FOREWORD

A. Function of the Part A Intermediary Manual.--This manual makes available to the Part A intermediary, in a form suitable for ready reference, informational and procedural material needed for the prompt and accurate processing of claims for services furnished under the provisions of the Health Insurance for the Aged Act (Medicare). It also contains information needed to answer questions which may be asked about the program and should help to assure that the law is uniformly applied nationally without regard to where covered services are furnished.

Throughout this manual when reference is made to an intermediary function, it is to be construed that the term "intermediary" is to include "bill paying HMO." Although the HMO is not responsible for the Admission/Query process per se, proper correlation of utilization data with the ensuing bill requires knowledge by the HMO of the query and reply process, the spell of illness concept, entitlement and benefit data, and the general contents of this manual.

B. Contents and Organization.--

1. Contents.—The manual provides instructions for implementation of the provisions of Title XVIII of the Social Security Act and Medicare regulations. It amplifies the basic statutory provisions for coverage of services and the requirements which must be met for Medicare payment to be made. The procedures and documentation required have been devised to satisfy the administrative needs of the program and are slanted toward the usual case. However, an attempt has been made to cover some infrequent situations that may occur.

2. Organization.--The Part A Intermediary Manual is divided into three separate parts:

Part 1--Fiscal Administration contains instructions for reimbursement of administrative costs, budget preparation and execution, letter of credit method of advancing funds, and accountability.

Part 2--Audits-Reimbursement-Program Administration includes instructions for intermediaries on provider audits, instructions on provider reimbursement pertinent only for intermediaries, and instructions in other areas of program administration not directly related to the claims process.

Part 3--Claims Process contains informational and procedural material the intermediary needs for the efficient processing and payment of claims. This includes instructions dealing with coverage of services, bill review, payment and postpayment actions, reasonable charges, and other pertinent claims procedures.

READEX FICHE best copy available

C. Relation Between the Part A Intermediary Manual and Other Reference Material.--Title XVIII of the Social Security Act is the statutory basis for the broad objectives and operations of the Medicare program and is the foundation for the regulations and all manual material.

In addition to the Part A Intermediary Manual, the Medicare Bureau issues separate manuals for Part B carriers, participating providers of health services, and Social Security Administration components to provide guidance in specific areas in the administration or participation in the Medicare program. The Part A Intermediary Manual is self-contained and requires no cross-referral to any of the other manuals. However, users may refer to the Social Security Act and Department Health Regulations, to determine the legal basis underlying a particular policy or procedure embodied in the instructions.

Although the Part A Intermediary Manual does not have the effect of regulations, a careful effort has been made to insure that the provisions of the law and regulations are accurately reflected.

The health insurance regulations are interpretations, implementations, and policies flowing from the statute and are formally approved and published by the Secretary of the Department of Health, Education, and Welfare. Regulations have the force and effect of law and are binding on all parties.

The Health Care Financing Administration (HCFA) also publishes Health Care Financing Administration Rulings under the authority of the Administrator of HCFA, to make available official rulings which relate to the health care financing programs under his jurisdiction. HCFA jurisdiction includes responsibility for the Medicare and Medicaid programs, certification of health standards for health care facilities, the Professional Standards Review Organization program, maintenance of program integrity against fraud and abuse, and the Provider Reimbursement Review Board.

The rulings include materials that the Freedom of Information Act requires to be made public, such as final opinions, including concurring and dissenting opinions, and orders made in the adjudication of cases. The rulings also include statements of policy and interpretations adopted by HCFA or one of its components and not published in the Federal Register, indexes of administrative staff manuals, and instructions to staff that affect the public.

Examples of kinds of materials published in the Health Care Financing Administration Rulings are: significant Federal court decisions covering HCFA programs and significant decisions of Administrative Law Judges, the Appeals Council of the Social Security Administration, the Provider Reimbursement Review Board, and the Administrator of HCFA on behalf of the Secretary. Also published are opinions of the Office of General Counsel and other formal policy statements.

Rulings are intended to exemplify general manual instructions and do not alter existing policy guidelines. However, they may place more emphasis on a particular program area that has been identified as a problem. The rulings do not have the force and effect of a statute or regulation, but provide illustrative case material useful in interpreting and applying policies and procedures contained in instructional issuances.

In processing claims, contractors should be guided by the rulings in deciding those cases where the pivotal facts are substantially the same as in the ruling. A ruling would not be applicable to other cases where the facts in a particular case were not substantially the same as those stated in the ruling. Additionally, the effect of subsequent legislation, regulations, court decisions, and rulings must also be considered in determining the applicability of a particular ruling to a specific factual situation.

D. Part A Intermediary Manual Revisions.--The manual is designed to accommodate new pages as further interpretations of the law and changes in policy and procedures are made. Accordingly, supplements and revised sections, pages, or chapters are issued as the need presents itself. Changed material is indicated in the left margin of a page in the following manner:

┌ Line on which change begins

└ Line on which change ends

The revision transmittal sheet identifies new page numbers and the pages replaced, and summarizes the principal changes in the material being issued. When a major change in policy or procedures is involved, the background and effective date for the change is provided. If, at a later date, you wish to again refer to the background explanation given on a transmittal sheet, you can identify the transmittal by its number which appears on each manual page.

E. Use of the Revision Transmittal Check Sheet.--Immediately after the title page, a check sheet has been provided on which receipt of revisions can be recorded. Revised manual transmittals should be filed in transmittal number order to avoid discarding a more recent page in favor of an older one.

If it appears that you have been skipped in the distribution of a particular transmittal, keep in mind that the transmittals are not always distributed in strict numerical sequence. Allow 10 working days after receipt of a higher numbered transmittal before requesting a transmittal that you have not received.

F. Effective Dates for Medicare Issuances.--Medicare manual transmittals specify the effective dates for changes in policy or procedures and new policies or procedures, effective with material released for publication sometime after November 30, 1977. The effective date indicates at which point in the adjudicative process it applies; usually this will be for services furnished on and after a certain date. The transmittal specifies whether the material involves a change in policy or procedures, new policy or procedures, or simply a clarification of existing policy or procedures.

1. New Policy or Procedure or a Change in the Old.--If the material is a new policy or procedure or a change in the old, specific effective dates are shown. New policies or changes in policies almost invariably carry prospective dates. (The administrative finality rules in Part A, § 3799.13 still apply.) The effective date depends upon the situation that gave rise to the issuance. It may be mandated by legislation or regulations or it may be based on operational considerations, e.g., a systems change that requires time for reprogramming.

2. Clarification of a Policy or Procedures.--A clarification of policy or procedures does not revise a rule already in effect but rather is intended to clarify or improve its understanding. It includes situations where it is necessary to elaborate on a particular policy or rule. An effective date is not specified for a clarification of policy or procedure.

3. Correcting an Erroneous Policy Statement.--Where a proposed policy issuance corrects a prior statement or policy, recognizing that such prior policy was in error and yielded erroneous adjudicative results, it will be given retroactive effect specified in the transmittal.

8-66 CHECK SHEET OF PART A INTERMEDIARY MANUAL REVISION TRANSMITTALS

This Check Sheet should be placed at the front of the Manual immediately after the Foreword, to provide a record of Manual revisions received. Part A Intermediary Manual revisions will be issued under cover of numbered "Revision Transmittals."

3001. HOSPITAL INSURANCE ENTITLEMENT.

Hospital insurance (HI) (as well as supplementary medical insurance (SMI)) is available to three basic groups of "insured" individuals - the aged (although certain aged individuals can qualify for hospital insurance without being "insured"), the disabled, and those with end-stage renal disease. Following is an explanation of how an individual becomes "insured" as well as an explanation of the eligibility requirements for each group.

A. Insured Status.—To be eligible for premium-free hospital insurance (HI), an individual must be "insured" based on his or her own earnings or those of a spouse, parent or child. To be insured, the worker must have a specified number of quarters of coverage (QC's); the exact number required is dependent on whether the person is filing for HI on the basis of age, disability, or end-stage renal disease. QC's are earned through payment of payroll taxes under the Federal Insurance Contributions Act (FICA) during the person's working years. QC's earned by an individual who pays the full FICA tax are usable to insure the person for both monthly social security benefits and HI. Federal employees were exempt from payment of FICA taxes prior to January 1983. However, beginning in January 1983, Federal employees became subject to the HI portion of the FICA tax (those actually employed in January 1983 were also deemed to have earned HI quarters of coverage for their Federal service prior to January 1983). Also, Government employees who pay only the HI portion of the FICA tax are only insured for HI; they are not insured for monthly social security benefits. State and local government employees hired after 3/31/86, who do not pay the full FICA tax, must pay the HI portion of the FICA tax. Employees hired prior to 4/1/86 may be voluntarily covered for the HI tax by the State or local government entity.

B. The Aged.—To be eligible for HI on the basis of age, a person must be age 65 or older and either eligible for monthly social security or railroad retirement cash benefits, or would be eligible for such benefits if the worker's government QC's were regular social security QC's. An individual who is insured for monthly benefits need not actually file an application to receive the benefits. If such a person continues to work beyond age 65, he or she may instead elect to file an application for HI only.

Premium-free HI for the aged begins with the month in which the individual attains age 65, provided he or she files an application for HI or for cash benefits and HI within 6 months of the month in which he or she attains age 65. If the application is filed later than that, HI entitlement can be retroactive for only 6 months. An individual attains age 65 on the day before his or her 65th birthday. For example, if an individual is born on August 1, the attainment date is July 31, and HI begins with July 1. Entitlement generally does not end until death.

3001.1 Transitional Provision.—In 1966, when the Medicare law took effect, a person needed in excess of 3 years of work under social security to be eligible for premium-free HI. To "blanket-in" many elderly people who had not had the opportunity to be working in jobs subject to FICA taxes, or who had not worked long in such jobs, the law provided a special transitional insured requirement allowing entitlement to HI without the individual being fully insured if certain residence and citizenship or alien status requirements are met. The work requirements for this transitional provision were designed to increase in such a way that, for persons becoming age 65 in 1974 or later, the provision has essentially been phased out. The only applicability the provision has today occurs where the very old person, for some reason, has not yet filed for HI.

3001.2 Hospital Insurance for Disability Beneficiaries.-- A disabled person who is entitled to social security or railroad retirement benefits on the basis of disability is automatically entitled to HI after 24 months of entitlement to such benefits. Since there is a 5-month disability benefits waiting period, the person actually becomes entitled to HI after being disabled for 29 months. In addition, disabled persons who are not insured for monthly social security disability benefits but would be insured for such benefits if Government QC's were social security QC's are deemed to be entitled to disability benefits and automatically entitled to HI after being disabled for 29 months. The months in the Medicare qualifying period need not be consecutive so that months from a previous period of (deemed) disability benefit entitlement generally may be counted in determining when the qualifying period requirement is met. HI entitlement on the basis of disability is available not only to the worker, but to the widow, widower or child of a deceased, disabled or retired worker if any of them become disabled within the meaning of the Social Security or Railroad Retirement Acts.

If an individual recovers from a disability, HI entitlement ends with the month after the month he or she is notified of the disability termination. However, if the individual's (deemed) disability benefit entitlement ends only because he or she was working, HI entitlement may continue for up to 24 additional months.

3001.3 Hospital Insurance for Persons Needing Kidney Transplant or Dialysis.--Individuals of any age who receive dialysis or renal transplantation for end-stage renal disease (ESRD) are eligible for HI (and are deemed enrolled for SMI unless such coverage is refused) if they file an application and they (1) meet certain work requirements for insured status under the social security or railroad retirement programs or as Government employees, or (2) are entitled to monthly social security benefits or an annuity under the Railroad Retirement Act, or (3) are the spouses or dependent children of such insured or entitled persons.

HI entitlement usually begins after a 3-month waiting period has been served, i.e., with the first day of the third month after the month in which a course of renal dialysis begins. Entitlement begins before the waiting period has expired if the individual (1) receives a transplant or (2) participates in a self-dialysis training program during the waiting period. For those falling into category (1), entitlement begins with the month the individual is admitted as an inpatient to a hospital for procedures in preparation for or anticipation of a kidney transplant provided the transplant surgery takes place within the following 2 months. If the transplant is delayed more than 2 months after the preparatory hospitalization, entitlement begins with the 2nd month prior to the monthof transplant. Entitlement for those falling into category (2) begins with the first month of the course of dialysis if the individual is expected to complete the self-dialysis training program and self-dialyze thereafter. Eligibility is based on the earliest entitlement date when someone could possibly qualify under several different provisions.

HI coverage based on ESRD ends with the earliest of the following dates: (1) the day an individual dies, or (2) the last day of the 12th month after the month the course of dialysis is discontinued, unless the individual receives a kidney transplant during that period or begins another course of dialysis, or (3) the last day of the 36th month after a person receives a kidney transplant. If the transplant fails and a regular course of dialysis is initiated or another transplant is performed within the 36 months, entitlement continues. If a person whose entitlement based on ESRD has ended, begins a new course of dialysis or has a kidney transplant, reentitlement begins without a waiting period.

3001.4 Hospital Insurance Obtained by Premium Payment.--

A. Eligibility Requirements.-- Individuals who want hospital insurance coverage but who are not otherwise eligible (i.e., do not qualify under either the regular, transitional or ESRD provisions, §§ 3001, 3001.1, 3001.3) may obtain such coverage on or after July 1, 1973, by enrolling timely, paying a monthly premium, and upon meeting the following three requirements:

- attaining age 65
- enrolling in the supplementary medical insurance program
- being a resident of the U.S.; and either
  - a citizen, or
  - an alien lawfully admitted for permanent residence, who has resided continuously in the U.S. for the 5 years prior to the month of enrollment.

B. Premiums.-- Each year, the Secretary of HHS announces the amount of the standard hospital insurance premium payable for each month in the following calendar year. The applicable premium amount is 33/76 (about 43.4 percent) of the hospital insurance deductible for that calendar year. The premium is rounded to the nearest $1.

States and public organizations, through agreements with the Secretary, may pay premiums for groups of enrollees under the rules governing group payment of SMI premiums. However, the individual must enroll for himself during an appropriate enrollment period; there is no buy-in for premium hospital insurance.

C. Beginning of Coverage.--

1. Initial Enrollment Period (IEP).-- Persons may enroll for Premium hospital insurance by filing a request during the IEP which begins the third month before the month of first eligibility and lasts for 7 months. The individual's IEP for Premium hospital insurance is in most cases the same 7-month period as the IEP for SMI.

The individual may enroll for hospital insurance when he or she enrolls for SMI, or later during his IEP. The beginning date of an individual's Premium hospital insurance coverage period is determined by the rules applicable to SMI coverage based on an SMI enrollment during an IEP. (See §3003.3.)

2. General Enrollment Period (GEP).-- Eligible persons who have not enrolled for Premium hospital insurance during their IEP, or whose Premium hospital insurance has been terminated, may enroll during a GEP (January 1 - March 31 of each year) if they are enrolling or have enrolled for SMI. As under SMI, an eligible person who enrolls for hospital insurance during a GEP after the end of the IEP will have hospital insurance coverage beginning the following July.

The same restrictions on enrollment and reenrollment apply as in the supplementary medical insurance program. Individuals who enroll late pay a 10 percent per year premium penalty.

D. End of Coverage.-- A beneficiary's entitlement under tthe provision terminates:

- with the month of the individual's death;
- (for nonpayment of premiums) with the last day of the third month following the premium billing month;
- with the end of the month following the month in which he or she files a voluntary request for termination;
- with the month SMI coverage is terminated; or
- with the month before the month in which he or she becomes entitled to hospital insurance under the regular, transitional, or ESRD provisions. (See §§3001, 3001.1, 3001.3.)

Supplementary Medical Insurance--Enrollment and Premiums

3003. SUPPLEMENTARY MEDICAL INSURANCE.

3003.1 Eligibility for Enrollment.-- To obtain supplementary medical insurance coverage, eligible individuals must enroll in the plan during an enrollment period open to them and pay the required premiums. They are eligible to enroll if they are eligible for premium-free HI (as shown in §§3001-3001.3), or are resident citizens or resident aliens. To qualify as a resident alien, an individual must have been lawfully admitted for permanent residence and have resided continuously in the United States during the 5 years immediately preceding the month of enrollment.

By agreement with the Secretary of Health and Human Services, States may enroll in the supplementary medical insurance plan eligible individuals who are receiving money payments under certain public assistance programs as specified in the agreement. Persons entitled to monthly social security benefits or railroad retirement benefits may be included in such "buy-in" agreement at the option of the State.

The State may also choose to enroll all individuals eligible for medical assistance under title XIX or those receiving cash assistance under specified titles of the Act.

3003.2 Automatic Enrollment in SMI.-- Beneficiaries (except those residing in foreign countries or Puerto Rico) are deemed to have enrolled in SMI in the month before the month for which they are entitled to hospital insurance, so that hospital insurance and SMI coverage start in the same month. Thus, monthly beneficiaries other than disability beneficiaries are deemed to enroll in the month before attainment of age 65. Disability beneficiaries are deemed to enroll in the 24th consecutive month of entitlement to disability benefits.

Every potential "deemed" enrollee is given a reasonable opportunity (at least 2 months) to decline SMI enrollment by filing notice to this effect. He or she is deemed not to have enrolled and does not incur any premium liability. A refusal of SMI not timely filed is treated as a request for voluntary termination under existing disenrollment rules once it has been established that the individual does not wish to have SMI.

3003.3 Enrollment Periods.-- Enrollment is possible only during specified enrollment periods:

An individual's initial enrollment period is of 7 months duration. It begins 3 full calendar months before and ends 3 full calendar months after the month in which the individual first meets all the requirements for enrollment.

A general enrollment period occurs each year from January 1 through March 31. Coverage is effective the following July 1. These periods afford enrollment opportunities to those who failed to enroll during their initial enrollment periods and to those whose enrollment has terminated.

A special enrollment period (SEP) is available, effective with November 1984, for individuals age 65 or over who did not enroll for SMI when first eligible (or who terminated SMI enrollment) because of coverage under an employer group health plan (EGHP). The SEP lasts for 7 months. It begins with the month in which the individual is no longer enrolled in an EGHP based on current employment.

A SEP also became available, effective January 1987 for disabled beneficiaries under age 65 who do not have ESRD, who did not enroll for SMI when first eligible (or who terminated SMI enrollment) because of coverage under an EGHP which is the primary payer of benefits. The disabled beneficiary may have the EGHP coverage based on his or her own current work (under the trial work period provisions) or as the family member of a current employee. The SEP lasts for 7 months and begins with the month in which Medicare becomes the primary payer of benefits.

3003.4 Beginning of Coverage.--

A. Enrollment during the individual's initial enrollment period-- coverage begins on the first day of:

- The month in which he or she attains age 65, if he or she enrolls before that month,
- The month after he or she attains age 65, if he or she enrolls in the month of attainment of age 65,
- The second month after enrollment, if he or she enrolls in the month after attainment of age 65, or
- The third month after enrollment, if he or she enrolls more than one month after the month of attainment of age 65.

B. Enrollment during a general enrollment period--coverage begins the following July 1.

C. Enrollment by a State of its welfare recipients--coverage begins on the latest of the following:

- First day of the third month after the month of the agreement with the State,
- First day of the first month in which the individual is both an eligible individual and a member of the coverage group, except that for a State which buys in for medically indigent persons under title XIX, if the individual is not receiving money payments under titles I, IV, (Part A), X, XIV, or XVI, the coverage begins on the first day of the second month after the month in which the individual is found or is reported by the State to SSA to be eligible for medical assistance, or
- The date specified in the agreement.

D. Enrollment during the individual's special enrollment period—coverage begins on the first day of:

- The month of enrollment, if he or she enrolls in the first month; or
- The month after the month of enrollment; if he or she enrolls during the following 6 months.

3003.5 Coverage Ends.--

A. An individual may notify SSA in writing, at any time, that he or she no longer wishes to participate in the supplementary medical insurance plan. Termination of coverage takes effect at the close of the calendar month following the calendar month in which the request for termination was filed.

B. Enrollment under medical insurance is terminated because of nonpayment of premiums. Termination is effective with the end of the grace period provided for payment of premiums. (See § 3003.7).

C. If an individual is enrolled under a Federal-State agreement, coverage under the agreement ends on the last day of whichever of the following occurs first:

1. The month in which the State makes the determination that the individual is ineligible for welfare money payments and/or medical assistance, depending on the coverage specified in the agreement, provided that SSA receives notice by the 25th day of the second month after the calendar month in which the State's determination is made. (If SSA does not receive notification by that date, coverage ends on the last day of the second month before the month in which SSA receives such notice. Notice received in a calendar month but after the 25th day of that month is deemed to have been received in the following month); or

2. The month in which the State agreement is terminated.

When the individual's State enrollment ends, the coverage period continues as though he or she had individually enrolled in the initial enrollment period. The individual is responsible for the premiums but there is no increase for late enrollment regardless of the number of prior enrollment periods. The individual may terminate this deemed individual enrollment by requesting SMI termination during the last month of buy-in coverage or during the 6 succeeding months and have the individual SMI coverage end at the end of the month is which the request for termination is filed.

D. If not terminated sooner, coverage ends with the beneficiary's death.

3003.6 Termination and Reenrollment.-- An individual whose enrollment has terminated may reenroll only in a general enrollment period or a special enrollment period if the requirements are met.

Payment may be made for covered services if the individual was covered at the time the services were furnished, even though at the time the request for payment is filed with the intermediary the enrollment has been terminated.

3003.7 Premiums.--A premium is due for each month of entitlement under SMI. The SMI premium covers about one-fourth of the cost of the Part B program. In the third quarter of each calendar year, the Secretary of Health and Human Services announces the base premiums for SMI coverage that is payable as of the following January 1st. The SMI premium is the same for all enrollees even though the cost to the program is greater for ESRD enrollees and the disabled than it is for the aged. The SMI premium is refigured each year and is based on the lower of one-half of SMI program costs per aged enrollee or the general percentage by which social security benefits were increased during the calendar year in which the announcement occurs. (During the 5-year period January 1984 through December 1988, the formula for computing the SMI premium has been modified to provide that the Part B premium reflects exactly one-fourth of the cost of the Part B program. Beginning with the premium announced for the period beginning January 1989, however, the method of computing the SMI premium reverts back to the pre-January 1984 rules).

The base premium that is announced by the Secretary is paid by most enrollees. However, it is increased for those who enroll late or reenroll after a prior termination of entitlement. The amount of the increase is 10 percent of the base rate for each full 12-month period during which the individual could have been but was not enrolled in the program. No months in which an individual age 65 or over has EGHP coverage, or is disabled and has Medicare as secondary payer of benefits, is countable as a month in which the individual "could have been, but was not enrolled." The exception does not apply to individuals who are entitled, or could be entitled, to Medicare on the basis of ESRD.

SMI premiums are collected from benefits payable (in order of priority) by the Railroad Retirement Board, Social Security Administration, or Office of Personnel Management (Civil Service) unless the individual is covered under a State buy-in agreement. If the individual is entitled to such benefits but the payments are in suspense, e.g., due to work deductions, he or she is billed for the amounts due. Non-beneficiaries are also billed directly for the premiums due.

A grace period has been provided for payment of premiums by those who are billed directly. The period extends for 90 days after the month in which the bill is mailed. This 90-day grace period for paying overdue SMI premiums and continuing SMI coverage may be extended by SSA for good cause for up to an additional 90 days. Good cause, for example, is found if the enrollee was mentally or physically incapable of paying his or her premiums timely, or had some reasonable basis to believe that payment had been made, or the failure to pay was due to administrative error.

3004. WAIVER OF ENROLLMENT PERIOD REQUIREMENTS BECAUSE OF ADMINISTRATIVE ERROR.

SSA is authorized to take necessary action to correct an erroneous SMI or premium hospital insurance enrollment or nonenrollment which was based upon the action, inaction, or error of a government officer, employee, or agent. The action may include designating special individual enrollment periods and premium adjustments.

For purpose of this provision, an individual's enrollment or nonenrollment in SMI is considered to have been prejudiced and due to the "action, inaction, or error" of an officer, employee, or agent of the government, if there is an official record or other evidence showing that (a) the individual took reasonable appropriate and timely measures to assert his or her rights, and (b) due to administrative fault or other action-- which may or may not have been erroneous at the time taken--his or her rights have been or are likely to be impaired unless relief is given.

This authority applies to all Part B cases which have arisen since the Medicare program began on July 1, 1966. It is applied to cases which come to SSA's attention; however, do not search your files.

Provider and Related Definitions

3005. PROVIDER AGREEMENTS.

For purposes of section 1866 of the Social Security Act, the term "provider of services" (or "provider") means a hospital, skilled nursing facility, home health agency and, for the limited purpose of furnishing outpatient physical therapy or speech pathology services, a clinic, rehabilitation agency or public health agency which meets the applicable eligibility provisions of title XVIII of the Act and regulations issued thereunder (i.e., the conditions of participation).

To be a participating provider under Medicare, a provider must be in compliance with the applicable provisions of title VI of the Civil Rights Act of 1964 and must enter into an agreement under section 1866 of the Act which provides that it (1) will not charge any individual or other person for items and services covered by the health insurance program other than allowable charges and deductibles and coinsurance amounts; and (2) will return any money incorrectly collected from the individual or other person on his behalf or make such other disposition as described in §§ 3401ff.

3005.1 Responsibilities of Participating Provider.-- Upon acceptance for participation, a provider becomes responsible for remaining in compliance with the terms of the agreement and the provisions of title XVIII and regulations issued thereunder. Where the agreement is made retroactive, the provider must comply with its responsibilities as of the retroactive date. Payment to the provider for covered items and services it furnishes on or after the effective date of the agreement will require that the provider have a recordkeeping capability sufficient for determining the cost of services furnished Medicare beneficiaries.

The termination of participation (§ 3008) does not immediately abrogate all of the provider's responsibilities and in specific matters a responsibility may extend beyond the effective date of termination. For example, the provider continues to be responsible (as applicable) for those provisions of the law and regulations which provide for program coverage to remain in effect for specified periods of time beyond the effective termination date, for those beneficiaries who were accepted for care and treatment by the provider before such date. The provider also continues to be responsible for filing a final cost report and/or the repayment of any overpayment, as these actions relate to final program cost settlement after termination.

3005.2 Term of Agreement With Providers Other than SNFs.-- With the exception of agreements with skilled nursing facilities, an agreement with a provider of services (§ 3005) is not time-limited and has no fixed expiration date. These agreements remain in effect until such time as there is a voluntary termination (§ 3008.1), an involuntary termination (§ 3008.2), or an invalidation of the agreement by reason of change of ownership (§ 3009).

3005.3 Term of Agreement With SNFs.-- All agreements with skilled nursing facilities are required to be for a specified term of up to 12 full calendar months with fixed expiration dates. In appropriate situations, the agreement may also contain a cancellation clause. Therefore, when it is determined that a skilled nursing facility is eligible and that its agreement for participation in the Medicare program will be accepted for filing, the term of the agreement will be determined in the following manner:

A. No Deficiencies.--Where the facility is certified as being in full compliance with all standards contained in the conditions of participation for skilled nursing facilities, the term of the agreement will, as appropriate to the period of certification for which the facility has been approved, be for a term of up to 12 full calendar months.

B. Deficiencies.--Where the facility is certified as not being in full compliance with all standards contained in the conditions of participation for skilled nursing facilities, the term of the agreement will, as appropriate to the period of certification or conditional period of certification for which the facility has been approved:

1. Be for a term which expires no later than the close of the 60th day following the last day of the time period specified in the facility's

written plan providing for the correction of deficiencies in meeting the conditions of participation, provided that such term will not exceed 12 full calendar months; or,

2. Provide a conditional term of up to 12 full calendar months, subject to a cancellation clause that the agreement may be cancelled on a predetermined date which shall be no later than the close of the 60th day following the last day of the time period specified in the facility's written plan providing for the correction of deficiencies in meeting the conditions of participation, provided that such date will occur within such 12-month term.

If the health and safety of Medicare patients will not be jeopardized thereby, the term of an agreement may be extended for 2 full calendar months where it is found necessary to prevent irreparable harm to the facility; or to prevent hardship to Medicare beneficiaries being furnished care by the facility; or if it is found to be impracticable within the term of the agreement to determine whether the facility is complying with the provisions of the Act and regulations issued thereunder.

Intermediaries are advised of the term of each SNF agreement by the HCFA regional office.

3006. ADMISSION OF MEDICARE PATIENTS FOR CARE AND TREATMENT.

The participation of a provider of services which voluntarily files an agreement to participate in the health insurance program contemplates that such provider will admit Medicare beneficiaries for care and treatment, and upon admission, will provide them with such services as are ordinarily furnished by the provider to its patients generally. A provider may have restrictions on the types of services it makes available and/or the types of health conditions it accepts, or may establish other criteria relating to the admission of persons for care and treatment. However, the law does not contemplate that such restrictions or criteria will apply only to Medicare beneficiaries as a class. It does contemplate, however, that if such restrictions or criteria apply to Medicare beneficiaries, they will be applied in the same manner in which they are applied to all other persons seeking care and treatment by the provider. Thus, a provider admission or patient policy or practice which is not consistent with the objective contemplated in the law may be used by HCFA as a basis for termination of the agreement for cause.

3007. UNDER ARRANGEMENTS.

A provider may have others furnish certain covered items and services to their patients through arrangements under which receipt of payment by the provider for the services discharges the liability of the beneficiary or any other person to pay for the service. In permitting providers to furnish services under arrangements, it was not intended that the provider merely serve as a billing mechanism for the other party. Accordingly, for services provided under arrangements to be covered the provider must exercise professional responsibility over the arranged-for services.

The provider's professional supervision over arranged-for services requires application of many of the same quality controls as are applied to services furnished by salaried employees. The provider must accept the patient for treatment in accordance with its admission policies, maintain a complete and timely clinical record on the patient which includes diagnosis, medical history, physician's orders, and progress notes relating to all services received, maintain liaison with the attending physician with regard to the progress of the patient and the need for revised orders or, in the case of home health services and outpatient physical therapy or speech pathology services, to assure that the required plan of treatment is periodically reviewed by the physician, secure from the physician the required certifications and recertifications, and see to it that the medical necessity of such services is reviewed on a sample basis by its utilization review committee in the case of a hopsital or skilled nursing facility or, in the case of home health agencies, clinics, rehabilitation agencies, and public health agencies, by the agency's staff or an outside review group.

3008. TERMINATION OF PROVIDER PARTICIPATION (See S 3482).

A provider may voluntarily terminate its participation in the program or have it terminated by the Secretary for cause.

3008.1 Voluntary Termination.—A provider may terminate its agreement (and in the case of a skilled nursing facility, it may terminate its agreement prior to the close of the specified term of its agreement) by filing with the Secretary a written notice of its intention to terminate the agreement. The Secretary may accept the termination date stated in the notice (the date must be the first day of a month and, in the case of a skilled nursing facility, must occur within the specified term of such facility's agreement) or set a different date. However, the termination date set by the Secretary shall not be more than 6 months from the date the provider's notice is filed.

See Part A Part 2 S2800.1 for additional information on voluntary termination and the intermediary's role.

3008.2 Involuntary Termination, Including SNF Agreement Cancellations.—The Secretary may terminate an agreement (and in the case of a skilled nursing facility, he may terminate its agreement prior to the close of the specified term of the agreement) with a provider if it is determined that the provider:

A. Is not complying substantially with the provisions of the agreement or with the applicable provisions of title XVIII of the Act and regulations; or

B. No longer meets the appropriate conditions of participation; or

C. Has failed to supply information which is necessary to determine whether payments are due or were due and the amounts of such payments; or

D. Refuses to permit examinations of fiscal and other records, including medical records.

The cancellation of an SNF agreement at the close of the predetermined date stated in the cancellation clause contained in such agreement (S 3005.3B) is viewed as an involuntary termination of the agreement by the Secretary for cause. Such actions involve a finding that the SNF has not satisfactorily completed its written plan providing for the correction of deficiencies with respect to one or more of the standards in the applicable conditions of participation, or that the facility has not made substantial effort and progress in correcting such deficiencies.

A provider which is dissatisfied with the Secretary's determination terminating its agreement is entitled to request a hearing thereon in accordance with the appeals procedures contained in Subpart O of Regulations No. 5. There is no reconsideration step before the opportunity for a hearing.

For the intermediary's role in procesing involuntary terminations see Part A Part 2 SS 2800.3 and 2801-2805.

NOTE: The involuntary termination of a hospital's approval authorizing it to provide extended care services (i.e., to be a swing bed facility—see sec. 3130.1) would not automatically result in the involuntary termination of the hospital's agreement relating to the provision of hospital services.

3008.3 Expiration and Renewal-Nonrenewal of SNF Term Agreements.—All agreements with skilled nursing facilities are required to be for a specified term of up to 12 full calendar months with fixed expiration dates. The agreement expires at the close of the last day of its specified term and is not automatically renewable from term to term. Where the term of an agreement is extended (see S 3005.3) the "close of the last day of its specified term" is the close of the day to which the agreement has been extended. Thus, where the term of an agreement is extended, the provider's participation in the program continues and the agreement will not expire until the close of the last day to which it has been extended.

Since an agreement with an SNF is not automatically renewable from term to term, each term agreement with an SNF will require that the SNF qualify for participation and that its agreement be accepted for filing. A participating SNF may, however, continue its participation under the agreement form previously accepted for filing provided the SNF continues to qualify for participation and the agreement form is again accepted for filing and renewed for a term which begins on the date immediately following the close of the last day of the prior term of the agreement. When the requirements for participation continue to be met there is no limit to the number of times that the SNF's agreement form may again be accepted and renewed for a specified term.

When the time-limited agreement (including an agreement which has had its term extended) is renewed on the day immediately following the close of the last day of its term, the expiration of the agreement is not considered a termination of participation in the program.

However, once an agreement with an SNF is (1) not renewed, or (2) voluntarily terminated by the SNF, or (3) involuntarily terminated (including cancellations) by the Secretary, the previously accepted agreement cannot again be accepted and renewed. In such cases, the SNF is required to execute and file a new agreement if it is again found eligible to participate in the Medicare program. The effective date of the new agreement must be determined in accordance with regulatory provisions (42 CFR 489.13).

The Secretary's determination not to accept and renew a SNF agreement is a determination relating to the qualifications of the SNF in the period immediately following the close of the SNF's existing agreement and the SNF is entitled to request a reconsideration of the determination in accordance with the appeals procedure contained in 42 CFR part 405 Subpart 0. Such determinations involve a finding that:

1. Based on a State agency resurvey and recertification, the SNF will not be approved for a period of certification because it is out of compliance with one or more conditions of participation

2. Based on a State agency resurvey and recertification, the SNF continues to be out of compliance with the same standard(s) in the conditions of participation as were found out of compliance during the term of the agreement and the facility will not be approved for a new period of certification or

3. The SNF has violated the terms of its agreement or the provisions of title XVIII or regulations promulgated thereunder.

In cases of nonrenewal by the Secretary, the intermediary's role is the same as for involuntary terminations. (See Part A, Part 2, SS 2800.3 and 2801-2805).

3008.4 Determining Payment for Services Furnished After Termination, Expiration, or Cancellation.— Effective with the date a provider agreement (or swing bed approval) terminates, expires, or is cancelled, no payment is made to the provider under such agreement for:

A. Hospital.—

1. Termination—Hospital Agreement.— Inpatient hospital services (including inpatient psychiatric hospital services) and swing bed extended care services furnished on or after the effective date of the hospital's termination, except that payment can ıtinue to be made for up to 30 days of

inpatient hospital services and/or swing bed extended care services (total of no more than 30 days) furnished on or after the termination date to beneficiaries who were admitted (at either the acute or extended care level) prior to the termination date.

2. Termination--Swing Bed Approval.--Swing bed extended care services furnished on or after the effective date of the termination of the hospital's swing bed approval, except that payment can continue for up to 30 days of extended care services furnished on or after the termination date to beneficiaries who were admitted (at either the acute or extended care level) prior to the termination date.

B. Skilled Nursing Facility.--

1. Termination--SNF.--Posthospital extended care services furnished on or after the effective date of termination of the agreement, where such agreement has been voluntarily terminated by the provider (§ 3008.1) or involuntarily terminated (see 3 below for cancellations) by the Secretary for cause (§ 3008.2), except that payment can continue to be made for up to 30 days of posthospital extended care services furnished on and after the termination date to beneficiaries who were admitted prior to the termination date.

2. Expiration--SNF.--Posthospital extended care services furnished on or after the date which follows the last day of the specified term of the agreement, where such agreement has expired at the close of the last day of its specified term (§ 3008.3), except that where the agreement has not been renewed, payment can be made for up to 30 days of posthospital extended care services furnished on and after the date which follows the last day of the specified term of such agreement to beneficiaries who were admitted on or before such last day.

3. Cancellation--SNF.--Posthospital extended care services furnished on or after the date which follows the predetermined date specified in a cancellation clause, where such agreement is cancelled by the Secretary pursuant to such cancellation clause (§ 3008.2), except that payment can be made for up to 30 days of posthospital extended care services furnished on and after the date which follows the predetermined date specified in such clause, to beneficiaries who were admitted on or before such predetermined date.

C. HHA and Hospice.--Home health and hospice services furnished under a plan which is established on or after the termination date, except that if the plan was established before the termination date, payment is made for services for up to 30 days following the effective date of termination.

D. Termination, Expiration, and Cancellation--Providers.--Other items and services, including outpatient physical therapy or speech pathology and diagnostic services, furnished on or after the effective date of termination or, in the case of an expiration or cancellation of an SNF agreement, on or after the day following the close of such agreement.

(See § 3600.4 for billing instructions concerning providers who are no longer participating).

3009. CHANGE OF PROVIDER OWNERSHIP

When an organization having a provider agreement undergoes a change of ownership, the agreement is automatically assigned to the new owner. A participating provider which plans to change ownership should give advance notice of its intention so that necessary action can be taken in the event the newly-owned institution does not wish to participate in the Medicare program. A participating provider which plans to enter into a lease arrangement (in whole, or in part) should also give advance notice of its intention. A change of ownership would occur for example:

A. Where a sole proprietor transfers title to an enterprise to another party;

B. Where, in the case of a partnership, the addition, removal, or substitution of a partner effects a termination of such partnership and creates a successor partnership or other entity;

C. Where an incorporated provider merges with an incorporated institution which is not participating in the program and the nonparticipating institution is the surviving corporation or where two or more corporate providers consolidate and such consolidation results in the creation of a new corporate entity;

D. Where an unincorporated provider (a sole proprietorship or partnership) becomes incorporated.

Whenever you learn of an impending change of ownership, or possible change of ownership, inform the regional office immediately. Refer any questions you may have concerning change of ownership situations to the regional office.

3010. HOSPITAL DEFINED

A hospital (other than psychiatric) means an institution which is primarily engaged in providing, by or under the supervision of physicians, to inpatients, diagnostic and therapeutic services for medical diagnosis, treatment, and care of injured, disabled, or sick persons; or rehabilitation services for the rehabilitation of injured, disabled, or sick persons.

To be eligible to participate in Medicare, a hospital must also be an institution which:

A. Maintains clinical records on all patients;

B. Has bylaws in effect with respect to its staff of physicians;

C. Has a requirement that every patient must be under the care of a physician;

D. Provides 24-hour nursing service rendered or supervised by a registered professional nurse, and has a licensed practical nurse or registered professional nurse on duty at all times;

E. Has in effect a hospital utilization review plan;

F. Is licensed or is approved by the State or local licensing agency as meeting the standards established for such licensing;

G. Meets other health and safety requirements found necessary by the Secretary of Health, and Human Services. (These additional requirements may not be higher than comparable ones prescribed for accreditation by the Joint Commission on Accreditation of Hospitals with exceptions specified in the law);

H. Is not primarily for the care and treatment of mental diseases;

Such an institution, if approved to participate as a hospital, may also be approved as a swing bed facility pursuant to demonstration authority or if the hospital is a rural hospital with less than 50 beds (see § 3101.1).

3012. DEFINITION OF EMERGENCY INPATIENT AND OUTPATIENT SERVICES

Payment may be made for certain Part A inpatient hospital services and Part B outpatient hospital services provided in a nonparticipating U.S. hospital where they are necessary to prevent the death or serious impairment of the health of the individual. Because of the threat to the life or health of the individual, the use of the most accessible hospital equipped to furnish such services is necessary. The determination of emergency services depends upon three separate findings:

- o The hospital meets the definition of an emergency hospital. (See §3012.1.)
- o The services meet the definition of emergency services. (See §3698.1.)
- o The hospital is substantially more accessible from the site of the emergency than is the nearest participating hospital. (See §3698.13.)

3012.1 Definition of an Emergency Services Hospital.—An emergency services hospital is a nonparticipating hospital which meets the requirements of the law's definition of a "hospital" relating to full-time nursing services and licensure under State or applicable local law. (See §3010.) (A Federal hospital need not be licensed under State or local licensing laws to meet the definition of emergency hospital.) In addition, the hospital must be primarily engaged in providing, under the supervision of doctors of medicine or osteopathy, services of the type that §3010 describes in defining the term hospital, and must not be primarily engaged in providing skilled nursing care and related services for patients who require medical or nursing care (see requirement "a" of the definition of a SNF in §3020). Psychiatric hospitals that meet these requirements can qualify as emergency hospitals.

(Instructions and information concerning the coverage of domestic emergency hospital services are in §3698.)

Inpatient hospital services and related physician and ambulance services furnished outside the U.S. are covered under the limited conditions in §3154.

3016. PSYCHIATRIC HOSPITAL.

A psychiatric hospital is an institution which is primarily engaged in providing by or under the supervision of a physician, psychiatric services for the diagnosis and treatment of mentally ill persons. To be eligible for participation in the program as a psychiatric hospital, it must meet the Medicare conditions of participation for hospitals or be deemed to meet those conditions based on accreditation by the Joint Commission on Accreditation of Hospitals (JCAH), have a utilization review plan, and comply with additional staffing and medical record requirements necessary to carry out an active program of treatment and intensive care.

3017. CERTIFICATION OF PARTS OF INSTITUTIONS AS HOSPITALS.

Under certain conditions a distinct part of a psychiatric institution may be certified as a psychiatric or general hospital.

3017.1 Part of a Psychiatric Institution as a Psychiatric Hospital.-- A distinct part of a psychiatric institution can be certified as a psychiatric hospital if it meets the conditions of participation even though the institution of which it is a part does not. If the distinct part meets requirements equivalent to the accreditation requirements of the JCAH, it can qualify under the program even though the institution itself is not accredited.

3017.2 General Hospital Facility of Psychiatric Hospital.-- A general hospital facility within a psychiatric hospital may be certified as a general hospital independent of the institution as a whole provided the general facility is a self-contained operational entity distinct from the rest of the institution. The general hospital facility would be regarded as a separate institution for this purpose since the law does not provide for certifying a "distinct part' of an institution as a general hospital. Services furnished in a separately certified general hospital facility are not subject to any of the benefit limitations applicable to the other parts of the institution, i.e., the reduction in benefit days in the first spell of illness (§ 3104) and the 190-day lifetime maximum on inpatient services in psychiatric hospitals (§ 3105).

3017.3 Part of a General Hospital as a Psychiatric Hospital.—There is no provision for a psychiatric wing of a general hospital to be certified as a psychiatric hospital. The distinct part provisions apply only to psychiatric institutions and not to general hospitals. However, this does not prevent the certification of a psychiatric hospital which is a part of a medical center or other large complex, provided the hospital operates as a separate functioning entity, i.e., it is located in a separate building, wing, or part of a building, has its own administration and maintains separate fiscal records.

3020. SKILLED NURSING FACILITY (FORMERLY EXTENDED CARE FACILITY) DEFINED.

A skilled nursing facility is an institution (or a distinct part of an institution, see § 3020l.), such as a skilled nursing home or rehabilitation center, which has a transfer agreement in effect with one or more participating hospitals (see § 3020.2 for transfer agreements and § 3005 for definition of participating hospital), and which:

a. Is primarily engaged in providing to inpatients skilled nursing care and related services for patients who require medical or nursing care, or rehabilitation services for the rehabilitation of injured, disabled, or sick persons,

b. Has policies (developed with the advice of and periodically reviewed by a professional group including one or more physicians and one or more registered professional nurses) to govern the skilled nursing care and related medical or other services it provides,

c. Has a physician, a registered professional nurse, or a medical staff responsible for the execution of such policies,

d. Has a requirement that the health care of every patient must be under the supervision of a physician,

e. Provides for having a physician available to furnish necessary medical care in cases of an emergency,

f. Maintains clinical records on all patients,

g. Provides 24-hour nursing service sufficient to meet nursing needs in accordance with the policies developed pursuant to (b) above, and has at least one registered professional nurse employed full time,

h. Provides appropriate methods and procedures for dispensing and administering drugs and biologicals,

i. Has in effect a utilization review plan,

j. Is licensed in accordance with State or local law, or is approved by the State or local licensing agency as meeting the licensing standards where State or applicable law provides for the licensing of institutions of this nature, and

k. Is in substantial compliance with health and safety requirements established by regulation. (These health and safety requirements are contained in the "Conditions of Participation for Skilled Nursing Facilities.")

A qualified skilled nursing facility is one which meets all the requirements in the above definition.

Note: The term skilled nursing facility does not include any institution which is primarily for the care and treatment of mental diseases. Also, the term skilled nursing facility (SNF) does not include swing bed hospitals authorized to provide and be reimbursed for extended care services, except that such swing bed hospitals must, in general, meet requirements the same as or comparable to many of those listed above (see §3130.1).

3020.1 A Distinct Part of an Institution as a Skilled Nursing Facility.-- In order to qualify for participation in the program as a skilled nursing facility, a distinct part of an institution must be physically separated from the rest of the institution, i.e., it must represent an entire physically identifiable unit consisting of all the beds within that unit, such as a separate building, floor, wing, or ward. Although it is required that the distinct part be identifiable as a separate unit within the institution, it need not necessarily be confined to a single location within the institution's physical plant. The distinct part may, for example, consist of several floors or wards which are scattered throughout several different buildings within the institutional complex. In each case, however, the patients of the distinct part would have to be located in units which are physically separate from those units housing all other patients of the institution. Various beds scattered throughout the institution would not comprise a distinct part for purposes of being certified as a skilled nursing facility.

3020.2 Transfer Agreements.-- To participate in the program a skilled nursing facility must have a written transfer agreement with one or more participating hospitals (see § 3005) providing for the transfer of patients between the hospital and the facility, and for the interchange of medical and other information. If an otherwise qualified skilled nursing facility has attempted in good faith, but without success, to enter into a transfer agreement, this requirement may be waived by the State agency. (See Conditions of Participation for Extended Care Facilities for the detailed requirements for transfer agreements).

3023. CHRISTIAN SCIENCE SANATORIUM.

A Christian Science Sanatorium operated or listed and certified by the First Church of Christ, Scientist, Boston, Mass., qualifies as both a hospital and skilled nursing facility. Sanatorium services are considered to be furnished by a sanatorium in its capacity as a hospital unless the individual elects to have them treated as sanatorium extended care services. Inpatient care in such an institution whether as hospital services or extended care services can begin or prolong a "spell of illness" (§ 3035).

Payment may be made to a participating sanatorium for as many as 120 days of covered Christian Science care in the same spell of illness--up to 90 days under the hospital provision and up to 30 days under the extended care provision. Payment for sanatorium extended care services may not be made for more than 30 days in each spell of illness, instead of the 100 days applicable to extended care services generally.

Payment can be made in the same spell of illness for both inpatient hospital services furnished in a hospital and those furnished by a sanatorium in its capacity as a hospital, but the total days of covered care cannot exceed the maximum of 90 days in a spell of illness (§ 3103).

Payment may not be made for sanatorium extended care services after an individual has been furnished posthospital inpatient extended care services during the same spell of illness in a qualified extended care facility other than a Christian Science sanatorium. Similarly, payment may not be made for posthospital extended care services furnished to an inpatient of an extended care facility other than a Christian Science sanatorium after he has been furnished, during the same spell of illness, covered sanatorium extended care services.

3025. DEFINITION OF HOME HEALTH AGENCY

A home health agency is a public agency or private organization, or a subdivision of such an agency or organization, which meets the following requirements:

A. It is primarily engaged in providing skilled nursing services and other therapeutic services, such as physical, speech, or occupational therapy, medical social services, and home health aide services. A public or voluntary nonprofit health agency may qualify by:

1. furnishing both skilled nursing and at least one other therapeutic service directly to patients, or

2. furnishing directly either skilled nursing services or at least one other therapeutic service and having arrangements with another public or voluntary nonprofit agency to furnish the services which it does not provide directly.

A proprietary agency can qualify only by providing directly both skilled nursing services and at least one other therapeutic service.

B. It has policies established by a professional group associated with the agency or organization (including at least one physician and at least one registered professional nurse) to govern the services, and provides for supervision of such services by a physician or a registered professional nurse.

C. It maintains clinical records on all patients.

D. It is licensed in accordance with State or local law or is approved by the State or local licensing agency as meeting the licensing standards (where State or local law provides for the licensing of such agencies or organizations).

E. It meets other conditions found by the Secretary of Health, Education, and Welfare to be necessary for health and safety.

A private organization which is not exempt from Federal income taxation under section 501 of the Internal Revenue Code of 1954 (sometimes referred to as a "proprietary" organization) must be licensed pursuant to State law. If the State has no licensing law for such organizations, a proprietary agency cannot participate in the health insurance program.

For services under hospital insurance, the term "home health agency" does not include any agency or organization which is primarily for the care and treatment of mental disease. There is no such restriction under supplementary medical insurance.

3025.1 Subdivisions of Agencies.--When the subdivision of an agency, such as the home care department of a hospital or the nursing division of a health department, wishes to participate as a home health agency, the subdivision must meet the conditions of participation and must maintain records in such a way that subdivision activities and expenditures attributable to services provided under the health insurance program are identifiable.

3025.2 Arrangements by Home Health Agencies.--

A. Arrangements made by a home health agency with others to furnish items or services must be such that receipt of payment by the home health agency for the services (whether in its own right or as agent) discharges the liability of the beneficiary or any other person to pay for the services.

Whether the services and items are furnished by the home health agency itself or by another agency under arrangements made by the home health agency, both must agree not to charge the patient for covered services and items and must also agree to return money incorrectly collected.

There are various situations in which a home health agency may have arrangements with another health organization or person to provide health services to its home health agency patients. Medicare always reimburses (and holds responsible) the primary provider. Thus, if a hospice or hospital provides some of its services through a contracting home health agency, it is the hospice or hospital which Medicare will reimburse; and it is the hospice or hospital which is responsible for the quality of care given by the home health agency under arrangements. There are 3 situations in which it is the home health agency which is the primary provider:

1. Where an agency or organization, in order to be approved to participate in the program makes arrangements with another agency or organization to provide the nursing or other therapeutic services which it cannot provide directly.

2. Where an agency or organization, which is already approved for participation, makes arrangements with others to provide services it does not provide.

3. Where an agency or organization, which is already approved for participation, makes arrangements with a hospital, skilled nursing facility, or rehabilitation center for services on an outpatient basis because the services involve the use of equipment which cannot be made available to the patient in his place of residence.

B. If an agency's subdivision (acting in its capacity as a home health agency) makes an arrangement with its parent agency for the provision of these items and/or services, there need not be a contract or formal agreement. If, however, the arrangement is made between the home health agency and another provider participating in the health insurance program (hospital, skilled nursing facility, or home health agency, and, in the case of physical therapy services, clinics, rehabilitation agencies, and public health agencies), there must be a written statement regarding the services to be provided and the financial arrangements.

C. If the arrangements are with an agency or organization which is not a qualified provider of services, there must be a written contract which includes all of the following:

1. A description of the services to be provided.

2. The duration of the agreement and how frequently it is to be reviewed.

3. A description of how personnel will be supervised.

4. A statement that the contracting organization will provide its services in accordance with the plan of treatment established by the patient's physician in conjunction with the home health agency's staff.

5. A description of the contracting organization's standards for personnel, including qualifications, functions, supervision, and inservice training.

6. A description of the method of determining reasonable costs and reimbursement by the home health agency for the specific services to be provided by the contracting organization.

7. An assurance that the contracting organization will comply with title VI of the Civil Rights Act.

D. If a home health agency notifies a beneficiary of noncoverage of services which another party has been furnishing under arrangements entered into by the agency, the initial notice, in and of itself, does not negate the contract between the agency and the other party. Unless the evidence shows that the contract has been formally terminated, the beneficiary is considered to still be the agency's patient and the other party to be the representative of the agency. Consequently, if upon initial notice that a service is no longer covered the other party continues to provide services to the patient, the other party is considered to be furnishing the services under arrangements with the home health agency, absent evidence to the contrary. Thus, if a beneficiary appeals the noncoverage of any or all of the arranged for services furnished after the notice, and a ruling is made in favor of the beneficiary, those services ruled on favorably would be reimbursable since they would constitute services furnished under arrangements by a certified home health agency. If the denial is sustained, however, the other party cannot bill the beneficiary for the denied services since the home health agency, not the other party, is responsible for the care rendered.

3025.3 Rehabilitation Centers.--When the services are of such a nature that they cannot be administered at the patient's residence and are administered at a rehabilitation center which is not participating in the program as a hospital, skilled nursing facility, or home health agency, the rehabilitation center must meet certain standards. The physical plant and equipment of such a rehabilitation center must meet all applicable State and local legal requirements for construction, safety, health, and design, including safety, sanitation and fire regulations, building codes, and ordinances.

3027. DEFINITION OF HOSPICE

A hospice is a public agency or private organization or a subdivision of either that is primarily engaged in providing care to terminally ill individuals and meets the conditions of participation for hospices, and has a valid provider agreement.

3027.1 Subdivisions of Organizations.—When a subdivision of an organization, such as the home care department of a hospital, wishes to participate as a hospice, the subdivision must meet the hospice conditions of participation and must maintain records in such a way that activities and expenditures attributable to services provided under the hospice program are identifiable.

3027.2 Arrangements by Hospices.—Hospices are required to provide core services directly, that is, nursing services, physician services, medical social services and counseling. Other covered services may be provided under arrangement.

A. Arrangements made by a hospice to furnish items or services must be such that receipt of payment by the hospice for the services discharges the liability of the beneficiary or any other persons to pay for the services. Whether the services and items are furnished by the hospice itself or by another organization under arrangments made by the hospice, both must agree not to charge the patient for covered services and items and must agree to return money incorrectly collected.

B. The agreement includes at least the following:

1. Identification of the services to be provided.

2. A stipulation that services may be provided only with the express authorization of the hospice.

3. The manner in which the contracted services are coordinated, supervised and evaluated by the hospice.

4. The delineation of the role(s) of the hospice and the contractors in the admission process, patient/family assessment and the interdisciplinary group care conferences.

5. Requirements for documenting that services are furnished in accordance with the agreement.

6. The qualifications of the personnel providing the services.

Physician Defined

3030. PHYSICIAN.

Physician means doctor of medicine, doctor of osteopathy (including osteopathic practitioner), doctor of dental surgery or dental medicine (within the limitations in §3030.2) doctor of podiatric medicine (within the limitations in §3030.3), or doctor of optometry (within the limitations of §3030.5) and with respect to certain specified treatment, a doctor of chiropractic legally authorized to practice by a State in which he performs this function. The services performed by a physician within these definitions are subject to any limitations imposed by the State on the scope of practice.

In all States, the issuance by the State of a license to practice medicine constitutes legal authorization. Temporary State licenses also constitute legal authorization to practice medicine. If State law authorizes local political subdivisions to establish higher standards for medical practitioners than those set by the State licensing board, such local standards will be used in determining whether a particular physician has legal authorization. If State licensing law limits the scope of practice of a particular type of medical practitioner, only the services within these limitations will be covered.

NOTE: The term "physician" does not include such practitioners as a Christian Science practitioner or naturopath.

3030.1 Doctors of Medicine and Osteopathy.--The requirement that a doctor of medicine must be legally authorized to practice medicine and surgery by the State in which he performs his services is met where a physician is licensed by the State to practice medicine and surgery.

A doctor of osteopathy who is legally authorized to practice medicine and surgery by the State in which he performs his services qualifies as a physician. In addition, a licensed osteopath or osteopathic practitioner qualifies as a "physician" to the extent that he performs services within the scope of his practice as defined by State law. For example, in some States osteopaths and osteopathic practitioners are limited in their practice to the manipulation of bones and muscles; such legally authorized services are covered.

3030.2 Dentists.--A dentist qualifies as a "physician" if he is a doctor of dental surgery or of dental medicine who is legally authorized to practice dentistry by the State in which he performs such function and who is acting within the scope of his license when he performs such functions. Such services include any otherwise covered service that may legally and alternatively be performed by doctors of medicine, osteopathy and dentistry; e.g., dental examinations to detect infections prior to certain surgical procedures, treatment of oral infections and interpretations of diagnostic X-ray examinations in connection with covered services. Because the general exclusion of payment for dental services has not been withdrawn, payment for the services of dentists is also limited to those procedures which are not primarily provided for the care, treatment, removal, or replacement of teeth or structures directly supporting the teeth. (See §3162 and Coverage Issues Manual §50-26.) The coverage of any given dental service is not affected by the professional designation of the "physician" rendering the service; i.e., an excluded dental service remains excluded and a covered dental service is still covered whether furnished by a dentist or a doctor of medicine or osteopathy.

3030.3 Doctors of Podiatric Medicine.--A doctor of podiatric medicine is included within the definition of "physician" but only with respect to those functions which he is legally authorized to perform in the State in which he performs them. This means that the professional services provided by a doctor of podiatric medicine within the scope of his applicable State license (except those services which are specifically excluded) are "physician's services" reimbursable on a reasonable charge basis under Part B.

A doctor of podiatric medicine may hold any of the following professional degrees of which the first three are the most common: Pod.D. or D. P. (Doctor of Podiatry), D.S.C. (Doctor of Surgical Chiropody), D.P.M. (Doctor of Podiatric Medicine), D.S.P. (Doctor of Surgical Podiatry), Graduate in Podiatry, Master Chiropodist, Graduate Chiropodist, or in a very few instances another podiatry degree. Within a particular State, all individuals holding any of these degrees are licensed to perform the same functions; however, there are variations from State to State as to the authorized scope of podiatric practice.

A doctor of podiatric medicine is considered a "physician," subject to the limitations cited, for any of the following purposes:

o making the required physician certification and recertification of the medical necessity for Part A and Part B services;

o establishing and periodically reviewing a home health plan of treatment; and

o serving as a member of a Utilization Review (UR) committee, but only if at least two of the physicians on the UR committee are doctors of medicine or osteopathy. The performance of these functions must also be:

— consistent with the policy of the hospital, skilled nursing facility or home health agency at which the functions are performed; and

— consistent with the scope of the professional service provided by a doctor of podiatric medicine as authorized by applicable State law.

A doctor of podiatric medicine is also considered a "physician," subject to the limitations cited, for purposes of the outpatient physical therapy (OPT) benefit. The OPT benefit requires, among other things, that an individual be under the care of a physician and that a plan of treatment for outpatient physical therapy services be established by such physician or by a qualified physical therapist. Since the OPT benefit also provides coverage of physical therapy services furnished by a physical therapist in independent practice, a podiatrist (when acting within the scope of his practice under State law) is considered a physician for purposes of meeting the OPT requirements when services are provided by an independently practicing physical therapist.

A doctor of podiatric medicine is not considered a "physician" for the purpose of performing any of the physician activities required to qualify an institution or organization as a skilled nursing facility or home health agency.

3030.4 Physicians in Federal Hospitals.--There are many physicians performing services in hospitals operated by the Federal Government--military hospitals, Veterans Administration hospitals, and Public Health Service hospitals. Normally the services provided by a physician in a Federal hospital are not reimbursable except when the hospital provides services to the public generally as a community institution. Such a physician working in the scope of his Federal employment may be considered as coming within the statutory definition of "physician" even though he may not have a license to practice in the State in which he is employed.

3030.5 Optometrists.--A doctor of optometry, legally authorized to practice optometry by the State in which he performs such function, is a "physician" as defined in the law with respect to the provision of any item or service the optometrist is authorized to perform by State law or regulation.

Prior to April 1, 1987, an optometrist was considered a physician only with respect to services related to the condition of aphakia (absence of the natural crystalline lens of the eye). The following are examples of examination services which were covered when furnished by optometrists if related to the condition of aphakia: case history, external examination, ophthalmoscopy, biomicroscopy, tonometry, visual fields, ocular motility, binocular function, and evaluation for contact lenses, if the optometrist furnishing these services was legally authorized to perform them.

NOTE: The exclusions from coverage concerning vision care services (see §3157) continue to apply, whether performed by doctors of medicine, osteopathy, or optometry.

Spell of Illness

3035. BENEFIT PERIOD (SPELL OF ILLNESS)

A benefit period is a period of time for measuring the use of hospital insurance benefits. It is a period of consecutive days during which covered services furnished to a patient, up to certain specified maximum amounts, can be paid for by the hospital insurance plan. For example, a patient is eligible for 90 days of hospital care in a benefit period and 100 days of extended care services during the same benefit period. A patient may be eligible for as many as 150 days of hospital care in a benefit period if he draws on his lifetime reserve. (See §3106.) As long as a person continues to be entitled to hospital insurance, there is no limit on the number of benefit periods he may have. The term "benefit period" is synonymous with "spell of illness." Since the term "spell of illness" could connote a single illness or a particular "spell" of sickness, the term "benefit period" is used in communications with the public.

A. Starting a Benefit Period.--A benefit period begins with the first day (not included in a previous benefit period) on which a patient is furnished inpatient hospital or extended care services by a qualified provider in a month for which the patient is entitled to hospital insurance benefits.

A provider qualified to start a benefit period is a hospital (including a psychiatric hospital) or SNF that meets all the requirements of the definition of such an institution. A hospital which meets all requirements in §3012.1 is also a qualified hospital for purposes of beginning a benefit period when it furnishes the patient covered inpatient emergency services. Thus, generally, the benefit period begins when covered inpatient services are initially furnished to an entitled individual. However, see discussion in §3622 on beginning a spell of illness with the noncovered care furnished by a nonparticipating provider. Also, see §3121.1A for beginning a benefit period for purposes of qualifying for posthospital home health benefits.

A "qualified hospital" in Canada or Mexico (see §3121.1C) is also a qualified provider for purposes of beginning a benefit period when it furnishes the patient covered inpatient hospital services. See §3121.1A for beginning a benefit period for the purpose of qualifying for posthospital home health benefits when the prior hospitalization was in a foreign hospital.

If a person is in a nonqualified institution and is subsequently transferred to a qualified hospital (general or psychiatric), his benefit period begins on admission to the qualified hospital.

Admission to a qualified SNF or to the SNF level of care in a swing bed hospital begins a benefit period even though payment for the services cannot be made because the prior hospitalization or transfer requirement has not been met. (See §3131.) Inpatient care in a Christian Science Sanatorium (whether as hospital or extended care services) can begin or prolong a benefit period.

B. Ending a Benefit Period.--The benefit period ends with the close of a period of 60 consecutive days during which the patient was neither an inpatient of a hospital nor of a SNF. To determine the 60-consecutive-day period, begin counting with the day the individual was discharged.

1. Definition of "Hospital" or "SNF" for Ending a Benefit Period.—It is important to note that a benefit period cannot end while a beneficiary is an inpatient in a SNF or hospital, even if the SNF or hospital does not meet all of the requirements that are necessary for starting a benefit period.

a. "Hospital."—In order to end a benefit period, for at least 60 consecutive days, a beneficiary cannot have been in a hospital which meets the initial requirement in the definitions in SS3010, 3012.1, or 3016. That is, the beneficiary cannot have been in a facility that is primarily engaged in providing, by or under the supervision of physician(s), to inpatients:

- Diagnostic and therapeutic services for medical diagnosis, treatment, and care of injured, disabled, or sick persons or rehabilitation services for injured, disabled, or sick persons; or
- Psychiatric services for the diagnosis and treatment of mentally ill persons; or
- Medical services for the diagnosis and treatment of tuberculosis.

A stay in a hospital outside the United States will prolong a benefit period. It may be assumed, in the absence of evidence to the contrary, that:

- A foreign hospital in which a beneficiary spent one or more days meets the requirement of the definition in S3010; and
- The beneficiary's statement about length and place of stay are correct.

b. "SNF."—Similarly, to end a benefit period, a beneficiary cannot have been an inpatient in a SNF for at least 60 consecutive days; where "SNF" (including one primarily for the care and treatment of mental diseases or tuberculosis) is defined as a facility which is primarily engaged in providing to inpatients skilled nursing care and related services for patients who require medical or nursing care, or rehabilitation services for injured, disabled, or sick persons.

For purposes of benefit period determinations, a facility or part of a facility that is licensed or certified solely as an intermediate care facility (ICF) is not a facility that meets the above requirement. Therefore, a facility or part of a facility licensed or certified solely as an ICF is not a "SNF" for benefit period determinations and a stay in such a facility or part of a facility will not prolong a benefit period. This is the case even if a Medicare SNF waiver payment has been made under SS3431.3 and 3431.4 for care provided in an ICF distinct part. A SNF waiver payment made consistent with those provisions will not convert an ICF distinct part into a "SNF" for purposes of benefit period determinations.

c. Examples.—An individual may be discharged from and readmitted to a hospital or SNF several times during a benefit period and still be in the same benefit period if 60 consecutive days have not elapsed between discharge and readmission. The stays need not be for related physical or mental conditions.

EXAMPLE 1: X was born 8/9/18. On 7/28/83, X entered a participating general hospital. After he had been in the hospital for 2 weeks, X was discharged on 8/11/83. On his doctor's orders, X entered a participating SNF on 8/15/83, and remained there until his discharge on 10/27/83. He had no further inpatient stays in 1983.

X's benefit period began on 8/1/83, the first day of the month he attained age 65 and was entitled to hospital insurance. The benefit period ended 12/25/83, the end of the 60-day period beginning with the date of his last discharge.

EXAMPLE 2: Y, over age 65, entered a participating general hospital on 7/28/83, for treatment of a heart condition. He was discharged on 8/11/83. On 8/20/83, Y entered a nonparticipating nursing home, which provided primarily skilled nursing care and related services. Y remained in this facility until his discharge on 10/27/83. On 12/25/83, Y was again admitted to a participating hospital because of injuries suffered in an accident. He was discharged on 1/13/84, and had no further inpatient stays in 1984.

Y's benefit period began on 7/28/83. His stay in the nursing home began less than 60 days after his hospital stay and the benefit period was continued even though the stay was not covered. The subsequent hospital stay began less than 60 days after the nursing home stay and continued the benefit period although the condition treated was unrelated to his prior stays. The benefit period ended on 3/13/84, the end of the 60-day period beginning with the day of last discharge.

EXAMPLE 3: Z, over age 65 and entitled to hospital insurance benefits, was admitted to General Hospital on 8/1/83, and discharged on 8/10/83 having received nonemergency hospital services. General Hospital met all the requirements in the definition of a hospital except those concerning utilization review and health and safety. While General Hospital met the minimum requirements for a prior-stay hospital, Z's benefit period did not begin with his admission to this hospital because (1) the hospital did not meet all of the requirements in the definition of a hospital; and (2) although the hospital satisfied the requirements for coverage of emergency services, Z did not receive emergency inpatient care. Z was admitted to Haven Convalescent Home on 8/20/83, and remained an inpatient of the home until his discharge on 3/1/84. He had no further inpatient stays in 1984. Haven Convalescent Home became a participating SNF on 1/1/84.

Z's benefit period began 1/1/84, the day Haven Convalescent Home was determined to be a qualified SNF and the services Z received from that date through discharge were extended care services even though they were not covered and, therefore, not charged against Z's Medicare SNF utilization. (The services were not covered posthospital extended care services because Z was not admitted to a participating SNF within 14 days after discharge from the hospital.). Z's benefit period ended 4/29/84, the end of the 60-day period beginning with the date of his discharge from the convalescent home.

2. Definition of "Inpatient" for Ending a Benefit Period.—Generally, a beneficiary is an "inpatient" of a SNF or hospital if the beneficiary is in the SNF or hospital (i.e., not on an outpatient basis). The type of care actually received is not relevant.

However, as a result of recent court orders, a different definition of "inpatient" applies in determining the end of a benefit period in some jurisdictions. That rule or definition is that a beneficiary was an inpatient in a SNF only if the beneficiary's care in the SNF met certain skilled level of care standards. The beneficiary must have needed and received a skilled level of care while in the SNF. This means that in order to have been an "inpatient," the beneficiary must have required skilled services on a daily basis and received daily skilled services which could, as a practical matter, only have been provided in a SNF on an inpatient basis. See standards (1) and (3) in the first paragraph of §3132. If these provisions were not met during the prior SNF stay, the beneficiary was not an inpatient of the SNF and, therefore, the prior SNF stay did not prolong a benefit period. This rule applies when adjudicating claims from hospitals and SNFs located in: Maine Massachusetts, New Hampshire, Rhode Island, Connecticut, New York, Vermont, Delaware, New Jersey, Pennsylvania, The Virgin Island, Kentucky, Michigan, Ohio, Puerto Rico, and Tennessee. The rule applies to all determinations made on or after January 1, 1985, whether they are initial decisions or determinations on reconsideration. The rule is also effective for determinations received by the beneficiary (or the beneficiary's representative) on or after August 7, 1982, for claims from hospitals and SNFs in Maine, New Hampshire, Vermont, Massachusetts, Connecticut and Rhode Island.

In each of the 16 jurisdictions where the special rule applies, use the following presumptions for determining whether the skilled level of care standards described above were met during a prior SNF stay:

Presumption 1: A beneficiary's care in a SNF met the skilled level of care standards described above if a Medicare or Medicaid SNF claim was paid for the care, unless such payment was made under waiver of liability rules.

Presumption 2: A beneficiary's care in a SNF did not meet the skilled level of care standards described above if a claim was paid for the services provided in the SNF under Medicare waiver of liability rules pursuant to §3431A (i.e., not pursuant to §§3431.3 and 3431.4).

Presumption 3: A beneficiary's care in a SNF met the skilled level of care standards described above if a SNF claim was paid for the services provided in the SNF under Medicare waiver of liability rules pursuant to §§3431.3 and 3431.4.

Presumption 4: A beneficiary's care in a SNF did not meet the skilled level of care standards described above if a Medicaid claim for the services provided in the SNF was denied on the grounds that the services received were not at the skilled level of care (even if paid under applicable waiver of liability provisions).

Presumption 5: A beneficiary's care in a SNF shall be presumed to have met the skilled level of care standards described above if a Medicaid or Medicare SNF claim for the services provided in the SNF was denied on grounds other than that the services were not at the skilled level of care.

Presumption 6: A beneficiary's care in a SNF shall be presumed not to have met the skilled level of care standards described above if a Medicare claim for the services provided in the SNF was denied on the grounds that the services were not at the skilled level of care and no waiver of liability payment was made under §3431A.

Presumption 7: A beneficiary's care in a SNF shall be presumed not to have met the skilled level of care standards described above if no Medicare or Medicaid claim was submitted by the SNF.

Presumptions (1) through (4) cannot be rebutted. Thus, prior Medicare and Medicaid claim determinations that necessarily required a level of care determination for the time period under consideration are binding for purposes of a later benefit period calculation. Presumptions (5) through (7) can be rebutted by beneficiary showings that the level of care needed or received is other than that which the presumption would dictate.

Presumption 6 can be rebutted because the Medicare skilled level of care definition for coverage purposes is broader than the skilled level of care definition used here for benefit period determinations. Specifically, requirement (2) in the first paragraph of §3132 (regarding the requirement for prior hospital care related to the SNF care) is included for meeting Medicare SNF coverage requirements but is not included in the standard for benefit period determinations. Therefore, Medicare payment could have been denied for a SNF stay on level of care grounds (i.e., not even waiver payment was made), because of noncompliance with that requirement, even though skilled level of care requirements for benefit period determinations were in fact met by the SNF stay. Consequently, when there has been a Medicare SNF payment denial on level of care grounds the beneficiary must be given the opportunity to demonstrate that he still needed and received a skilled level of care for purposes of benefit period determinations.

This issue does not arise when there has been a Medicaid SNF claim denied on level of care grounds. That is because the Medicaid skilled level of care standard for SNF coverage is the same as Medicare's skilled level of care standard for benefit period determinations. Therefore, when a Medicaid SNF claim is denied on level of care grounds, that level of care determination is binding for purposes of a benefit period determination. (See presumption 4.)

Medicare "no payment" bills submitted by a SNF result in Medicare program payment determinations (i.e., denials). Therefore, such "no payment" bills will trigger the appropriate presumptions. This will also be the case in any State where the Medicaid program utilizies "no payment" bills which lead to Medicaid program payment determinations. If a SNF erroneously fails to submit a Medicare claim (albeit a no-pay claim) when Medicare rules require such submission, request compliance with Medicare's rules. Once the no-pay bill is submitted and Medicare has made a denial, the applicable presumption (other than presumption 7) will be triggered.

Where the presumptions are rebuttable (i.e., (5) through (7)), rebuttal showings are to be permitted at both intermediary determination levels under 42 CFR, Part 405, Subpart G (i.e., a rebuttal showing regarding the status of a prior SNF stay could be made at the time that an inpatient claim is submitted and/or at the reconsideration level). Evaluate rebuttal documentation even if the presumption being rebutted was triggered by a Medicaid denial.

Notes:

1. Except as noted below, this special rule for the 16 jurisdictions listed above is applicable in all cases where a prior SNF stay could affect benefit period status; not just in those instances where a beneficiary is in "exhausted" or "copay" status and is therefore seeking to renew a benefit period. The rule has equal application where it results in the beneficiary having to start a new benefit period and pay a new deductible, without receiving an increase in the amount of Medicare benefits paid. However, for claims from hospitals and SNFs in Maine, New Hampshire, Vermont, Massachusetts, Connecticut, and Rhode Island, the pertinent court decision (i.e., Mayburg v. Heckler, 574 F. Supp. 922 (D. Mass. 1983), on appeal, No. 84-1022 (1st Cir., August 2, 1984)) required that the rule be applicable to some determinations which had already been made. In those instances, i.e., where a reopening is required to implement the rule, the special provision is applicable only in cases where the beneficiary is in an "exhausted" or "co-pay" benefits status such that application of the rule would benefit him or her. Reopenings would not be done to apply the rule in instances where the beneficiary would not be benefited (i.e. there would be no reopenings unless the beneficiary would experience a net gain in Medicare beneficiary payments).

2. Application of the special rule and presumptions regarding SNF "inpatient" status is based strictly on the location of the SNF or hospital whose Medicare inpatient claim is being adjudicated (i.e., it applies to claims from SNFs and hospitals in the 16 jurisdictions described above). Application of the rule is not determined by the location of the SNF where any prior stay occurred.

A3030 and A3030.3 Podiatrists.--The phrase "doctor of podiatry or surgical chiropody" in Section 1861(r)(3) of the Social Security Act has been changed in the 1980 Amendments to read "doctor of podiatric medicine." Effective January 1, 1981, a podiatrist is considered a "physician" for purposes of constituting a member of a UR committee if at least two of the other committee physician members are doctors of medicine or osteopathy. In addition, the podiatrists's performance of these utilization review functions must be: (1) consistent with the policy of the hospital or skilled nursing facility in which he performs them; (2) functions which the podiatrist is legally authorized by the State to perform.

Effective January 1, 1981, a podiatrist is considered a "physician" for the purpose of making required physician certification and recertification of medical necessity for Part A and Part B services if the podiatrist's performance of these functions is: (1) consistent with the policy of the institution or agency with respect to which he performs them; and (2) legally authorized by the State.

Effective January 1, 1981, a podiatrist is considered a "physician" for the purpose of establishing and periodically reviewing a home health plan of treatment if the podiatrist's performance of these functions is: (1) consistent with the policy of the institution or agency with respect to which he performs them; and (2) is legally authorized by the State. (See Section 3120.3.)

A3040.—MEDICARE SECONDARY TO EMPLOYER GROUP HEALTH PLANS FOR INDIVIDUALS ENTITLED ON THE BASIS OF END STAGE RENAL DISEASE

A3040.1. General—Section 2146 of P.L. 97-35, the Omnibus Budget Reconciliation Act of 1981, effective October 1, 1981, provides for the coordination of benefits between Medicare and employer group health insurance plans during a 12-month period in the case of individuals entitled to Medicare solely on the basis of end-stage renal disease (ESRD). Under this provision Medicare is secondary payor if an employer group health plan covers the same services. This provision does not apply to beneficiaries entitled to Medicare benefits on the basis of being 65 years of age or because of disability.

For purposes of this instruction, an employer group health plan means a health plan that is of, or contributed to by, an employer, and that provides medical care directly or through other methods such as insurance or reimbursement to current or former employees, or to current or former employees and their families.

The amendment applies to services furnished on or after October 1, 1981 to entitled individuals whose 12-month periods began in October 1981 or later. Thus it can apply to services furnished as early as October 1981 where there is no waiting period for ESRD entitlement (transplant or self-dialysis training cases), but will not affect services rendered earlier than January 1982 in cases in which Medicare entitlement follows a 3-month waiting period.

Providers have been instructed to annotate the remarks item of all claims for services furnished on and after October 1, 1981 to ESRD beneficiaries whose entitlement began in October 1981 or later, to indicate whether or not the individual is covered under an employer group health plan. The name and address of the plan and the beneficiary's plan identification number should also be entered.

A3040.2 Period in Which Medicare is Secondary to Employer Group Health Plans.—Medicare benefits are not payable or are subject to recovery to the extent that benefits have been paid, or will be paid promptly by an employer group health plan for services furnished during the 12-month period which begins with the earlier of (1) the month in which the individual starts a regular course of renal dialysis or (2) in the case of an individual who receives a kidney transplant, the first month in which the individual is eligible for Medicare benefits. Medicare is the secondary payor under these circumstances during the portion of this 12-month period in which the individual is entitled to Medicare. Since Medicare entitlement usually begins with the third month after the month in which the individual starts a regular course of dialysis, Medicare will usually be the secondary payor for the first 9 months of an indivdual's entitlement. However, for those individuals who undertake a course in self-dialysis training or who receive a kidney transplant during the 3-month waiting period, Medicare may be the secondary payor for up to the first 12 months of the individual's Medicare entitlement. Medicare as secondary payor may make supplementary payments if payment by the employer plan is less than the amount charged. Payments made by Medicare initially as a primary payor e.g., where the intermediary is not aware that the beneficiary has coverage under an employer group health plan or where prompt payment by the employer plan cannot be assumed, will be subject to recovery.

A3040.3 Actions by Intermediary Until Permanent Instructions are Issued.—Intermediaries should prepare for implementation of this provision by taking the following actions:

1. Intermediaries should keep a record of all claims by providers and renal dialysis facilities for services furnished on or after October 1, 1981 through the 12th month of entitlement to persons who became entitled to Medicare on the basis of ESRD in October 1981 or later. Intermediaries should utilize the annotations which providers are required to make on their claims in accordance with Section A3040.1 to help them maintain these records. When instructions are issued, these claims will be reexamined for possible recoupment of the Medicare reimbursement if it is determined that the services are subject to this provision. It is not necessary to search your records or to initiate development concerning claims already paid.

2. Benefits should ordinarily be paid as usual for services rendered individuals entitled to Medicare on the basis of ESRD. If it should come to the intermediary's attention that an employer group health plan has already paid for services furnished on or after October 1, 1981 that could be subject to this provision, no Medicare payment should be made. Such claims should not be processed to completion. They should be held until instructions are issued on how to calculate the amount of Medicare secondary reimbursement. The beneficiary and the provider should be informed of the status of the claim.

Inpatient Hospital Services

3101. COVERED INPATIENT HOSPITAL SERVICES.

Patients covered under hospital insurance are entitled to have payment made on their behalf for inpatient hospital services. (Inpatient hospital services do not include extended care services provided by hospitals pursuant to swing bed approvals (see § 3130.1).)

In any case where Part A payment can be made, all nonphysician services delivered to an inpatient of a hospital (except pneumococcal vaccine and its administration and hepatitis B vaccine and its administration) must be treated as "inpatient hospital services," to be paid for only by Part A.

Beginning with hospital cost reporting periods occurring on or after October 1, 1983, while some hospitals continue to be paid on a reasonable cost basis for inpatient hospital services, most come under a Medicare prospective payment system (PPS). Under PPS, Medicare will pay a fixed amount for a case. That amount is determined by the Diagnosis Related Group (DRG) into which the case falls. This means that a given all or nothing Medicare payment will be made for a case, based on the DRG assigned, so long as the admission is medically necessary and appropriate. Futhermore, under PPS, if an appropriately admitted case results in an extraordinarily long stay (i.e., becomes a day outlier) or results in the expenditure of extraordinary resources (i.e., becomes a cost outlier) additional money, known as outlier payment, is added to the regular Medicare prospective payment amount for the particular DRG.

Therefore, in PPS hospitals, coverage restrictions continue but noncovered care can have only three effects: (1) lead to denial of an admission; (2) in appropriately admitted cases where a noncovered procedure was performed, result in payment of a different DRG (i.e., one which excludes payment for the noncovered procedure); or (3) in appropriately admitted cases that become day or cost outlier cases, lead to denial of some or all of an outlier payment. The following examples illustrate this principle. If care is noncovered because a patient does not need to be hospitalized, deny the admission and make no Part A (i.e., PPS) payment unless paid under waiver of liability. If a patient is appropriately hospitalized but receives (beyond routine services) only noncovered care (e.g., acupuncture), deny the admission. (Note: Do not deny an admission so long as inpatient hospital care was medically necessary and covered services required for the adequate treatment and/or diagnosis of the patient's illness were provided, even if noncovered care was also rendered. Under PPS, Medicare assumes that it is paying for only the covered care rendered whenever covered services needed to treat and/or diagnose the illness were in fact provided.) If a noncovered procedure is provided along with covered nonroutine care, a DRG change rather than an admission denial might occur. If, noncovered procedures such as acupuncture are elevating costs into the cost outlier category or prolonging the patient's stay into day outlier status, outlier payments is denied in whole or in part.

For purposes of prospective payments, most of the subsequent discussion regarding coverage of inpatient hospital services is relevant only in the context of determining the appropriateness of admissions, which DRG, if any, to pay, and the appropriateness of payment for any outlier cases. (See § 3690ff for related operational instructions).

An inpatient is a person who has been admitted to a hospital for bed occupancy for purposes of receiving inpatient hospital services. Generally, a person is considered an inpatient if formally admitted as an inpatient with the expectation that he will remain at least overnight and occupy a bed even though it later develops that he can be discharged or transferred to another hospital and does not actually use a hospital bed overnight.

The physician or other practitioner responsible for a patient's care at the hospital is also responsible for deciding whether the patient should be admitted as an inpatient. The physician should use a 24-hour period as a benchmark, i.e., he or she should order admission for patients who are expected to need hospital care for 24 hours or more, and treat other patients on an outpatient basis. However, the decision to admit a patient is a complex medical judgment which can be made only after the physician has considered a number of factors, including the patient's medical history and current medical needs, the types of facilities available to inpatients and to outpatients, the hospital's bylaws and admissions policies, and the relative appropriateness of treatment in each setting. Factors to be considered when making the decision to admit include such things as:

- The severity of the signs and symptoms exhibited by the patient;
- The medical predictability of something adverse happening to the patient;
- The need for diagnostic studies that appropriately are outpatient services (i.e., their performance does not ordinarily require the patient to remain at the hospital for 24 hours or more) to assist in assessing whether the patient should be admitted; and
- The availability of diagnostic procedures at the time when and at the location where the patient presents.

Admissions of particular patients are not covered or noncovered solely on the basis of the length of time the patient actually spends in the hospital.

In certain specific situations coverage of services on an inpatient or outpatient basis is determined by the following rules:

- Minor Surgery or Other Treatment.--When a patient with a known diagnosis enters a hospital for a specific minor surgical procedure or other treatment that is expected to keep him in the hospital for only a few hours (less than 24), he is considered an outpatient for coverage purposes regardless of: the hour he came to the hospital; whether he used a bed; and whether he remained in the hospital past midnight.

- Renal Dialysis.--Renal dialysis treatments are usually covered only as outpatient services but may under certain circumstances be covered as inpatient services depending on the patient's condition. A patient who is staying at his home, who is ambulatory, whose condition is stable and who comes to the hospital for routine chronic dialysis treatments, and not for a diagnostic workup or a change in therapy, is considered an outpatient. On the other hand, a patient undergoing short-term dialysis until his kidneys recover from an acute illness (acute dialysis), or a person with borderline renal failure who develops acute renal failure every time he has an illness and requires dialysis (episodic dialysis) is usually an inpatient. A patient may begin dialysis as an inpatient and then progress to an outpatient status.

Under Medicare, the peer review organization (PRO) for each hospital is responsible for deciding, during review of inpatient admissions on a case-by-case basis, whether the admission was medically necessary. The PRO is authorized by the Medicare law to make these judgments, and the judgments are binding for purposes of Medicare coverage. In making these judgments, however, PROs consider only the medical evidence which was available to the physician at the time an admission decision had to be made, and do not take into account other information (e.g., test results) which became available only after admission, except in cases where considering the post-admission information would support a finding that an admission was medically necessary.

NOTE: When patients requiring extended care services occupy beds in a hospital, they are considered inpatients of the hospital. In such cases, the services furnished in the hospital will not be considered extended care services, and payment may not be made under the program for such services. (See §§ 3421.2 and 3130.1 for exceptions to this rule). Such a situation may arise where the hospital is part of an institution having a distinct part SNF, and either there is no bed available in the distinct part SNF or for any other reason the institution fails to place the patient in the appropriate bed. The same rule applies where the hospital is a separate institution. For the same reason, where patients who require inpatient hospital services occupy beds in a skilled nursing facility, payment cannot be made on their behalf for the services furnished to them in the SNF. (See § 3133).

(If a patient received items or services in excess of, or more expensive than, those for which payment can be made, payment will be made only for the reasonable cost of the covered items or services or for only the appropriate prospective payment amount. This provision applies not only to inpatient services but to all hospital services under Parts A and B of the program).

(If a patient received items or services in excess of, or more expensive than, those for which payment can be made, payment will be made only for the reasonable cost of the covered items or services. This provision applies not only to inpatient services but to all hospital services under Parts A and B of the program).

3101.1 Bed and Board.--

A. Accommodations--General.-- Effective for accounting periods beginning after December 31, 1977, Health Care Financing Administration regulations provide for apportionment of routine service costs on the basis of average per diem cost under both the Departmental and the Combination methods of cost apportionment. Thus, the program will pay the same amount for routine services whether the patient has a private room not medically necessary, a private room medically necessary (Medicare does not pay for deluxe accommodations in any case), a semiprivate room (two, three, or four-bed accommodations), or ward accommodations, if its ward accommodations are consistent with program purposes (see F below).

A provider having both private and semiprivate accommodations may nevertheless charge the patient a differential for a private room if:

1. The private room is not medically necessary; and

2. The patient (or relative or other person acting on his behalf) has requested the private room, and the provider informs him at the time of the request of the amount of the charge.

The private room differential may not exceed the difference between the customary charge for the acommodations furnished and the most prevalent semiprivate accommodation rate at the time of the patients admission.

Where the provider bills for a private room as a covered service, i.e., shows the charge for the room as a covered charge on the HCFA-1453, the intermediary will deem the private room to be medically necessary. Where the provider, on the other hand, shows a private differential as a noncovered charge, the intermediary will assume that the private room is not medically necessary.

If the beneficiary (or his representative) protests a charge for the private room on the grounds that the privacy was medically necessary, such protest will, if not in written form, be reduced to writing and forwarded to the intermediary. The intermediary will then develop the facts and make a specific determination regarding the medical necessity of the private room. (If an intermediary receives many protests of this kind, the provider may need guidance on what constitutes medical necessity for privacy). If the protest is received after the claim is processed, it will be treated as a request for reconsideration.

If at any time in the course of development (or thereafter within the period when the determination is not administratively final under § 3799FF the provider acknowledges that the private room was medically necessary, the intermediary will make an immediate finding to this effect.

Where it is necessary to develop the medical necessity of a private room, the guidelines in subsections B and C will apply.

B. Medical Necessity: Need for Isolation.--A private room is medically necessary where isolation of a beneficiary is required to avoid jeopardizing his health or recovery, or that of other patients who are likely to be alarmed or disturbed by the beneficiary's symptoms or treatment or subjected to infection by the beneficiary's communicable disease. For example, communicable diseases, heart attacks, cerebrovascular accidents, and psychotic episodes may require isolation of the patient for certain periods. (See C below concerning medical necessity not based on need for isolation.)

In establishing the medical necessity for isolation, the date of the physician's written statement is not controlling, nor is the presence of a written statement. The crucial question is whether a private room was ordered by the physician because it is necessary for the health of the patient himself or of other patients. In the absence of such an order, a patient who requested the room with knowledge of the amount of the charge may be charged appropriately, even though a physician subsequently submits a statement that the room was medically necessary. There may be cases in which the physician's written statement of medical necessity, though dated after admission or even after discharge, merely confirms an order made informally at or before the time the beneficiary was admitted to the private room (e.g., the physician made arrangements by phone for the patient's admission, gave the diagnosis, and stated the beneficiary would need a private room). In such cases, assuming that the private room was medically necessary, the lack of a written statement by the physician, or the fact that the written statement was prepared after discharge, would not be controlling. The patient may not be charged.

C. Medical Necessity: Admission Required and Only Private Rooms Available.--A private room is considered to be medically necessary even though the beneficiary's condition does not require isolation if he needs immediate hospitalization (i.e., his medical condition is such that hospitalization cannot be deferred) and the hospital has no semiprivate or ward accommodations available at the time of admission.

Effective August 1, 1972, medical necessity will be considered to exist in an SNF where semiprivate and ward accommodations are unavailable and admission cannot be deferred until such accommodations become available because it would endanger the beneficiary's health or recovery, require that the beneficiary's hospitalization be prolonged after he is ready for discharge to an SNF (§ 3421.2), or require that he forfeit program coverage by delaying admission beyond the applicable transfer period. (See §§ 3131.3 and A3131B).

It need not be considered whether semiprivate or ward accommodations were available in some other accessible hospital or SNF. Where medical necessity exists, the provider may not charge the beneficiary a private room differential until semiprivate or ward accommodations become available. Thereafter the provider may transfer the patient to the nonprivate accommodations, or allow him to continue occupancy of the private room, subject to an appropriate differential charge (described in A above) if he requests the private room with knowledge of the amount of the charge.

If the admission could be deferred until semiprivate or ward accommodations become available, the beneficiary should be informed of the amount of the differential he must pay for a private room if he wishes to be admitted immediately; the beneficiary may be charged the specified differential if he has been admitted to the private room at his request (or at the request of his representative) with knowledge of the amount of the charge.

D. Charges for Deluxe Private Room.--A beneficiary found to need a private room (either because he needs isolation for medical reasons or because he needs immediate admission when no other accommodations are available) may be assigned to any of the provider's private rooms. He does not have the right to insist on the private room of his choice, but his preferences should be given the same consideration as if he were paying all provider charges himself. The program does not, under any circumstances, pay for personal comfort items. Thus, the program does not pay for deluxe accommodations and/or services; these would include a suite, or a room substantially more spacious than is required for treatment, or specially equipped or decorated, or serviced for the comfort and convenience of persons willing to pay a differential for such amenities. If he (or his representative) requests such deluxe accommodations, the provider should advise that there will be a charge, not covered by Medicare, of a specified amount per day (not exceeding the differential defined in the next sentence) and may charge him that amount for each day he occupies the deluxe accommodations. The maximum amount he may be charged for such accommodations is the differential between the most prevalent private room rate (see § 3635.1 for determination of most prevalent private room rate) at the time of admission and the customary charge for the room occupied. The beneficiary may not be charged this differential if he (or his representative) does not request the deluxe accommodations.

The beneficiary may not be charged such a differential in private room rates if that differential is based on factors other than personal comfort items. Such factors might include differences between older and newer wings, proximity to lounge, elevators or nursing stations, desirable view, etc. Such rooms are standard one-bed units and not deluxe rooms for purposes of this instructions, even though the provider may call the- deluxe and have a higher customary charge for them. No additional charge may be imposed upon the beneficiary who is assigned to a room which may be somewhat more desirable because of these factors.

E. All-Private Room Providers.--If the patient is admitted to a provider which has only private accommodations, and no semiprivate or ward accommodations, medical necessity will be deemed to exist for the accommodations furnished. Beneficiaries may not be subjected to an extra charge for a private room in an all-private room provider.

F. Wards.--The law contemplates that Medicare patients should not be assigned to ward accommodations except at the patient's request or for a reason consistent with the purposes of the health insurance program.

When ward accommodations are furnished at the patient's request or for a reason determined to be consistent with the program's purposes, payment will be based on the average per diem cost of routine services (see paragraph A above). Where ward accommodations are assigned for other reasons, the law provides what may be a substantial penalty. (See 2 below.)

Any request by the patient (or relative or other person responsible for his affairs) for ward accommodations must be obtained by the provider in writing and kept in its files.

1. Assignment Consistent with Program Purposes.--It is considered to be consistent with the program's purposes to assign the patient to ward accommodations if all semiprivate accommodations are occupied, or the facility has no semiprivate accommodations. However, the patient must be moved to semiprivate accommodations if they become available during his stay.

Some hospitals, and possibly some skilled nursing facilities, have a policy of placing in wards all patients who do not have private physicians. Such a practice may be consistent with the purposes of the program if the intermediary determines that the ward assignment inures to the benefit of the patient. In making this determination, the principal consideration is whether the assignment is likely to result in better medical treatment of the patient (e.g., it facilitates necessary medical and nursing supervision and treatment). The intermediary should ask a provider having this policy to submit a statement describing how the assignments are made, their purpose, and the effect on the care of patients so assigned.

If the intermediary makes a favorable determination on a practice affecting all ward assignments of Medicare patients in the institution, a reference should be made on the appropriate billing form for patients whom the hospital assigned a ward pursuant to such practice.

2. Assignment Not Consistent with Program Purposes.--It not consistent with the purposes of the law to assign a patient ward ccommodations on the basis of his social or economic status, his national origin, race, or religion, or his entitlement to benefits as a Medicare patient, or any other such discriminatory reason. It is also inconsistent with the purposes of the law to assign patients to ward accommodations merely for the convenience or financial advantage of the institution.

If a ward assignment is made neither at the patient's request nor for a reason consistent with the purpose of the program, the reimbursement to the provider for routine services is decreased by the difference between the institution's customary charges for semiprivate accommodations at the most prevalent rate (see G below) at the time of the patient's admission and the charge customarily made for the ward accommodations furnished the patient. The reduction in payment, when applicable, will be made at the end-of-year settlement.

When the intermediary cannot ascertain from the billing form the reason for a ward assignment, it need not develop further where application of the formula would not result in a reduction in payment to the provider; i.e., there is no difference in the provider's customary charges for semiprivate and ward accommodations.

EXAMPLE: The reasonable cost for routine services in Hospital X is $72 per day. The most prevalent customary charge for a semiprivate room is $77 per day, while $70 per day is the customary charge for ward accommodations. In such a case, development of the reason for the ward assignment will be necessary. If it is determined that the patient was assigned to a ward neither at his request nor for a reason consistent with the purposes of the program, the hospital will be paid only $65 per day for the ward accommodations, computed as follows: $72 (the reasonable cost for routine services) minus a differential of $7 (obtained by subtracting $70 from $77). However, if it is determined that the patient was assigned to the ward at his own request or for a reason consistent with the purposes of the program, the hospital will be paid $72, i.e., the reasonable cost of routine services.

G. Charges.--Customary charges means amounts which the hospital or skilled nursing facility is uniformly charging patients currently for specific services and accommodations. The most prevalent rate or charge is the rate which applies to the greatest number of semiprivate or private beds in the institution.

3101.2 Nursing and Other Services.--Nursing and other related services, use of hospital facilities, and medical social services ordinarily furnished by the hospital for the care and treatment of inpatients are covered under hospital insurance.

NOTE: The services of a private-duty nurse or other private-duty attendant are not covered. Private-duty nurses or private-duty attendants are registered nurses, licensed practical nurses, or any other trained attendant whose services ordinarily are rendered to, and restricted to, a particular patient by arrangement between the patient and the private-duty nurse or attendant. Such persons are engaged or paid by an individual patient or by someone acting on his behalf, including a hospital that initially incurs the costs and looks to the patient for reimbursement for such noncovered services.

Where the hospital acts on behalf of a patient, the services of the private-duty nurse or other attendant under such an arrangement are not inpatient hospital services regardless of the control which the hospital may exercise with respect to the services rendered by such private-duty nurse or attendant.

A. Anesthetist Services.--If the hospital engages the services of a nurse anesthetist or other nonphysician anesthetist (either on a salary or fee-for-service basis) under arrangements which provide for billing to be made by the hospital, the cost of the service when provided to an inpatient would be covered under Part A.

B. Medical Social Services to Meet the Patient's Medically Related Social Needs.--Medical social services are services which contribute meaningfully to the treatment of a patient's condition. Such services include, but are not limited to, (a) assessment of the social and emotional factors related to the patient's illness, his need for care, his response to treatment, and his adjustment to care in the facility; (b) appropriate action to obtain case work services to assist in resolving problems in these areas; (c) assessment of the relationship of the patient's medical and nursing requirements to his home situation, his financial resources, and the community resources available to him in making the decision regarding his discharge.

3101.3 Drugs and Biologicals.--Drugs and biologicals for use in the hospital, which are ordinarily furnished by the hospital for the care and treatment of inpatients are covered.

Three basic requirements must be met for a drug or biological furnished by a hospital to be a covered hospital service.

- The drug or biological must represent a cost to the institution in rendering services to the beneficiary.
- It must either be included, or approved for inclusion, in the U.S. Pharmacopoeia, the National Formulary, or the U.S. Homeopathic Pharmacopoeia; or, except for those unfavorably evaluated, in AMA Drug Evaluations (the successor publication to New Drugs) or Accepted Dental Therapeutics (the successor publication to Accepted Dental Remedies); or be approved by the pharmacy and drug therapeutics or equivalent committee of the medical staff of the hospital for use in the hospital.
- Use of the drug or biological must be safe and effective and otherwise reasonable and necessary.

Drugs or biologicals approved for marketing by the Food and Drug Administration (FDA) are considered safe and effective for purposes of this last requirement when used for indications specified in the labeling. Therefore, use of an FDA-approved drug or biological is covered if:

- o it was administered on or after the date of the FDA's approval;
- o it is reasonable and necessary for the individual patient; and
- o all other applicable coverage requirements are met.

Drugs and biologicals which have not received final marketing approval by the FDA are not covered unless you receive instructions from HCFA to the contrary. For specific guidelines of Group C cancer drugs and other covered/non-covered drug issues refer to the Coverage Issues Manual.

However, FDA-approved drugs are used for indications other than those specified on the labeling. As long as the FDA has not specified such use as nonapproved, coverage is determined taking into consideration the generally accepted medical practice in the community. For example, the labeling of certain chemotherapeutic drugs indicates their use in the therapy of specified types of cancer. However, based on experience and empirical evidence, physicians may prescribe these drugs for a wider range of cancer treatments than what is indicated in the labeling. Under these conditions, these drugs would be covered unless the PRO determines that such use is not medically reasonable and necessary in the individual case.

Determinations as to whether use of a drug or biological is reasonable and necessary for an individual patient are the responsibility of the Peer Review Organization (PRO).

A hospital stay solely for the purpose of use of a drug or biological that is determined not reasonable and necessary is not covered.

A. Drugs Included in the Drug Compendia.--Cover only those drugs and biologicals included, or approved for inclusion, in the latest official edition or revision of the compendia as previously listed.

Where a drug is excluded from coverage because it is unfavorably evaluated in either the AMA Drug Evaluations or Accepted Dental Therapeutics, the exclusion applies to all uses for which the drug or biological was so unfavorably evaluated.

Drugs and biologicals are considered "approved for inclusion" in a compendium if approved under the procedure established by the professional organization responsible for revision of the compendium.

B. Approval by Pharmacy and Drug Therapeutics Committee.--A pharmacy and drug therapeutics or equivalent committee is a medical staff committee which confers with the hospital pharmacist in the formulation of policies pertaining to drugs. Drugs and biologicals approved for use in the hospital by such a committee are covered only if the committee develops and maintains a formulary or list of drugs accepted for use in the hospital. The committee need not function exclusively as a pharmacy and drug therapeutics committee buy may also carry on other medical staff functions.

Drugs and biologicals are considered approved for use in the hospital if selected for inclusion in the hospital drug list of formulary under the procedure of the committee established for that purpose. Express approval is required; the fact that a drug or biological has not been specifically determined to be unacceptable for use in the hospital does not constitute approval.

Drugs and biologicals are covered if approved for general use in the hospital, or if approved for use by a particular patient or group of patients. Approval by a pharmacy and drug therapeutics committee is an alternative to approval for inclusion of the drug or biological in an approved drug compendium (see A above); such approval does not preclude the need for a determination of medical necessity. An investigational drug is not considered to meet the reasonable and necessary test since its efficacy has not yet been established. The decision of individual hospitals should not transcend the determinations of the Food and Drug Administration and Public Health Service in respect to the safety and effectiveness of drugs. Therefore, even if approved by an appropriate hospital committee, the reasonable cost of an investigational or other nonapproved drug or biological (e.g., Laetrile) cannot be reimbursed. This exclusion from payment applies whether or not the drug or biological is administered during the course of an otherwise covered hospital stay, since payment may not be made for items and services which are not reasonable and necessary. A hospital stay solely for the purpose of administering a drug or biological which is not reasonable and necessary, including an investigational drug or biological, is not covered and the drug or biological itself is not covered.

C. Combination Drugs.--Combination drugs are covered if the combination itself or all of the therapeutic ingredients of the combination are included, or approved for inclusion, in any of the designated drug compendia. Any combination drug approved for use in the hospital by the pharmacy and drug therapeutics or equivalent committee is covered.

D. Drugs Specially Ordered for Inpatients.--Coverage is not limited to drugs and biologicals routinely stocked by the hospital; a drug or biological not stocked by the hospital which the hospital obtains for the patient from an outside source, such as a community pharmacy, can also be covered.

Drugs and biologicals not included in the drug list or formulary maintained by the hospital's pharmacy and drug therapeutic's committee may be covered if the hospital has a policy which permits such drugs to be furnished to a patient at the special request of a physician. However, in order to be covered, such drugs and biologicals must be included, or approved for inclusion, in one of the designated drug compendia. (In addition, a combination drug, or all of its therapeutic ingredients, would have to be included or approved for inclusion in one of the compendia.)

E. Drugs for Use Outside the Hospital.--Drugs and biologicals furnished by a hospital to an inpatient for use outside the hospital are, in general, not covered as inpatient hospital services. However, if the drug or biological is deemed medically necessary to permit or facilitate the patient's departure from the hospital, and a limited supply is required until he can obtain a continuing supply, the limited supply of the drug or biological is covered as an inpatient hospital service.

3101.4 Supplies, Appliances, and Equipment.--Supplies, appliances, and equipment which are ordinarily furnished by the hospital for the care and treatment of the beneficiary solely during his inpatient stay in the hospital are covered inpatient hospital services.

Under certain circumstances, supplies, appliances, and equipment used during the beneficiary's inpatient stay are covered under Part A even though they leave the hospital with the patient when he is discharged. These are circumstances in which it would be unreasonable or impossible from a medical standpoint to limit the patient's use of the item to the periods during which the individual is an inpatient. Examples of items covered under this rule are cardiac valves, cardiac pacemakers, and artificial limbs which are permanently installed in or attached to the patient's body while he is an inpatient of the hospital; and items, such as tracheostomy or drainage tubes, which are temporarily installed in or attached to the patient's body while he is receiving treatment as an inpatient and which are also necessary to permit or facilitate the patient's release from the hospital.

Hospital "admission packs" containing primarily toilet articles, such as soap, toothbrushes, toothpaste, and combs, are covered under Part A if routinely furnished by the hospital to all its inpatients. If not routinely furnished to all patients, the packs are not covered. In that situation, the hospital may charge a beneficiary for the pack, but only if he requests it with knowledge of what he is requesting and what the charge to him will be.

Supplies, appliances, and equipment furnished to an inpatient for use only outside the hospital are not, in general, covered as inpatient hospital services. However, a temporary or disposable item which is medically necessary to permit or facilitate the patient's departure from the hospital and is required until the patient can obtain a continuing supply is covered as an inpatient hospital service.

The reasonable cost of oxygen furnished to hospital inpatients is covered under Part A as an inpatient supply.

3101.5 Other Diagnostic or Therapeutic Items or Services.--Other diagnostic or therapeutic items or services ordinarily furnished inpatients by the hospital or by others under arrangements made by the hospital are covered. This category of covered services encompasses items and services not otherwise specifically listed as covered inpatient hospital services. (See § 3101.8 for coverage of physical therapy services, § 3101.9 for occupational therapy, and § 3101.10 for respiratory therapy.)

Such services to hospital inpatients may be covered under Part A even when furnished off the hospital premises. For example, diagnostic or therapeutic services of an audiologist off the hospital premises are covered if billed for by the hospital under arrangements (see § 3007), if the services are furnished at a speech and hearing center, and if the audiologist meets the qualifications for an audiologist contained in the "Conditions of Participation for Skilled Nursing Facilities."

A. Therapeutic Items.--Therapeutic items which are covered when ordinarily furnished by the hospital to its inpatients, or when ordinarily furnished to hospital inpatients by others under arrangements with them made by the hospital, include but are not limited to the following:

1. Surgical dressings, and splints, casts, and other devices used for the reduction of fractures and dislocations;

2. Prosthetic devices (other than dental) which replace all or part of an internal body organ (including contiguous tissue) or replace all or part of the function of a permanently inoperative or malfunctioning internal body organ; and

3. Leg, arm, back, and neck braces, trusses, and artificial legs, arms, and eyes.

With respect to items that leave the hospital with the patient when he is discharged, such as splints or casts, the rules for determining whether the item is covered are the same as the rules set forth above for supplies, appliances, and equipment.

B. Diagnostic Services of Psychologists and Physical Therapists.--When a psychologist or physical therapist is a salaried member of the staff of a hospital, his diagnostic or therapeutic services to inpatients of that hospital are covered on a reasonable cost basis in the same manner as the services of other nonphysician hospital employees. The services of a psychologist or physical therapist who is not a salaried staff member are covered if furnished by the hospital as part of the services it ordinarily furnishes under arrangements which provide for billing to be handled by the hospital.

C. Diagnostic services furnished to an inpatient by an independent clinical laboratory under arrangements with the hospital are reimbursable under hospital insurance.

An independent laboratory is one which is independent both of an attending or consulting physician's office and of a hospital which meets at least the requirements to qualify as an emergency hospital, e.g., meets the requirements of § 3010A, E, and G. (A consulting physician is one whose services include history taking, examination of the patient and, in each case, furnishing to the attending physician an opinion regarding diagnosis or treatment. A physician providing clinical laboratory services for patients of other physicians is not considered to be a consulting physician.)

A laboratory which is operated by or under the supervision of a hospital (or the organized medical staff of the hospital) which does not meet at least the definition of an emergency hospital is considered to be an independent laboratory. However, a laboratory serving hospital patients and operated on the premises of a hospital which meets the definition of an emergency hospital is presumed to be subject to the supervision of the hospital or its organized medical staff and is not an independent laboratory. A laboratory which a physician or group of physicians maintains for performing diagnostic tests in connection with his own or the group practice is also not considered to be an independent laboratory.

An out-of-hospital laboratory is ordinarily presumed to be independent unless there is written evidence establishing that it is operated by or under the supervision of a hospital which meets at least the definition of an emergency hospital or of the organized medical staff of such a hospital.

Where a laboratory operated on hospital premises is claimed to be independent or where an out-of-hospital facility is designated as a hospital laboratory, the health insurance regional office makes the determination concerning the laboratory's status.

A clinical laboratory is a laboratory where microbiological, serological, chemical, hematological, radiobioassay, cytological, immunohematological, or pathological examinations are performed on materials derived from the human body, to provide information for the diagnosis, prevention, or treatment of a disease or assessment of a medical condition.

The "Conditions of Participation for Hospitals (HIRM-1)" call for independent clinical laboratory services furnished under arrangements made by a hospital to be furnished only by a laboratory meeting the specified conditions for coverage under the program. These require that: "(1) where State or applicable local law provides for licensing of independent clinical laboratories, the laboratory is either licensed under such law or is approved as meeting the requirements for licensing by the State or local agency responsible for licensing laboratories; and (2) such laboratories also meet the health and safety requirements prescribed by the Secretary of Health and Human Services. (See "Conditions for Coverage of Services of Independent Laboratories (HIRM-1)."

Where independent laboratory services are provided patients of a participating hospital under arrangements with the hospital, the law does not require as a condition of payment in an individual case that the independent laboratory be approved under the program. In processing individual claims, the intermediary, therefore, need not verify that the services were obtained from an approved laboratory. The intermediary should make payment for laboratory services although it may know that the laboratory from which the hospital has obtained the service is not approved under the program. However, it should promptly refer this information to the appropriate Health Care Financing Administration regional office for review of the determination of the hospital's compliance with the conditions of participation and for whatever action the regional office deems appropriate.

D. Diagnostic services furnished a hospital inpatient under arrangements with the laboratory of another participating hospital are reimbursable on a cost basis under Part A to the hospital obtaining the services.

NOTE: Where a hospital obtains diagnostic laboratory services for inpatients under arrangements described in § 3101.5C or § 3101.5D, the cost to the hospital obtaining the services would be the reasonable charge for the laboratory's service.

3101.6 Services of Interns or Residents-In-Training.--Hospital insurance covers the reasonable cost of the services of medical interns or residents-in-training under a teaching program approved by the appropriate approving body or, in the case of an osteopathic hospital, approved by the Committee on Hospitals of the Bureau of Professional Education of the American Osteopathic Association.

In the case of services of interns or residents-in-training in the field of dentistry in a hospital or osteopathic hospital, the teaching program must have the approval of the Council on Dental Education of the American Dental Association.

Effective for accounting periods beginning after December 31, 1972, the services of interns and residents-in-training in the field of podiatry under a teaching program approved by the Council of Podiatry Education of the American Podiatry Association are covered under Part A on the same basis as the services of other interns and residents-in-training in approved teaching programs. For accounting periods beginning on or prior to December 31, 1972, coverage of these services is under Part B, on a reasonable cost basis. See §3115 for other coverage of services of hospital interns and residents under medical insurance.

3101.7 Inpatient Services in Connection with Dental Services.--When a patient is hospitalized for a dental procedure and the dentist's service is covered under Part B, the inpatient hospital services furnished during the stay are covered under Part A. For example, both the professional services of the dentist and the inpatient hospital expenses are covered when the dentist reduces a jaw fracture of an individual who is an inpatient of a participating hospital. In addition, hospital inpatient services which are necessary because of or the patient's underlying medical condition and clinical status or the severity of a noncovered dental procedure are covered. The dental procedure itself is excluded from coverage if it is a service described in §3162. See also §§3030.2, 3316.1, and Coverage Issues Manual §50-26.

When the hospital services are covered, all ancillary services furnished by the hospital, such as x-rays, administration of anesthesia, use of the operating room, etc., are covered. See §3316 for required certifications, and §3316.1 for certification by dentists for admissions for non-covered dental procedures.

Regardless of whether the inpatient hospital services are covered, the medical services of physicians furnished in connection with non-covered dental services, are not covered. Thus, the services of an anesthesiologist, radiologist, or pathologist whose services are performed in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth are not covered.

3101.8 Physical Therapy Furnished by the Hospital or by Others under Arrangements with the Hospital and under its Supervision.--

A. General.--To be covered physical therapy services the services must relate directly and specifically to an active written treatment regimen established by the physician after any needed consultation with the qualified physical therapist and must be reasonable and necessary to the treatment of the individual's illness or injury.

B. Reasonable and Necessary.--To be considered reasonable and necessary the following conditions must be met:

(a) the services must be considered under accepted standards of medical practice to be a specific and effective treatment for the patient's condition,

(b) the services must be of such a level of complexity and sophistication or the condition of the patient must be such that the services required can be safely and effectively performed only by a qualified physical therapist or under his supervision. Services which do not require the performance or supervision of a physical therapist are not considered reasonable or necessary physical therapy services, even if they are performed or supervised by a physical therapist. (When the intermediary determines the services furnished were of a type that could have been safely and effectively performed only by a qualified physical therapist or under his supervision, it should presume that such services were properly supervised. However, this assumption is rebuttable and if in the course of processing claims, the intermediary finds that physical therapy services are not being furnished under proper supervision, the intermediary should deny the claim and bring this matter to the attention of the Division of Survey and Certification of the HCFA regional office.)

(c) there must be an expectation that the condition will improve significantly in a reasonable (and generally predictable) period of time based on the assessment made by the physician of the patient's restoration potential after any needed consultation with the qualified physical therapist or the services must be necessary to the establishment of a safe and effective maintenance program required in connection with a specific disease state, and

(d) the amount, frequency, and duration of the services must be reasonable.

NOTE: Claims for physical therapy services denied because they are not considered reasonable and necessary are excluded by section 1862(a)(1) and are thus subject to consideration under the waiver of liability provisions in section 1879 of the act. (See §§ 3430ff.)

1. Restorative Therapy.--To constitute physical therapy a service must, among other things, be reasonable and necessary to the treatment of the individual's illness. If an individual's expected restoration potential would be insignificant in relation to the extent and duration of physical therapy services required to achieve such potential the physical therapy would not be considered reasonable and necessary. In addition, there must be an expectation that the patient's condition will improve significantly in a reasonable (and generally predictable) period of time. However, if

at any point in the treatment of an illness it is determined that the expectations will not materialize, the services will no longer be considered reasonable and necessary; and they, therefore, should be excluded from coverage under section 1862(a)(1).

2. Maintenance Program.--The repetitive services required to maintain function generally do not involve complex and sophisticated physical therapy procedures, and consequently the judgment and skill of a qualified physical therapist are not required for safety and effectiveness. However, in certain instances the specialized knowledge and judgment of a qualified physical therapist may be required to establish a maintenance program. For example, a Parkinson patient who has not been under a restorative physical therapy program may require the services of a physical therapist to determine what type of exercises will contribute the most to maintain the patient's present functional level.

In such situations the initial evaluation of the patient's needs, the designing by the qualified physical therapist of a maintenance program which is appropriate to the capacity and tolerance of the patient and the treatment objectives of the physician, the instruction of the patient or supportive personnel, e.g., aides or nursing personnel (or family members where physical therapy is being furnished on an outpatient basis) in carrying out the program and such infrequent reevaluations as may be required would constitute physical therapy.

Where a patient has been under a restorative physical therapy program, the physical therapist should regularly be reevaluating the condition and adjusting any exercise program in which the patient is engaged. Consequently, when it is determined that no further restoration is possible, the physical therapist should have already designed the maintenance program required and instructed the patient, supportive personnel (or family members where physical therapy is being furnished on an outpatient basis) in the carrying out of the program. Therefore, where a maintenance program is not established until after the restorative physical therapy program has been completed, it would not be considered reasonable and necessary to the treatment of the patient's condition and would be excluded from coverage under § 1862(a)(1).

C. Application of Guidelines.--The following discussion illustrates the application of the above guidelines to the more common modalities and procedures utilized in the treatment of patients:

1. Hot Pack, Hydrocollator, Infra-Red Treatments, Paraffin baths and Whirlpool Baths.--Heat treatments of this type and whirlpool baths do not ordinarily require the skills of a qualified physical therapist. However, in a particular case the skills, knowledge, and judgment of a qualified physical therapist might be required in such treatments or baths, e.g., where the patient's condition is complicated by circulatory deficiency, areas of desensitization, open wounds, or other complications. Also, if such treatments are given prior to but as an integral part of a skilled physical therapy procedure, they would be considered part of the physical therapy service.

2. Gait Training.-- Gait evaluation and training furnished a patient whose ability to walk has been impaired by neurological, muscular, or skeletal abnormality requires the skills of a qualified physical therapist. However, if gait evaluation and training cannot reasonably be expected to improve significantly the patient's ability to walk, such services would not be considered reasonable and necessary. Repetitious exercises to improve gait or maintain strength and endurance and assistive walking, such as provided in support for feeble or unstable patients are appropriately provided by supportive personnel, e.g., aides or nursing personnel, and do not require the skills of a qualified physical therapist.

3. Ultrasound, Shortwave, and Microwave Diathermy Treatments.-- These modalities must always be performed by or under the supervision of a qualified physical therapist and therefore such treatments constitute physical therapy.

4. Range of Motion Tests.-- Only the qualified physical therapist may perform range of motion tests and, therefore, such tests would constitute physical therapy.

5. Therapeutic Exercises.-- Therapeutic exercises which must be performed by or under the supervision of the qualified physical therapist or by a qualified physical therapist due either to the type of exercise employed or to the condition of the patient would constitute physical therapy. Range of motion exercises require the skills of a qualified physical therapist only when they are part of the active treatment of a specific disease which has resulted in a loss or restriction of mobility (as evidenced by physical therapy notes showing the degree of motion lost and the degree to be restored) and such exercises, either because of their nature on the condition of the patient, may only be performed safely and effectively by or under the supervision of a qualified physical therapist. Generally, range of motion exercises which are not related to the restoration of a specific loss of function but rather are related to the maintenance of function (see B.2.) do not require the skills of a qualified physical therapist. However, such services may, under some circumstances, be included in the physical therapy cost center. (See Section 3101.8(D).

D. Routine Services.-- Many hospital inpatients who do not require physical therapy services as defined in Section 3101.8A above do require services involving procedures which are routine in nature in the sense that they can be rendered by supportive personnel, e.g., aids or nursing personnel, without the supervision of a qualified physical therapist. Such services as well as services involving activities to promote over-all fitness and flexibility and activities to provide diversion or general motivation can be reimbursed through the physical therapy cost center even though they do not constitute physical therapy for Medicare purposes, if:

1. The services are medically necessary,

2. The treatment furnished is prescribed by a physician,

3. All services are provided by salaried employees of the physical therapy department of the provider,

4. The cost incurred is reasonable in amount (i.e., the employees' salaries are reasonably related to the level of skill and experience required to perform the services in question), and

5. Charges are equally imposed on all patients.

If all of the above conditions are met, routine restorative services can be billed as ancillary physical therapy services and their costs included in the physical therapy cost center for reimbursement purposes.

The services furnished beneficiaries must meet the definition of physical therapy where the entitlement to benefits is at issue. Since the outpatient physical therapy benefit under Part B provides coverage only of physical therapy services, payment can be made only for the services which constitute physical therapy.

3101.9 Occupational Therapy Furnished by the Hospital or by Others under Arrangements with the Hospital and under its Supervision.--

A. General.--Occupational therapy is medically prescribed treatment concerned with improving or restoring functions which have been impaired by illness or injury or, where function has been permanently lost or reduced by illness or injury, to improve the individual's ability to perform those tasks required for independent functioning. Such therapy may involve:

1. The evaluation, and reevaluation as required, of a patient's level of function by administering diagnostic and prognostic tests;

2. The selection and teaching of task-oriented therapeutic activities designed to restore physical function,, e.g., use of woodworking activities on an inclined table to restore shoulder, elbow and wrist range of motion lost as a result of burns;

3. The planning, implementing, and supervising of individualized therapeutic activity programs as part of an overall "active treatment" program for a patient with a diagnosed psychiatric illness, e.g., the use of sewing activities which require following a pattern to reduce confusion and restore reality orientation in a schizophrenic patient;

4. The planning and implementing of therapeutic tasks and activities to restore sensory-integrative function, e.g., providing motor and tactile activities to increase sensory input and improve response for a stroke patient with functional loss resulting in a distorted body image;

5. The teaching of compensatory technique to improve the level of independence in the activities of daily living, for example:

- Teaching a patient who has lost the use of an arm how to pare potatoes and chop vegetables with one hand;
- Teaching an upper extremity amputee how to functionally utilize a prosthesis;
- Teaching a stroke patient new techniques to enable him to perform feeding, dressing and other activities as independently as possible; and
- Teaching a hip fracture/hip replacement patient techniques of standing tolerance and balance to enable him or her to perform such functional activities as dressing and homemaking tasks.

6. The designing, fabricating, and fitting of orthotic and self- help devices, e.g., making a hand splint for a patient with rheumatoid arthritis to maintain the hand in a functional position or constructing a device which would enable an individual to hold a utensil and feed himself independently; and

7. Vocational and prevocational assessment and training.

Only a qualified occupational therapist has the knowledge, training, and experience required to evaluate and, as necessary, reevaluate a patient's level of function, determine whether an occupational therapy program could reasonably be expected to improve, restore, or compensate for lost function and, where appropriate, recommend to the physician a plan of treatment. However, while the skills of a qualified occupational therapist are required to evaluate the patient's level of function and develop a plan of treatment, the implementation of the plan may also be carried out by a qualified occupational therapy assistant functioning under the general supervision of the qualified occupational therapist. ("General supervision" requires initial direction and periodic inspection of the actual activity; however, the supervisor need not always be physically present or on the premises when the assistant is performing services).

B. Coverage Criteria.--To constitute covered occupational therapy for Medicare purposes the services furnished to a beneficiary must be (1) prescribed by a physician, (2) performed by a qualified occupational therapist or a qualified occupational therapy assistant under the general supervision of a qualified occupational therapist, and (3) reasonable and necessary for the treatment of the individual's illness or injury.

Occupational therapy designed to improve function is considered reasonable and necessary for the treatment of the individual's illness or injury only where an expectation exists that the therapy will result in a significant practical improvement in the individual's level of functioning within a reasonable period of time. Where an individual's improvement potential is insignificant in relation to the extent and duration of occupational therapy services required to achieve improvement, such services would not be considered reasonable and necessary and would thus be excluded from coverage by 1862(a)(1). Where a valid expectation of improvement exists at the time the occupational therapy program is instituted, the services would be covered even though the expectation may not be realized. However, in such situations the services would be covered only up to the time at which it would have been reasonable to conclude that the patient is not going to improve. Once a patient has reached the point where no further significant practical improvement can be expected, the skills of an occupational therapist or occupational therapy assistant will not be required in the carrying out of any activity and/or exercise program required to maintain function at the level to which it has been restored. Consequently, while the services of an occupational therapist in designing a maintenance program and making infrequent but periodic evaluation of its effectiveness would be covered, the services of an occupational therapist or occupational therapy assistant in carrying out the program are not considered reasonable and necessary for the treatment of illness or injury and such services are excluded from coverage under section 1862(a)(1).

Generally speaking, occupational therapy is not required to effect improvement or restoration of function where a patient suffers a temporary loss or reduction of function (e.g., temporary weakness which may follow prolonged bedrest following major abdominal surgery) which could reasonably be expected to spontaneously improve as the patient gradually resumes normal activities. Accordingly, occupational therapy furnished in such situations would not be considered reasonable and necessary for the treatment of the individual's illness or injury and the services would be excluded from coverage by 1862(a)(1).

Occupational therapy may also be required for a patient with a specific diagnosed psychiatric illness. Where such services are required they would be covered, assuming the coverage criteria set forth above are met. However, it should be noted that where an individual's motivational needs are not related to a specific diagnosed psychiatric illness, the meeting of such needs does not usually require an individualized therapeutic program. Rather, such needs can be met through general activity programs or the efforts of other professional personnel involved in the care of the patient, patient motivation being an appropriate and inherent function of all health disciplines which is interwoven with other functions performed by such personnel for the patient. Accordingly, since the special skills of an occupational therapist or occupational therapy assistant are not required, an occupational therapy program for such individuals would not be considered reasonable and necessary for the treatment of an illness or injury, and services furnished under such a program would be excluded from coverage by 1862(a)(1). See D for discussion regarding coverage of patient activity programs.

As indicated, occupational therapy includes vocational and prevocational assessment and training. When services provided by an occupational therapist and/or assistant are related solely to specific employment opportunities, work skills or work settings, they are not reasonable or necessary for the diagnosis or treatment of an illness or injury and are excluded from coverage under the program by 1862(a)(1). However, care should be exercised in applying this exclusion, because the assessment of level of function and the teaching of compensatory techniques to improve the level of function, especially in activities of daily living, are services which occupational therapists provide for both vocational and nonvocational purposes. For example, an assessment of sitting and standing tolerance might be nonvocational for a mother of young children or a retired individual living alone, but would be a vocational test for a sales clerk. Training an amputee in the use of a prosthesis for telephoning is necessary for every-day activities as well as for employment purposes. Major changes in life style may be mandatory for an individual with a substantial disability; the techniques of adjustment cannot be considered exclusively vocational or nonvocational.

C. Supplies.—Occupational therapy frequently necessitates the use of various supplies, e.g., looms, ceramic tiles, leather, etc. The cost of such supplies may be included in the occupational therapy cost center. However, to prevent possible abuse in this area these costs should be carefully reviewed by the intermediary to ensure that they are reasonable.

D. Patient Activity Programs.--In the inpatient setting, organized patient activity programs are utilized to provide diversion and general motivation to inpatients. Although occupational therapists and occupational therapy assistants may be involved in directing and supervising such programs, these activity programs are part of a generalized effort directed to the health and welfare of all patients and such programs do not constitute occupational therapy and no ancillary charges may be recognized for such services. However, since these programs do constitute an integral part of good inpatient care they would be considered covered services related to the routine care of patients, providing: (1) the program is one ordinarily furnished by the provider to its inpatients, and (2) it is of a type in which Medicare patients requiring a covered level of inpatient care may reasonably be expected to participate. For example, patients requiring the level of inpatient care covered under the program might engage in games such as checkers or chess, handicrafts such as sewing or weaving, and they might attend movies, etc. But, it would not be expected that such patients would be able to go on field trips, engage in strenuous athletics, or participate in other activities which are inappropriate for patients requiring the level of care covered under the program. (The capacities of physically healthy psychiatric patients would vary from those of patients whose ailments are physical.)

3101.10 Respiratory Therapy Furnished by the Hospital or by Others Under Arrangements with the Hospital and Under its Supervision.--

A. This section contains criteria for reviewing bills submitted by hospitals for reimbursement for respiratory therapy under Medicare.

B. Definition.--Respiratory therapy (respiratory care) is defined as those services that are prescribed by a physician for the assessment, diagnostic evaluation, treatment, management, and monitoring (as defined in §3101.10E.6.) of patients with deficiencies and abnormalities of cardiopulmonary function.

Respiratory therapy services include but are not limited to:

1. The application of techniques for support of oxygenation and ventilation in the acutely ill patient. These techniques include, but are not limited to: a) establishment and maintenance of artificial airways; b) ventilator therapy and other means of airway pressure manipulation; c) precise delivery of oxygen concentration; and d) techniques to aid removal of secretions from the pulmonary tree.

2. The therapeutic use and monitoring of medical gases (especially oxygen), bland and pharmacologically active mists and aerosols and such equipment as resuscitators and ventilators;

3. Bronchial hygiene therapy, including deep breathing and coughing exercises, IPPB, postural drainage, chest percussion and vibration, and nasotracheal suctioning;

4. Diagnostic tests for evaluation by a physician, e.g., pulmonary function tests, spirometry, and blood gas analyses;

5. Pulmonary rehabilitation techniques which include: a) exercise conditioning; b) breathing retraining; and c) patient education regarding the management of the patient's respiratory problems; and

6. Periodic assessment and monitoring of the acute and chronically ill patients for indications for, and the effectiveness of, respiratory therapy services.

Such services are performed by respiratory therapists or technicians, physical therapists, nurses and other qualified personnel. If such services are reasonable and necessary, they are covered irrespective of where they are furnished in the hospital; e.g., emergency room, ICU, etc.

To qualify for reimbursement under Medicare, such therapy (1) must qualify as a covered service, and (2) must be reasonable and necessary for the diagnosis or treatment of an illness or injury.

C. Qualification as a Covered Service.-- Respiratory therapy can be covered under Medicare in the following circumstances.

1. Hospital - When furnished by a respiratory therapist or technician, the services are covered as ancillary services under the inpatient hospital benefit. When furnished by a nurse, the services would constitute nursing services and would be covered as such under the inpatient hospital benefit.

2. Skilled nursing facility - Services furnished in the skilled nursing facility setting would be covered under the posthospital extended care benefit if furnished to the inpatients of a skilled nursing facility by a "transfer hospital" (see § 3133.8.), or if furnished by a nurse on the staff of the SNF.

3. Diagnostic testing - Although the diagnostic testing referred to in § 3101.10B.4 is considered respiratory therapy, coverage of such tests is governed by the guidelines relating to the coverage of diagnostic tests. (See §§ 3101.5, 3110A, 3133.8 and 3640.2A.1.)

D. Criteria for Reviewing Bills to Determine if Respiratory Therapy is Reasonable and Necessary.--In reviewing bills to determine if respiratory services are reasonable and necessary, intermediaries will need to assure themselves that the respiratory therapy services furnished to a beneficiary are (1) consistent with the nature and severity of the individual's complaints and diagnosis, (2) reasonable in terms of modality, amount, frequency and duration of the treatments, and (3) generally accepted by the professional medical community as being safe and effective treatment for the purpose used. More specific instructions for applying these criteria in the bill review process appear in (1) through (3) below.

1. Consistent with the Nature and Severity of the Individual's Symptoms and Diagnosis.-- A patient's primary or secondary diagnosis alone may justify the need for respiratory therapy (e.g., acute respiratory failure, pneumonitis, retained secretions, atelectasis, chronic obstructive pulmonary disease). However, there may be cases in which the primary or secondary diagnosis alone does not justify the need for respiratory therapy, but the medical evidence indicates a combination of diagnoses which may justify therapy. In such cases, the intermediary will obtain documentation from the provider which explains the medical necessity for the therapy.

2. Reasonable in Terms of Modality, Amount, Frequency and Duration of the Treatment.-- Although respiratory therapy services may be reasonable and necessary based on the nature and severity of the patient's condition, they must also be reasonable and necessary with respect to modality, amount, frequency, and duration. For example, while a patient may require a particular type of modality to accomplish a certain therapeutic objective, the reasonableness and medical necessity may be questionable where more than one type of modality is used at the same time to accomplish the same therapeutic objective; e.g., IPPB and incentive spirometry.

In most circumstances, the need for therapy would decrease with improvement of the condition, or increase if the condition worsened. Therefore, in most instances, respiratory therapy would not be considered reasonable and necessary when furnished in the same amount and/or frequency throughout the patient's hospital stay; i.e., it would be expected that the level and intensity of the care should be modified as discharge nears. Where the amount and frequency of respiratory therapy furnished throughout the hospital stay remains constant and the primary or secondary diagnosis indicates that, under normal circumstances, a decline in amount and frequency could be anticipated, intermediaries will obtain an explanation from the provider.

3. Generally Accepted by the Professional Community as Being Safe and Effective Treatment for the Purpose Used.-- In the absence of evidence to the contrary, it may be presumed that respiratory therapy is an accepted treatment and may be covered under Medicare.

E. Additional Guidelines for Applying Criteria.--While there are many conditions for which respiratory therapy may be indicated, for Medicare purposes coverage of respiratory therapy services cannot be recognized when performed on a mass basis with no distinction made as to the individual patient's actual condition and need for such services. In addition, the intermediary should make a distinction between respiratory therapy services and routine nursing services.

The following discussion illustrates some examples of the application of the above guidelines.

1. Intensive Care and Recovery Room Patients.—Intensive care and recovery room patients may require respiratory monitoring, support, and therapy. Such respiratory care services (including equipment and maintenance thereof) qualify for reimbursement when reasonable and necessary. Frequency, intensity, and duration of such monitoring and maintenance services will vary with the patient's illness, age, and underlying state of health.

2. Preoperative Bronchial Hygiene Therapy.--Bronchial hygiene therapy furnished on a routine basis to preoperative patients would be presumed not to be reasonable and necessary and would, therefore, be excluded from coverage under section 1862(a)(1). Circumstances under which preoperative bronchial hygiene therapy may be reasonable and necessary would include those situations when it is furnished to patients with acute or chronic pulmonary disease which by itself requires such therapy (see §3101.10D.1). In the absence of a presumptive condition, preoperative respiratory therapy could still be reasonable and necessary if the prescribing physician adequately documents the medical necessity for it (for example, heavy smokers with chronic cough and sputum production). In such cases, the medical necesssity for such therapy will be established if the documentation submitted adequately supports such therapy. A statement that respiratory therapy "is needed" or "is necessary based on diagnosis" would be unacceptable.

3. Postoperative Bronchial Hygiene Therapy.--Routine procedures such as deep breathing and cough instruction, frequent repositioning and early ambulation should provide for adequate bronchial hygiene in the majority of postoperative patients. Therefore, bronchial hygiene therapy services, in addition to those cited above, when

furnished on a routine basis to most postoperative patients would be presumed not to be necessary and would be excluded from coverage under section 1862(a)(1).

Respiratory therapy services aiding bronchial hygiene (e.g., IPPB, aerosol therapy, postural drainage, chest percussion and vibration, nasotracheal suctioning) may be reasonable and necessary in the postoperative patient with identifiable pulmonary complications or in patients with underlying pulmonary diseases. In addition, such therapy may be required for several postoperative days for those patients. (In such cases, the intermediary should request documentation which establishes the medical necessity for the therapy.) It would be reasonable to expect changes in modalities and decreases in frequency of therapy should pulmonary complications not be medically evident after several days of therapy postoperatively (see 3101.10D.2). Since the need for postoperative bronchial hygiene therapy cannot be identified presumptively, all such therapy must be adequately documented by the physician.

4. Setting Up Equipment and Instructing Patients in Its Use.-- When appropriate, setting up of respiratory equipment, instructing and monitoring patient progress in the use of equipment or on postural drainage, and breathing exercises by a respiratory therapist or technician are considered reasonable and necessary services even though the direct patient supervision of such therapy may be the responsibility of the nursing service.

5. Oxygen Therapy.—Oxygen therapy is administered utilizing many devices ranging from the simple nasal cannula to progressively complex techniques providing controlled oxygen concentrations. Such devices are usually applied, maintained, and monitored by respiratory therapists and technicians. These services will be covered provided the need and the effectiveness is documented.

The goal of oxygen therapy is to maintain adequate tissue and cell oxygenation while trying to minimize the danger of oxygen toxicity. Periodic measurement of the arterial PO_2 or oxygen saturation at rest and/or during exercise aids in determining the appropriate amount of oxygen to be administered, and is necessary until the patient has achieved a stable status.

If the intermediary notes the use of continuous oxygen without periodic assessment of arterial PO_2 or oxygen saturation, it should request additional documentation to determine the medical necessity for the service. The physician's order must state the oxygen device and/or the specific flow rate or concentration of oxygen desired. A prescription for "oxygen PRN" or "oxygen as needed" does not meet these requirements. An intermittent or PRN oxygen therapy order must include time limits and specific indications for initiating and terminating therapy.

6. Monitoring Services.—The term monitoring as used in the context of this instruction means: periodic checking of the equipment in actual use for the purpose of ascertaining that it is functioning properly (see 5. above); monitoring the individual patient's condition for purposes of assuring that the patient is receiving the proper mixtures of medical gases, mists and aerosols (see §3101.10B.2.); periodic checking of the acute and chronically ill patients for the purposes described in §3101.10B.6.; and checking the patient's progress for the purposes described in §3101.10E.4. Checking solely to determine if a patient is using oxygen and the amount of oxygen used is not considered the type of monitoring that requires specialized training or skills, and therefore is not a covered respiratory therapy service.

F. Patient Education Programs.—Instructing a patient in the use of equipment, breathing exercises, etc., may be considered reasonable and necessary to the treatment of the patient's condition and can usually be given a patient during the course of treatment by any of the health personnel involved therein, e.g., physician, nurse, respiratory therapist or technician. While patient activities involved in the management of respiratory problems are not ordinarily of such complexity as to warrant a structured or formal patient education program, there may be instances where such a program may be appropriate; e.g., where the patient will experience significant behavior modification or rely on mechanical support after discharge from the hospital. However, the content of structured or formal education programs must be reasonable and necessary, that is, such programs should meet but not exceed the needs of patients. For Medicare purposes, the provision of information that is over and beyond that ordinarily provided during the course of a treatment (e.g., extensive theoretical background in the pathology, etiology, and psysiological effects of the disease) is not considered reasonable and necessary to the management and treatment of illnesses.

NOTE: PSRO determinations as to medical necessity and level of care are a component of Medicare claims determinations. The PSRO's determinations are binding on those issues and must be incorporated into claims adjudication. The intermediary will continue to review claims for other determinations and initiate denials on the basis of lack of eligibility, lack of remaining benefit days, provision of items and services which are not covered under Medicare, and any of the other exclusions under title XVIII.

The intermediary must deny payment if it identifies a service for which payment is always precluded by a Medicare coverage rule and in which no medical judgment need be exercised even if the service was rendered during a PSRO-approved hospital stay or specifically approved by the PSRO. The intermediary may not deny payment for PSRO-approved services on the ground that services were not medically necessary or did not meet the applicable level of care requirements. If a judgmental medical determination is necessary to apply a coverage rule, the intermediary must ask the PSRO to make the medical determination and accept the PSRO's determinations as binding when it adjudicates the claim.

Because PSROs may differ in both the method and degree to which they assume responsibility for the review of ancillary services, intermediaries should incorporate in their approved Memorandum of Understanding with each PSRO the specific responsibilities assumed by each party in review of such services.

3101.10A. Speech Pathology Services Furnished by the Hospital or by Others Under Arrangements with the Hospital and Under Its Supervision.—

1. General.—Speech pathology services are those services necessary for the diagnosis and treatment of speech and language disorders which result in communication disabilities. They must relate directly and specifically to a written treatment regimen established by the physician after any needed consultation with the qualified speech pathologist.

2. Reasonable and Necessary.—Speech pathology services must be reasonable and necessary to the treatment of the individual's illness or injury. To be considered reasonable and necessary, the following conditions must be met:

a. The services must be considered under accepted standards of practice to be a specific and effective treatment for the patient's condition;

b. The services must be of such a level of complexity and sophistication, or the patient's condition must be such that the services required can be safely and effectively performed only by or under the supervision of a qualified speech pathologist. (See 42 CFR 405.1202(u)(1)(2).) (When the intermediary determines the services furnished were of a type that could have been safely and effectively performed only by qualified speech pathologists or under the supervision of a qualified speech pathologist, it should presume that such services were properly supervised. However, this assumption is rebuttable and, if in the course of processing claims the intermediary finds that speech pathology services are not being furnished under proper supervision, the intermediary should deny the claim and bring this matter to the attention of the Division of Health Standards and Quality of the HCFA Regional Office.)

c. There must be an expectation that the patient's condition will improve significantly in a reasonable (and generally predictable) period of time based on the assessment by the physician of the patient's restoration potential after any needed consultation with the qualified speech pathologist, or the services must be necessary to the establishment of a safe and effective maintenance program required in connection with a specific disease state; and

d. The amount, frequency, and duration of the services must be reasonable under accepted standards of practice. (The intermediary should consult with local speech pathologists or the State chapter of the American Speech-Language-Hearing Association in the development of any utilization guidelines.)

Claims for speech pathology services which are not reasonable and necessary should be considered denied under authority of section 1862(a)(1) and, therefore, are subject to the waiver of liability provisions in section 1879 of the act. (See §§ 3430ff.)

3. Application of Guidelines.—The following discussion illustrates the application of the above guidelines to the more common situations in which the reasonableness and necessity of speech services furnished is a significant issue.

a. Restorative Therapy.—If an individual's expected restoration potential would be insignificant in relation to the extent and duration of speech pathology services required to achieve such potential, the services would not be considered reasonable and necessary. In addition, there must be an expectation that the patient's condition will improve significantly in a reasonable (and generally predictable) period of time. If at any point in the treatment of an illness or injury it is determined that the expectations will not materialize, the services will no longer constitute covered speech pathology services, as they would no longer be reasonable and necessary for the treatment of the patient's condition and would be excluded from coverage under section 1862(a)(1).

b. Maintenance Program.—After the initial evaluation of the extent of the disorder or illness, if the restoration potential is judged insignificant or, after a reasonable period of trial, the patient's response to treatment is judged insignificant or at a plateau, an appropriate functional maintenance program may be established. The specialized knowledge and judgment of a qualified speech pathologist may be required if the treatment aim of the physician is to be achieved; e.g., a multiple sclerosis patient may require the services of a speech pathologist to establish a maintenance program designed to fit the patient's level of function. In such a situation, the initial evaluation of the patient's needs, the designing by the qualified speech pathologist of a maintenance program which is appropriate to the capacity and tolerance of the patient and the treatment objectives of the physician, the instruction of the patient and supportive personnel (e.g., aides or nursing personnel, or family members where speech pathology is being furnished on an outpatient basis) in carrying out the program, and such infrequent reevaluations as may be required, would constitute covered speech therapy. After the maintenance program has been established and instructions have been given for carrying out the program, the services of the speech pathologist would no longer be covered, as they would no longer be considered reasonable and necessary for the treatment of the patient's condition and would be excluded from coverage under section 1862(a)(1).

If a patient has been under a restorative speech pathology program, the speech pathologist should regularly reevaluate the condition and adjust the treatment program. Consequently, during the course of treatment the speech pathologist should determine when the patient's restorative potential will be achieved and, by the time the restorative program has been completed, should have designed the maintenance program required and instructed the patient, supportive personnel, or family members in the carrying out of the program. A separate charge for the establishment of the maintenance program under these circumstances would not be recognized. Moreover, where a maintenance program is not established until after the restorative speech pathology program has been completed, it would not be considered reasonable and necessary to the treatment of the patient's condition and would be excluded from coverage under section 1862(a)(1) since the maintenance program should have been established during the active course of treatment.

4. Types of Services.—Speech pathology services can be grouped into two main categories: services concerned with diagnosis or evaluation and therapeutic services.

a. Diagnostic and Evaluation Services.--Unless excluded by section 1862(a)(7) of the law, these services are covered if they are reasonable and necessary. The speech pathologist employs a variety of formal and informal language assessment tests to ascertain the type, causal factor(s), and severity of the speech and language disorders. Reevaluation would be covered only if the patient exhibited a change in functional speech or motivation, clearing of confusion, or the remission of some other medical condition which previously contraindicated speech pathology. However, monthly reevaluations, e.g., a Porch Index of Communicative Ability (PICA) for a patient undergoing a restorative speech pathology program, are to be considered a part of the treatment session and could not be covered as a separate evaluation for billing purposes.

b. Therapeutic Services.—The following are examples of common medical disorders and resulting communication deficits which may necessitate active restorative therapy:

(i) Cerebrovascular disease such as cerebral vascular accidents presenting with dysphagia, aphasia/dysphasia, apraxia, and dysarthria;

(ii) Neurological disease such as Parkinsonism or Multiple Sclerosis may exhibit dysarthria, dysphagia, or inadequate respiratory volume/control;

(iii) Mental retardation with disorders such as aphasia or dysarthria; and

(iv) Laryngeal carcinoma requiring laryngectomy resulting in aphonia may warrant therapy of the laryngectomized patient so he can develop new communication skills through esophageal speech and/or use of the electrolarynx.

NOTE: Many patients who do not require speech pathology services as defined above do require services involving nondiagnostic, non-therapeutic, routine, repetitive, and reinforced procedures or services for their general good and welfare; e.g., the practicing of word drills. Such services do not constitute speech pathology services for Medicare purposes and would not be covered since they do not require performance by or the supervision of a qualified speech pathologist.

Inpatient Hospital Stays for Rehabilitation Care

3101.11 Inpatient Hospital Stays for Rehabilitation Care.--

A. General.-- Physicians generally agree on the circumstances that justify a medical or surgical patient's hospitalization. And, in some cases an admission to a rehabilitation hospital or to the rehabilitation service of a short-term hospital can be justified on essentially the same medical or surgical grounds. In other cases, however, a patient's medical or surgical needs alone may not warrant inpatient hospital care, but hospitalization may nevertheless be necessary because of the patient's need for rehabilitative services.

A hospital level of care is required by a patient needing rehabilitative services if that patient needs a relatively intense rehabilitation program that requires a multidisciplinary coordinated team approach to upgrade his ability to function. There are two basic requirements which must be met for inpatient hospital stays for rehabilitation care to be covered:

1. The services must be reasonable and necessary (in terms of efficacy, duration, frequency, and amount) for the treatment of the patient's condition; and

2. It must be reasonable and necessary to furnish the care on an inpatient hospital basis, rather than in a less intensive facility such as an SNF, or on an outpatient basis.

B. Preadmission Screening.—Before a patient is admitted to a rehabilitation hospital for treatment, a preadmission screening is normally done. This screening is a preliminary review of the patient's condition and previous medical record to determine if the patient is likely to benefit significantly from an intensive hospital program or extensive inpatient assessment.

While preadmission screening is a standard practice in most rehabilitation hospitals and may provide useful information for claims review purposes, the absence of a preadmission screening in a particular case should not be the sole reason for denying a claim. However, in a case where an inpatient assessment showed that a patient clearly was not a good candidate for an inpatient hospital program, then the presence or absence of preadmission screening information would be important in determining whether the inpatient assessment itself was reasonable and necessary. If preadmission screening information indicated that the patient had the potential for benefiting from an inpatient hospital program, a period of inpatient assessment could be covered, up to the point where it was determined that inpatient hospital rehabilitation was not appropriate, since preadmission screening cannot be expected to eliminate all unsuitable candidates.

C. Inpatient Assessment of Individual's Status and Potential for Rehabilitation.—

1. General.—Coverage is available for inpatient assessment of a patient's potential for benefiting from an intensive coordinated rehabilitation program only if it was reasonable and necessary to perform the assessment in the hospital. This determination should be made on the basis of information available in the patient's

medical record. It is important to note that the assessment process is not merely a paperwork review, but rather an onsite professional review of the patient's condition by the necessary disciplines. Inpatient assessments conducted by a rehabilitation team through examination of the patient usually require between 3 to 10 calendar days, but on occasion may require more. This 3-10 day period is often one where the patient is receiving therapies rather than simple screening assessments. Where more than 10 days are required, the case should be carefully reviewed to ensure that such additional time was necessary. An inpatient assessment may be covered even if the assessment subsequently indicates that a patient is not suitable for an intensive inpatient hospital rehabilitation program, if the patient's condition on admission was such that an extensive inpatient assessment was considered reasonable and necessary for a final decision to be made on a patient's actual rehabilitation potential. Where the initial assessment has resulted in a conclusion that the individual is a poor candidate for rehabilitation care, coverage for further inpatient hospital care is limited to a reasonable number of days needed to permit appropriate placement of the patient.

The fact that an individual received therapy prior to admission to a hospital for a rehabilitation program would not necessarily mean that the initial assessment period was not reasonable and necessary. However, if during a previous hospital stay an individual completed such a program for essentially the same condition for which inpatient hospital care is now being provided, the assessment period could be covered only if: (1) some intervening circumstance rendered such an assessment reasonable and necessary; or (2) the subsequent admission is to an institution utilizing techniques or technology not previously available or not available in the first institution.

2. Specific examples.—

a. After an inpatient hospital stay for rehabilitation care which resulted in little improvement in the patient's condition, an individual who undergoes surgery for severe contractures as a result of arthritis may require a reassessment of his rehabilitation potential in light of the surgery.

b. The fact that an individual has some degree of mental impairment would not per se be a basis for concluding that a multidisciplinary team evaluation is not warranted. Many individuals who have had CVAs suffer both mental and physical impairments. The mental impairment often results in a limited attention span and reduced comprehension with a resultant problem in communication. With an intensive rehabilitation program, it is sometimes possible to correct or significantly alleviate both the mental and physical problems.

c. Absent other complicating medical problems, the type of rehabiliitation program normally required by a patient with a fractured hip during or after the nonweightbearing period or a patient with a healed ankle fracture would not require an inpatient hospital stay for rehabilitation care. Accordingly, an inpatient assessment would not be warranted in such cases. On the other hand, an individual who has had a

CVA which has left the individual significantly dependent in the activities of daily living (even after physical therapy in a different setting) might be a good candidate for a more extensive inpatient assessment if the patient has potential for rehabilitation and his needs are not primarily of a custodial nature.

D. Inpatient Rehabilitation Hospital Care.—Rehabilitative care in a hospital, rather than in an SNF or on an outpatient basis, is reasonable and necessary for a patient who requires a more coordinated, intensive program of multiple services than is generally found out of a hospital. A patient who has one or more conditions requiring intensive and multidisciplinary rehabilitation care, or who has a medical complication in addition to his primary condition, so that the continuing availability of a physician is required to ensure safe and effective treatment, would probably require a hospital level of rehabilitation care. A patient in need of rehabilitation on an inpatient hospital basis requires all of the following:

1. Close medical supervision by a physician with specialized training or experience in rehabilitation.—A patient's condition must require the 24-hour availability of a physician with special training or experience in the field of rehabilitation. This need should be verifiable by entries in the patient's medical record that reflect frequent and direct, and medically necessary physician involvement in the patient's care; i.e., at least every 2 - 3 days during the patient's stay. This degree of physician involvement, which is greater than would normally be rendered to a patient in a SNF, is an indicator of a patient's need for services generally available only in a hospital setting. A SNF patient's care would usually require only the general supervision of a physician, rather than the close supervision which hospital patients need.

2. Twenty-four-hour rehabilitation nursing.—The patient requires the 24-hour availability of a registered nurse with specialized training or experience in rehabilitation. This degree of availability represents a higher level of care than would normally be found in an SNF. While an SNF patient may require nursing care, specialized rehabilitation nursing is generally not as readily available in such a facility.

3. A relatively intense level of rehabilitation services. The general threshold for establishing the need for inpatient hospital rehabilitation services is that the patient must require and receive at least 3 hours a day of physical and/or occupational therapy. (The furnishing of services no less than 5 days a week will satisfy the requirement for "daily" services.) While nearly all patients requiring an inpatient stay for rehabilitation need and receive at least 3 hours a day of physical and/or occupational therapy, there can be limited exceptions because individual patient's needs vary. In a few instances patients who require inpatient hospital rehabilitation services may need, for a brief period, other skilled rehabilitative modalities such as speech-language pathology services, or prosthetic-orthotic services on a priority basis and their stage of recovery makes the concurrent receipt of intensive physical therapy or occupational therapy services inappropriate. In such cases, the 3-hour a day requirement can be met by a combination of these other therapeutic services instead of or in addition to physical therapy and/or occupational therapy. In exceptional cases, an inpatient stay for rehabilitation care can also be covered even though the patient has a secondary diagnosis or medical complication that prevents him from participating in a program consisting of 3 hours of therapy a day. Inpatient hospital care in these cases may be the only reasonable means by which even a low intensity rehabilitation program may be carried out. Secure documentation of the existence and extent of complicating conditions affecting the carrying out of a rehabilitation program to ensure that inpatient hospital care for less than intensive rehabilitation care is actually needed.

4. A multidisciplinary team approach to the delivery of the program.—A multidisciplinary team usually includes a physician, rehabilitation nurse, social worker and/or psychologist, and those therapists involved in the patient's care. At a minimum, a team must include a physician, rehabilitation nurse and one therapist.

5. A coordinated program of care.—The patient's records must reflect evidence of a coordinated program, i.e., documentation that periodic team conferences were held with a regularity of at least every 2 weeks to: (1) assess the individual's progress or the problems impeding progress; (2) consider possible resolutions to such problems; and (3) reassess the validity of the rehabilitation goals initially established. A team conference may be formal or informal; however, a review by the various team members of each other's notes would not constitute a team conference. The decisions made during such conferences, such as those concerning discharge planning and the need for any adjustment in goals or in the prescribed treatment program, must be recorded in the clinical record.

6. Significant practical improvement.—Hospitalization after the initial assessment is covered only in those cases where the initial assessment results in a conclusion by the rehabilitation team that a significant practical improvement can be expected in a reasonable period of time. It is not necessary that there be an expectation of complete independence in the activities of daily living, but there must be a reasonable expectation of improvement that will be of practical value to the patient, measured against his condition at the start of the rehabilitation program. For example, a multiple sclerosis patient's condition may have deteriorated as a result of a secondary illness. To be restored to a level of function before the secondary illness, the patient may require an intensive inpatient hospital rehabilitation program. While such a program would not restore the level of function before multiple sclerosis developed, a return to pre-secondary illness level would be considered to be a "significant practical improvement" in the condition.

7. Realistic goals.—While there may be instances where an intense rehabilitation program may enable a Medicare patient to return to the labor market, vocational rehabilitation is generally not considered a realistic goal for most aged or severely disabled individuals. The most realistic rehabilitation goal for most Medicare beneficiaries is self-care or independence in the activities of daily living; i.e., self-sufficiency in bathing, ambulation, eating, dressing, homemaking, etc., or sufficient improvement to allow a patient to live at home with family assistance rather than in an institution. Thus, the aim of the treatment should be achieving the maximum level of function possible.

E. Length of the Rehabilitation Program.—Coverage should stop when further progress toward the established rehabilitation goal is unlikely or it can be achieved in a less intensive setting. In deciding whether further care can be carried out in a less intensive setting, both the degree of improvement which has occurred and the type of program required to achieve further improvement must be considered. In some cases, an individual may be expected to continue to improve under an outpatient program. There are other situations where further improvement in the individual's ability to function relatively independently in the activities of daily living can be expected only if a multidisciplinary team effort is continued.

While occasional home visits and other trips into the community are factors in determining whether continued stay in the hospital is necessary, such excursions would not alone be a basis for concluding that further hospital care is not required. Planned home visits and trips to the community are frequently used to test the individual's ability to function outside the institutional setting and assist in discharge planning for the individual.

It is also important to consider how close the patient may be to the planned end of his rehabilitation hospital stay when further progress becomes unlikely. If a patient is within a few days of discharge, it would usually not be appropriate to transfer him to a less intensive setting in another facility even though further progress in the hospital setting is unlikely. However, it could be appropriate to utilize a "swing bed" arrangement, if it exists in the same facility, for rendering necessary services to the patient pending discharge.

When discharge or transfer to another facility is appropriate, the cut-off point for coverage should not be the last day on which improvement actually occurred. Rather, coverage should continue through the time it would have been reasonable for the physician, in consultation with the rehabilitation team, to have concluded that further improvement would not occur and to initiate the patient's discharge.

Since discharge planning is an integral part of any rehabilitation program and should begin upon the patient's admittance to the facility, an extended period of time for discharge action would not be reasonable after established goals have been reached, or a determination made that further progress is unlikely, or that care in a less intensive setting would be appropriate.

Pregnancy

3101.12 Health Care Associated with Pregnancy.--Reasonable and necessary services associated with pregnancy are covered and reimbursable under the Medicare program. Because pregnancy is a condition which is sufficiently at variance with the usual state of health, it is appropriate for a pregnant woman to seek medical care. The increased possibility of illness or injury which accompanies this condition is well recognized, and medical supervision is required throughout pregnancy and for a brief period beyond. Skilled medical management is appropriate throughout the events of pregnancy, beginning with diagnosis of the condition, continuing through delivery, and ending after the necessary postnatal care. Similarly, in the event of termination of pregnancy, regardless of whether terminated spontaneously or for therapeutic reasons (i.e., where the life of the mother would be endangered if the fetus were brought to term), the need for skilled medical management and/or medical services is equally as important as in those cases carried to full term. After the infant is delivered items and services furnished to the infant cannot be covered and reimbursed under the program on the basis of the mother's eligibility.

Infertility

3101.13 Treatment for Infertility.--(Effective for services rendered on or after January 15, 1980). Reasonable and necessary services associated with treatment for infertility are covered under Medicare. Like pregnancy (see § 3101.12 above), infertility is a condition sufficiently at variance with the usual state of health to make it appropriate for a person who normally would be expected to be fertile to seek medical consultation and treatment. Contractors should coordinate with PSROs to see that utilization guidelines are established for this treatment if inappropriate utilization or abuse is suspected.

3101.14 Services Related to and Required as a Result of Services Which are Not Covered Under Medicare.--

A. Medical and hospital services are sometimes required to treat a condition that arises as a result of services which are not covered because they are determined to be not reasonable and necessary or because they are excluded from coverage for other reasons. Services "related to" noncovered services (e.g., cosmetic surgery, noncovered organ transplants, noncovered artificial organ implants, etc.), including services related to followup care and complications of noncovered services which require treatment during a hospital stay in which the noncovered service was performed, are not covered services under Medicare. Services "not related to" noncovered services are covered under Medicare. To the extent that you are responsible for making medical coverage decisions in such cases involving inpatient stays, follow the procedures established below.

B. Identify which services are related to noncovered services and which are not. Following are some examples of services "related to" and "not related to" noncovered services while the beneficiary is an inpatient:

1. A beneficiary was hospitalized for a noncovered service and broke a leg while in the hospital. Services related to care of the broken leg during this stay is a clear cut example of "not related to" services and are covered under Medicare.

2. A beneficiary was admitted to the hospital for covered services, but during the course of hospitalization became a candidate for a noncovered transplant or implant and actually received the transplant or implant during that hospital stay. When the original admission was entirely unrelated to the diagnosis that led to a recommendation for a noncovered transplant or implant, the services related to the admitting condition would be covered.

3. A beneficiary was admitted to the hospital for covered services related to a condition which ultimately led to identification of a need for transplant and receipt of a transplant during the same hospital stay. If, on the basis of the nature of the services and a comparison of the date they are received with the date on which the beneficiary is identified as a transplant candidate, the services could reasonably be attributed to preparation for the noncovered transplant, the services would be "related to" noncovered services and would also be noncovered.

C. After a beneficiary has been discharged from the hospital stay in which he received noncovered services, medical and hospital services required to treat a condition or complication that arises as a result of the prior noncovered services may be covered when they are reasonable and necessary in all other respects. Thus, coverage could be provided for subsequent inpatient stays or outpatient treatment ordinarily covered by Medicare, even if the need for treatment arose because of a previous noncovered procedure. Some examples of services that may be found to be covered under this policy are the reversal of intestinal bypass surgery for obesity, repair of complications from transsexual surgery or from cosmetic surgery, removal of a noncovered bladder stimulator, or treatment of an infection at the surgical site of a noncovered transplant that occurred following discharge from the hospital.

However, any subsequent services that could be expected to have been incorporated into a global fee (i.e., a single charge for a group of services) should be denied. Thus, where a patient undergoes cosmetic surgery and the treatment regimen calls for a series of postoperative visits to the surgeon for evaluating the patient's progress, these visits should be denied. (See § 3610.12 and Hospital Manual § 415.18 for billing procedures.)

Inpatient Psychiatric Hospital Services

3102. COVERED INPATIENT PSYCHIATRIC HOSPITAL SERVICES

A patient covered under hospital insurance is entitled to have payment made for inpatient hospital services furnished to him while an inpatient of a psychiatric hospital. See § 3105 for the 190-day lifetime limitation on payment for inpatient psychiatric hospital services and §§ 3104-3104.6 for the preentitlement inpatient psychiatric benefit days reduction provision.

3102.1 Active Treatment in Psychiatric Hospitals.--Payment for inpatient psychiatric hospital services is to be made only for "active treatment" which can reasonably be expected to improve the patient's condition. To assure that payment is made only under such circumstances, the law includes certain requirements which must be met before the services furnished in a psychiatric hospital can be covered.

First, the certification that a physician must provide with respect to inpatient psychiatric hospital services is required to include a statement that the services furnished can reasonably be expected to improve the patient's condition (§ 3320). Second, the law provides that payment may be made for these services only if they were being furnished while the patient was receiving either active treatment or admission and related services necessary for diagnostic study.

In the context of inpatient psychiatric hospital services emphasis is placed on the presence of "active treatment" and, therefore, this determination is the crucial one. Simply applying the skilled care definition for general hospitals (§ 3159.1B) is not sufficient for determining whether payment may be made since that definition does not take into account the patient's potential for improvement nor was it designed to permit the more sophisticated judgments required by the concept of active treatment. See § 3605.2 for bill review guidelines in determining active treatment in psychiatric hospitals.

A. Definition of Active Treatment.--The term "active treatment" is defined in a manner designed to reflect and implement the physician certification requirement described above. For services in a psychiatric hospital to be designated as "active treatment," they must be: (a) provided under an individualized treatment or diagnostic plan, (b) reasonably expected to improve the patient's condition or for the purpose of diagnosis, and (c) supervised and evaluated by a physician. Such factors as diagnosis, length of hospitalization, and the degree of functional limitation, while useful as general indicators of the kind of care most likely being furnished in a given situation, are not controlling in deciding whether the care was active treatment. The following is a discussion of each element of the above definition of active treatment:

1. Individualized Treatment or Diagnostic Plan.--The services must be provided in accordance with an individualized program of treatment or diagnosis developed by a physician in conjunction with staff members of appropriate other disciplines on the basis of a thorough evaluation of the patient's restorative needs and potentialities. Thus, an isolated service, e.g., a single session with a psychiatrist, or a routine laboratory test not furnished under a planned program of therapy or diagnosis would not constitute active treatment, even though the service was therapeutic or diagnostic in nature. The plan of treatment must be recorded in the patient's medical record in accordance with section 405.1037(a)(8) of the regulations on Conditions of Participation for Hospitals.

2. Services Expected to Improve the Condition or for Purpose of Diagnosis.--The service must reasonably be expected to improve the patient's condition or must be for the purpose of diagnostic study. It is not necessary that a course of therapy have as its goal the restoration of the patient to a level which would permit discharge from the institution although the treatment must, at a minimum, be designed both to reduce or control the patient's psychotic or neurotic symptoms which necessitated hospitalization and improve the patient's level of functioning.

The kinds of services which meet the above requirements would include not only psychotherapy, drug therapy, and shock therapy, but also such adjunctive therapies as occupational therapy, recreational therapy, and milieu therapy, provided the adjunctive therapeutic services are expected to result in improvement (as defined above) in the patient's condition. If, however, the only activities prescribed for the patient are primarily diversional in nature, i.e., to provide some social or recreational outlet for the patient, it would not be regarded as treatment to improve the patient's condition. In many large hospitals these adjunctive services are present and part of the life experience of every patient. In a case where milieu therapy (or one of the other adjunctive therapies) is involved, it is particularly important that this therapy be a planned program for the particular patient and not one where life in the hospital is designated as milieu therapy.

In accordance with the above definition of "improvement," the administration of antidepressant or tranquilizing drugs which are expected to significantly alleviate a patient's psychotic or neurotic symptoms would be termed active treatment (assuming that the other elements of the definition are met). However, the administration of a drug or drugs does not of itself necessarily constitute active treatment. Thus, the use of mild tranquilizers or sedatives solely for the purpose of relieving anxiety or insomnia would not constitute active treatment.

3. Services Supervised and Evaluated by a Physician.--Physician participation in the services is an essential ingredient of active treatment. The services of qualified individuals other than physicians, e.g., social workers, occupational therapists, group therapists, attendants, etc., must be prescribed and directed by a physician to meet the specific psychiatric needs of the individual. In short, the physician must serve as a source of information and guidance for all members of the therapeutic team who work directly with the patient in various roles. It is the responsibility of the physician to periodically evaluate the therapeutic program and determine the extent to which treatment goals are being realized and whether changes in direction or emphasis are needed. Such evaluation should be made on the basis of periodic consultations and conferences with therapists, reviews of the patient's medical record, and regularly scheduled patient interviews--at least once a week.

Although in an institutional setting the services of a physician may be readily available, the general pattern is for the physician to visit the patient only periodically, delegating to nursing personnel the responsibility for intensive observation of patients, where it is necessary. Such periodic visits to a patient do not in themselves constitute active treatment. Conversely, when the physician periodically evalutes the therapeutic program to determine the extent to which treatment goals are being realized and whether changes in direction or emphasis are needed based on consultations and conferences with therapists, review of the patient's progress as recorded on his medical record and his periodic conversations with the patient, active treatment would be indicated. The treatment furnished the patient should be documented in the medical record in such a manner and with such frequency as to provide a full picture of the therapy administered as well as an assessment of the patient's reaction to it. (See section 405.1037(a)(9) and (10) of the regulations on Conditions of Participation for Hospitals.)

A finding that a patient is not receiving active treatment will not in itself preclude payment for physicians' services under Part B. As long as the professional services rendered by the physician are reasonable and necessary for the care of the patient, such services would be reimbursable under the medical insurance program.

B. Principles for Evaluating a Period of Active Treatment.--As indicated, the period of time covered by the physician's certification is referred to as a "period of active treatment." This period should include all days on which inpatient psychiatric hospital services were provided because of the individual's need for active treatment--not just the days on which specific therapeutic or diagnostic services were rendered. For example, a patient's program of treatment may necessitate the discontinuance of therapy for a period of time or it may include a period of observation, either in preparation for or as a followup to therapy, while only maintenance or protective services are furnished. If such periods were essential to the overall treatment plan, they would be regarded as part of the period of active treatment.

The fact that a patient is under the supervision of a physician does not necessarily mean that he is getting active treatment. For example, medical supervision of a patient may be necessary to assure the early detection of significant changes in his condition; however, in the absence of a specific program of therapy designed to effect improvement, a finding that the patient is receiving active treatment would be precluded.

The program's definition of active treatment does not automatically exclude from coverage services rendered to patients who have conditions which ordinarily result in progressive physical and/or mental deterioration. Although patients with such diagnoses will most commonly be receiving custodial care, they may also receive services which meet the program's definition of active treatment. This might be the case, for example, where a patient with Alzheimer's or Pick's disease received services designed to alleviate the effects of paralysis, epileptic seizures, or some other neurological symptom, or where a patient in the terminal stages of any disease received life-supportive care. A period of hospitalization during which services of this kind were furnished would be regarded as a period of active treatment. See §§ 3605.2-3605.3 regarding the evaluation of conditions which generally require custodial care only.

3102.2 Nonpsychiatric Care in a Psychiatric Hospital.--Inpatient hospital services are covered where a patient receives medical or surgical care in a psychiatric hospital, but does not satisfy the requirements dealing with active psychiatric treatment (see § 3102.1) if:

A. the medical or surgical service requires a hospital level of care; and

B. hospitalization in a psychiatric institution, rather than a general hospital, is appropriate because of some factor related to the patient's mental condition; and

C. a physician certifies that these conditions are met.

The patient's past history of psychiatric problems or the possibility that he has a current psychiatric condition could furnish a proper base for the exercise of medical judgment in concluding that admission to the psychiatric hospital is "medically necessary."

Duration of Covered Inpatient Hospital Services

3103. INPATIENT HOSPITAL BENEFIT DAYS

A patient having hospital insurance coverage is entitled to have payment made on his behalf for up to 90 days of covered inpatient hospital services in each spell of illness. (For coinsurance provision, see § 3203.) Also, he has a lifetime reserve of 60 additional days (see § 3106).

3103.1 Counting Inpatient Days.--The number of days of care charged to a beneficiary for inpatient hospital services is always in units of full days. A day begins at midnight and ends 24 hours later. The midnight-to-midnight method is to be used in counting days of care for Medicare reporting purposes even if the hospital uses a different definition of day for statistical or other purposes.

A part of a day, including the day of admission, counts as a full day. However, the day of discharge, death, or a day on which a patient begins a leave of absence is not counted as a day. (Charges for ancillary services on the day of discharge or death or the day on which a patient begins a leave of absence are covered.) If admission and discharge or death occur on the same day, the day is considered a day of admission and counts as one inpatient day. (For billing when a patient is discharged, dies, or is transferred to another participating provider before midnight of the day of admission, see § 3611.)

A patient occupying the labor/delivery room ancillary service area at the census-taking hour is counted in the inpatient census for the maternity routine care area even if she has not entered that area. An inpatient day should not be recorded in the ancillary area. If she is admitted as an inpatient with the expectation of remaining overnight, incurs false labor, and is subsequently released the same day prior to the census-taking hour, a day of inpatient maternity routine care is counted.

Also, where an inpatient is occupying any other ancillary area such as surgery or radiology at the census-taking hour prior to occupying an inpatient bed, the patient's occupancy in the ancillary area should not be recorded as an inpatient day in the ancillary area. However, such patient must be included in the inpatient census of the routine care area. See § 3101 for definition of an inpatient and more information regarding covered inpatient hospital services.

3103.2 Late Discharge.--When a patient chooses to continue to occupy his hospital accommodations beyond the check-out time for personal reasons, the hospital may charge the beneficiary for his continued stay. Such a stay beyond the check-out time, for the comfort or convenience of the patient, is not covered under the program and the hospital's agreement to participate in the program does not preclude the hospital from charging the patient. However, it is expected that hospitals will not impose late charges on a beneficiary unless he has been given reasonable notice (for example, 24 hours) of his impending discharge.

Where the patient's medical condition is the cause of the stay past the check-out time (e.g., the patient needs further services, is bedridden and awaiting transportation to his home or to a skilled nursing facility, or dies in the hospital), the stay beyond the discharge hour is covered under the program and the hospital may not charge the patient. (See § 3620, Item 19, Accommodations.)

The imposition of a late charge by a hospital does not affect the counting of days for: (a) ending a spell of illness; (b) the 3-day prior hospitalization requirement for coverage of extended care services and Part A home health services; and (c) the number of days of inpatient care available to the individual. (See §§ 3035, 3107, 3121.1B, and 3131.1.)

3103.3 Leave of Absence.--The day on which the patient began a leave of absence is treated as a day of discharge and is not counted as an inpatient day unless he returns to the hospital by midnight of the same day. The day the patient returns to the hospital from a leave of absence is treated as a day of admission and is counted as an inpatient day if he is present at midnight of that day.

3103.4 Discharge or Death on First Day of Entitlement or Participation.--
In the following special situations program payment is not made for accommodations on the day of discharge or death, but may be made for ancillary services (under Part A) provided on that day: (a) where a patient is admitted prior to the first day of his entitlement and dies or is discharged from a participating hospital on the first day of his entitlement; and (b) where a patient in a noncovered stay in a nonparticipating hospital dies or is discharged on the first day the hospital becomes a participating hospital. For a late discharge on such a day, the rules in § 3103.2 will be followed. Although in these situations a day of utilization is not counted, a spell of illness begins and any charges for covered services are applied against the inpatient hospital deductible. (See § 3611 for billing in these cases.)

3104. INPATIENT PSYCHIATRIC BENEFIT DAYS REDUCTION

If an individual is in a participating psychiatric hospital on the first day of his entitlement to hospital insurance, the number of inpatient benefit days in the first spell of illness is subject to reduction. The days (not necessarily consecutive) on which he was an inpatient of a psychiatric hospital in the 150-day period immediately before the first day of entitlement, must be subtracted from the 150 days of inpatient hospital services for which he would otherwise be eligible in his first spell of illness. Days spent in a general hospital for diagnosis or treatment of a psychiatric condition prior to entitlement will not reduce the patient's 150 inpatient benefit days in his initial spell of illness.

The reduction applies only to inpatient hospital services received in a psychiatric hospital, or in a general hospital if the individual is an inpatient of the general hospital primarily for the diagnosis or treatment of mental illness. Thus, for example, if a patient in a psychiatric hospital has no benefit days remaining because of the reduction, he may nevertheless be entitled to have payment made for up to 150 days of inpatient hospital services for a non-mental illness during his first spell of illness.

See § 3104.5 for the effect of this provision on the coinsurance provision.

Prior to 1/1/68, the above reduction in benefit days also applied to an individual who was an inpatient of a participating tuberculosis hospital on his first day of entitlement. However, the days that were subtracted are restored to such an individual if he is still in his first spell of illness after December 31, 1967, and as a result he is eligible for up to 150 days of any inpatient hospital services furnished after December 31, 1967.

Prior to 1968, the reduction applied to all inpatient hospital services in the initial spell of illness, whether received in a psychiatric, tuberculosis, or general hospital.

3104.1 Patient Status on Day of Entitlement.--A patient who is in a participating psychiatric hospital on the first day of his entitlement is subject to this reduction. The reduction applies to patients admitted to or discharged from such a hospital on their first day of entitlement, or who begin or end a leave of absence on that day. Where only a distinct part of an institution is participating as a psychiatric hospital, the provision applies only to patients who, on their first day of entitlement, are inpatients of that part.

3104.2 Institution's Status in Determining Days Deducted.--The status of a psychiatric hospital (or a distinct part of such a hospital) as of the individual's first day of entitlement is controlling in determining whether days spent there during the preceding 150 days are to be deducted. Thus, deductions would be made for days spent in a hospital (or distinct part) which was participating as of the individual's first day of entitlement even though it was not participating during all or part of the preceding 150 days. However, where an institution is not participating as of the individual's first day of entitlement, deductions would not be made for days spent in that institution during the preceding 150 days, even though the institution is later certified for participation as a psychiatric hospital.

Where a participating psychiatric hospital is a distinct part of an institution, deductions are made only for days spent in the wards, floors, wings, etc., included in the participating distinct part as of the individual's first day of entitlement, even though it was not participating during all or part of the preceding 150 days. Deductions are not made for days spent in a part of the institution not included in the participating distinct part as of the individual's first day of entitlement, e.g., days spent in a custodial section of the institution or days spent in a general medical-surgical facility participating as a general hospital.

3104.3 Days of Admission, Discharge, and Leave.--In determining the number of days to be deducted, include days of admission and days on which the patient returned from leave of absence. Do not count days of discharge, days on which the patient began a leave of absence, or days of leave during all of which the individual is absent from the hospital.

3104.4 Reduction for Psychiatric Services in General Hospitals.--When an individual subject to a reduction in days is an inpatient in a general hospital after December 31, 1967, the intermediary will apply the reduction only if it has determined that the individual was an inpatient primarily for the diagnosis or treatment of mental illness.

The intermediary will make a tentative decision based on the admitting diagnosis (Item 16, Form SSA-1453). This decision will be subject to change, however, based on reports from the hospital or other information received by the intermediary. Hospitals should notify the intermediary of any subsequent developments that might cause the intermediary to modify the initial decision. Where the patient receives treatment not only for mental illness but also for another condition, the intermediary will determine for which condition the individual was primarily an inpatient.

The intermediary will also examine the discharge diagnosis when the bill is received to see if a change occurred during the period of hospitalization. The reduction will not be applied where the primary discharge diagnosis is not related to mental illness, even though the reduction was tentatively applied based on the admitting diagnosis.

If the intermediary needs more information to make the required determination, it should obtain it from the hospital, the attending physician, or other appropriate source. In some cases, it may be helpful to consult with the intermediary's medical staff. Any case in which a reasonable question persists about whether the individual was an inpatient "primarily for the diagnosis or treatment of mental illness" should be resolved in favor of not applying the reduction.

The term "mental illness," is defined as the specific psychiatric conditions described in the American Psychiatric Association's *Diagnostic and Statistical Manual--Mental Disorders*.

3104.5 *Determining Days Available-Date of Entitlement After 1967*.--Since payment can be made only for the number of days remaining after the reduction is applied, the following steps should be taken to determine the number of days available in the first spell of illness for which payment can be made for inpatient psychiatric hospital services and inpatient services in a general hospital for the treatment of mental illness:

1. determine how many days in the 150-day pre-entitlement period the patient spent in a psychiatric hospital

2. subtract these from 150.

Payment should be made for the remaining days in the following order of priority:

a. the 60 full benefit days,

b. the 30 regular coinsurance days,

c. the 60 lifetime reserve coinsurance days.

Benefit days, including lifetime days, not available to the patient because of the psychiatric reduction nevertheless remain available for use in hospitalization not subject to the reduction: a general hospital stay for a nonpsychiatric condition or a tuberculosis hospital stay. The lifetime days not previously used also remain available for any inpatient stays (including psychiatric hospital stays) in subsequent spells of illness.

EXAMPLE 1: The patient was an inpatient of a participating psychiatric hospital on his first day of entitlement on February 1, 1973. He had been in such a hospital in the pre-entitlement period for 20 days. Therefore, 130 days are payable. Payment would be made in the following order: 60 full benefit days; 30 $18 coinsurance days; 40 $36 coinsurance (lifetime) days.

EXAMPLE 2: The same facts in example 1, except that the patient had been in a psychiatric hospital in the pre-entitlement period for 70 days. Therefore, 80 days are payable. Payment would be made in the following order: 60 full benefit days; 20 $18 coinsurance days.

EXAMPLE 3: The same facts as in example 1, except that the patient had been in a psychiatric hospital in the pre-entitlement period for 110 days. Therefore, 40 days are payable. Payment would be made for these 40 days as full benefit days.

3104.6 Determining Days Available-Date of Entitlement Before 1968-Patient Still In First Spell of Illness.--

A. Preentitlement Stay In Tuberculosis Hospital.--An individual who after December 31, 1967, is still in his first spell of illness and was subject to a reduction in benefit days prior to 1968 because he was in a participating tuberculosis hospital at the time of entitlement will have those days restored for any inpatient hospital services furnished after December 31, 1967. The reduction provision no longer applies to such an individual for services furnished after 1967. Thus, for example, an individual who was an inpatient of a tuberculosis hospital on his date of entitlement and for the 90-day period preceding entitlement, would be eligible on January 1, 1968, for up to 150 days of any inpatient hospital services in his first spell of illness.

B. Preentitlement Stay in Psychiatric Hospital.--A beneficiary who after December 31, 1967, is still in his first spell of illness and was subject to a reduction in benefit days prior to 1968 because he was in a participating psychiatric hospital upon entitlement, may be entitled to additional benefit days beginning January 1, 1968.

1. On January 1, 1968, the individual becomes eligible for 60 lifetime reserve days. Before these days can be used for psychiatric hospital stays or general hospital stays for the treatment of mental illness, an investigation of the 91st to 150th day period preceding entitlement must be made. Any days spent in a psychiatric hospital during this period will have to be subtracted from the 60 lifetime reserve days available for use in the first spell of illness.

Prior to 1968, the number of benefit days available in the patient's first spell of illness was determined on the basis of the 90-day period preceding entitlement. The rules in § 3104.5 do not apply and a new determination will not be made for this period. Payment, if any, for psychiatric hospital stays and general hospital stays for the treatment of mental illness on or after January 1, 1968, will be made for any days still payable under the prior determination and then for any lifetime reserve days available as determined above. (However, a new determination for the 90 day preentitlement period will be required if there is evidence that tuberculosis hospital days were included in the prior determination. See C. below.)

EXAMPLE 1: An individual was in a participating psychiatric hospital when he became entitled to benefits on December 1, 1967, and remained in the hospital following entitlement. Since he had been in the hospital for all of the 90-day preentitlement period, he was not entitled to benefits for the services he received in 1967. On January 1, 1968, he became entitled to 60 lifetime reserve days. An investigation of the 91st to 150th day preceding entitlement disclosed he was in a psychiatric hospital for 30 days in that period. He may use 30 lifetime days for his stay in the psychiatric hospital beginning January 1, 1968.

EXAMPLE 2; Same facts as example 1, except that in the 90-day preentitlement period the individual was in a psychiatric hospital only 30 days. He was, therefore, eligible under prior law for payment of 60 full benefit days. On January 1, 1968, 31 of the 60 full days had been used. On January 1, 1968, he is eligible to have payment made for 29 full benefit days and then 30 lifetime days.

2. Any unused benefit days plus the number of days for which the beneficiary's eligibility was previously reduced plus 60 lifetime reserve days are available for general hospital stays for a nonpsychiatric condition or for tuberculosis hospital stays in the first spell of illness.

C. Preentitlement Stays In Both Psychiatric and Tuberculosis Hospitals.--Days spent in a tuberculosis hospital in the preentitlement period do not count as reduction for services received after 1967 and such days are restored. This is true not only for a beneficiary who was in a tuberculosis hospital when he became entitled but also for a beneficiary who was in a psychiatric hospital at the time of entitlement after having spent some of his preentitlement days in a tuberculosis hospital. However, in the latter situation, a presumption may be made in the absence of evidence to the contrary that all days in the preentitlement period were psychiatric hospital days. (Where there is evidence a new determination for this period is required, see B.1. above.)

3105. INPATIENT PSYCHIATRIC HOSPITAL SERVICES--LIFETIME LIMITATION

Payment may not be made for more than a total of 190 days of inpatient psychiatric hospital services during the patient's lifetime. The limitation applies only to services furnished in a psychiatric hospital. The period spent in a psychiatric hospital prior to entitlement does not count against the patient's lifetime limitation, even though preentitlement days may have been counted against the 150 days of eligibility in the first spell of illness.

3106. LIFETIME RESERVE DAYS.

A. Summary of Provision.-- Each beneficiary has a lifetime reserve of 60 additional days of inpatient hospital services to draw upon after he or she has used 90 days of inpatient hospital services in a spell of illness. Payment will be made for such additional days of hospital care after the 90 days of benefits have been exhausted unless the individual elects not to have such payment made (and thus saves the reserve days for a later time).

A coinsurance amount equal to one-half of the inpatient hospital deductible applies to lifetime reserve days. See §§3201 and 3211 for the inpatient hospital deductible amount.

B. Effect of Reserve Days on Guarantee of Payment Provision.-- Under the guarantee of payment provisions (§§3714ff.) a hospital may be paid, under certain conditions, for inpatient services furnished to a beneficiary whose eligibility for inpatient benefit days has been exhausted, including exhaustion of the 190-day lifetime limitation on inpatient psychiatric hospital services. The guarantee of payment provisions are not applicable until the individual has exhausted his or her 60 lifetime reserve days of inpatient hospital services except where the beneficiary is deemed to have elected not to use lifetime reserve days. (See C below and §§3106.2A and 3106.2D(2).)

C. Reserve Days Not Available Where Average Charges Do Not Exceed One-Half Inpatient Hospital Deductible.-- A beneficiary will be deemed to have elected not to use the lifetime reserve days where the average daily charge for covered services furnished during a lifetime reserve days billing period is equal to or less than the coinsurance amount for the lifetime reserve days. Such days are treated as noncovered days rather than potential lifetime reserve days since the beneficiary would be required to pay for all of the hospital charges regardless of his or her election and therefore would not benefit from use of lifetime reserve days. This rule applies to hospitals reimbursed on the basis of reasonable cost and to hospitals in areas with special reimbursement rules (such as Maryland, New Jersey, and Rochester and the Finger Lakes areas of New York). See §§3106.2D(2) for deemed election under PPS.

D. Availability of Reserve Days Where Psychiatric Limitations Are Involved.-- A beneficiary's reserve days are not available to the extent that he or she is subject to the 150-day psychiatric hospital reduction provision, i.e., where the beneficiary has been in a psychiatric hospital during the 150-day period immediately preceding the first day of entitlement to hospital insurance benefits and is still in a psychiatric hospital on the first day of entitlement. (See §3104.) The reserve days are available, however, if such a beneficiary receives nonpsychiatric services in a general hospital or if the beneficiary starts a new spell of illness. The reserve days are also not available to a beneficiary who is in a psychiatric hospital after using 190 days of inpatient psychiatric hospital care during his or her lifetime. (See §3105.)

E. Availability of Reserve Days for Hospital Emergency Services.-- The reserve days are available for emergency services furnished in nonparticipating hospitals.

F. Physician Certification.-- Physician certification requirements are applicable to lifetime reserve days. (See §§3315-3324.)

3106.1 When Payment Will Be Made for Reserve Days.-- When a patient receives services after exhaustion of 90 days of coverage, benefits will be paid for available reserve days on the basis of the patient's request for payment, unless the patient has indicated in writing that he or she elects not to have the program pay for such services.

3106.2 Election Not To Use Lifetime Reserve Days.--

A. General.-- An election not to use lifetime reserve days may be made by the beneficiary (or by someone acting on his or her behalf) at the time of admission to a hospital or at any time thereafter, subject to the limitations on retroactive elections described in paragraph (C) of this section.

Hospitals are required to notify patients who have already used or will use 90 days of benefits in a spell of illness that they can elect not to use their reserve days for all or part of a stay. The hospital notice should be given when the beneficiary has five regular coinsurance days left and is expected to be hospitalized beyond that period. Where the hospital discovers the patient has fewer than five regular coinsurance days left, it should immediately notify the patient of this option. The hospital should annotate its records at the time that it informed the patient of this option. In addition, it should make available an appropriate election statement or form to be included in the patient's hospital record if he or she elects not to use reserve days. (See §3106.4 for sample election format). If a patient elects not to use reserve days, covered Part B services are billed on an HCFA-1450. A Medicare beneficiary who is eligible for medical assistance (Medicaid) under a State plan should be advised that such assistance will not be available if he or she elects not to use the lifetime reserve days. However, this restriction on medical assistance payments does not apply to cases where the beneficiary is deemed to have elected not to use lifetime reserve days.

In the following situations a beneficiary will be deemed to have elected not to use lifetime reserve days:

(1) The average daily charge for covered services furnished during a lifetime reserve billing period is equal to or less than the coinsurance amount for lifetime reserve days and (a) the hospital is reimbursed on a cost reimbursement basis or (b) the hospital is reimbursed under the prospective payment system and lifetime reserve days are needed to pay for all or part of the outlier days. (See §§3106C and 3106.2D(2)(a).)

(2) For the nonoutlier portion of a stay in a hospital reimbursed under the prospective payment system, if the beneficiary has one or more regular (non-lifetime reserve) days remaining in the benefit period upon admission to the hospital. (See §3106.2D(2)(a).)

(3) The beneficiary has no regular days available at the time of admission to a hospital reimbursed under the prospective payment system and the total charges for which the beneficiary would be liable if he does not use lifetime reserve days are equal to or less than the charges for which the beneficiary would be liable if he used lifetime reserve days, i.e., the sum of the coinsurance amounts for the lifetime reserve days that would be used plus the total charges for outlier days, if any, for which no lifetime reserve days would be available because lifetime reserve days are exhausted. (See §3106.2D(2)(b).)

Exception: Even though a beneficiary would otherwise be deemed to have elected not to use lifetime reserve days, he or she will not be so deemed where benefits are available from another third party payer to pay some or all of the charges and the third party requires as a condition for payment that lifetime reserve days be used. In such cases, lifetime reserve days will be used unless the beneficiary specifically elects not to use them.

B. Election Made Prospectively.-- Ordinarily, an election not to use reserve days will apply prospectively. If the election is filed at the time of admission to a hospital, it may be made effective beginning with the first day of hospitalization or with any day thereafter. If the election is filed later, it may be made effective beginning with any day after the day it is filed.

C. Retroactive Election.-- A beneficiary may retroactively elect not to use reserve days provided: (1) the beneficiary (or some other source) offers to pay the hospital for any of the services not payable under Part B; and (2) the hospital agrees to accept the retroactive election. In these cases, the hospital will use corrected bill procedures. (The debit-credit procedure in §3816 should be used by the intermediary if HCFA has not rejected the prior bill. Otherwise, the intermediary should correct the original bill.)

A retroactive election not to use the lifetime reserve days must be filed within 90 days following the beneficiary's discharge from the hospital unless benefits are available from a third party payer to pay for the services and the hospital agrees to the retroactive election. In that case, the beneficiary may file an election not to use the lifetime reserve days later than 90 days following discharge.

EXAMPLE 1:

Prior to July 1, A had used 90 days of inpatient hospital services in a spell of illness. Beginning July 1, A was hospitalized for 10 additional days in that same spell of illness. A was informed of his election right on July 1 at the time of admission and indicated that he wanted to use his reserve days for that stay. One month after being discharged from the hospital, A informed the hospital's billing office that he now wished to save his reserve days for a future stay. A agreed to pay the hospital for the services he received during the 10 days of hospitalization which were not payable under Part B and was permitted to file a retroactive election not to use his reserve days, effective July 1.

EXAMPLE 2:

On July 1, 1983, B was discharged from a hospital after being hospitalized for 105 days. The hospital billed Medicare for 90 regular days plus 15 lifetime reserve days. On October 20, 1983 (more than 90 days following discharge) B learned that a private insurer could pay for the last 15 days of the stay. B informed the hospital that he wished to file a retroactive election not to use lifetime reserve days for the last 15 days of the stay. The hospital agreed to the request, and B filed an election form. The hospital refunded the Medicare payment and billed the private carrier instead.

D. Period Covered by Election.

(1) Hospitals Not Reimbursed Under Prospective Payment System.—A beneficiary election not to use reserve days for a particular hospital stay may apply to the entire stay or to a single period of consecutive days in the stay but cannot apply to selected days in a stay. If an election (whether made prospectively or retroactively) not to use reserve days is made effective with the first day for which reserve days are available, it may be terminated at any time. After termination of the election, all hospital days would be covered to the extent that reserve days are available. (Thus, an individual who has private insurance which covers hospitalization beginning with the first day after 90 days of benefits have been exhausted may terminate the election as of the first day not covered by the insurance plan.) If an election not to use reserve days is made effective beginning with any day after the first day for which reserve days are available, it must remain in effect until the end of that stay unless the entire election is revoked in accordance with §3106.5.

(2) Hospitals Reimbursed Under Prospective Payment System.

(a) Beneficiary Has One or More Regular Benefit Days Available at Time of Admission.--If the beneficiary has one or more regular benefit (non-lifetime reserve) days remaining in the benefit period upon entering the hospital, Medicare will pay the entire prospective payment amount for nonoutlier days. Therefore, there will be no advantage to a beneficiary in using any of his lifetime reserve days for nonoutlier days if at least one day of his regular 90 days of coverage remains when he enters the hospital. In this situation, the beneficiary will be deemed to have elected not to use any of his lifetime reserve days for the nonoutlier part of the stay. The beneficiary may also elect not to use lifetime reserve days for outlier days but such an election must apply to all outlier days.

EXAMPLE 3:

> C was admitted to a hospital on April 1, 1984 and discharged on June 29, 1984, utilizing 89 regular days of inpatient care. On August 1, 1984, C entered the hospital again. For this DRG, outlier days would have begun August 26, but C was discharged on August 23, prior to the commencement of outlier days. Since the first 2 days of the second stay were regular coverage days, Medicare will reimburse the hospital the prospective reimbursement amount for the entire stay. Since no outlier days are involved, there is no advantage to the beneficiary in using lifetime reserve days. Therefore, C will be deemed to have elected not to use any lifetime reserve days for that stay.

Even though lifetime reserve days are not used for nonoutlier days where the beneficiary has at least one regular day available at the time of admission, payment will be made for outlier days occurring after regular coverage days have been exhausted unless (a) the beneficiary elects not to use lifetime reserve days for the outlier days or (b) the beneficiary is deemed to have elected not to use lifetime reserve days for the outlier days. A beneficiary is deemed to have elected not to use lifetime reserve days for outlier days if the average daily charge for the outlier days for which lifetime reserve days would otherwise be available is equal to or less than the daily coinsurance amount for the lifetime reserve days. In that situation, the beneficiary would be required to pay for all of the hospital's charges for such outlier days regardless of his or her election and therefore would not benefit from the use of lifetime reserve days. If the beneficiary elects not to use lifetime reserve days for outlier days, such an election must apply to all outlier days. If the beneficiary elects not to use lifetime reserve days for outlier days Medicare will pay for the non-outlier portion of the stay and will make no payment for the outlier days.

EXAMPLE 4:

D, who had never used any of his lifetime reserve days, was admitted to the hospital on April 1, 1984 and discharged on June 29, 1984, utilizing 89 regular days of covered inpatient care. On August 1, 1984, D entered the hospital again and was discharged on September 5. For this DRG, outlier days began on August 26. Medicare will reimburse the hospital the prospective payment amount for the non-outlier portion of the stay. The average daily charges were $200 for the outlier portion of the stay. The lifetime reserve day coinsurance amount is $178. Since the average daily charge for the outlier days is more than the daily coinsurance amount for lifetime reserve days, there is no deemed election not to use lifetime reserve days for the outlier portion of the stay. For outlier days D has the option: (1) to make no lifetime reserve election, in which case Medicare will pay for the nonoutlier portion of the stay and for the 10 outlier days, August 26 through Sept. 4, and D will have utilized 10 lifetime reserve days; or (2) to elect not to use his lifetime reserve days for the 10 outlier days, in which case Medicare will pay only for the nonoutlier portion of the stay, and D will not have used any lifetime reserve days.

(b) Beneficiary Has No Regular Days Available at Time of Admission.—If the beneficiary enters the hospital after he has completely exhausted his regular benefit days, available lifetime reserve days will be used automatically for each day of the stay unless the beneficiary elects not to use lifetime reserve days or he or she is deemed to have elected not to use lifetime reserve days. A beneficiary is deemed to have elected not to use lifetime reserve days, if the total charges for the stay, i.e., the charges for which the beneficiary would be liable if he does not use lifetime reserve days are equal to or less than the charges for which the beneficiary would be liable if he used lifetime reserve days. In the latter case, charges equal the sum of the coinsurance amounts for the lifetime reserve days that would be used plus the total charges for outlier days, if any, for which no lifetime reserve days would be available because lifetime reserve days are exhausted. (See 3106.2A(3).)

In the case of a hospital reimbursed under the prospective payment system, an election by a beneficiary not to use lifetime reserve days must apply to the entire hospital stay. If the beneficiary elects not to use lifetime reserve days, Medicare will not pay for any portion of the stay. Similarly, a deemed election not to use lifetime reserve days must apply to the entire stay and will preclude any payment for the stay.

EXAMPLE 5:

F was admitted to a hospital on March 10, 1984 and discharged on June 8, 1984, utilizing 90 regular days of coverage. On August 1, 1984, F entered the hospital again and was discharged on September 8. For this DRG, outlier days began on August 26. At the time of the second admission, F still had 60 lifetime reserve days available. The hospital charges for this stay were $7,000. The sum of the coinsurance amounts for the lifetime reserve days needed to pay for this stay is $6,784 ($178 per day X 38 days). Since the charges for the stay are greater than the sum of lifetime reserve days coinsurance amounts, there is no deemed election not to use lifetime reserve days. F has the option: (1) to make no lifetime reserve election, in which case Medicare will pay for the entire stay including the outlier days, and F will use 38 lifetime reserve days; or (2) to elect not to use lifetime reserve days, in which case Medicare will not pay for any portion of the stay.

EXAMPLE 6:

Same facts as Example 5 except the beneficiary has only 35 lifetime reserve days available at the time of the second admission and total charges for the stay are $6,500. Included in the hospital charges is $300 for the last 3 days of the stay. The sum of the coinsurance amounts for the lifetime reserve days that could be used is $6,230 ($178 per day X 35 days). Since the charges for the entire stay, $6,500, are less than $6,530 (the sum of the coinsurance amounts for days for which lifetime reserve days are available ($6,230) plus the total charges for the outlier days for which lifetime reserve days are not available ($300)), the beneficiary is deemed to have elected not to use any lifetime reserve days for the stay.

E. Election Where Beneficiary Incapacitated.-- If a beneficiary is physically or mentally unable to file an election not to use reserve days, certain other individuals may file the election on his behalf: (1) If the charges will be paid by other hospital insurance or if some other person agrees to pay the hospital for the services, an election not to use reserve days may be filed by any of the individuals who may sign a Request for Payment on behalf of the beneficiary (e.g., relative, legal guardian) (see S3302.5); (2) If an incapacitated beneficiary does not have other hospital insurance, and no other person agrees to pay the hospital for the services, only the beneficiary's legal representative may file an election on his or her behalf.

3106.3 Content of Election.-- A beneficiary's election not to use reserve days should specify the name of the hospital and the starting date of the election.

Where the hospital is not reimbursed under the prospective payment system, the starting date of the election may be any day after regular benefits are exhausted. Where the hospital is reimbursed under the prospective payment system, the starting date of the election depends on whether the beneficiary has regular benefit days remaining upon entering the hospital. If the beneficiary has regular benefit days remaining upon entering the hospital, the starting date of the election must be the first outlier day after regular benefits are exhausted. If the beneficiary has no regular benefits remaining upon entering the hospital, the starting date of the election must be the first day of the hospital stay.

The election may specify a termination date before the last day of the stay only if the hospital is not reimbursed under the prospective payment system and the election is made effective beginning with the first day for which reserve days are available (S3106.2D(1)). Where the hospital is under the prospective payment system, (S3106.2D(2) applies) the election may not specify a termination date because the election remains in effect until the last day of the stay.

3106.4 Election Format.—The following model election language may be used:

Election Not To Use Lifetime Reserve Days

I do not wish to have Medicare benefits paid on my behalf under the lifetime reserve provisions of section 1812(b) of the Social Security Act for services furnished me by (name of hospital) beginning (date).

WHERE THE ELECTION MAY TERMINATE BEFORE THE END OF THE STAY IN ACCORDANCE WITH SECTION 3106.3, THE FOLLOWING MAY BE INCLUDED:

The last day to which this election applies is (date).

I understand that I will be responsible for all of the hospital's charges not reimbursed by Medicare because of this election, except those covered under Medicare Part B. Where Medicare Part B payments may be made for services furnished during the period covered by the election, I will be responsible for the deductible and 20 percent coinsurance amounts.

______________ ____________
(signature) (date)

____
(HI claim number)

3106.5 Revocation of Election.-- An election not to use reserve days may be revoked in whole or in part, provided a claim has not been filed for Part B ancillary services furnished on the hospital days in question. (An election may be revoked in part subject to the restriction on elections in §3106.2D(1).) The revocation must be submitted to the hospital in writing and should be made part of the patient's hospital record. (See §3106.6 for sample revocation format.) If a beneficiary is incapacitated, any of the individuals who are permitted to sign the Request for Payment may file the revocation on the beneficiary's behalf. However, an election not to use reserve days may not be revoked after the beneficiary dies.

A revocation of election not to use lifetime reserve days must be made within 90 days following the beneficiary's discharge from the hospital with the following exception: The election may be revoked later than 90 days after discharge if benefits are available from a private insurer to pay the lifetime reserve coinsurance amounts and the insurer requires as a condition for payment that lifetime reserve days be used.

3106.6 Revocation Format.-- The revocation of an election not to use reserve days should specify the name of the hospital, the admission date of the stay to which it applies and, if appropriate, the effective date of revocation. The following model language is suggested:

Revocation of Election Not To Use Lifetime Reserve Days

I wish to revoke the election previously made by me or on my behalf not to use lifetime reserve days to pay for the inpatient hospital services furnished me by (name of hospital) during my stay there beginning (admission date). (If appropriate add: I wish to revoke my election not to use lifetime reserve days for the period from _____ to _____.) I understand that my lifetime reserve days will be used for these services (to the extent that I have such days available) but that I will still be responsible to pay the Medicare coinsurance amounts and any charges for services not covered under the Medicare program.

__________ (signature) __________ (date)

__________ (HI claim number)

3107. INPATIENT SERVICE DAYS COUNTING TOWARD BENEFIT MAXIMUMS.

A. 90-Day Benefit Limitation.--Inpatient hospital (including psychiatric hospital) services count toward the maximum of 90 benefit days payable per benefit period only if:

- payment for the services is made, or

- payment for the services would be made if a request for payment and claim were filed properly and timely, a physician certified that the services were necessary, if required, and the provider submitted all necessary evidence. (See § 3302.6 for patient's refusal to file, § 3315.1 for physician's refusal to certify, § 3600.1 for provider's failure to submit evidence, and § 3610.1 for billing procedures in these situations). Where payment cannot be made because of the inpatient deductible or coinsurance requirements, the inpatient day(s) used in satisfying these requirements nevertheless counts toward the beneficiary's maximum inpatient days.

B. Lifetime Reserve Days.--Inpatient hospital services count toward the maximum of 60 lifetime reserve days under the same conditions as in subsection A except that days are not counted if:

- the individual elects not to have payment made (§ 3106.2), or

- the daily charge does not exceed the coinsurance rate (§ 3106C).

C. Lifetime Inpatient Psychiatric Hospital Limitation.--Inpatient psychiatric hospital services count toward the 190-day lifetime limitation on inpatient psychiatric hospital services only if the conditions in subsection A are met.

Hospital Services Covered Under Part B

3110. MEDICAL AND OTHER HEALTH SERVICES FURNISHED TO INPATIENTS OF PARTICIPATING HOSPITALS.

Payment may be made under Part B for the following medical and other health services (i.e, when they are reasonable and necessary) when furnished by a participating hospital (either directly or under arrangements) to an inpatient of the hospital, but only if payment for these services cannot be made under Part A. In PPS hospitals, this means that Part B payment could be made for these services if:

- no Part A prospective payment is made at all for the hospital stay because of patient exhaustion of benefit days before admission,

- the admission was disapproved as not reasonable and necessary (and waiver of liability payment was not made),

- the day or days of the otherwise covered stay during which the services were provided were not reasonable and necessary (and no payment was made under waiver of liability), o the patient was not otherwise eligible for or entitled to coverage under Part A (See § 3101.14 for Services Related to and Required as a Result of Services Which are Not Covered Under Medicare); or

o no Part A day outlier payment is made for one or more outlier days due to patient exhaustion of benefit days after admission but before the case's arrival at outlier status or because outlier days are otherwise not covered and waiver of liability payment is not made.

Part B payment may be made for the following medical and other health services furnished at any time during the stay if no Part A payment is made. However, if only day outlier payment is denied under Part A, Part B payment may be made for only the services furnished on the denied outlier days.

In non-PPS hospitals, Part B payment may be made for the following covered services delivered on any day for which Part A payment is denied (i.e., because of patient exhaustion of benefit days, patient or services were not at the hospital level of care, patient was not otherwise eligible or entitled to payment under Part A).

o Diagnostic X-ray tests, diagnostic laboratory tests, and other diagnostic tests;

o X-ray, radium, and radioactive isotope therapy, including materials and services of technicians;

o Surgical dressings, and splints, casts, and other devices used for reduction of fractures and dislocations;

o Prosthetic devices (other than dental) which replace all or part of an internal body organ (including contiguous tissue), or all or part of the function of a permanently inoperative or malfunctioning internal body organ, including replacement or repairs of such devices;

o Leg, arm, back, and neck braces, trusses, and artificial legs, arms, and eyes including adjustments, repairs, and replacements required because of breakage, wear, loss, or a change in the patient's physical condition;

o Outpatient physical therapy, outpatient speech pathology services, and outpatient occupational therapy (see §§ 3147ff); and

o Ambulance services.

See §§ 3698ff for processing claims of nonparticipating hospitals.

In order to be covered under Part A or Part B, a hospital must furnish nonphysician services to its inpatients directly or under arrangements. A nonphysician service is one which does not meet the criteria defining physicians' services specifically provided for in regulation at 42 CFR 405.550(b). Services "incident to" physicians' services (except for the services of nurse anesthetists employed by anesthesiologists) are nonphysician services for purposes of this provision. This provision is applicable to all hospitals participating in Medicare, including those reimbursed under alternative arrangements such as State cost control systems and to emergency hospital services furnished by nonparticipating hospitals. (Exception: Part B payment may be made for nonphysician services provided to a hospital inpatient even if the service is not provided directly by the hospital or under arrangements in hospitals where the HCFA has found that a hospital has allowed Part B billing by outside suppliers so extensively prior to October 1, 1982, that failure to continue to allow it would threaten the stability of patient care. Specific criteria and procedures related to this waiver, which is available only until October 1, 1986, are referred to in §3618C.)

In all hospitals not falling within the above exception, every service provided to a hospital inpatient (other than the three (3) discussed below) must be treated as an "inpatient hospital service" to be paid for under Part A, if Part A coverage is available for the stay and the beneficiary. This is the case since, as noted above, every hospital, other than those granted the above described exception, must provide directly or arrange for any nonphysician service rendered to its inpatients and a hospital can be paid under Part B for a service provided in this manner only if Part A coverage does not exist.

Note: There are three services which, when provided to a hospital inpatient, may be covered under Part B, even though the patient has Part A coverage for the hospital stay. These services are: (1) physicians services (including the services of residents and interns in unapproved teaching programs); and (2) pneumoccocal vaccine and its administration, and (3) hepatitis B vaccine and its administration. However, it is noted again that unless a waiver has been specifically granted to a hospital consistent with §3618C, in order to have any Medicare coverage at all (Part A or Part B) any nonphysician service rendered to a hospital inpatient (including pneumoccocal and hepatitis B vaccine services) must be provided directly or arranged for by the hospital.

3110.3 Surgical Dressings, and Splints, Casts, and Other Devices Used for Reduction of Fractures and Dislocations.--Surgical dressing are limited to primary dressings, i.e., therapeutic and protective coverings applied directly to lesions either on the skin or opening to the skin required as the result of a surgical procedure performed by a physician. (Items such as ace bandages, elastic stockings, and support hose, Spenco boots and other foot coverings, leotards, knee supports, surgical leggings, gauntlets, and pressure garments for the arms and hands are generally used as secondary coverings and therefore would not be covered as surgical dressings.) Surgical dressings are usually applied first by a physician but may be reapplied by others including the patient or a member of his family. Dressings required for purposes other than a surgical lesion, e.g., bedscores, are not covered. Splints and casts, etc., include dental splints.

Prior to October 30, 1972, a colostomy bag and necessary accountrements required for its attachment were covered as a surigcal dressing, but irrigation equipment and supplies used in treating a colostomy were not. (See §3110.4 below for statement regarding coverage of such items as prosthetic devices effective October 30, 1972.)

3110.4 Prosthetic Devices.--Prosthetic devices (other than dental) which replace all or part of an internal body organ (including contiguous tissue), or replace all or part of the function of a permanently inoperative or malfunctioning internal body organ are covered when furnished on a physician's order. This does not require a determination that there is no possibility that the patient's condition may improve sometime in the future. If the medical record, including the judgment of the attending physician, indicates the condition will be of long and indefinite duration, the test of permanence will be considered met. (Such a device could also be covered as a supply when furnished incident to a physician's service.)

Examples of prosthetic devices would include cardiac pacemakers, prosthetic lenses (see subsection B), breast prostheses (including a surgical brassiere) for postmastectomy patients, maxillofacial devices and devices which replace all or part of the ear or nose. A urinary collection and retention system with or without a tube would be a prosthetic device replacing bladder function in case of permanent urinary incontinence. The Foley catheter would also be considered a prosthetic device when ordered for a patient with permanent urinary incontinence. However, chucks, diapers, rubber sheets, etc., are supplies that are not covered under this provision. (Although hemodialysis equipment is a prosthetic device, reimbursement and coverage for the rental or purchase of such equipment for use in the home will be made only under the provisions for payment applicable to durable medical equipment (§3113ff) or the special rules that apply to the ESRD program.)

NOTE: Medicare does not cover a prosthetic device dispensed to a patient prior to the time at which the patient undergoes the procedure that will make necessary the use of the device. For example, a separate Part B payment would not be made for an intraocular lens or a pacemaker that a physician dispenses to a patient during an office visit, prior to the patient's hospitalization for performance of the procedure that will cause the device to be used. Dispensing a prosthetic device in this manner raises health and safety issues. Moreover, the need for the device cannot be clearly established until the procedure that makes its use possible is successfully performed. Therefore, dispensing a prosthetic device in this manner would not be considered reasonable and necessary for the treatment of the patient's condition.

Colostomy (and other ostomy) bags and necessary accoutrements required for attachment are covered as prosthetic devices. This coverage also includes irrigation and flushing equipment and other items and supplies directly related to ostomy care, whether or not the attachment of a bag is required.

If payment cannot be made on an inpatient's behalf under Part A, hemodialysis equiment, supplies, and services required by such patient could be covered under Part B as a prosthetic device which replaces the function of a kidney. See §3113.1B1 and the Coverage Issues Manual §§60-1 and 60-2 for payment for hemodialysis equipment used in the home. See §3101B for additional instructions on hospitalization for renal dialysis.

Accessories and/or supplies which are used directly with an enteral or parenteral device in order to achieve the therapeutic benefit of the prosthesis or to assure the proper functioning of the device are covered under the prosthetic device benefit subject to the additional guidelines in the Coverage Issues Manual §§65-10 - 65-10.3. Covered items include catheters, filters, extension tubing, infusion bottles, pumps (either food or infusion), intravenous (I.V.) pole, needles, syringes, dressings, tape, Heparin Sodium (parenteral only), volumetric monitors (parenteral only), and parenteral and enteral nutrient solutions. Baby food and other regular grocery products that can be blenderized and used with the enteral system are not covered. Note that some of these items, e.g., a food pump and an I.V. pole, qualify as DME. Although coverage of the enteral nutrition (EN) and total parenteral nutrition (TPN) therapy systems is provided on the basis of the prosthetic device benefit, the reimbursement rules relating to rental or purchase of DME apply to such items. (see §3113). When a hospital supplies TPN or EN systems which meet the criteria for coverage as a prosthetic device to an inpatient whose stay is not covered under Part A, the hospital must bill one of the two carriers designated to process claims for TPN and EN systems.(See §3661.)

(See §3111 where a hospital furnishes TPN or EN to an individual who is not an inpatient.)

The coverage of prosthetic devices includes replacement of and repairs to such devices as explained in subsection C below.

A. Prosthetic Lenses.--The term "internal body organ" includes the lens of an eye. Prostheses replacing the lens of an eye include postsurgical lenses customarily used during convalescence from eye surgery in which the lens of the eye was removed. In addition, permanent lenses are also covered when required by an individual lacking the natural lens of the eye because of surgical removal or congenital absence. Prosthetic lenses obtained on or after the beneficiary's date of entitlement to supplementary medical insurance benefits can be covered even though the surgical removal of the natural lens occurred before entitlement.

Payment may be made for one of the following combinations of prosthetic lenses when determined to be medically necessary by a physician (including on and after October 30, 1972, a doctor of optometry, see §3030.5) to restore essentially the vision provided by the natural lens of the eye:

1. prosthetic bifocal lenses in frames; or

2. prosthetic lenses in frames for far vision, and prosthetic lenses in frames for near vision; or

3. when a prosthetic contact lens(es) for far vision is prescribed (including cases of binocular and monocular aphakia), payment can be made for the contact lens(es) and prosthetic lenses in frames for near vision to be worn at the same time as the contact lens(es); and prosthetic lenses in frames to be worn when the contacts have been removed.

Payment may be made for prosthetic lenses which have ultraviolet absorbing or reflecting properties, in lieu of payment for the regular (untinted) prosthetic lenses mentioned in 1, 2 and 3 above, if it has been determined that such lenses are medically reasonable and necessary for the individual patient.

Payment cannot be made for cataract sunglasses obtained in addition to the regular (untinted) prosthetic lenses, since the sunglasses duplicate the restoration of vision function performed by the regular prosthetic lenses.

B. Dentures are excluded from coverage. However, when a denture or a portion thereof is an integral part (built-in) of a covered prosthesis (e.g., an obturator to fill an opening in the palate) it is covered as part of that prosthesis.

C. Supplies, Repairs, Adjustments, and Replacements.--Payment may be made for supplies that are necessary for the effective use of a prosthetic device (e.g., the batteries needed to operate an artificial larynx). Adjustment of prosthetic devices required by wear or by a change in the patient's condition are covered when ordered by a physician. To the extent applicable the provisions relating to the repair and replacement of durable medical equipment in §3113.3 should be followed with respect to the repair and replacement of prosthetic devices. Necessary supplies, adjustments, repairs, and replacements are covered even when the device had been in use before the user enrolled in Part B, so long as the device continues to be medically required. (See the Coverage Issues Manual §65-10.)

3110.5 Leg, Arm, Back, and Neck Braces, Trusses, and Artificial Legs, Arms, and Eyes.-- These appliances are covered under Part B when furnished incident to physicians' services or on a physician's order. A brace includes rigid and semi-rigid devices which are used for the purpose of supporting a weak or deformed body member or restricting or eliminating motion in a diseased or injured part of the body. Elastic stockings, garter belts, and similar devices do not come within the scope of the definition of a brace. Back braces include, but are not limited to, special corsets, sacroiliac, sacrolumbar, dorsolumbar corsets and belts. A terminal device (e.g., hand or hook) is covered under this provision whether or not an artificial limb is required by the patient.

Stump stockings and harnesses (including replacements) are also covered when these appliances are essential to the effective use of the artificial limb.

Adjustments to an artificial limb or other appliance required by wear or by a change in the patient's condition are covered when ordered by a physician. To the extent applicable the provisions relating to the repair and replacement of durable medical equipment in §3113.3 should be followed with respect to the repair and replacement of artificial limbs, braces, etc. Adjustments, repairs, and replacements are covered even when the item had been in use before the user enrolled in Part B so long as the device continues to be medically required.

3111. TOTAL PARENTERAL NUTRITION AND ENTERAL NUTRITION FURNISHED TO INDIVIDUALS WHO ARE NOT INPATIENTS.

Total parenteral nutrition (TPN) systems and enteral nutrition (EN) systems are covered as prosthetic devices when the criteria in §§ 65-10 - 65-10.3 of the Coverage Issues Manual are met. When these criteria are met, the medical equipment and medical supplies (together with nutrients) being used comprise covered prosthetic devices rather than durable medical equipment, however, reimbursement rules relating to DME will continue to apply to such items. (See § 3113.) When a hospital supplies TPN or EN systems which meet the criteria for coverage as a prosthetic device to an individual who is not an inpatient, the hospital must bill one of the two carriers designated to process claims for TPN and EN systems. (See § 3661.)

(See § 3110.4 where a hospital furnishes TPN or EN to an inpatient whose care is not covered under Part A.)

3112. OUTPATIENT HOSPITAL SERVICES.

Hospitals provide two distinct types of services to outpatients: services that are diagnostic in nature, and other services that aid the physician in the treatment of his patient. Both the diagnostic and the therapeutic services furnished by hospitals to outpatients are covered by Part B. The following rules pertaining to the coverage of outpatient hospital services are not applicable to physical therapy, speech pathology, occupational therapy, or end stage renal disease (ESRD) services furnished by hospitals to outpatients. See §§ 3147ff for rules on the coverage of outpatient physical therapy, occupational therapy and speech pathology furnished by a hospital.

3112.1 Outpatient Defined.--A hospital outpatient is a person who has not been admitted by the hospital as an inpatient but is registered on the hospital records as an outpatient and receives services (rather than supplies alone) from the hospital. Where a tissue sample, blood sample, or specimen is taken by personnel that are neither employed nor arranged for by the hospital and is sent to the hospital for performance of tests, the tests are not outpatient hospital services since the patient does not directly receive services from the hospital. Similarly, supplies provided by a hospital supply room for use by physicians in the treatment of private patients are not covered as an outpatient service since the patients receiving the supplies are not outpatients of the hospital. (See § 3103.1 for definition of "inpatient.")

Where the hospital uses the category "day patient," i.e., an individual who receives hospital services during the day and is not expected to be lodged in the hospital at midnight, classify the individual as an outpatient. For billing for outpatient services furnished before admission as an inpatient, see § 3610.3.

The inpatient of a SNF may be considered the outpatient of a participating hospital. However, the inpatient of a participating hospital cannot be considered an outpatient of that or any other hospital.

Outpatient hospital services furnished in the emergency room to a patient classified as "dead on arrival" are covered up through pronouncement of death if the hospital considers such patients as outpatients for record-keeping purposes and follows its usual outpatient billing practice for such services to all patients, both Medicare and non-Medicare. This coverage does not apply if the patient was pronounced dead prior to arrival at the hospital.

3112.2 Distinguishing Outpatient Hospital Services Provided Outside the Hospital.--Diagnostic services are covered when provided by the hospital whether furnished in the hospital or at other locations. Outpatient therapeutic services, furnished incident to physician's services, are covered when furnished outside the hospital only if there is direct personal supervision by a physician. Thus, it may be necessary to distinguish between diagnostic and therapeutic services when services are provided outside the hospital. Outpatient physical therapy, occupational therapy, and speech pathology services are not subject to the direct physician supervision requirement. See §§ 3147ff. for coverage of outpatient physical therapy, occupational therapy, and speech pathology services.

Where the rules of coverage require a distinction between diagnostic and therapeutic services the hospital may accept the physician's designations. Normally, however, the physician does not separate the services and need not be asked to do so.

3112.3 Outpatient Diagnostic Services.--

A. Diagnostic Services Defined.--A service is "diagnostic" if it is an examination or procedure to which the patient is subjected, or which is performed on materials derived from a hospital outpatient, to obtain information to aid in the assessment of a medical condition or the identification of a disease. Among these examinations and tests are diagnostic laboratory services such as hematology and chemistry, diagnostic X-rays, isotope studies, EKGs, pulmonary function studies, thyroid function tests, psychological tests and other tests given to determine the nature and severity of an ailment or injury.

B. Coverage of Outpatient Diagnostic Services.--Covered diagnostic services to outpatients include the services of nurses, psychologists, and technicians, drugs and biologicals necessary for diagnostic study, and the use of supplies and equipment. When a hospital sends hospital personnel and hospital equipment to a patient's home to furnish a diagnostic service, cover the service as if the patient had received the service in the hospital outpatient department.

Hospital personnel may provide diagnostic services outside the hospital premises without the direct personal supervision of a physician. For example, if a hospital laboratory technician is sent by the hospital to a patient's home to obtain a blood sample for testing in the hospital's laboratory, the technician's services are a covered hospital service even though a physician was not with the technician.

Payment may not be made for outpatient diagnostic services unless the same service would be covered as an inpatient hospital service if furnished to a hospital inpatient.

C. Outpatient Diagnostic Services under Arrangements.--When the hospital makes arrangements with others for diagnostic services, such services are covered under Part B as diagnostic tests whether furnished in the hospital or in other facilities.

Independent laboratory services furnished to an outpatient under arrangements with the hospital are covered only under the "diagnostic laboratory tests" provisions of Part B (see § 3110A), but are to be billed along with other services to outpatients. See § 3101.5B for (1) the definition of an independent clinical laboratory; (2) the requirements which such a laboratory must meet; and (3) instructions to the intermediary when it is not approved. The "cost" to the hospital for diagnostic laboratory services for outpatients obtained under arrangements is the reasonable charge by the laboratory.

Laboratory services may also be furnished to a hospital outpatient under arrangements by (1) the laboratory of another participating hospital, or (2) the laboratory of an emergency hospital or participating skilled nursing facility which meets the hospital conditions of participation relating to laboratory services.

D. Preadmission Diagnostic Services.--(Effective only for services performed after December 4, 1980, and before July 19, 1984.) Preadmission diagnostic services are those otherwise covered outpatient diagnostic services which are reasonable and necessary for the administration and interpretation of a diagnostic test, study or procedure and that are furnished by, or under arrangements made by, a participating hospital to an outpatient within 7 days before the day of the patient's admission to the same hospital as an inpatient. (See § 3101 for definition of "inpatient.") Furthermore, the services involved must be ones which would have to be performed after the admission if they had not been performed prior to admission and the results of the testing must be available to the hospital and physician at the time of the patient's admission. Preadmission diagnostic services can include services provided by a participating hospital to an outpatient who is being admitted for medical and/or surgical treatment in connection with an already diagnosed condition, as well as those services provided an outpatient whose condition has not been fully diagnosed and who is being admitted for a medically necessary inpatient diagnostic study. Such services as taking patients' histories or performing routine physical examinations are not "preadmission diagnostic services."

Where covered outpatient diagnostic services are reimbursed under Part B as "preadmission diagnostic services," payment may be made regardless of whether inpatient benefits are payable (e.g., when the beneficiary has used up all his inpatient hospital benefit days). Preadmission diagnostic services are reimbursed under Part B at 100 percent of reasonable costs; such services are not subject to the Part B coinsurance. The Part B deductible, however, does apply. Outpatient diagnostic services which do not meet the definition of "preadmission diagnostic services," but are otherwise covered and are reasonable and necessary, are subject to the Part B deductible and coinsurance. For purposes of these instructions, "preadmission diagnostic services" do not include outpatient hospital services furnished to an individual (with Part A coverage) on the day of or the day immediately preceding that individual's admission to the same hospital as an inpatient. Such services are treated as inpatient hospital services (see §§ 3608 and 3637.19).

3112.4 Outpatient Therapeutic Services.--

A. Coverage of Outpatient Therapeutic Services.--Therapeutic services which hospitals provide on an outpatient basis are those services and supplies (including the use of hospital facilities) which are incident to the services of physicians in the treatment of patients. Such services include clinic services and emergency room services.

To be covered as incident to physicians' services, the services and supplies must be furnished as an integral, although incidental, part of the physician's professional service in the course of diagnosis or treatment of an illness or injury. The services and supplies must be furnished on a physician's order by hospital personnel and under a physician's supervision. This does not mean that each occasion of service by a nonphysician need also be the occassion of the actual rendition of a personal professional service by the physician. However, during any course of treatment rendered by auxiliary personnel, the physician must personally see the patient periodically and sufficiently often to assess the course of treatment and the patient's progress and, where necessary, to change the treatment regimen. A hospital service or supply would not be considered incident to a physician's service if the attending physician merely wrote an order for the services or supplies and referred the patient to the hospital without being involved in the management of that course of treatment. The physician supervision requirement is generally assumed to be met where the services are performed on hospital premises; the hospital medical staff that supervises the services need not be in the same department as the ordering physician. However, if the services are furnished outside the hospital, they must be rendered under the direct personal supervision of a physician who is treating the patient. For example, if a hospital therapist, other than a physical or speech therapist, goes to a patient's home to give treatment and no physician accompanies him, the therapist's services would not be covered. See § 3147ff. for outpatient physical therapy and speech pathology coverage conditions.

B. Drugs and Biologicals.--For definitions of drugs and biologicals and combination drugs, see § 3101.3. Except for those drugs and biologicals which must be put directly into an item of durable medical equipment or a prosthetic device (see §§ 3110.4C and 3113.4), drugs and biologicals furnished to outpatients for therapeutic purposes are includable only if they are of a type which cannot be self-administered.

Whether a drug or biological is of a type which cannot be self-administered is based on the usual method of administration of the form of that drug or biological as furnished by the physician. Thus, where a physician gives a patient pills or other oral medication, these are excluded from coverage since the form of the drug given to the patient is usually self-administered. Similarly, if a physician gives a patient an injection which is usually self-injected (thus far insulin is the only drug determined to fall in this category), this drug is excluded from coverage, unless administered to the patient in an emergency situation (e.g., diabetic coma). Where, however, a physician injects a drug which is not usually self-injected, this drug is not subject to the self-administrable drug exclusion (regardless of whether the drug may also be available in oral form) since it is not self-administrable in the form in which it was furnished to the patient. (Of course, such injections could not be reasonable and necessary where injection is not considered an indicated method of administration according to accepted standards of medical practice for the condition for which given.)

1. Less Than Effective Drugs.--Payment may not be made for a less than effective drug. This is a drug that has been determined by the Food and Drug Administration (FDA) to lack substantial evidence of effectiveness for all labeled indications. Also, a drug that has been the subject of a Notice of an Opportunity for a Hearing (NOOH) published in the Federal Register before being withdrawn from the market, and for which the Secretary has not determined there is a compelling justification for its medical need, is considered less than effective. This will include any other drug product that is identical, similar, or related.

Because the FDA has not yet completed its identification of drug products that are still on the market, existing FDA efficacy decisions must be applied to all similar products once they are identified. The complete FDA listing comprises, for the most part, self-administered drugs. The listing that follows includes only those drugs which cannot be self-administered and which therefore could otherwise be covered under the Medicare program.

DESI DRUG PRODUCTS AND KNOWN RELATED DRUG PRODUCTS THAT LACK SUBSTANTIAL EVIDENCE OF EFFECTIVENESS AND ARE SUBJECT TO A NOTICE OF OPPORTUNITY FOR HEARING

TRADE NAME	ACTIVE INGREDIENT	DOSAGE FORM/ROUTE	FIRM
Vasodilan	Isoxsuprine Hydrochloride	Sol/IM	Mead Johnson

2. Hemophilia Clotting Factors. - Blood clotting factors, for hemophilia patients competent to use such factors to control bleeding without medical or other supervision, and items related to the administration of such factors are covered under Part B. Coverage is effective for such items and services purchased on or after July 18, 1984. Prior to the enactment of the Deficit Reduction Act of 1984 (P.L. 98-369), all drugs and biologicals which were of the type that could be self-administered were excluded from coverage. The coverage of blood clotting factors is an exception to the exclusion.

The amount of clotting factors determined to be necessary to have on hand and thus covered under this provision will be based on the historical utilization pattern or profile developed by the carrier for each patient. It is expected that the treating source; e.g., a family physician or Comprehensive Hemophilia Diagnostic and Treatment Center, will have such information. From this data, the contractor should be able to make reasonable projections concerning the quantity of clotting factors anticipated to be needed by the patient over a specific period of time. Unanticipated occurrences involving extraordinary events, such as automobile accidents, inpatient hospital stays, etc., will change this base line data and should be appropriately considered. In addition, changes in a patient's medical needs over a period of time will require adjustments in the profile.

Payment under this provision may be conditioned by the Part B blood deductible, see § 3235.2.

3. Immunosuppresive Drugs.—For a period of one year following discharge from a hospital for a Medicare-covered organ transplant, immunosuppressive drugs are covered under Part B. (We interpret "one year period after the date of transplant procedure" to mean 365 days from the day on which an inpatient is discharged from the hospital.) However, coverage is limited to those immunosuppressive drugs that have been specifically labeled and approved for marketing as such by the FDA. (This is an exception to the standing drug policy which permits coverage of FDA approved drugs for nonlabeled uses, where such uses are found to be reasonable and necessary in an individual case.)

To date the FDA has identified and approved for marketing only four specifically labeled immunosuppressive drugs. They are Sandimmune (cyclosporine), Sandoz Pharmaceutical; Imuran (azathioprine), Burroughs Wellcome; Atgam (antithymocyte globulin), Upjohn; and Orthoclone OKT3 (Muromonab-CD3), Ortho Pharmaceutical. You must keep informed of FDA additions to the list of immunosuppressive drugs.

For coverage of immunizations, etc., see § 3157.

C. Other Covered Services and Items.--Covered services and items provided by the hospital in connection with the clinic visit or the physician's treatment of outpatients include the use of hospital facilities, including the use of the emergency room; services of nurses, nonphysician anesthetists, psychologists, technicians, therapists, and other aides; and medical supplies such as gauze, oxygen, ointments and other supplies used by physicians or hospital personnel in the treatment of outpatients. Additional examples of covered items are surgical dressings; slints, casts, and other devices used for reduction of fractures and dislocations; prosthetic devices; leg, arm, back, and neck braces, trusses, and artificial legs, arms, and eyes. (See §§ 3110.3-3-3110.5 for details on coverage of these items and § 3101.9B for additional coverage rules for occupational therapy.)

3112.5 Sleep Disorder Clinics.--Sleep disorder clinics are facilities in which certain conditions are diagnosed through the study of sleep. Such clinics are primarily for research. Nevertheless, sleep disorder clinics may provide some diagnostic or therapeutic services which are covered under Medicare. These clinics may be affiliated either with a hospital or a freestanding facility. Whether a clinic is hospital-affiliated or freestanding, coverage for diagnostic services would under some circumstances be covered under provisions of the law different from those for coverage of therapeutic services.

A. Criteria for Coverage of Diagnostic Services.--All reasonable and necessary diagnostic tests given for the medical conditions listed in B. below are covered when the following criteria are met:

1. The clinic is either affiliated with a hospital or is under the direction and control of physicians and a physician is present whenever diagnostic tests are performed.

2. Patients are referred to the sleep disorder clinic by their attending physicians and the clinic maintains a record of the attending physician's orders. In the case of diagnostic nocturnal penile tumescence testing, see the coverage guidelines in B.3. below.

3. The need for diagnostic testing is confirmed by medical evidence, e.g., physician examinations and laboratory tests.

Diagnostic testing that is duplicative of previous testing done by the attending physician to the extent the results are still pertinent is not covered.

B. Medical Conditions for Which This Testing is Covered.--Diagnostic testing can be covered only if the patient has the symptoms or complaints of one of the conditions listed below. Most of the patients who undergo the diagnostic testing are not considered inpatients, although they may come to the facility in the evening for testing and then leave after their tests are over. The overnight stay would be considered an integral part of these tests.

1. Narcolepsy.--This term refers to a syndrome that is characterized by abnormal sleep tendencies, e.g., excessive daytime sleepiness or disturbed nocturnal sleep. Related diagnostic testing is covered if the patient has inappropriate sleep episodes or attacks (e.g., while driving, in the middle of a meal, in the middle of a conversation), amnesiac episodes or continuous disabling drowsiness. The sleep disorder clinic must submit documentation that this condition is severe enough to interfere with the patient's well-being and health before Medicare benefits may be provided for diagnostic testing. A maximum of three "sleep naps" to confirm a diagnosis of narcolepsy may be covered.

2. Sleep Apnea.--This is a potentially lethal condition where the patient stops breathing during sleep. Three types of sleep apnea have been described—central, obstructive and mixed. The nature of the apnea episodes can be documented by appropriate diagnostic testing. A maximum of one night stay per patient may be allowed.

3. Impotence.--Diagnostic nocturnal penile tumescence testing may be covered, under limited circumstances, to determine whether erectile impotence in men is organic or psychogenic. Although impotence is not a sleep disorder, the nature of the testing requires that it be performed during sleep. The tests ordinarily would be covered only where necessary to confirm the treatment to be given—whether surgical, medical or psychotherapeutic. A maximum of two nights of diagnostic testing may be covered. The contractor's medical staff should review questionable cases to ensure that the tests are reasonable and necessary for the individual. (See § 35-24 of the Coverage Issues Appendix for policy on coverage of diagnosis and treatment of impotence.)

C. Coverage of Therapeutic Services.--Sleep disorder clinics may at times render therapeutic as well as diagnostic services. Although only the diagnostic services indicated above are covered under Medicare, therapeutic services may be covered provided they are standard and accepted services and are reasonable and necessary for the patient.

1. In a Hospital Outpatient Setting

2. In a Free-Standing Facility

3112.6 Intermittent Peritoneal Dialysis Services.-- Maintenance intermittent peritoneal dialysis (IPD) is dialysis used to sustain ESRD patients by using the patient's peritoneum as an artificial kidney. Dialysate is administered into the peritoneal cavity to dialyze the patient's blood. While maintenance IPD is usually accomplished in sessions of 10-12 hours duration, three times per week, it is sometimes accomplished in fewer sessions of longer duration. The payment screens applicable to maintenance IPD as well as the facility's actual reimbursement for maintenance IDP, depends on the length of the dialysis session, and the number of sessions furnished per week. If additional dialysis beyond the usual weekly maintenance dialysis is required because of special circumstances, the facility's claim to the intermediary for these extra services must be accompained by a medical justification. Under these circumstances additional reimbursement may be made. In all cases the Part B deductible and coinsurance apply.

A. Maintenance Intermittent Peritoneal Dialysis Sessions of Less Than 20 Hours Duration.-- The payment screen applicable to a facility for maintenance intermittent peritoneal dialysis (IPD) sessions of less than 20 hours duration is the same as the payment screen applicable to that facility for hemodialysis. However, in addition to the per dialysis payment screen there is also a weekly maintenance IPD screen equal to three times the per treatment hemodialysis screen. For example, if the applicable hemodialysis reimbursement screen for a facility is $150, then its maintenance IPD payment screen would be $150 per dialysis session, and $450 per week. Therefore, if the facility furnished two 12-hour IPD sessions to a patient in a week, its reimbursement would be based on a $300 payment screen for that week. If the facility furnished three or more 12-hour IPD sessions to a patient in a week, reimbursement would be based on a $450 weekly payment screen for that week.

B. Maintenance Intermittent Peritoneal Dialysis Sessions of More Than 20 but Less Than 30 Hours Duration.-- Where maintenance intermittent peritoneal dialysis (IPD) is accomplished in sessions of 20 hours or more duration but less than 30 hours, reimbursement is made in accordance with the same weekly payment screen as described in A above. However, the individual dialysis session screen is equal to one and one-half times the individual dialysis session screen derived in paragraph A, above. Therefore, if the facility in the above example furnishes one 20 hour IPD session to a patient in a week, its reimbursement would be based on a $225 screen; reimbursement for two 20 hour maintenance IPD sessions to a patient in a week would be based on a $450 screen for that week.

C. Maintenance Intermittent Peritoneal Dialysis Sessions of 30 Hours or More Duration.-- Medical consultants indicate that patients undergoing intermittent dialysis (IPD) should be dialyzed more often than once per week. However, sometimes geographical considerations or other exigencies require a compromise to be made between optimum medical practice and patient convenience. In recognition of these special cases, IPD sessions of 30 hours or more duration are reimbursed in accordance with the weekly payment screen described in paragraph A above. Therefore, if the facility in the above example furnished one 30 hour IPD session to a patient, it would be reimbursed in accordance with a $450 screen for that week.

D. Training.-- Intermittent peritoneal self-dialysis training sessions are reimbursed similarly to hemodialysis self-dialysis training; i.e., the same rate of reimbursement applies as the facility's maintenance intermitten IPD session rate, with an additional $20 per session for training. Therefore, if the facility's physicians are on the initial method of reimbursement, the facility provides laboratory services, and its maintenance IPD reimbursement rate is $150 per session, then its intermittent peritoneal self-dialysis training rate would be $170 per training dialysis session. The maximum weekly reimbursement would be three times the per session rate, or $510.

Accelerated intermittent peritoneal self-dialysis training programs offering five training sessions per week, 8 hours per session are also covered. Reimbursement for this accelerated schedule is made according to the following scale:

Facilities who physicians are paid by the initial method may be reimbursed for its five sessions per week, 8 hours per session, intermittent peritoneal self-dialysis training program on the basis of a rate which does not exceed $120 per session, or a total of $600 per week, for each patient for the duration of that patient's training period. Facilities whose physicians are reimbursed under the alternative monthly method may be reimbursed for such a training program based on a rate which does not exceed $112 per session, or a total of $560 per week, for each patient for the duration of that patient's training period. This rate reflects a reduction by a prorated amount of the usual $12 per session reduction in facility reimbursement when its physicians are paid under the alternative method. If the facility does not provide laboratory services, then the screen is reduced by $5, i.e., $115 per session under the initial method or $107 per session under the alternative method.

3112.7 Outpatient Hospital Psychiatric Services.—

A. General.—There is a wide range of services and programs that a hospital may provide to its outpatients who need psychiatric care, ranging from a few individual services to comprehensive, full-day programs; from intensive treatment programs to those that provide primarily supportive, protective or social activities. Because of this diversity, ensure that payment is made only for covered services that meet the requirements of the outpatient hospital benefit.

In general, to be covered the services must be: (1) incident to a physician's service (see §3112.4A), and (2) reasonable and necessary for the diagnosis or treatment of the patient's condition. This means the services must be for the purpose of diagnostic study or the services must reasonably be expected to improve the patient's condition.

B. Coverage Criteria.—The services must meet the following criteria:

1. Individualized Treatment Plan.—Services must be prescribed by a physician and provided under an individualized written plan of treatment established by a physician after any needed consultation with appropriate staff members. The plan must state the type, amount, frequency, and duration of the services to be furnished and indicate the diagnoses and anticipated goals. (A plan is not required if only a few brief services will be furnished.)

2. Physician Supervision and Evaluation.—Services must be supervised and periodically evaluated by a physician to determine the extent to which treatment goals are being realized. The evaluation must be based on periodic consultation and conference with therapists and staff, review of medical records, and patient interviews. Physician entries in medical records must support this involvement. The physician must also provide supervision and direction to any therapist involved in the patient's treatment and see the patient periodically to evaluate the course of treatment and to determine the extent to which treatment goals are being realized and whether changes in direction or emphasis are needed.

3. Reasonable Expectation of Improvement.--Services must be for the purpose of diagnostic study or reasonably be expected to improve the patient's condition. The treatment must, at a minimum, be designed to reduce or control the patient's psychiatric symptoms so as to prevent relapse or hospitalization, and improve or maintain the patient's level of functioning.

It is not necessary that a course of therapy have as its goal restoration of the patient to the level of functioning exhibited prior to the onset of the illness, although this may be appropriate for some patients. For many other psychiatric patients, particularly those with long-term, chronic conditions, control of symptoms and maintenance of a functional level to avoid further deterioration or hospitalization is an acceptable expectation of improvement. "Improvement" in this context is measured by comparing the effect of continuing treatment versus discontinuing it. Where there is a reasonable expectation that if treatment services were withdrawn the patient's condition would deteriorate, relapse further, or require hospitalization, this criterion would be met.

Some patients may undergo a course of treatment which increases their level of functioning, but then reach a point where further significant increase is not expected. Do not deny claims automatically because conditions have stabilized, or because treatment is now primarily for the purpose of maintaining present level of functioning. Rather, evaluate each case in terms of the criteria discussed above, and deny only where the evidence clearly establishes that the criteria are not met; for example, that stability can be maintained without further treatment or with less intensive treatment.

C. Partial Hospitalization.--Partial hospitalization is a general term that encompasses a variety of outpatient psychiatric programs; each of which can vary in their functions, the populations that they serve, their treatment goals and in the services that they provide. Depending on their functions, they may also be called day hospital/day treatment centers, or day care/night care centers. Within the same facility, there may be a number of programs operating, each of which may be aimed at a different population with a different level-of-care treatment program.

The Medicare law does not provide for the coverage of partial hospitalization programs per se. However, under the outpatient hospital benefit, those portions of the programs that fall within the requirements of the law may be covered. For coverage purposes, the key to whether a particular type or group of services and activities may be covered will depend primarily on the services provided in the program, and how the services are being used in the care of patients.

D. Application of Criteria.--The following discussion illustrates the application of the above guidelines to the more common modalities and procedures used in the treatment of psychiatric patients; and some factors to consider in determining whether the coverage criteria are met.

1. Covered Services.--Services generally covered for the treatment of psychiatric patients are:

a. Individual and group therapy with physicians, psychologists or other mental health professionals authorized by the State.

b. Occupational therapy services are covered if they meet the criteria in §3101.9. The services must require the skills of a qualified occupational therapist, and be performed by or under the supervision of a qualified occupational therapist or by an occupational therapy assistant.

c. Services of social workers, trained psychiatric nurses and other staff trained to work with psychiatric patients.

d. Drugs and biologicals furnished to outpatients for therapeutic purposes, but only if they are of a type which cannot be self-administered. (See §3112.4B.)

e. Activity therapies but only those that are individualized and essential for the treatment of the patient's condition. The treatment plan must clearly justify the need for each particular therapy utilized and explain how it fits into the patient's treatment.

f. Family counseling services. Counseling services with members of the household are covered only where the primary purpose of such counseling is the treatment of the patient's condition. (See Coverage Issues Manual §35-14.)

g. Patient education programs, but only where the educational activities are closely related to the care and treatment of the patient. (See Coverage Issues Manual §80-1.)

h. Diagnostic services for the purpose of diagnosing those individuals for whom an extended or direct observation is necessary to determine functioning and interactions, to identify problem areas, and to formulate a treatment plan.

2. Noncovered Services.--The following are generally not covered except as indicated:

a. Meals and transportation.

b. Activity therapies, group activities or other services and programs which are primarily recreational or diversional in nature. Outpatient psychiatric day treatment programs that consist entirely of activity therapies are not covered.

"Geriatric day care" programs are available in both medical and nonmedical settings. They provide social and recreational activities to older individuals who need some supervision during the day while other family members are away from home. Such programs are not covered since they are not considered reasonable and necessary for a diagnosed psychiatric disorder, nor do such programs routinely have physician involvement.

c. Psychosocial programs. These are generally community support groups in nonmedical settings for chronically mentally ill persons for the purpose of social interaction. Partial hospitalization programs may include some psychosocial components; and to the extent these components are not primarily for social or recreational purposes, they would be covered. However, if an individual's outpatient hospital program consists entirely of psychosocial activities, it would not be covered.

d. Vocational training. While occupational therapy may include vocational and prevocational assessment and training, when the services are related solely to specific employment opportunities, work skills or work settings, they are not covered. (See §3109.9B.)

3. Frequency and Duration of Services.--There are no specific limits on the length of time that services may be covered. There are many factors that affect the outcome of treatment; among them are the nature of the illness, prior history, the goals of treatment, and the patient's response. As long as the evidence shows that the patient continues to show improvement in accordance with his/her individualized treatment plan, and the frequency of services is within accepted norms of medical practice, coverage should be continued.

If a patient reaches a point in his/her treatment where further improvement does not appear to be indicated, evaluate the case in terms of the criteria discussed in §3112.7B.3 to determine whether with continued treatment there is a reasonable expectation of improvement.

3112.8 Outpatient Observation Services.--Observation services are those services furnished on a hospital's premises, including use of a bed and periodic monitoring by a hospital's nursing or other staff, which are reasonable and necessary to evaluate an outpatient's condition or determine the need for a possible admission to the hospital as an inpatient. Such services are covered only when provided by the order of a physician or another individual authorized by State licensure law and hospital staff bylaws to admit patients to the hospital or to order outpatient tests. Observation services usually do not exceed 24 hours. However, there is no hourly limit on the extent to which they may be used.

NOTE: Observation services may exceed 24 hours in some cases. They are not explicitly limited in duration by this instruction. However, hospitals are not expected to substitute outpatient observation services for medically appropriate inpatient admissions. (See §3101 regarding coverage of inpatient admissions.)

The following types of services are not covered as observation services:

o Services which are not reasonable or necessary for the diagnosis or treatment of the patient but are provided for the convenience of the patient or a physician.

o Services which are covered under Part A or as part of another Part B benefit, such as services which are defined as facility services and subject to the ambulatory surgical center (ASC) payment rates or, in the case of patients who undergo diagnostic testing in a hospital outpatient department, routine preparation services furnished prior to the testing and recovering afterwards.

The following examples illustrate the application of this policy, including example 4, when a decision to admit the patient is clearly justified.

EXAMPLE 1: A patient comes to the emergency room complaining of difficulty in breathing. The patient is seen by the physician on duty, who orders laboratory tests, including a blood gas analysis, and an injection to help the patient breathe more easily. The physician then has the patient placed in an outpatient observation unit to determine whether this intervention produces normal breathing. Six hours later the patient is again seen by the physician, who determines from the patient's chart and his own observation that the patient's vital signs are normal and the patient has resumed normal breathing. The patient is released. Under these circumstances, the outpatient observation services are covered, and the bill submitted by the hospital may include charges for those services.

EXAMPLE 2: A patient comes to a hospital's outpatient department to undergo a scheduled surgical procedure which is not a covered ASC surgical procedure. After surgery, the patient is taken to the recovery room, where he exhibits difficulty in awakening from anesthesia and an elevated blood pressure. These conditions persist, and the patient is seen by a physician, who has him placed on observation. The physician leaves orders for the nursing staff to monitor the patient's condition and note any continued abnormalities that could indicate a drug reaction or other post-surgical complications. After a few hours, the patient no longer is lethargic, has a normal blood pressure and shows no other signs of post-surgical complications. The physician, upon being advised of these conditions, orders the patient released from the hospital. Under these circumstances, coverage of outpatient observation services begins when the patient was placed in the observation bed. Services received in the hospital's outpatient surgical suite and recovery room cannot be covered as observation services, since they are otherwise covered under Part B.

EXAMPLE 3: A patient is scheduled to have an uncomplicated cataract extraction on an outpatient basis. The patient expresses a preference for spending the night following the procedure at the hospital despite the fact that the procedure does not require an overnight stay. The hospital may register and treat the patient on an outpatient basis and permit the patient to remain at the hospital overnight. The overnight stay cannot be covered as observation services because it is not medically necessary. (When this is the case, the patient must be notified that the overnight stay is not medically necessary and may be charged for the additional services. If unforeseen complications necessitate inpatient admission, the patient is admitted and a Part A claim is submitted.)

EXAMPLE 4: A patient comes to the emergency room in the evening with complaints of sudden severe flank pain which radiates to the inner thigh, nausea, vomiting, and urinary frequency and urgency. Examination reveals soreness over the kidney area, spasm of the abdominal muscles and microscopic hematuria. Additionally, an X-ray reveals the presence of a stone in the ureter. The patient was admitted to the hospital as an inpatient at 11 P.M. He is treated with I.V. fluids, IM Morphine and an antispasmodic every 4 hours. Further diagnostic studies were scheduled for the following morning. During the night the patient passed a stone through the urethra without complications. The patient was then comfortable without nausea or urinary symptoms. Therefore, the patient was discharged at 9 a.m. and scheduled for follow-up in the physician's office. Although the patient was able to be discharged in less than 24 hours, the admission was appropriate, because it was reasonable to expect at the time of admission that the presenting problem would require more than 24 hours to resolve.

3113. RENTAL AND PURCHASE OF DURABLE MEDICAL EQUIPMENT

A participating provider of service may be reimbursed under Part B on a reasonable cost basis for durable medical equipment which it rents or sells to a beneficiary for use in his home if the following three requirements are met:

A. The equipment meets the definition of durable medical equipment (§ 3113.1); and

B. The equipment is necessary and reasonable for the treatment of the patient's illness or injury or to improve the functioning of his malformed body member (§ 3113.2); and

C. The equipment is used in the patient's home (§ 3113.6).

Payment may also be made under this provision for repairs, maintenance, and delivery of equipment as well as for expendable and nonreusable items essential to the effective use of the equipment subject to the conditions in § 3113.3.

See § 3643 and its appendix for coverage guidelines and screening list of durable medical equipment. See Coverage Issues Appendix, 60-1, for hemodialysis equipment and supplies.

3113.1 Definition of Durable Medical Equipment.--For purposes of coverage under Part B, durable medical equipment is equipment which (1) can withstand repeated use, and (2) is primarily and customarily used to serve a medical purpose, and (3) generally is not useful to a person in the absence of illness or injury, and (4) is appropriate for use in the home. All requirements of the definition must be met before an item can be considered to be durable medical equipment.

A. Durability.--An item is considered durable if it can withstand repeated use; i.e., the type of item which could normally be rented. Medical supplies of an expendable nature such as incontinent pads, lambs wool pads, catheters, ace bandages, elastic stockings, surgical face masks, irrigating kits, sheets and bags are not considered "durable" within the meaning of the definition. There are other items which, although durable in nature, may fall into other coverage categories such as braces, prosthetic devices, artificial arms, legs, and eyes.

B. Medical Equipment.--Medical equipment is equipment which is primarily and customarily used for medical purposes and is not generally useful in the absence of illness or injury. In most instances, no development will be needed to determine whether a specific item of equipment is medical in nature. However, some cases will require development to determine whether the item constitutes medical equipment. This development would include the advice of local medical organizations (hospitals, medical schools, medical societies) and specialists in the field of physical medicine and rehabilitation. If the equipment is new on the market, it may be necessary, prior to seeking professional advice, to obtain information from the supplier or manufacturer explaining the design, purpose, effectiveness and method of using the equipment in the home as well as the results of any tests or clinical studies that have been conducted.

1. Equipment Presumptively Medical.--Items such as hospital beds, wheelchairs, hemodialysis equipment, iron lungs, respirators, intermittent positive pressure breathing machines, medical regulators, oxygen tents, crutches, canes, trapeze bars, walkers, inhalators, nebulizers, commodes, suction machines and traction equipment presumptively constitute medical equipment. (Although hemodialysis equipment is a prosthetic device (§ 3110.4), it also meets the definition of durable medical equipment, and reimbursement for the rental or purchase of such equipment for use in the beneficiary's home will be made only under the provisions for payment applicable to durable medical equipment. See 60-1 and 60-2 of the Coverage Issues Appendix for coverage of hemodialysis in the home.)

NOTE: There is a wide variety in types of respirators and suction machines. Intermediary's medical staff should determine whether the apparatus specified in the claim is appropriate for home use.

2. Equipment Presumptively Nonmedical.--Equipment which is primarily and customarily used for a nonmedical purpose may not be considered "medical" equipment for which payment can be made under the medical insurance program. This is true even though the item has some remote medically related use. For example, in the case of a cardiac patient, an air conditioner might possibly be used to lower room temperature to reduce fluid loss in the patient and to restore an environment conducive to maintenance of the proper fluid balance. Nevertheless, because the primary and customary use of an air conditioner is a nonmedical one, the air conditioner cannot be deemed to be medical equipment for which payment can be made.

Other devices and equipment used for environmental control or to enhance the environmental setting in which the beneficiary is placed are not considered covered durable medical equipment. These include, for example, room heaters, humidifiers, dehumidifiers, and electric air cleaners. Equipment which basically serves comfort or convenience functions or is primarily for the convenience of a person caring for the patient, such as elevators, stairway elevators, and posture chairs, do not constitute medical equipment. Similarly, physical fitness equipment, e.g., an exercycle; first-aid or precautionary-type equipment, e.g., preset portable oxygen units; self-help devices, e.g., safety grab bars; and training equipment, e.g., speech teaching machines and braille training texts, are considered nonmedical in nature.

3. Special Exception Items.--Specified items of equipment may be covered under certain conditions even though they do not meet the definition of durable medical equipment because they are not primarily and customarily used to serve a medical purpose and/or are generally useful in the absence of illness or injury. These items would be covered when it is clearly established that they serve a therapeutic purpose in an individual case and would include:

a. Gel pads and pressure and water mattresses (which generally serve a preventive purpose) when prescribed for a patient who has bed sores or there is medical evidence indicating that he is highly susceptible to such ulceration; and

b. Heat lamps for a medical rather than a soothing or cosmetic purpose, e.g., where the need for heat therapy has been established.

In establishing medical necessity (§ 3113.2) for the above items, the evidence must show that the item is included in the physician's course of treatment and a physician is supervising its use. (See also Appendix to § 3643.)

Note: The above items represent special exceptions and no extension of coverage to other items should be inferred.

3113.2 Necessary and Reasonable.—Although an item may be classified as durable medical equipment, it may not be covered in every instance. Coverage in a particular case is subject to the requirement that the equipment be necessary and reasonable for treatment of an illness or injury, or to improve the functioning of a malformed body member. These considerations will bar payment for equipment which cannot reasonably be expected to perform a therapeutic function in an individual case or will permit only partial payment when the type of equipment furnished substantially exceeds that required for the treatment of the illness or injury involved.

A. Necessity for the Equipment.--Equipment is necessary when it can be expected to make a meaningful contribution to the treatment of the patient's illness or injury or to the improvement of his malformed body member. In most cases the physician's prescription for the equipment and other medical information available to the intermediary will be sufficient to establish that the equipment serves this purpose.

B. Reasonableness of the Equipment.--Even though an item of durable medical equipment may serve a useful medical purpose, the intermediary must also consider to what extent, if any, it would be reasonable for the Medicare program to pay for the item prescribed. The following considerations should enter into the determination of reasonableness:

1. Would the expense of the item to the program be clearly disproportionate to the therapeutic benefits which could ordinarily be derived from use of the equipment?

2. Is the item substantially more costly than a medically appropriate and realistically feasible alternative pattern of care?

3. Does the item serve essentially the same purpose as equipment already available to the beneficiary?

Claims for payment for the relatively few billed items of equipment found to be out of line with tests of "reasonableness" should be denied in full except in the following case: Where it is determined that there exists a medically appropriate and realistically feasible alternative pattern of care for which payment could be made, payment should be based on the reasonable charge for this alternative.

The following example points up the need to take account of the reasonableness of the services rendered.

EXAMPLE: The median price of standard whirlpool bath equipment is about $600 plus plumbing expenses necessary to install it in the patient's home. Program coverage of such equipment in the patient's home should be limited to those cases where it is prescribed for conditions where the whirlpool bath can be expected to provide a substantial therapeutic benefit justifying its cost. For example, bursitis or chronic osteoarthritis would not generally justify Medicare payment for whirlpool bath equipment in the home since it would not be reasonable to expect that a whirlpool bath would be significantly more beneficial than a normal warm bath. Moreover, where the patient is not homebound, payment for this item in the patient's home should be restricted to the cost of providing the service elsewhere, e.g., an outpatient department of a participating hospital, if that alternative is less costly.

C. Payment Consistent With What is Necessary and Reasonable.—Where a claim is filed for equipment containing features of an aesthetic nature or features of a medical nature which are not required by the patient's condition or where there exists a reasonably feasible and medically appropriate alternative pattern of care which is less costly than the equipment furnished, the amount payable is based on the reasonable costs for the equipment or alternative treatment which meets the patient's medical needs.

The provider may not charge the beneficiary for features not medically required by his condition and which cannot be considered in determining the provider's allowable costs unless the beneficiary or his representative has specifically requested the excessive or deluxe items or services with knowledge of the amount he is to be charged.

3113.3 Repairs, Maintenance, Replacement, and Delivery.-- Under the circumstances specified below, payment may be made for repair, maintenance, and replacement of medically required durable medical equipment which the beneficiary owns or is purchasing, including equipment which had been in use before the user enrolled in Part B. Since renters of equipment usually recover from the rental charge the expenses they incur with respect to maintaining in working order the equipment they rent out, separately itemized charges for repair, maintenance, and replacement of rented equipment are not covered.

A. Repairs.-- Repairs to equipment which a beneficiary is purchasing or already owns are covered when necessary to make the equipment serviceable. If the expense for repairs exceeds the estimated expense of purchasing or renting another item of equipment for the remaining period of medical need, no payment can be made for the amount of the excess. (See C below where claims for repairs suggest malicious damage or culpable neglect.)

B. Maintenance.-- Routine periodic servicing, such as testing, cleaning, regulating and checking of the beneficiary's equipment is not covered. Such routine maintenance is generally expected to be done by the owner rather than by a retailer or some other person who would charge the beneficiary. Normally, purchasers of durable medical equipment are given operating manuals which describe the type of servicing an owner may perform to properly maintain the equipment. Thus, hiring a third party to do such work would be for the convenience of the beneficiary and would not be covered.

However, more extensive maintenance which, based on the manufacturers' recommendations, is to be performed by authorized technicians, would be covered as repairs. This might include, for example, breaking down sealed components and performing tests which require specialized testing equipment not available to the beneficiary.

C. Replacement.-- Replacement of equipment which the beneficiary owns or is purchasing is covered in cases of loss or irreparable damage or wear and when required because of a change in the patient's condition Expenses for replacement required because of loss or irreparable damage may be reimbursed without a physician's order when in the judgment of the intermediary the equipment as originally ordered, considering the age of the order, would still fill the patient's medical needs. However, claims involving replacement equipment necessitated because of wear or a change in the patient's condition should be supported by a current physician's order. (See § 3152D in regard to payment for equipment replaced under a warranty).

Cases suggesting malicious damage, culpable neglect or wrongful disposition of equipment as discussed in § 3113.5 should be investigated and denied where the intermediary determines that it would be unreasonable to make program payment under the circumstances. The intermediary should refer such cases to the program integrity specialist in the RO.

D. Delivery.-- Reasonable costs for delivery of durable medical equipment whether rented or purchased are covered if the provider customarily makes separate charges for delivery and this is a common practice among the other local providers.

3113.4 Coverage of Supplies and Accessories.-- Reimbursement may be made for supplies, e.g., oxygen, that are necessary for the effective use of durable medical equipment. Such supplies include those drugs and biologicals which must be put directly into the equipment in order to achieve the therapeutic benefit of the durable medical equipment or to assure the proper functioning of the equipment, e.g., tumor chemotherapy agents used with an infusion pump or heparin used with a home dialysis system. However, the coverage of such drugs or biologicals does not preclude the need for a determination that the drug or biological itself is reasonable and necessary for treatment of the illness or injury or to improve the functioning of a malformed body member.

Reimbursement may be made for replacement of essential accessories such as hoses, tubes, mouth pieces, etc., for necessary durable medical equipment, only if the beneficiary owns or is purchasing the equipment.

3113.5 Miscellaneous Issues Included in the Coverage of Equipment.-- Payment can be made for the purchase of durable medical equipment even though rental payments may have been made for prior months. This could occur where, because of a change in his condition, the beneficiary feels that it would be to his advantage to purchase the equipment rather than to continue to rent it. When such a situation occurs, the provider may deduct all or part of the rentals paid from the purchase price of the equipment.

A beneficiary may sell or otherwise dispose of equipment for which he has no further use, for example, because of recovery from the illness or injury which gave rise to the need for the equipment. (There is no authority for the program to repossess the equipment.) If after such disposal there is again medical need for similar equipment, payment can be made for the rental or purchase of that equipment.

However, where an arrangement is motivated solely by a desire to create artificial expenses to be met by Medicare and to realize a profit thereby, such expenses would not be covered under Medicare. The resolution of questions involving the disposition and subsequent acquisition of durable medical equipment must be made on a case-by-case basis.

Cases where it appears that there has been an attempt to create an artificial expense and realize a profit thereby should be developed and when appropriate denied by the intermediary. After adjudication the intermediary should refer such cases to the program integrity specialist in the RO.

When payments stop because the beneficiary's condition has changed and the equipment is no longer medically necessary, he is responsible for the remaining noncovered charges. Similarly, when payments stop because the beneficiary dies, his estate is responsible for the remaining noncovered charges.

NOTE: Intermediaries should not get involved in issues relating to ownership or title of propertly.

3113.6 Definition of Beneficiary's Home.--For purposes of rental and purchase of durable medical equipment, a beneficiary's home may be his own dwelling, an apartment, a relative's home, a home for the aged, or some other type of institution. However, an institution may not be considered a beneficiary's home if it:

A. Meets at least the basic requirement in the definition of a hospital (§ 3010A), i.e., it is primarily engaged in providing by or under the supervision of physicians, to inpatients, diagnostic and therapeutic services for medical diagnosis, treatment, and care of injured, disabled, and sick persons, or rehabilitation services for the rehabilitation of injured, disabled, or sick persons; or

B. Meets at least the basic requirement in the definition of a skilled nursing facility (§ 3020), i.e., it is primarily engaged in providing to inpatients skilled nursing care and related services for patients who require medical or nursing care, or rehabilitation services for the rehabilitation of injured, disabled, or sick persons.

Thus, if an individual is a patient in an institution or distinct part of an institution which provides the services described in A or B above, he is not entitled to have payment made for rental or purchase of durable medical equipment since such an institution may not be considered his home. (See § 3113.7B when beneficiary is in an institution for part of a month.)

3113.7 Payment for Durable Medical Equipment.—

A. The Decision to Rent or Purchase.—A beneficiary may elect to rent an item of equipment rather than purchase it even though it may appear that purchase would be more economical for the program. However, the intermediary will determine in accordance with the guidelines below the method of payment to be used by the program in making reimbursement for equipment that is purchased. In both rental and purchase on a periodic payment basis, the monthly amount payable to the provider is converted to estimated costs by using the established outpatient cost reimbursement rate. (See § 3615 for interim reimbursement procedures.)

1. Rental Payments.--Where a provider rents durable medical equipment to a beneficiary, the provider will be reimbursed 80 percent of the reasonable cost of making the equipment available, less any unmet deductible. The provider must submit an HCFA-1483 for each month's rental charge. The patient is responsible to the provider for any unmet deductible and the monthly coinsurance.

2. Purchase of Equipment.--When equipment is purchased, the intermediary determines in accordance with the following guidelines whether program payment is to be made in a lump sum or in periodic payments.

a. Lump-Sum Payment for Inexpensive Equipment.—Payment for inexpensive equipment will be made in a lump sum subject to the deductible and coinsurance when it is determined to be less costly or more practical to do so. Inexpensive equipment is any item of durable medical equipment for which the reasonable charge is $50 or less. A presumption should be made that it is less costly and more practical to pay a lump sum for inexpensive equipment. However, this presumption would not apply where the estimated period of medical need is relatively short. For example, a walkerette (purchase price $47.50) rents for $5 a month. If the physician estimates that the item would be needed 4 months, it would be less costly to make four periodic payments than to pay a lump-sum amount based on the reasonable purchase price.

Where an intermediary has decided to make payment for inexpensive equipment on a periodic basis, it may in its discretion combine the periodic payments and pay a single amount at the time of initial adjudication, e.g., where the estimated period of medical necessity is only 2 months. Certain equipment will be so inexpensive that it would never be administratively less costly or more practical to pay for it on a periodic basis, e.g., a cane.

b. Periodic Payment.--Where payment is not made in a lump sum, benefits will be paid in monthly installments equivalent to the payment that would have been made had the equipment been rented. However, periodic payments may be made only for the established period of medical necessity for the item or until the total program payments to the provider equal 80 percent of the estimated cost of the item, whichever comes first. The periodic payments are subject to the deductible and coinsurance provisions. While periodic payments will be made on a monthly basis, a single payment can be made for periodic payments which have accrued. (See § 3642 for additional guidelines on periodic payments.)

B. Incurred Expenses for Durable Medical Equipment.--The first month's expense for the rental of durable medical equipment is incurred as of the date of delivery of the equipment for purposes of crediting the deductible and reimbursement. Expenses for subsequent months are incurred on the same day of the month. Where equipment is purchased, the periodic monthly benefits will be payable on the same basis. Providers may submit claims as of the date expenses are incurred. If the date of delivery is not specified on the bill, the intermediary should assume, in the absence of evidence to the contrary, that the date of purchase was the date of delivery.

Example: In 8/77, Mr. Thomas, a paraplegic whose SMI coverage began on 1/1/77, signed an agreement to purchase a wheelchair for $200. The wheelchair was delivered to him on 9/8/77, and he immediately submitted his claim and an itemized bill to the intermediary. The reasonable rental charge is $20 a month. Since he had no other covered Part B expenses during the year, periodic payments for 9/77, 10/77, and 11/77 are withheld to satisfy the deductible. The first installment would become payable on 12/8/77. Since $40 of the deductible was met in the last quarter of 1977, only payment for 1/78 would need to be withheld to satisfy the deductible for 1978. Periodic payments would resume 2/8/78.

Except for the 3-month tolerance rule for ESRD DME in § 3113.7E, no payment may be made for the rental or purchase of DME for any month throughout which the patient is in an institution which does not qualify as his or her home (see § 3113.6) or is outside the U.S. (See § 3154.) If the patient is at home for part of a month and, for part of the same month is in an institution which cannot qualify as his or her home, or is outside the U.S., rental or purchase payments may be made for the entire month. Similarly, if an item of rental DME is returned to the provider before the end of a payment month because the beneficiary died in that month or because the equipment became unnecessary in that month, payment may be made for the entire month, unless the provider charged for only part of a month, or the intermediary is aware that the provider customarily follows such a practice, in which case payment is to be made on a prorated basis. If the individual is outside the U.S. for more than 30 days and then returns to the U.S., determine medical necessity as in an initial case before resuming payments.

[illegible] No Payment for Purchased [illegible] States or Before Beneficiary's Coverage [illegible]--[illegible] equipment, the beneficiary must have been in the United States and must have had SMI coverage at the time the item was delivered. Therefore, where a purchased item of durable medical equipment was delivered to an individual outside the United States or before his coverage period began, the entire expense of the item would be excluded from coverage whether it was paid for in its entirety at the time of purchase, or on a deferred or installment basis. Payment cannot be made in such cases even though the individual later uses the item inside the United States or after his coverage begins.

D. Determining Months for Which Periodic Payments May be Made for Purchased Equipment Used in an Institution.--If a patient uses purchased equipment in an institution which does not qualify as his or her home, the rules for determining months for which periodic payments may be made are as follows:

1. The use months during which the beneficiary was institutionalized are not covered but are charged as periodic payment months determined per § A.2.b. above. Only those remaining installments (if any) attributable to months during all or part of which the patient was in his home may be considered covered for purposes of crediting the deductible and for reimbursement. The following situation illustrates the application of this policy.

Example: On February 1, while confined to a participating skilled nursing facility, Mr. Smith who had already met his deductible purchased a wheelchair for which the reasonable charge is $150 and the reasonable rental charge is $15 per month. He remained in the facility until June 10, when he was discharged to his home. The intermediary determines that 10 monthly installments of $12 each (80 percent of $15) would ordinarily be paid beginnning with the month of February. Since Mr. Smith was institutionalized February through May, no payments can be made for those months. However, the payments at $12 each for the remaining 6 months, June through November, would be made if medical need continued throughout this period.

2. A different rule applies where equipment is purchased by a patient for use in his home and he is subsequently admitted to a hospital which meets the requirements in § 3010A or an SNF which meets the requirements in § 3020a. (See § 3113.6 for definition of the beneficiary's home.) In this case, payments should be simply suspended. Upon return of the patient to his home, payments should resume without loss of monthly installments because of the institutionalization. Assuming the deductible is met, payments would continue as long as the equipment is medically necessary or until 80 percent of the reasonable purchase price has been reimbursed, whichever occurs first. The following example illustrates the application of this policy.

Example: Mrs. Jones, [illegible] wheelchair on February 1, which she used in her home until her admission to the hospital on April 15. She was discharged from the hospital to her home on June 15 and continued to need the wheelchair. The reasonable charge for the wheelchair was $150 and the reasonable rental charge was $15 per month. The intermediary scheduled 10 monthly payments of $12 each (80 percent of $15) and payment was made for February, March, and April. Since Mrs. Jones was hospitalized for the entire month of May, the fourth installment is suspended. This installment would become the June payment, and payments would continue through December rather than November, as originally scheduled.

(See §§ 3154ff. where purchased or rented durable medical equipment involves a beneficiary outside the United States.)

E. Establishing the Period of Medical Necessity.--Generally, the period of time an item of durable medical equipment will be considered to be medically necessary should be based on the physician's estimate of the time that his patient will need the equipment. (See §§ 3640.6, Item 13, and 3642 for the information which the physician must give the provider and which the provider must include in Item 13 of form HCFA-1483.)

Where additional information is required regarding medical necessity or the period of medical necessity, request the provider to obtain this information form the patient's physician. In some cases, development to obtain a physician 's estimate will not be necessary, e.g., in the case of certain items of "inexpensive equipment" development may not be practical. In other cases, the intermediary may already have sufficient information for a reasonable judgement as to the period of medical necessity, e.g., when a paraplegic either rents or purchases a wheelchair it can generally be assumed that he will need the equipment for the rest of his life. A similar assumption can be made about breathing assistance apparatus required for a beneficiary with advanced pulmonary emphysema. Where there is a question, resolve in favor of development.

When the physician estimates that the patient will need an item of durable medical equipment "indefinitely," or the intermediary, on the basis of all the evidence available, has estimated that the period of medical necessity will be more than 6 months, a reevaluation of medical necessity should be made no later than the sixth month for which reimbursement is made. Usually payments in such cases should not be stopped pending receipt of information or a reevaluation of the case, unless there is a strong indication that medical need for the equipment no longer exists. If other records do not reflect a continuing medical need for the equipment, obtain additional information on the medical necessity question. Subsequent reevaluation must be made at intervals of not more than 6 months.

The period of medical necessity for home dialysis equipment will generally be "indefinite." The nature of the patient's condition is such that there may be periods of temporary non-use of equipment. Several situations which may occur causing temporary non-use of equipment are:

a. Beneficiary requires in-facility treatment either for restabilization or as a result of some acute condition but there is expectation that he will return to home dialysis.

b. Beneficiary temporarily is without a suitable home dialysis assistant.

c. Beneficiary is temporarily away from home but expects to return.

d. Beneficiary is a transplant candidate and is taken off home dialysis preparatory to transplant. (If the transplant cannot occur, or if the transplant is not successful, the patient will very likely resume home dialysis and an evaluation can be made whether it will be within the immediate or foreseeable future.)

Under such circumstances intermediaries may determine that medical necessity exists and pay for a period of up to three months after the month the home dialysis equipment was last used. This instruction does not eliminate the necessity for periodic reevaluation of medical necessity but rather is intended to provide a tolerance to avoid frequent reevaluation in renal dialysis situations and provide for continuity of payments, where this is economically advantageous.

3114. AMBULANCE SERVICE

Ambulance service is covered only under Part B. The cost of oxygen and its administration in connection with and as part of the ambulance service is also covered. (See § 3322 for the required certification for ambulance service.)

The Part A intermediary is responsible for the processing of claims for ambulance service furnished by participating hospitals, extended care facilities and home health agencies and has the responsibility to determine the compliance of the provider's ambulance and crew. Where a provider furnishes ambulance service "under arrangements" with a supplier of ambulance services, such services can be covered only if the supplier's vehicles and crew meet the requirements discussed in 1. and 2. below. Where the "under arrangement" supplier also supplies ambulance services to other patients, i.e., nonprovider related patients, contact the Part B carrier to ascertain whether it has already determined whether the crew and ambulance requirements are met. In such a situation, the intermediary should accept the carrier's determination without pursuing its own investigation.

A. Vehicle and Crew Requirements.--

1. Vehicle.--The vehicle must be a specially designed and equipped automobile or other vehicle (in come areas of the United States this might be a boat or plane) for transporting the sick or injured. It must have customary patient care equipment including a stretcher, clean linens, first aid supplies, oxygen equipment, and it must also have such other safety and lifesaving equipment as is required by State or local authorities.

2. Crew.-- The ambulance crew must consist of a least two members. Those crew members charged with the care or handling of the patient must include one individual with adequate first aid training; i.e., training at least equivalent to that provided by the standard and advanced Red Cross first aid courses. Training "equivalent" to the standard and advanced Red Cross first aid training courses includes ambulance service training and experience acquired in military service, successful completion by the individual of a comparable first aid course furnished by or under the sponsorship of State or local authorities, an educational institution, a fire department, a hospital, a professional organization, or other such qualified organization. On-the-job training involving the administration of first aid under the supervision of or in conjunction with trained first aid personnel for a period of time sufficient to assure the trainee's proficiency in handling the wide range of patient care services that may have to be performed by a qualified attendant can also be considered as "equivalent training."

3. Equipment and Supplies.--As mentioned above, the ambulance must have customary patient care equipment and first aid supplies. Reusable devices and equipment such as backboards, neckboards and inflatable leg and arm splints are considered part of the general ambulance service and would be included in the cost of the trip. On the other hand, a separate cost based on actual quantities used may be recognized for nonreusable items and disposable supplies such as oxygen, gauze and dressings required in the care of the patient during his trip.

B. Necessity and Reasonableness.--To be covered, ambulance service must be medically necessary and reasonable.

1. Necessity for the Service.—Medical necessity is established when the patient's condition is such that use of any other method of transportation is contraindicated. In any case, in which some means of transportation other than an ambulance could be utilized without endangering the individual's health, whether or not such other transportation is actually available, no payment may be made for ambulance service.

2. Reasonableness of the Ambulance Trip.--A claim may be denied on the ground that the use of ambulance service was unreasonable in the treatment of the illness or injury involved (§ 3151) notwithstanding the fact that the patient's condition may have contraindicated the use of other means of transportation. The intermediary should use discretion when applying this principle. It is expected that generally its application will be limited to those instances where a supplier or provider repeatedly demonstrates a pattern of uneconomical practice and to those individual claims where the excess cost is large.

C. The Destination.--As a general rule, only local transportation by ambulance is covered. This means that the patient must have been transported to an institution (i.e., a hospital or a skilled nursing facility) whose locality (see paragraph 4 below) encompasses the place where the ambulance transportation of the patient began and which would ordinarily be expected to have the appropriate facilities for the treatment of the injury or illness involved. In exceptional situations where the ambulance transportation originates beyond the locality of the institution to which the beneficiary was transported,. full payment may be made for such services only if the evidence clearly establishes that such institution is the nearest one with appropriate facilities (see paragraph 5 below).

The institution to which a patient is transported need not be a participating institution, but must meet at least the requirements of § 3010A. (in the case of a hospital) or § 3020a (in the case of a nursing facility).

A claim for ambulance service to a participating hospital or extended care facility should not be denied on the grounds that there is a nearer nonparticipating institution having appropriate facilities.

1. Institution to Beneficiary's Home.—Ambulance service from an institution to the beneficiary's home is covered when his home is within the locality of such institution or where the beneficiary's home is outside of the locality of such institution and the institution in relation to his home is the nearest one with appropriate facilities.

2. Institution to Institution.—Occasionally, the institution to which the patient is initially taken is found to have inadequate facilities for treating him and he is then transported to a second institution having

appropriate facilities. In such cases, transportation by ambulance to both institutions would be covered provided the institution to which he is being transferred is determined to be the nearest one with appropriate facilities. In these cases, transportation from such second institution to the patient's home could be covered if his home is within the locality serviced by that institution or by the first institution to which he was taken.

3. Round-Trip for Specialized Services.--(Effective with services furnished on or after March 15, 1978.) Round-trip ambulance services are covered if a hospital inpatient goes to another hospital to obtain necessary specialized diagnostic and/or therapeutic services (such as a CT scan or cobalt therapy) and the following requirements are met:

a. The patient's condition is such that use of any other method of transportation is contraindicated (§ 3114.B1);

b. The services are not available in the hospital in which the individual is an inpatient; and

c. The hospital furnishing the services is the nearest one with such facilities.

Perform a periodic postpayment review with appropriate medical staff assistance to determine whether the frequency of such ambulance services for a particular patient together with his medical condition indicates that transfer to the second hospital is the preferred medical course. Do not request such a transfer, but deny such ambulance services claims in the future.

4. Partial Payment.--(See § 3647.2 for partial reimbursement guidelines for otherwise covered ambulance service which exceeded the limits defined in C, C1, and C2 above.)

5. Locality.--The term "locality" with respect to ambulance service means the service area surrounding the institution from which individuals normally come or are expected to come for hospital or skilled nursing services.

Example: Mr. A becomes ill at home and requires ambulance service to the hospital. The small community in which he lives has a 35-bed hospital. Two large metropolitan hospitals are located some distance from Mr. A's community but they regularly provide hospital services to the community's residents. The community is within the "locality" of the metropolitan hospitals and direct ambulance service to either of these (as well as to the local community hospital) is covered.

6. Appropriate Facilities.--The term "appropriate facilities" means that the institution is generally equipped to provide the needed hospital or skilled nursing care for the illness or injury involved. It is the institution, its equipment, its personnel and its capability to provide the services necessary to support the required medical care that determine whether it has appropriate facilities.

Example: Mr. A becomes ill at home and requires ambulance service to the hospital. The hospitals servicing the community in which he lives are capable of providing general hospital care. However, Mr. A requires immediate kidney dialysis but the needed equipment is not available in any of these hospitals. The service area of the nearest hospital having dialysis equipment does not encompass the patient's home. Nevertheless, in this case, ambulance service beyond the locality to the hospital with the equipment would be covered since it is the nearest one with appropriate facilities.

The fact that a more distant institution is better equipped, either qualitatively or quantitatively, to care for the patient does not warrant a finding that a closer institution does not have "appropriate facilities." However, a legal impediment barring a patient's admission would permit a finding that the institution did not have "appropriate facilities." For example, the nearest tuberculosis hospital may be in another State and that State's law precludes admission of nonresidents.

An institution is not considered an appropriate facility if there is no bed available. The intermediary, however, will presume that there are beds available at the local institutions unless evidence is furnished that none of these institutions had a bed available at the time the ambulance service was provided.

The individual physician who practices in a hospital is not a consideration in determining whether the hospital has appropriate facilities. Thus, ambulance service to a more distant hospital solely to avail a patient of the service of a specific physician or a physician in a specific specialty does not make the hospital in which the physician has staff privileges the nearest hospital with appropriate facilities.

7. Ambulance Service to a Physician's Office Is Not Covered.--There may be situations, however, where in the course of transporting a patient to a hospital, the ambulance stops at a physician's office because of the patient's dire need for professional attention and immediately thereafter the ambulance continues the trip to the hospital. In such cases, the patient will be deemed not to have been transported to the physician's office and payment may be made for the entire trip.

8. Transportation Requested by a Home Health Agency.--Where a home health agency finds it necessary to have a beneficiary transported by ambulance to a hospital or skilled nursing facility to obtain home health services not otherwise available to the individual, the trip is covered as a Part B service only if the above coverage requirements are met. Such transportation is not covered as a home health service.

9. Coverage of Ambulance Service Furnished a Deceased Beneficiary.--An individual is considered to have expired as of the time he is pronounced dead by a person who is legally authorized to make such a pronouncement, usually a physician. Therefore, if the beneficiary was pronounced dead by a legally authorized individual before the ambulance was called, no program payment may be made. Where the beneficiary was pronounced dead after the ambulance was called but before pickup, the service to the point of pickup is covered. If otherwise covered ambulance services were furnished to a beneficiary who was pronounced dead while enroute to or upon arrival at the destination, the entire ambulance service is covered.

10. Ambulance Transportation to a Renal Dialysis Facility Located on the Premises of a Hospital.--A renal dialysis facility may be approved to participate in the end-stage renal disease program as a part of a hospital or as a nonprovider. Where the facility has been approved as a part of a hospital, it meets the destination requirements of an institution. Even where the facility has been approved as a nonprovider, it may be determined to meet the destination requirements for purposes of ambulance service coverage under the following circumstances:

a. The renal dialysis facility is located on or adjacent to the premises of a hospital;

b. The renal dialysis facility furnishes services to patients of the hospital, referred to in a. above, e.g., on an outpatient or emergency basis, even though the dialysis facility is primarily in operation to furnish dialysis services to its own patients; and

c. There is an ongoing professional relationship between the two facilities. For example, the hospital and the renal dialysis facility have an agreement that provides for physician staff of the renal dialysis facility to abide by the by-laws and regulations of the hospital's medical staff.

A prior determination that the renal dialysis facility is a nonprovider for approval purposes should not be reopened or changed, even though it is found to be sufficiently related to the hospital to meet the destination requirement for ambulance service coverage, unless there has been a significant change in the relationship between the hospital and the renal dialysis facility since the facility's certification.

A beneficiary receiving maintenance dialysis on an outpatient basis is not ordinarily ill enough to require ambulance transportation for dialysis treatment. This would be so whether the renal dialysis facility is an independent enterprise or part of a hospital. Thus, if a claim for ambulance service furnished to a maintenance dialysis patient does not show that the patient's condition requires ambulance service, it should be disallowed. However, if the documentation submitted with the claim shows that ambulance service is required, then determine whether the dialysis facility meets the destination requirements under the ambulance service benefit described above.

11. Air Ambulance Service.--In some areas, transportation by airplane might qualify as ambulance service. Air ambulance services are covered only where:

a. The point of pickup is inaccessible by land vehicle; or

b. Great distances or other obstacles are involved in getting the patient to the nearest hospital with appropriate facilities and speedy admission is essential, i.e., in cases where transportation by land ambulance is contraindicated; and

c. All other conditions for coverage in §§ 3114ff. are met. The first two conditions could be met in places such as Hawaii, Alaska, and in other remote or sparsely populated areas of the continental United States. Air ambulance service can be covered in the relatively rare instances where the beneficiary's condition and the other circumstances of the case necessitated the use of this type transportation. However, where land ambulance service would have sufficed, payment should be based on the amount payable for land ambulance if this is less costly.

3115 SERVICES OF INTERNS AND RESIDENTS

A. General.--For Medicare purposes, the terms "interns" and "residents" include physicians participating in approved postgraduate training programs and physicians who are not in approved programs but who are authorized to practice only in a hospital setting, e.g., individuals with temporary or restricted licenses, or unlicensed graduates of foreign medical schools. Where a senior resident has a staff or faculty appointment or is designated, for example, a "fellow," it does not change the resident's status for the purposes of Medicare coverage and reimbursement. As a general rule, services of interns and residents are paid as provider services by the intermediary.

B. Services Furnished by Interns and Residents Within the Scope of an Approved Training Program.--Medical and surgical services furnished by interns and residents within the scope of their training program are covered as provider services. Effective with services furnished on or after July 1, 1987, this includes services furnished in a setting which is not part of the provider where a hospital has agreed to incur all or substantially all of the costs of training in the nonprovider facility. You are required to notify the Medicare carrier of such agreements. Where the provider does not incur all or substantially all of the training costs and the services are performed by a licensed physician, the services are reimbursable on a reasonable charge basis by the carrier. Prior to July 1, 1987, the covered services of interns and residents were reimbursed by the carrier on a reasonable charge basis as physician services if furnished by a licensed physician off the provider premises regardless of who incurred the training costs.

C. Services Furnished by Interns and Residents Outside the Scope of an Approved Training Program--Moonlighting.--Medical and surgical services furnished by interns and residents that are not related to their training program, and are performed outside the facility where they have their training program, are covered as physicians' services and paid on a reasonable charge basis where the requirements in 1 and 2, below, are met. Medical and surgical services furnished by interns and residents that are not related to their training program, and are performed in an outpatient department or emergency room of the hospital where they have their training program, are covered as physicians' services and paid on a reasonable charge basis where the following criteria are met:

1. the services are identifiable physicians' services, the nature of which requires performance by a physician in person and which contributes to the diagnosis or treatment of the patient's condition;

2. the intern or resident is fully licensed to practice medicine, osteopathy, dentistry or podiatry by the State in which the services are performed; and

3. the services performed can be separately identified from those services that are required as part of the training program.

When these criteria are met, the services are considered to have been furnished by the individuals in their capacity as physicians and not in their capacity as interns and residents.

Covered and Noncovered Home Health Agency Services

3116. CONDITIONS TO BE MET FOR COVERAGE OF HOME HEALTH SERVICES

Home health agency services are covered by Medicare when the following criteria are met:

- o The person to whom the services are provided is an eligible Medicare beneficiary.

- o The home health agency which is providing the services to the beneficiary has in effect a valid agreement to participate in the Medicare program.

- o The beneficiary qualifies for coverage of home health services as described in §3117.

- o The services for which payment is claimed are covered as described in §§3118 and 3119.

- o Medicare is the appropriate payer.

- o The services for which payment is claimed are not otherwise excluded from payment.

3116.1 Reasonable and Necessary Services.--

A. Background.--In enacting the Medicare program, Congress recognized that the physician would play an important role in determining utilization of services. The law requires that payment can be made only if a physician certifies the need for services and establishes a plan of care. The Secretary is responsible for ensuring that the claimed services are covered by Medicare, including determining whether they are "reasonable and necessary."

B. Determination of Coverage.--The beneficiary's health status and medical need as reflected in the home health plan of care and medical record provide the basis for determinations as to whether services provided are reasonable and necessary. A finding that services are reasonable and necessary must be based on information available in these documents, although clear inferences may be drawn from information provided in the plan of care (form HCFA 485) or in supplementary forms (forms HCFA 486, 487, 488).

A finding that care is not reasonable and necessary must be based on information provided on the forms and in the medical record with respect to the unique medical condition of the individual beneficiary. That is, a coverage denial may not be made based solely on the reviewer's general inferences about patients with similar diagnoses or on data related to utilization generally, but must be based upon objective clinical evidence regarding the patient's individual need for care.

Both payment and denial decisions may be based on summary information contained in the relevant HCFA data forms; however, additional information from the medical records (either via Form 488 or a copy of the medical record) must be requested when medical information needed to support a decision is not clearly present. The following examples illustrate this statement.

Examples of cases in which development of the case is needed:

EXAMPLE 1: A plan of care provides for daily skilled nursing visits for care of a pressure sore, but the description of the pressure sore and the dressing which is contained on the form causes the reviewer to question why daily skilled care is needed. The intermediary would not reduce the number of visits but would either request additional information to support the need for daily care or would request the nursing notes to determine if the beneficiary required daily skilled care.

EXAMPLE 2: A beneficiary with a diagnosis of congestive heart failure (CHF) has been hospitalized for 5 days. Posthospital skilled nursing care is ordered 3 x wk x 60 days for skilled observation, teaching of diet medication compliance and signs and symptoms of the disease. The documentation on the HCFA 485-486 shows that the patient has had CHF for 10 years with an exacerbation requiring recent hospitalization. The medications are not shown as changed or new. The clinical findings are contradictory. There is a possibility that this beneficiary requires skilled observation and teaching although the documentation does not give a clear picture of the beneficiary's needs. Therefore, the case would be developed further to determine if the criteria for coverage were met.

Examples of cases which would be denied without further development:

EXAMPLE 3: A plan of care calls for vitamin B12 injections 1 x mo x 60 days for a beneficiary who has been discharged from the hospital following a recent hip fracture. The beneficiary has generalized weakness but there is no diagnosis or clinical symptoms shown which support the Medicare requirements governing coverage of skilled nursing care for B12 injections are met. The claim would be denied without development for further information since there is no support for coverage of the skilled nursing care for the B12 injections.

EXAMPLE 4: A beneficiary has a primary diagnosis of back sprain for which he was hospitalized for 7 days. The beneficiary also has a secondary diagnosis of emphysema with an onset 2 years prior to the start of care. Following the hospitalization, the physician ordered skilled nursing 2 x wk x 4 weeks for skilled observation of vital signs and response to medication and aide services 2 x wk x 4 weeks for personal care. The documentation on the HCFA 485-486 shows that the beneficiary is up as tolerated, is able to walk

10 feet without resting and is alert. Clinical facts show normal vital signs, and no reference to emphysema. The beneficiary is on phenobarbital PO 30 mg TID. The documentation clearly does not support the medical necessity for skilled nursing care and the claim for the services would be denied without development.

Examples of cases in which payment may be made without further development:

EXAMPLE 5: A beneficiary with a diagnosis of congestive health failure has been hospitalized for five days. Post-hospital skilled nursing care is ordered 3 x wk x 60 days for skilled observation, teaching of a new diet regimen, compliance with multiple new medications, and signs and symptoms of the disease state. The documentation on the HCFA 485-486 shows the beneficiary had had an acute exacerbation of a pre-existing CHF condition which required the recent acute hospitalization. The beneficiary is discharged from the hospital with a medication regimen changed from previous medications. The HCFA forms documenting the clinical evidence of the recent acute exacerbation of the beneficiary's cardiac condition combined with changed medications support the physician's order for care. Payment may be made without further development.

EXAMPLE 6: A plan of care provides for physical therapy treatments 3 x wk x 45 days for a beneficiary who has been discharged from the hospital following a recent hip fracture. The beneficiary was discharged using a walker 7 days before the start of home care. The HCFA form 485 and supplementary form HCFA 486 shows that the beneficiary was discharged from the hospital with restricted mobility in ambulation, transfers, and climbing of stairs. The beneficiary had an unsafe gait which indicated a need for gait training and the beneficiary had not been instructed in stair climbing and a home exercise program. The goal of the physical therapy was to increase strength, range of motion and to progress from walker to cane with safe gait. Information on the relevant HCFA forms also indicates that the beneficiary had a previous functional capacity of full ambulation, mobility, and self care. The claim may be paid without further development, since there are no objective clinical factors in the medical evidence to contradict the order of the beneficiary's treating physician.

3116.2 Impact of Other Available Caregivers and Other Available Coverage on Medicare Coverage of Home Health Services.--Where the Medicare criteria for coverage of home health services are met, beneficiaries are entitled by law to coverage of reasonable and necessary home health services.

Therefore, a beneficiary is entitled to have the costs of reasonable and necessary services reimbursed by Medicare without regard to whether there is someone available in the home to furnish them. However, where a family member or other caring person is or will be providing services that adequately meet the patient's needs, it would not be reasonable and necessary for home health agency personnel to furnish such services. Ordinarily it can be presumed that there is no able and willing person in the home to provide the services being rendered by the home health agency unless the beneficiary or family indicates otherwise, and objects to the provision of the services by the home health agency, or unless the home health agency has first hand knowledge to the contrary.

EXAMPLE: A beneficiary, who lives with an adult daughter and who otherwise qualifies for Medicare coverage of home health services, requires the assistance of a home health aide for bathing and assistance with an exercise program to improve endurance. The daughter is unwilling to bathe her elderly father and assist him with the exercise program. Home health aide services to provide these services would be reasonable and necessary.

Similarly, a beneficiary is entitled to have the costs of reasonable and necessary home health services reimbursed by Medicare even if the beneficiary would qualify for institutional care (e.g., hospital care or skilled nursing facility care).

EXAMPLE: A beneficiary who is being discharged from a hospital with a diagnosis of osteomyelitis and who requires continuation of the IV antibiotic therapy that was begun in the hospital was found to meet the criteria for Medicare coverage of skilled nursing facility services. If the beneficiary also meets the qualifying criteria for coverage of home health services, payment may be made for the reasonable and necessary home health services the beneficiary needs, notwithstanding the availability of coverage in a skilled nursing facility.

Medicare payment should be made for reasonable and necessary home health services where the beneficiary is also receiving supplemental services that do not meet Medicare's definition of skilled nursing care or home health aide services.

EXAMPLE: A patient who needs skilled nursing care on an intermittent basis also hires an LPN to provide nighttime assistance while family members sleep. The care provided by the LPN, as respite to the family members, does not require the skills of a licensed nurse (as defined in §3118.1) and therefore has no impact on the beneficiary's eligibility for Medicare payment of home health services even though another third party insurer may pay for that nursing care.

3116.3 Use of Utilization Screens and "Rules of Thumb".--Medicare recognizes that determinations of whether home health services are reasonable and necessary must be based on an assessment of each beneficiary's individual care needs. Therefore, denial of services based on numerical utilization screens, diagnostic screens, diagnosis or specific treatment norms is not appropriate.

3117. CONDITIONS THE BENEFICIARY MUST MEET TO QUALIFY FOR COVERAGE OF HOME HEALTH SERVICES

To qualify for Medicare coverage of any home health services, the beneficiary must meet each of the criteria specified in this section. Beneficiaries who meet each of these criteria are eligible to have payment made on their behalf for services which are discussed in §§3118 and 3119.

3117.1 Confined to the Home.--

A. Patient Confined to His Home.--In order for a beneficiary to be eligible to receive covered home health services under both Part A and Part B, the law requires that a physician certify in all cases that the beneficiary is confined to his home. An individual does not have to be bedridden to be considered as confined to his home. However, the condition of these patients should be such that there exists a normal inability to leave home and, consequently, leaving their homes would require a considerable and taxing effort. If the patient does in fact leave the home, the patient may nevertheless be considered homebound if the absences from the home are infrequent or for periods of relatively short duration, or are attributable to the need to receive medical treatment. Absences attributable to the need to receive medical treatment include attendance at adult day centers to receive medical care, ongoing receipt of out-patient kidney dialysis, and the receipt of outpatient chemotherapy or radiation therapy. It is expected that in most instances absences from the home which occur will be for the purpose of receiving medical treatment. However, occasional absences from the home for nonmedical purposes, e.g., an occasional trip to the barber, a walk around the block or a drive, would not necessitate a finding that the individual is not homebound so long as the absences are undertaken on an infrequent basis or are of relatively short duration and do not indicate that the patient has the capacity to obtain the health care provided outside rather than in the home.

Generally speaking, a beneficiary will be considered to be homebound if he has a condition due to an illness or injury which restricts his ability to leave his place of residence except with the aid of supportive devices such as crutches, canes, wheelchairs, and walkers, the use of special transportation, or the assistance of another person or if he has a condition which is such that leaving his home is medically contraindicated. Some examples of homebound patients which are illustrative of the factors to be taken into account in determining whether a homebound condition exists would be: (1) a beneficiary paralyzed from a stroke who is confined to a wheelchair or who requires the aid of crutches in order to walk; (2) a beneficiary who is blind or senile and requires the assistance of another person in leaving his place of residence; (3) a beneficiary who has lost the use of his upper extremities and, therefore, is unable to open doors, use handrails on stairways, etc., and, therefore, requires the assistance of another individual in leaving his place of residence; (4) a patient who has just returned from a hospital stay involving surgery who may be suffering from resultant weakness and pain and, therefore, his actions may be restricted by his physician to certain specified and limited activities such as getting out of bed only for a specified period of time, walking stairs only once a day, etc.; and (5) a patient with arteriosclerotic heart disease of such severity that he must avoid all stress and physical activity, and (6) a patient with a psychiatric problem if his illness is manifested in part by a refusal to leave his home environment or is of such a nature that it would not be considered safe for him to leave his home unattended, even if he has no physical limitations.

The aged person who does not often travel from his home because of feebleness and insecurity brought on by advanced age would not be considered confined to his home for purposes of receiving home health services unless he meets one of the above conditions. A patient who requires speech therapy but does not require physical therapy or nursing services must also meet one of the above conditions in order to be considered as confined to his home.

Although a patient must be confined to his home to be eligible for covered home health services, some services cannot be provided at the patient's residence because equipment is required which cannot be made available there. If the services required by an individual involve the use of such equipment, the home health agency may make arrangements with a hospital, skilled nursing facility (SNF), or a rehabilitation center to provide these services on an outpatient basis. (See §3119.6.) However, even in these situations, for the services to be covered as home health services the patient must be considered as confined to his home; and to receive such outpatient services it may be expected that a homebound patient will generally require the use of supportive devices, special transportation, or the assistance of another person to travel to the appropriate facility.

If for any reason a question is raised as to whether an individual is confined to his home, the agency will be requested to furnish the intermediary with the information necessary to establish that the beneficiary is homebound as defined above.

B. Patient's Place of Residence.--A patient's residence is wherever he makes his home. This may be his own dwelling, an apartment, a relative's home, a home for the aged, or some other type of institution. However, an institution may not be considered a patient's residence if it:

1. Meets at least the basic requirement in the definition of a hospital, i.e., it is primarily engaged in providing by or under the supervision of physicians, to inpatients, diagnostic and therapeutic services for medical diagnosis, treatment, and care of disabled, or sick persons, or rehabilitation services for the rehabilitation of injured, disabled, or sick persons, or

2. Meets at least the basic requirement in the definition of an extended care facility, i.e., it is primarily engaged in providing to inpatients skilled nursing care and related services for patients who require medical or nursing care, or rehabilitation services for the rehabilitation of injured, disabled, or sick persons. All nursing homes that participate in Medicare and/or Medicaid as skilled nursing facilities, and most facilities that participate in Medicaid as intermediate care facilities meet this basic requirement. In addition, many nursing homes which do not choose to participate in Medicare or Medicaid meet this test. Acquire from your HCFA regional office a list of nursing facilities that cannot be considered a place of residence for the provision of home health services.

Thus, if an individual is a patient in an institution or distinct part of an institution which provides the services described above, he is not entitled to have payment made for home health services under either Part A or Part B since such an institution may not be considered his residence.

When a patient remains in a participating SNF following his discharge from active care, the facility may not be considered his residence for purposes of home health coverage.

3117.2 Services Are Provided Under a Plan of Care Established and Approved by a Physician.--

A. Content of the Plan of Care.--The plan of care must contain all pertinent diagnoses, including the beneficiary's mental status, the types of services, supplies and equipment ordered, the frequency of the visits to be made, prognosis, rehabilitation potential, functional limitations, activities permitted, nutritional requirements, medications and treatments, safety measures to protect against injury, discharge plans, and any additional items the home health agency or physician choose to include.

NOTE: This manual uses the term "plan of care" to refer to the medical treatment plan established by the treating physician with the assistance of the home health care nurse. The term we used in the past was "plan of treatment." However, the term we used in the past was changed to "plan of care" in the Omnibus Budget Reconciliation Act of 1987 (OBRA'87) without a change in definition. It is anticipated that a discipline-oriented plan of care will be established, where appropriate, by a home health agency nurse regarding nursing and home health aide services and by skilled therapists regarding specific therapy treatment. These plans of care may be incorporated within the physician's plan of care or separately prepared.

B. Specificity of Orders.--The orders on the plan of care must indicate the type of services to be provided to the beneficiary, both with respect to the professional who will provide them and with respect to the nature of the individual services, as well as the frequency of the services.

EXAMPLE: SN x 7/wk x 1 wk; 3/wk x 4 wk; 2/wk x 3 wk, (skilled nursing visits 7 times per week for 1 week; 3 times per week for 4 weeks; and two times per week for 3 weeks) for skilled observation and evaluation of the surgical site, for teaching sterile dressing changes and to perform sterile dressing changes. The sterile change consists of . . . (detail of procedure).

Orders for care can indicate a specific range in the frequency of visits to ensure that the most appropriate level of services is provided to home health beneficiaries. When a range of visits is ordered the upper limit of the range is to be considered the specific frequency.

EXAMPLE: SN x 2-4/wk x 4 wk; 1-2/wk x 4 wk for skilled observation and evaluation of the surgical site. . . .

Example of inappropriate specificity: Skilled nursing visits 3 times per week and PRN as needed. (This order is not specific because: 1) the number of weeks is not specified; 2) "PRN" is open-ended; and 3) the nature of the service is not specified.)

C. Who Signs the Plan of Care.--The physician who signs the plan of care must be qualified to sign the physician certification as described in 42 CFR 424 subpart B.

D. Timeliness of Signature.--The plan of care must be signed before the bill is submitted to the intermediary for payment.

E. Use of Verbal Orders.--

(1) Services which are provided from the beginning of the certification period and before the physician signs the plan of care are considered to be provided under a plan of care established and approved by the physician where there is a verbal order for the care prior to rendering the services which is documented in the medical record and where the services are included in a signed plan of care.

EXAMPLE: The HHA acquires a verbal order for venipuncture for a beneficiary to be performed on August 1. The HHA provides the venipuncture on August 1 and evaluates the beneficiary's need for continued care. The physician signs the plan of care for the venipuncture on August 15. Since the HHA had acquired a verbal order prior to the delivery of services, the visit is considered to be provided under a plan of care established and approved by the physician.

(2) Services which are provided in the subsequent certification period are considered to be provided under the subsequent plan of care where there is a verbal order before the services provided in the subsequent period are furnished and the order is reflected in the medical record. However, services which are provided after the expiration of a plan of care, but before the acquisition of a verbal order or a signed plan of care, cannot be considered to be provided under a plan of care.

EXAMPLE 1: The beneficiary is under a plan of care in which the physician orders venipuncture every 2 weeks. The last day covered by the initial plan of care is July 31. The beneficiary's next venipuncture is scheduled for August 5th, and the physician signs the plan of treatment for the new period on August 1st. The venipuncture on August 5th was provided under a plan of care established and approved by the physician.

EXAMPLE 2: The beneficiary is under a plan of care in which the physician orders venipuncture every 2 weeks. The last day covered by the plan of care is July 31. The beneficiary's next venipuncture is scheduled for August 5th, and the physician does not sign the plan of treatment until August 6th. The HHA acquires a verbal order for the venipuncture before the August 5th visit, and therefore the visit is considered to be provided under a plan of care established and approved by the physician.

EXAMPLE 3: The beneficiary is under a plan of care in which the physician orders venipuncture every 2 weeks. The last day covered by the plan of care is July 31. The beneficiary's next venipuncture is scheduled for August 5th, and the physician does not sign the plan of treatment until August 6th. The HHA does not acquire a verbal order for the venipuncture before the August 5th visit, and therefore the visit cannot be considered to be provided under a plan of care established and approved by the physician. The prior plan of care expired and neither a verbal order nor a signed plan of care was in effect on the date of the service. The visit is not covered.

(3) Any increase in the frequency of services or addition of new services during a certification period must be authorized by a physician by way of a verbal order or written order prior to the provision of the increased or additional services.

F. Periodic Review of the Plan of Care.--The plan of care must be reviewed and signed by a physician no less frequently than every 2 months. The physician who reviews and signs the plan of care must be qualified under 42 CFR 424 subpart B to sign the physician certification and plan of care.

3117.3 Under the Care of a Physician.--The patient must be under the care of a physician who is qualified to sign the physician certification and plan of care in accord with 42 CFR 424 subpart B.

A beneficiary is expected to be under the care of the physician who signs the plan of care and the physician certification. It is expected, but not required for coverage, that the physician who signs the plan of care will see the patient, but there is no specified interval of time within which the patient must be seen.

3117.4 Needs Skilled Nursing Care on an Intermittent Basis, or Physical Therapy or Speech Therapy or Has a Continued Need for Occupational Therapy.--The patient must need one of the following types of services:

- o Skilled nursing care which:
    - Is reasonable and necessary as defined in §3118.1 A and B, and
    - Is needed on an "intermittent" basis as defined in §3118.1C, or
- o Physical therapy as defined in §3118.2A and B, or
- o Speech therapy as defined in §3118.2A and C, or
- o Have a continuing need for occupational therapy as defined in §3118.2A and D.

The beneficiary has a continued need for occupational therapy when:

The services which the beneficiary requires meet the definition of "occupational therapy" services of §3118.2 A and D, and

The beneficiary's eligibility for home health services has been established by virtue of a prior need for skilled nursing care, speech therapy, or physical therapy in the current or prior certification period.

EXAMPLE: A beneficiary who is recovering from a CVA has an initial plan of care that called for physical therapy, speech therapy, and home health aide services. In the next certification period, the physician orders only occupational therapy and home health aide services because the beneficiary no longer needs the skills of a physical therapist or a speech therapist, but needs the services provided by the occupational therapist. The beneficiary's need for occupational therapy qualifies him or her for home health services, including home health aide services (presuming that all other qualifying criteria are met).

3117.5 Physician Certification.--The home health agency must be acting upon a physician certification which is part of the plan of care (HCFA form 485) and which meets the requirements of this section for home health agency services to be covered.

A. Content of the Physician Certification.--The physician must certify that:

1. The home health services are or were needed because the beneficiary is or was confined to his home as defined in §3117.1;

2. The beneficiary needs or needed skilled nursing services on an intermittent basis or physical therapy or speech therapy, or continues or continued to need occupational therapy after the need for skilled nursing care or physical therapy or speech therapy ceased;

3. A plan of care has been established and is periodically reviewed by a physician; and

4. The services are or were furnished while the individual is or was under the care of a physician.

B. Periodic Recertification.--The physician certification may cover a period less than but not greater than 62 days (2 months).

C. Who May Sign the Certification.--The physician who signs the certification must be permitted to do so by 42 CFR 424 subpart B.

3118. COVERAGE OF SERVICES WHICH ESTABLISH HOME HEALTH ELIGIBILITY

For any home health services to be covered by Medicare, the beneficiary must meet the qualifying criteria as specified in §3117, including having a need for skilled nursing care on an intermittent basis, physical therapy, speech therapy or a continuing need for occupational therapy as defined in this section.

3118.1 Skilled Nursing Care.--To be covered as skilled nursing services, the services must require the skills of a registered nurse or a licensed practical nurse under the supervision of a registered nurse, must be reasonable and necessary to the treatment of the beneficiary's illness or injury as discussed in §3118.1A and B, and must be intermittent as discussed in §3118.1C.

A. General Principles Governing Reasonable and Necessary Skilled Nursing Care.--

1. A skilled nursing service is a service which must be provided by a registered nurse, or a licensed practical nurse or a licensed vocational nurse under the supervision of a registered nurse to be safe and effective. In determining whether a service requires the skills of a nurse, consider both the inherent complexity of the service, the condition of the patient and accepted standards of medical and nursing practice.

Some services may be classified as a skilled nursing service on the basis of complexity alone, e.g., intravenous and intramuscular injections or insertion of catheters, and if reasonable and necessary to the treatment of the beneficiary's illness or injury, would be covered on that basis. However, in some cases the condition of the beneficiary may cause a service which would ordinarily be considered unskilled to be considered a skilled nursing service. This would occur when the beneficiary's condition is such that the service can be safely and effectively provided only by a skilled nurse.

EXAMPLE 1: The presence of a plaster cast on an extremity generally does not indicate a need for skilled care. However, the patient with a pre-existing peripheral vascular or circulatory condition might need skilled nursing and skilled rehabilitation personnel to observe for complications, to monitor medication administration for pain control and to teach proper ambulation techniques to ensure proper bone alignment and healing.

EXAMPLE 2: The condition of a beneficiary who has irritable bowel syndrome, or who is recovering from rectal surgery, may be such that he can be given an enema safely and effectively only by a skilled nurse. If the enema is necessary to treat the illness or injury, then the visit would be covered as a skilled nursing visit.

2. A service is not considered a skilled nursing service merely because it is performed by or under the direct supervision of a licensed nurse. Where a service can be safely and effectively performed (or self-administered) by the average nonmedical person without the direct supervision of a licensed nurse, the service cannot be regarded as a skilled nursing service although a skilled nurse actually provides the service. Similarly, the unavailability of a competent person to provide a nonskilled service, notwithstanding the importance of the service to the beneficiary, does not make it a skilled service when the skilled nurse provides it.

EXAMPLE 1: Giving a bath does not ordinarily require the skills of a licensed nurse and therefore would not be covered as a skilled nursing service unless the beneficiary's condition is such that the bath could be given safely and effectively only by a licensed nurse (as discussed in §3118.1A.1. above).

EXAMPLE 2: A beneficiary with a well-established colostomy absent complications may require assistance changing the colostomy bag because he cannot do it himself and there is no one else to change it. Notwithstanding the need for the routine colostomy care, the care does not become a skilled nursing service when it is provided by the licensed nurse.

3. A service which, by its nature, requires the skills of a licensed nurse to be provided safely and effectively continues to be a skilled service even if it is taught to the patient, the patient's family or other caregivers. Where the beneficiary needs the skilled nursing care and there is no one trained, able and willing to provide it, the services of a skilled nurse would be reasonable and necessary to the treatment of the illness or injury.

EXAMPLE: A beneficiary was discharged from the hospital with an open draining wound which requires irrigation, packing and dressing twice each day. The home health agency has taught the family to perform the dressing changes. The home health agency continues to see the patient for the wound care that is needed during the time that the family is not available and willing to provide it. The wound care continues to be skilled nursing care, notwithstanding that the family provides it part of the time, and may be covered as long as it is required by the patient.

4. The skilled nursing service must be reasonable and necessary to the diagnosis and treatment of the beneficiary's illness or injury within the context of the beneficiary's unique medical condition. To be considered reasonable and necessary for the diagnosis or treatment of the beneficiary's illness or injury, the services must be consistent with the nature and severity of the illness or injury, his or her particular medical needs, and accepted standards of medical and nursing practice. A beneficiary's overall medical condition is a valid factor in deciding whether skilled services are needed. A beneficiary's diagnosis should never be the sole factor in deciding that a service the beneficiary needs is either skilled or not skilled.

The determination of whether the services are reasonable and necessary should be made in consideration that a physician has determined that the services ordered are reasonable and necessary. The services must, therefore, be viewed from the perspective of the condition of the patient when the services were ordered and what was, at that time, reasonably expected to be appropriate treatment for the illness or injury throughout the certification period.

EXAMPLE 1: A physician has ordered skilled nursing visits for a patient with a hairline fracture of the hip. In the absence of any underlying medical condition or illness, nursing visits would not be reasonable and necessary for treatment of the patient's hip injury.

EXAMPLE 2: A physician has ordered skilled nursing visits for injections of insulin and teaching of self-administration and self management of the medication regimen for a beneficiary with diabetes mellitus. Insulin has been shown to be a safe and effective treatment for diabetes mellitus, and therefore, the skilled nursing visits for the injections and the teaching of self-administration and self management of the treatment regimen would be reasonable and necessary.

The determination of whether a beneficiary needs skilled nursing care should be based solely upon the beneficiary's unique condition and individual needs, without regard to whether the illness or injury is acute, chronic, terminal or expected to extend over a long period of time. In addition, skilled care may, dependent upon the unique condition of the beneficiary, continue to be necessary for beneficiaries whose condition is stable.

EXAMPLE 1: Following a cerebral vascular accident (CVA), a beneficiary has an in-dwelling foley catheter because of urinary incontinence, and is expected to require the catheter for a long and indefinite period. Periodic visits to change the catheter as needed, to treat the symptoms of catheter malfunction and to teach proper patient care would be covered as long as they are reasonable and necessary, although the beneficiary is stable and there is an expectation that the care will be needed for a long and indefinite period.

EXAMPLE 2: A beneficiary with advanced multiple sclerosis undergoing an exacerbation of the illness needs skilled teaching of medications, measures to overcome urinary retention, and the establishment of a program designed to minimize the adverse impact of the exacerbation. The skilled nursing care the beneficiary needs for a short period would be covered despite the chronic nature of the illness.

EXAMPLE 3: A beneficiary with malignant melanoma is terminally ill, and requires skilled observation, assessment, teaching, and treatment. The beneficiary has not elected coverage under Medicare's hospice benefit. The skilled nursing care that the beneficiary requires would be covered, notwithstanding that his condition is terminal, because the services he needs require the skills of a licensed nurse.

B. Application of the Principles to Skilled Nursing Services.--The following discussion of skilled nursing services applies the foregoing principles to specific skilled nursing services about which questions are most frequently raised.

1. Observation and Assessment of the Patient's Condition When Only the Specialized Skills of a Medical Professional Can Determine Patient's Status.--Observation and assessment of the beneficiary's condition by a licensed nurse are reasonable and necessary skilled services when the likelihood of change in a patient's condition requires skilled nursing personnel to identify and evaluate the patient's need for possible modification of treatment or initiation of additional medical procedures

until the beneficiary's treatment regimen is essentially stabilized. Where a beneficiary was admitted to home health care for skilled observation because there was a reasonable potential of a complication or further acute episode, but did not develop a further acute episode or complication, the skilled observation services are still covered for 3 weeks or so long as there remains a reasonable potential for such a complication or further acute episode.

Information from the beneficiary's medical history may support the likelihood of a future complication or acute episode and, therefore, may justify the need for continued skilled observation and assessment beyond 3-week period. Moreover, such indications as abnormal/fluctuating vital signs, weight changes, edema, symptoms of drug toxicity, abnormal/fluctuating lab values, and respiratory changes on auscultation may justify skilled observation and assessment. Where these indications are such that it is likely that skilled observation and assessment by a licensed nurse will result in changes to the treatment of the patient, then the services would be covered. There are cases where beneficiaries who are stable continue to require skilled observation and assessment (see example in section 3118.1 B. 13. d.). However, observation and assessment by a skilled nurse is not reasonable and necessary to the treatment of the illness or injury where these indications are part of a longstanding pattern of the beneficiary's condition, and there is no attempt to change the treatment to resolve them.

EXAMPLE 1: A beneficiary with arteriosclerotic heart disease with congestive heart failure requires close observation by skilled nursing personnel for signs of decompensation, or adverse effects resulting from prescribed medication. Skilled observation is needed to determine whether the drug regimen should be modified or whether other therapeutic measures should be considered until the patient's treatment regimen is essentially stabilized.

EXAMPLE 2: A beneficiary has undergone peripheral vascular disease treatment including a revascularization procedure (bypass). The incision area is showing signs of potential infection (e.g., heat, redness, swelling, drainage); patient has elevated body temperature. Skilled observation and monitoring of the vascular supply of the legs and the incision site is required until the signs of potential infection have abated and there is no longer a reasonable potential of infection.

EXAMPLE 3: A patient was hospitalized following a heart attack and, following treatment but before mobilization, is discharged home. Because it is not known whether exertion will exacerbate the heart disease, skilled observation is reasonable and necessary as mobilization is initiated until the patient's treatment regimen is essentially stabilized.

EXAMPLE 4: A frail 85 year old man was hospitalized for pneumonia. The infection was resolved, but the patient, who had previously maintained adequate nutrition, will not eat or eats poorly. The patient is discharged to the home health agency for monitoring of fluid and nutrient intake, and assessment of the need for tube feeding. Observation and monitoring by skilled nurses of the patient's oral intake, output and hydration status is required to determine what further treatment or other intervention is needed.

EXAMPLE 5: A patient with glaucoma and a cardiac condition has a cataract extraction. Because of the interaction between the eye drops for the glaucoma and cataracts and the beta blocker for the cardiac condition, the patient is at risk for serious cardiac arrhythmias. Skilled observation and monitoring of the drug actions is reasonable and necessary until the patient's condition is stabilized.

EXAMPLE 6: A patient with hypertension suffered dizziness and weakness. The physician found that the blood pressure was too low and discontinued the hypertension medication. Skilled observation and monitoring of the patient's blood pressure is required until the blood pressure remains stable and in a safe range.

2. Management and Evaluation of a Patient Care Plan.--Skilled nursing visits for management and evaluation of the patient's care plan are also reasonable and necessary where underlying conditions or complications require that only a registered nurse can ensure that essential nonskilled care is achieving its purpose. For skilled nursing care to be reasonable and necessary for management and evaluation of the beneficiary's plan of care, the complexity of the necessary unskilled services which are a necessary part of the medical treatment must require the involvement of skilled nursing personnel to promote the patient's recovery and medical safety in view of the beneficiary's overall condition.

EXAMPLE 1: An aged beneficiary with a history of diabetes mellitus and angina pectoris is recovering from an open reduction of the neck of the femur. He requires among other services, careful skin care, appropriate oral medications, a diabetic diet, a therapeutic exercise program to preserve muscle tone and body condition, and observation to notice signs of deterioration in his condition or complications resulting from his restricted, but increasing mobility. Although any of the required services could be performed by a properly instructed person, that person would not have the capability to understand the relationship among the services and their effect on each other. Since the nature of the patient's condition, his age and his immobility create a high potential for serious complications, such an understanding is essential to ensure the patient's recovery and safety. The management of this plan of care requires skilled nursing personnel until the patient's treatment regimen is essentially stabilized.

EXAMPLE 2: An aged patient is recovering from pneumonia, is lethargic, is disoriented, has residual chest congestion, is confined to the bed as a result of this debilitated condition and requires restraints at times. To decrease the chest congestion, the physician has prescribed frequent changes in position, coughing, and deep breathing. While the residual chest congestion alone would not represent a high risk factor, the patient's immobility and confusion represent complicating factors which, when coupled with the chest congestion, could create a high probability of a relapse. In this situation, skilled oversight of the nonskilled services would be reasonable and necessary pending the elimination of the chest congestion to ensure the patient's medical safety.

Where visits by a licensed nurse are not needed to observe and assess the effects of the nonskilled services being provided to treat the illness or injury, skilled nursing care would not considered reasonable and necessary to treat the illness or injury.

EXAMPLE: A physician orders one skilled nursing visit every 2 weeks and three home health aide visits each week for bathing and washing hair for a beneficiary whose recovery from a cerebral vascular accident has left him with residual weakness on the left side. The beneficiary's cardiovascular condition is stable, and the beneficiary has reached the maximum restoration potential. There are no underlying conditions which would necessitate the skilled supervision of a licensed nurse in assisting with bathing or hair washing. The skilled nursing visits are not necessary to manage and supervise the home health aide services and would not be covered.

3. Teaching and Training Activities.--Teaching and training activities which require skilled nursing personnel to teach a beneficiary, the beneficiary's family or caregivers how to manage his treatment regimen would constitute skilled nursing services. Where the teaching or training is reasonable and necessary to the treatment of the illness or injury, skilled nursing visits for teaching would be covered. The test of whether a nursing service is skilled relates to the skill required to teach and not to the nature of what is being taught. Therefore, where skilled nursing services are necessary to teach an unskilled service, the teaching may be covered. Skilled nursing visits for teaching and training activities are reasonable and necessary where the teaching or training is appropriate to the beneficiary's functional loss, or his illness or injury.

Where it becomes apparent after a reasonable period of time that the patient, family or caregiver will not or is not able to learn or be trained, then further teaching and training would cease to be reasonable and necessary. The reason that the patient, family or caregiver will not or is not able to learn or be trained should be documented in the record. Notwithstanding that the teaching or training was unsuccessful, the services for teaching and training would be considered to be reasonable and necessary prior to the point that it became apparent that the teaching or training was unsuccessful, as long as such services were appropriate to the beneficiary's illness, functional loss or injury.

EXAMPLE 1: A physician has ordered skilled nursing care for teaching a diabetic who has recently become insulin dependent. The physician has ordered teaching of self injection and management of insulin, signs and symptoms of insulin shock and actions to take in emergencies. The teaching services are reasonable and necessary to the treatment of the illness or injury.

EXAMPLE 2: A physician has ordered skilled nursing care to teach a beneficiary to follow a new medication regimen (in which there is a significant probability of adverse drug reactions due to the nature of the drug and the beneficiary's condition), signs and symptoms of adverse reactions to new medications and necessary dietary restrictions. After it becomes apparent that the beneficiary remains unable to take the medications properly, cannot demonstrate awareness of potential adverse reactions, and is not following the necessary dietary restrictions, skilled nursing care for further teaching would not be reasonable and necessary, since the beneficiary has demonstrated an inability to be taught.

EXAMPLE 3: A physician has ordered skilled nursing visits to teach self-administration of insulin to a beneficiary who has been self injecting insulin for 10 years and there is no change in the beneficiary's physical or mental status that would require reteaching. The skilled nursing visits would not be considered reasonable and necessary since the beneficiary has a longstanding history of being able to perform the service.

EXAMPLE 4: A physician has ordered skilled nursing visits to teach self-administration of insulin to a beneficiary who has been self injecting insulin for 10 years because the beneficiary has recently lost the use of the dominant hand and must be retrained to use the other hand. Skilled nursing visits to reteach self-administration of the insulin would be reasonable and necessary.

In determining the reasonable and necessary number of teaching and training visits, consideration must be given to whether the teaching and training provided constitutes a reinforcement of teaching provided previously in an institutional setting or in the home or whether it represents the initial instruction. Where the teaching represents initial instruction, the complexity of the activity to be taught and the unique abilities of the beneficiary are to be considered. Where the teaching constitutes a reinforcement, an analysis of the patient's retained knowledge and anticipated learning progress is necessary to determine the appropriate number of visits. Skills taught in a controlled institutional setting often need to be reinforced when the beneficiary returns to his or her home and does not have the advantage of the controlled environment. Where the patient needs reinforcement of the institutional teaching, additional teaching visits in the home are covered.

EXAMPLE 5: A patient recovering from pneumonia is being sent home requiring IV infusion of antibiotics 4 times per day. The patient's spouse has been shown how to administer the drug during the last few days of hospitalization and has been told the signs and symptoms of infection. The physician has also ordered home health services for a skilled nurse to teach the administration of the drug and the signs and symptoms requiring immediate medical attention. Teaching by the skilled nurse in the home would be reasonable and necessary to continue that begun in the hospital, since the home environment, and the nature of the supplies used in the home, differ from that in the hospital.

Reteaching or retraining for an appropriate period may be considered reasonable and necessary where there is a change in the procedure or the beneficiary's condition that requires reteaching, or where the patient, family or caregiver is not properly carrying out the task. The medical record should document the reason that the reteaching or retraining is required.

EXAMPLE 6: A well established diabetic who loses the use of his or her dominant hand would need to be retrained in self-administration of insulin.

EXAMPLE 7: A spouse who has been taught to perform a dressing change for a post surgical beneficiary may need to be retaught wound care if the spouse demonstrates improper performance of wound care.

NOTE: There is no requirement that the beneficiary, family or other caregiver be taught to provide a service if they cannot or choose not to provide the care.

Teaching and training activities which require the skills of a licensed nurse include, but are not limited to the following:

o Teaching the self-administration of injectable medications, or a complex range of medications;

o Teaching a newly diagnosed diabetic or caregiver all aspects of diabetes management, including how to prepare and to administer insulin injections, to prepare and follow a diabetic diet, to observe foot-care precautions, and to observe for and understand signs of hyperglycemia and hypoglycemia;

o Teaching self-administration of medical gases;

o Teaching wound care where the complexity of the wound, the overall condition of the beneficiary or the ability of the caregiver makes teaching necessary.

o Teaching care for a recent ostomy or where reinforcement of ostomy care is needed;

o Teaching self-catheterization;

o Teaching self-administration of gastrostomy or enteral feedings;

o Teaching care for and maintenance of peripheral and central venous lines and administration of intravenous medications through such lines;

o Teaching bowel or bladder training when bowel or bladder dysfunction exists;

o Teaching how to perform the activities of daily living when the beneficiary or caregiver must use special techniques and adaptive devices due to a loss of function;

o Teaching transfer techniques, e.g., from bed to chair, which are needed for safe transfer;

o Teaching proper body alignment and positioning, and timing techniques of a bed-bound beneficiary;

- Teaching ambulation with prescribed assistive devices (such as crutches, walker, cane, etc.) that are needed due to a recent functional loss;

- Teaching prosthesis care and gait training;

- Teaching the use and care of braces, splints and orthotics and associated skin care;

- Teaching the proper care and application of any specialized dressings or skin treatments (for example, dressings or treatments needed by beneficiaries with severe or widespread fungal infections, active and severe psoriasis or eczema, or due to skin deterioration from radiation treatments);

- Teaching the preparation and maintenance of a therapeutic diet; and

- Teaching proper administration of oral medication, including signs of side-effects and avoidance of interaction with other medications and food.

4. Administration of Medications.--Although drugs and biologicals are specifically excluded from coverage by the statute (§1816(m)(5) of the Social Security Act), the services of a licensed nurse which are required to administer the medications safely and effectively may be covered if they are reasonable and necessary to the treatment of the illness or injury.

a. Intravenous, intramuscular, or subcutaneous injections and infusions, and hypodermoclysis or intravenous feedings require the skills of a licensed nurse to be performed (or taught) safely and effectively. Where these services are reasonable and necessary to treat the illness or injury, they may be covered. For these services to be reasonable and necessary, the medication being administered must be accepted as safe and effective treatment of the beneficiary's illness or injury, and there must be a medical reason that the medication cannot be taken orally. Moreover, the frequency and duration of the administration of the medication must be within accepted standards of medical practice, or there must be a valid explanation regarding the extenuating circumstances which justify the need for the additional injections.

(1) Vitamin B 12 injections are considered specific therapy only for the following conditions:

- Specified anemias: pernicious anemia, megaloblastic anemias, macrocytic anemias, fish tapeworm anemia

- Specified gastrointestinal disorders: gastrectomy, malabsorption syndromes such as sprue and idiopathic steatorrhea, surgical and mechanical disorders such as resection of the small intestine, strictures, anastomosis and blind loop syndrome,

- Certain neuropathies: posterolateral sclerosis, other neuropathies associated with pernicious anemia, during the acute phase or acute exacerbation of a neuropathy due to malnutrition and alcoholism.

For an individual with pernicious anemia caused by a B-12 deficiency, intramuscular or subcutaneous injection of vitamin B 12 at a dose of from 100 to 1000 micrograms no more frequently than once monthly is the accepted reasonable and necessary dosage schedule for maintenance treatment. More frequent injections would be appropriate in the initial or acute phase of the disease until it has been determined through laboratory tests that the patient can be sustained on a maintenance dose.

(2) Insulin Injections.—Insulin is customarily self-injected by patients or is injected by their families. However, where a beneficiary is either physically or mentally unable to self-inject insulin and there is no other person who is able and willing to inject the beneficiary, the injections would be considered a reasonable and necessary skilled nursing service.

EXAMPLE: A beneficiary who requires an injection of insulin once per day for treatment of diabetes mellitus, also has multiple sclerosis with loss of muscle control in the arms and hands, occasional tremors, and vision loss which cause her not to be able to fill syringes or to self inject the insulin she needs. If there is no able and willing caregiver to inject her insulin, skilled nursing care would be reasonable and necessary for the injection of the insulin.

The prefilling of syringes with insulin (or other medication which is self-injected) does not require the skills of a licensed nurse, and therefore is not considered to be a skilled nursing service. If the beneficiary needs someone only to prefill syringes (and therefore needs no skilled nursing care on an intermittent basis, or physical therapy or speech therapy), the beneficiary, therefore, does not qualify for any Medicare coverage of home health care. Prefilling of syringes for self administration of insulin or other medications is considered to be assistance with medications which are ordinarily self-administered and is an appropriate home health aide service. (See §3119.2.) However, where State law requires that a licensed nurse prefill syringes, a skilled nursing visit to prefill syringes is paid as a skilled nursing visit (if the beneficiary otherwise needs skilled nursing care or physical therapy or speech therapy), but is not considered to be a skilled nursing service.

b. Oral Medications.—The administration of oral medications by a licensed nurse is not reasonable and necessary skilled nursing care except in the specific situation in which the complexity of the beneficiary's condition, the nature of the drugs prescribed and the number of drugs prescribed require the skills of a licensed nurse to detect and evaluate side effects or reactions. The medical record must document the specific circumstances that cause administration of an oral medication to require skilled observation and assessment.

c. Eye Drops and Topical Ointments.--The administration of eye drops and topical ointments does not require the skills of a licensed nurse. Therefore, even if the administration of eyedrops or ointments is necessary to the treatment of an illness or injury and the patient cannot self-administer them, and there is no one available to administer them, the visits cannot be covered as a skilled nursing service. This section does not eliminate coverage for skilled nursing visits for observation and assessment of the beneficiary's condition. (See §3118.1.B.1.)

EXAMPLE 1: A physician has ordered skilled nursing visits to administer eye drops and ointments for a beneficiary with glaucoma. The administration of eye drops and ointments does not require the skills of a licensed nurse. Therefore, the skilled nursing visits cannot be covered as skilled nursing care, notwithstanding the importance of the administration of the drops as ordered.

EXAMPLE 2: A physician has ordered skilled nursing visits for a patient with a reddened area under the breast. The physician instructs the beneficiary to wash, rinse, and dry the area daily and apply A and D ointment. Skilled nursing care is not needed to provide this treatment safely and effectively.

5. Tube Feedings.--Nasogastric tube, and percutaneous tube feedings (including gastrostomy and jejunostomy tubes), and replacement, adjustment, stabilization and suctioning of the tubes are skilled nursing services, and if the feedings are required to treat the beneficiary's illness or injury, the feedings and replacement or adjustment of the tubes would be covered as skilled nursing services.

6. Nasopharyngeal and Tracheostomy Aspiration.--Nasopharyngeal and tracheostomy aspiration are skilled nursing services and, if required to treat the beneficiary's illness or injury, would be covered as skilled nursing services.

7. Catheters.--Insertion and sterile irrigation and replacement of catheters, care of a suprapubic catheter, and in selected patients, urethral catheters, are considered to be skilled nursing services. Where the catheter is necessitated by a permanent or temporary loss of bladder control, skilled nursing services which are provided at a frequency appropriate to the type of catheter in use would be considered reasonable and necessary. Absent complications, Foley catheters generally require skilled care once approximately every 30 days and silicone catheters generally require skilled care once every 60-90 days and this frequency of service would be considered reasonable and necessary. However, where there are complications which require more frequent skilled care related to the catheter, such care with adequate documentation, be covered.

EXAMPLE: A beneficiary who has a Foley catheter due to loss of bladder control because of multiple sclerosis has a history of frequent plugging of the catheter and urinary tract infections. The physician has ordered skilled nursing visits once per month to change the catheter, and has left a "PRN" order for up to 3 additional visits per month for skilled observation and evaluation and/or catheter changes if the beneficiary or her family reports signs and symptoms of a urinary tract infection or a plugged catheter. During the certification period, the beneficiary's family contacts the HHA because the beneficiary has an elevated temperature, abdominal pain, and scant urine output. The skilled nurse visits the beneficiary and determines that the catheter is plugged and that there are symptoms of a urinary tract infection. The skilled nurse changes the catheter, and contacts the physician to advise him of her findings and to discuss treatment. The skilled nursing visit to change the catheter and to evaluate the beneficiary would be reasonable and necessary to the treatment of the illness or injury.

8. Wound Care.--Care of wounds, (including, but not limited to ulcers, burns, pressure sores open surgical sites, fistulas, tube sites and tumor erosion sites) when the skills of a licensed nurse are needed to provide safely and effectively the services necessary to treat the illness or injury is considered to be a skilled nursing service. For skilled nursing care to be reasonable and necessary to treat a wound, the size, depth, nature of drainage (color, odor, consistency and quantity), condition and appearance of surrounding skin of wound must be documented in the clinical findings so that an assessment of the need for skilled nursing care can be made. Coverage or denial of skilled nursing visits for wound care may not be based solely on the stage classification of the wound, but rather must be based on all of the documented clinical findings. Moreover, the plan of care must contain the specific instructions for the treatment of the wound. Where the physician has ordered appropriate active treatment (e.g. sterile or complex dressings, administration of prescription medications, etc.) of wounds with the following characteristics, the skills of a licensed nurse are usually reasonable and necessary:

a. Open wounds which are draining purulent or colored exudate or which have a foul odor present and/or for which the beneficiary is receiving antibiotic therapy,

b. Wounds with a drain or T-tube with requires shortening or movement of such drains,

c. Wounds which require irrigation or instillation of a sterile cleansing or medicated solution into several layers of tissue and skin and/or packing with sterile gauze,

d. Recently debrided ulcers,

e. Pressure sores (decubitus ulcers) which present the following characteristics:

o There is partial tissue loss with signs of infection such as foul odor or purulent drainage, or

o There is full thickness tissue loss that involves exposure of fat or invasion of other tissue such as muscle or bone.

NOTE: Wounds or ulcers that show redness, edema and induration, at times with epidermal blistering or desquamation do not ordinarily require skilled nursing care.

f. Wounds with exposed internal vessels or a mass which may have a proclivity for hemorrhage when a dressing is changed (e.g., post radical neck surgery, cancer of the vulva),

g. Open wounds or widespread skin complications following radiation therapy, or which result from immune deficiencies or vascular insufficiencies.

h. Post-operative wounds where there are complications such as infection or allergic reaction or where there is an underlying disease which has a reasonable potential to adversely affect healing (e.g., diabetes),

i. Third degree burns, and second degree burns where the size of the burn or presence of complications causes skilled nursing care to be needed.

j. Skin conditions which require application of nitrogen mustard or other chemotherapeutic medication which present a significant risk to the beneficiary.

k. Other open or complex wounds which require treatment that can only be safely and effectively provided by a licensed nurse.

EXAMPLE 1: A beneficiary has a second-degree burn with full thickness skin damage on his back. The wound is cleansed, followed by an application of Sulfamylon. While the wound requires skilled monitoring for signs and symptoms of infection or complications, the dressing change requires skilled nursing services.

EXAMPLE 2: A beneficiary experiences a decubitus ulcer where the full thickness tissue loss extends through the dermis to involve subcutaneous tissue. The wound involves necrotic tissue with a physician's order to apply a covering of a debriding ointment following vigorous irrigation. The wound is then packed loosely with wet to dry dressings or continuous moist dressing and covered with dry sterile gauze. Skilled nursing care is necessary for a proper treatment and understanding of cellular adherence and/or exudate or tissue healing or necrosis.

NOTE: This section relates to the direct, hands on skilled nursing care provided to beneficiaries with wounds, including any necessary dressing changes on those wounds. While a wound might not require this skilled nursing care, the wound may still require skilled monitoring for signs and symptoms of infection or complication (see §3118.1.B.1) or skilled teaching of wound care to the beneficiary or the beneficiary's family. (See §3118.1.B.3.)

9. Ostomy Care.--Ostomy care during the post-operative period and in the presence of associated complications where the need for skilled nursing care is clearly documented is a skilled nursing service. Teaching ostomy care remains skilled nursing care regardless of the presence of complications.

10. Heat Treatments.--Heat treatments which have been specifically ordered by a physician as part of active treatment of an illness or injury and which require observation by a licensed nurse to adequately evaluate the patient's progress would be considered a skilled nursing service.

11. Medical Gasses.--Initial phases of a regimen involving the administration of medical gasses which are necessary to the treatment of the beneficiary's illness or injury, would require skilled nursing care for skilled observation and evaluation of the beneficiary's reaction to the gasses, and to teach the patient and family when and how to properly manage the administration of the gasses.

12. Rehabilitation Nursing.--Rehabilitation nursing procedures, including the related teaching and adaptive aspects of nursing that are part of active treatment (e.g., the institution and supervision of bowel and bladder training programs) would constitute skilled nursing services.

13. Venipuncture.--Venipuncture when the collection of the specimen is necessary to the diagnosis and treatment of the beneficiary's illness or injury and when the venipuncture cannot be performed in the course of regularly scheduled absences from the home to acquire medical treatment is a skilled nursing service. The frequency of visits for venipuncture must be reasonable within accepted standards of medical practice for treatment of the illness or injury.

For venipuncture to be reasonable and necessary:

- The physician order for the venipuncture for a laboratory test should be associated with a specific symptom or diagnosis, or the documentation should clarify the need for the test when it is not diagnosis/illness specific. In addition, the treatment must be recognized (in the Physician's Desk Reference, or other authoritative source) as being reasonable and necessary to the treatment of the illness or injury for venipunctures for monitoring the treatment to be reasonable and necessary.

- The frequency of testing should be consistent with accepted standards of medical practice for continued monitoring of a diagnosis, medical problem or treatment regimen. Even where the laboratory results are consistently stable, periodic venipuncture may be reasonable and necessary because of the nature of the treatment.

Examples of reasonable and necessary venipunctures for stabilized beneficiaries include, but are not limited to those described below. While these guidelines do not preclude a physician from ordering more frequent venipunctures for these laboratory tests, the HHA must present justifying documentation to support the reasonableness and necessity of more frequent testing.

a. Captopril may cause side effects such as leukopenia and agranulocytosis and it is standard medical practice to monitor the white blood cell count and differential count on a routine basis (every 3 months) when the results are stable and the patient is asymptomatic.

b. In monitoring phenytoin (e.g., Dilantin) administration, the difference between a therapeutic and a toxic level of phenytoin in the blood is very slight and it is therefore appropriate to monitor the level on a routine basis (every 3 months) when the results are stable and the beneficiary is asymptomatic.

c. Venipuncture for fasting blood sugar (FBS)

- An unstable insulin dependent or non-insulin dependent diabetic would require FBS more frequently than once per month if ordered by the physician.
- Where there is a new diagnosis or where there has been a recent exacerbation, but the beneficiary is not unstable, monitoring once per month would be reasonable and necessary.
- A stable insulin or non-insulin dependent diabetic would require monitoring every 2-3 months.

d. Venipuncture for prothrombin

- Where the documentation shows that the dosage is being adjusted, monitoring would be reasonable and necessary as ordered by the physician.
- Where the results are stable within the therapeutic ranges, monthly monitoring would be reasonable and necessary.
- Where the results are stable within non-therapeutic ranges, there must be documentation of other factors which would indicate why continued monitoring is reasonable and necessary.

EXAMPLE: A beneficiary with coronary artery disease (CAD) was hospitalized with atrial fibrillation and was subsequently discharged to the home health agency with orders for anticoagulation therapy. Monthly venipunctures as indicated are necessary to report prothrombin (protime) levels to the physician, notwithstanding that the beneficiary's prothrombin time tests indicate essential stability.

14. Student Nurse Visits.--Visits made by a student nurse may be covered as skilled nursing care when a home health agency participates in training programs in which it utilizes student nurses enrolled in a school of nursing to perform skilled nursing services in a home setting. To be covered, the services must be reasonable and necessary skilled nursing care, and must be performed under the general supervison of a registered or licensed nurse. The supervising nurse need not accompany the student nurse on each visit.

15. Psychiatric Evaluation and Therapy.--The evaluation and psychotherapy needed by a patient suffering from a diagnosed psychiatric disorder that necessitated active treatment in an institution requires the skills of a psychiatrically trained nurse and the costs of the psychiatric nurse's services may be covered as a skilled nursing care.

Psychiatrically trained nurses are nurses who have special training and/or experience beyond the standard curriculum required for an R.N. The services of the psychiatric nurse are to be provided under a plan of care established and reviewed by a psychiatrist. A psychiatrist may also prescribe services of non-psychiatric nursing such as intramuscular injections of behavior modifying medications.

Because the law precludes agencies that primarily provide care and treatment of mental diseases from participating as home health agencies, psychiatric nursing must be furnished by an agency that does not primarily provide care and treatment of mental diseases.

C. Intermittent Skilled Nursing Care.--To meet the requirement for "intermittent" skilled nursing care, an individual must have a medically predictable recurring need for skilled nursing services. In most instances, this definition will be met if a patient requires a skilled nursing service at least once every 60 days.

Since the need for "intermittent" skilled nursing care makes the individual eligible for other covered home health services, the intermediary should evaluate each claim involving skilled nursing services furnished less frequently than once every 60 days. In such cases, payment should be made only if documentation justifies a recurring need for reasonable, necessary, and medically predictable skilled nursing services. The following are examples of the need for infrequent, yet intermittent, skilled nursing services:

1. The patient with an indwelling silicone catheter who generally needs a catheter change only at 90-day intervals;

2. The person who experiences a fecal impaction due to the normal aging process (i.e., loss of bowel tone, restrictive mobility, and a breakdown in good health habits) and must be manually disimpacted. Although these impactions are likely to recur, it is not possible to pinpoint a specific timeframe; or

3. The blind diabetic who self-injects insulin may have a medically predictable recurring need for a skilled nursing visit at least every 90 days. These visits, for example, would be to observe and determine the need for changes in the level and type of care which have been prescribed, thus supplementing the physician's contacts with the patient. (See Coverage Issues Appendix, §HHA-1.)

Where the need for "intermittent" skilled nursing visits is medically predictable but a situation arises after the first visit making additional visits unnecessary, e.g., the patient is institutionalized or dies, the one visit would be reimbursable. However, a one-time order; e.g., to give gamma globulin following exposure to hepatitis, would not be considered a need for "intermittent" skilled nursing care since a recurrence of the problem which would require this service is not medically predictable.

Although most patients require services no more frequently than several times a week, Medicare will pay for part-time (as defined in §3119.7) medically reasonable and necessary skilled nursing care 7 days a week for a short period of time (2-3 weeks). There may also be a few cases involving unusual circumstances where the patient's prognosis indicates the medical need for daily skilled services will extend beyond 3 weeks. As soon as the patient's physician makes this judgment, which usually should be made before the end of the 3-week period, the home health agency must forward medical documentation justifying the need for such additional services and include an estimate of how much longer daily skilled services will be required.

A person expected to need more or less full-time skilled nursing care over an extended period of time; i.e., a patient who requires institutionalization, would usually not qualify for home health benefits.

3118.2 Skilled Therapy Services.--

A. General Principles Governing Reasonable and Necessary Physical Therapy, Speech Therapy, and Occupational Therapy.—

1. The service of a physical, speech or occupational therapist is a skilled therapy service if the inherent complexity of the service is such that it can be performed safely and/or effectively only by or under the general supervision of a skilled therapist. To be covered, the skilled services must also be reasonable and necessary to the treatment of the beneficiary's illness or injury or to the restoration of maintenance of function affected by the beneficiary's illness or injury. It is necessary to determine whether individual therapy services are skilled and whether, in view of the beneficiary's overall condition, skilled management of the services provided is needed although many or all of the specific services needed to treat the illness or injury do not require the skills of a therapist.

2. The development, implementation management and evaluation of a patient care plan based on the physician's orders constitute skilled therapy services when, because of the beneficiary's condition, those activities require the involvement of a skilled therapist to meet the beneficiary's needs, promote recovery and ensure medical safety. Where the skills of a therapist are needed to manage and periodically reevaluate the appropriateness of a maintenance program because of an identified danger to the patient, such services would be covered, even if the skills of a therapist are not needed to carry out the activities performed as part of the maintenance program.

3. While a beneficiary's particular medical condition is a valid factor in deciding if skilled therapy services are needed, a beneficiary's diagnosis or prognosis should never be the sole factor in deciding that a service is or is not skilled. The key issue is whether the skills of a therapist are needed to treat the illness or injury, or whether the services can be carried out by nonskilled personnel.

4. A service that is ordinarily considered nonskilled could be considered a skilled therapy service in cases in which there is clear documentation that, because of special medical complications, skilled rehabilitation personnel are required to perform or supervise the service or to observe the beneficiary. However, the importance of a particular service to a beneficiary or the frequency with which it must be performed does not, by itself, make a nonskilled service into a skilled service.

5. The skilled therapy services must be reasonable and necessary to the treatment of the beneficiary's illness or injury within the context of the beneficiary's unique medical condition. To be considered reasonable and necessary for the treatment of the illness or injury:

a. The services must be consistent with the nature and severity of the illness or injury, the beneficiary's particular medical needs, including the requirement that the amount, frequency and duration of the services must be reasonable, and

b. The services must be considered, under accepted standards of medical practice, to be specific and effective treatment for the patient's condition, and

c. The services must be provided with the expectation, based on the assessment made by the physician of the beneficiary's rehabilitation potential, that:

+ The condition of the beneficiary will improve materially in a reasonable and generally predictable period of time, or

+ The services are necessary to the establishment of a safe and effective maintenance program.

Services involving activities for the general welfare of any beneficiary, e.g., general exercises to promote overall fitness or flexibility and activities to provide diversion or general motivation, do not constitute skilled therapy. Those services can be performed by nonskilled individuals without the supervision of a therapist.

d. Services of skilled therapists which are for the purpose of teaching the patient or the patient's family or caregivers necessary techniques, exercises or precautions are covered to the extent that they are reasonable and necessary to treat illness or injury. However, visits made by skilled therapists to a beneficiary's home solely to train other home health agency staff (e.g., home health aides) are not billable as visits since the home health agency is responsible for ensuring that its staff is properly trained to perform any service it furnishes. The cost of a skilled therapist's visit for the purpose of training home health agency staff is an administrative cost to the home health agency.

EXAMPLE: A beneficiary with a diagnosis of multiple sclerosis has recently been discharged from the hospital following an exacerbation of her condition which has left her wheelchair bound and for the first time, without any expectation of achieving ambulation again. The physician has ordered physical therapy to select the proper wheelchair for her long term use, to teach safe use of the wheelchair and safe transfer techniques to the beneficiary and the family. Physical therapy would be reasonable and necessary to evaluate the beneficiary's overall needs, to make the selection of the proper wheelchair and to teach the beneficiary and/or family safe use of the wheelchair and proper transfer techniques.

B. Application of the Principles to Physical Therapy Services.--The following discussion of skilled physical therapy services applies the principles in §3118.2A to specific physical therapy services about which questions are most frequently raised.

1. Assessment.--The skills of a physical therapist to assess and periodically reassess a beneficiary's rehabilitation needs and potential or to develop and/or implement a physical therapy program are covered when they are reasonable and necessary because of the beneficiary's condition. Skilled rehabilitation services concurrent with the management of a patient's care plan include objective tests and measurements such as, but not limited to, range of motion, strength, balance, coordination, endurance or functional ability.

2. Therapeutic Exercises.--Therapeutic exercises which must be performed by or under the supervision of the qualified physical therapist to ensure the safety of the beneficiary and the effectiveness of the treatment, due either to the type of exercise employed or to the condition of the beneficiary, constitute skilled physical therapy.

3. Gait Training.--Gait evaluation and training furnished a beneficiary whose ability to walk has been impaired by neurological, muscular or skeletal abnormality require the skills of a qualified physical therapist and constitute skilled physical therapy and are considered reasonable and necessary if they can be expected to improve materially the beneficiary's ability to walk.

Gait evaluation and training which is furnished to a beneficiary whose ability to walk has been impaired by a condition other than a neurological, muscular or skeletal abnormality would nevertheless be covered where physical therapy is reasonable and necessary to restore the lost function.

EXAMPLE 1: A physician has ordered gait evaluation and training for a beneficiary whose gait has been materially impaired by scar tissue resulting from burns. Physical therapy services to evaluate the beneficiary's gait, to establish a gait training program and to provide the skilled services necessary to implement the program would be covered.

EXAMPLE 2: A beneficiary who has had a total hip replacement is ambulatory but demonstrates weakness, and is unable to climb stairs safely. Physical therapy would be reasonable and necessary to teach the beneficiary to safely climb and descend stairs.

Repetitive exercises to improve gait, or to maintain strength and endurance and assistive walking are appropriately provided by nonskilled persons and ordinarily do not require the skills of a physical therapist. Where such services are performed by a physical therapist as part of the initial design and establishment of a safe and effective maintenance program, the services would, to the extent that they are reasonable and necessary, be covered.

EXAMPLE: A beneficiary who has received gait training has reached his maximum restoration potential, and the physical therapist is teaching the beneficiary and family how to safely perform the activities which are a part of the maintenance program being established. The visits by the physical therapist to demonstrate and teach the activities (which by themselves do not require the skills of a therapist) would be covered since they are needed to establish the program.

4. Range of Motion.--Only a qualified physical therapist may perform range of motion tests and therefore such tests are skilled physical therapy.

Range of motion exercises constitute skilled physical therapy only if they are part of an active treatment for a specific disease state, illness, or injury, which has resulted in a loss or restriction of mobility (as evidenced by physical therapy notes showing the degree of motion lost and the degree to be restored). Range of motion exercises which are not related to the restoration of a specific loss of function often may be provided safely and effectively by nonskilled individuals. Passive exercises to maintain range of motion in paralyzed extremities that can be carried out by nonskilled persons do not constitute skilled physical therapy.

However, as indicated in section 3118.2A4, where there is clear documentation that, because of special medical complications (e.g., susceptible to pathological bone fractures), the skills of a therapist are needed to provide services which ordinarily do not need the skills of a therapist, then the services would be covered.

5. Maintenance Therapy.--Where repetitive services which are required to maintain function involve the use of complex and sophisticated procedures, the judgement and skill of a physical therapist might be required for the safe and effective rendition of such services. If the judgment and skill of a physical therapist is required to safely and effectively treat the illness or injury, the services would be covered as physical therapy services.

EXAMPLE: Where there is an unhealed, unstable fracture which requires regular exercise to maintain function until the fracture heals, the skills of a physical therapist would be needed to ensure that the fractured extremity is maintained in proper position and alignment during maintenance range of motion exercises.

Establishment of a maintenance program is a skilled physical therapy service where the specialized knowledge and judgement of a qualified physical therapist is required for the program to be safely carried out and the treatment aims of the physician achieved.

EXAMPLE: A Parkinson's patient or a patient with rheumatoid arthritis who has not been under a restorative physical therapy program may require the services of a physical therapist to determine what type of exercises are required for the maintenance of his present level of function. The initial evaluation of the patient's needs, the designing of a maintenance program which is appropriate to the capacity and tolerance of the patient and the treatment objectives of the physician, the instruction of the beneficiary, family or caregivers to safely and effectively carry out the program and such reevaluations as may be required by the beneficiary's condition, would constitute skilled physical therapy.

While a patient is under a restorative physical therapy program, the physical therapist should regularly reevaluate his condition and adjust any exercise program the patient is expected to carry out himself or with the aid of supportive personnel to maintain the function being restored. Consequently, by the time it is determined that no further restoration is possible (i.e., by the end of the last restorative session) the physical therapist will already have designed the maintenance program required and instructed the beneficiary or caregivers in carrying out the program.

6. Ultrasound, Shortwave, and Microwave Diathermy Treatments.--These treatments must always be performed by or under the supervision of a qualified physical therapist and are skilled therapy.

7. Hot Packs, Infra-Red Treatments, Paraffin Baths and Whirlpool Baths.--Heat treatments and baths of this type ordinarily do not require the skills of a qualified physical therapist. However, the skills, knowledge and judgement of a qualified physical therapist might be required in the giving of such treatments or baths in a particular case, e.g., where the patient's condition is complicated by circulatory deficiency, areas of desensitization, open wounds, fractures or other complications.

C. Application of the General Principles to Speech Language Pathology Services.--The following discussion of skilled speech language pathology services applies the principles to specific speech language pathology services about which questions are most frequently raised.

1. The skills of a speech language pathologist are required for the assessment of a beneficiary's rehabilitation needs (including the causal factors and the severity of the speech and language disorders), and rehabilitation potential. Reevaluation would only be considered reasonable and necessary if the beneficiary exhibited a change in functional speech or motivation, clearing of confusion or the remission of some other medical condition that previously contraindicated speech language pathology services. Where a beneficiary is undergoing restorative speech language pathology services, routine reevaluations are considered to be a part of the therapy and could not be billed as a separate visit.

2. The services of a speech language pathologist would be covered if they are needed as a result of an illness, or injury and are directed towards specific speech/voice production.

3. Speech language pathology would be covered where the service can only be provided by a speech language pathologist and where it is reasonably expected that the service will materially improve the beneficiary's ability to independently carry out any one or combination of communicative activities of daily living in a manner that is measurably at a higher level of attainment than that prior to the initiation of the services.

4. The services of a speech language pathologist to establish a hierarchy of speech-voice-language communication tasks and cueing that directs a beneficiary toward speech-language communication goals in the plan of care would be covered speech language pathology.

5. The services of a speech language pathologist to train the beneficiary, family or other caregivers to augment the speech-language communication, treatment or to establish an effective maintenance program would be covered speech therapy.

6. The services of a speech language pathologist to assist beneficiaries with aphasia in rehabilitation of speech and language skills is covered when needed by a beneficiary.

7. The services of a speech therapist to assist individuals with voice disorders to develop proper control of the vocal and respiratory systems for correct voice production are covered when needed by a beneficiary.

D. Application of the General Principles to Occupational Therapy.--The following discussion of skilled occupational therapy services applies the principles to specific occupational therapy services about which questions are most frequently raised.

1. Assessment.--The skills of an occupational therapist to assess and reassess a beneficiary's rehabilitation needs and potential or to develop and/or implement an occupational therapy program are covered when they are reasonable and necessary because of the beneficiary's condition.

2. Planning, Implementing and Supervision of Therapeutic Programs.--The planning, implementing and supervision of therapeutic programs including, but not limited to those listed below are skilled occupational therapy services, and if reasonable and necessary to the treatment of the beneficiary's illness or injury would be covered.

a. Selecting and teaching task oriented therapeutic activities designed to restore physical function.

EXAMPLE: Use of woodworking activities on an inclined table to restore shoulder, elbow and wrist range of motion lost as a result of burns.

b. Planning, implementing and supervising therapeutic tasks and activities designed to restore sensory-integrative function.

EXAMPLE: Providing motor and tactile activities to increase sensory output and improve response for a stroke patient with functional loss resulting in a distorted body image.

c. Planning, implementing and supervising of individualized therapeutic activity programs as part of an overall "active treatment" program for a patient with a diagnosed psychiatric illness.

EXAMPLE: Use of sewing activities which require following a pattern to reduce confusion and restore reality orientation in a schizophrenic patient.

d. Teaching compensatory techniques to improve the level of independence in the activities of daily living.

EXAMPLE: Teaching a beneficiary who has lost use of an arm how to pare potatoes and chop vegetables with one hand.

EXAMPLE: Teaching a stroke patient new techniques to enable him to perform feeding, dressing and other activities of daily living as independently as possible.

e. The designing, fabricating and fitting of orthotic and self-help devices.

EXAMPLE: Construction of a device which would enable an individual to hold a utensil and feed himself independently.

EXAMPLE: Construction of a hand splint for a patient with rheumatoid arthritis to maintain the hand in a functional position.

f. Vocational and prevocational assessment and training which is directed toward the restoration of function in the activities of daily living lost due to illness or injury would be covered. Where vocational or prevocational assessment and training is related solely to specific employment opportunities, work skills or work settings, such services would not be covered because they would not be directed toward the treatment of an illness or injury.

3. Illustration of Covered Services.--

EXAMPLE 1: A physician orders occupational therapy for a patient who is recovering from a fractured hip and who needs to be taught compensatory and safety techniques with regard to lower extremity dressing, hygiene, toileting and bathing. The occupational therapist will establish goals for the beneficiary's rehabilitation (to be approved by the physician), and will undertake the teaching of the techniques necessary for the patient to reach the goals. Occupational therapy services would be covered at a duration and intensity appropriate to the severity of the impairment and the beneficiary's response to treatment.

EXAMPLE 2: A physician has ordered occupational therapy for a beneficiary who is recovering from a CVA. The beneficiary has decreased range of motion, strength and sensation in both the upper and lower extremities on the right side. In addition, the beneficiary has perceptual and cognitive deficits resulting from the CVA. The beneficiary's condition has resulted in decreased function in activities of daily living (specifically bathing dressing, grooming, hygiene and toileting). The loss of function requires assistive devices to enable the beneficiary to compensate for the loss of function and to maximize safety and independence. The beneficiary also needs equipment such as himi-slings to prevent shoulder subluxation and a hand splint to prevent joint contracture and deformity in the right hand. The services of an occupational therapist would be necessary to assess the beneficiary's needs, develop goals (to be approved by the physician), to manufacture or adapt the needed equipment to the beneficiary's use, to teach compensatory techniques, to strengthen the beneficiary as necessary to permit use of compensatory techniques, to provide activities which are directed towards meeting the goals governing increased perceptual and cognitive function. Occupational therapy services would be covered at a duration and intensity appropriate to the severity of the impairment and the beneficiary's response to treatment.

3119. COVERAGE OF OTHER HOME HEALTH SERVICES

3119.1 Skilled Nursing, Physical Therapy, Speech Therapy, and Occupational Therapy.--Where the beneficiary meets the qualifying criteria in 3117, Medicare covers skilled nursing services which meet the requirements of 3118.1 A and B and 3119.7, physical therapy which meets the requirements of 3118.2 A and B, speech therapy which meets the requirements of 3118.2 A and C, and occupational therapy which meets the requirements of 3118.2 A and D.

3119.2 Home Health Aide Services.--For home health aide services to be covered, the beneficiary must meet the qualifying criteria as specified in §3117, the services which are provided by the home health aide must be part-time or intermittent as discussed in §3119.7 the services must meet the definition of home health aide services of this section; and the services must be reasonable and necessary to the treatment of the beneficiary's illness or injury.

The reason for the visits by the home health aide must be to provide hands-on personal care of the beneficiary or services which are needed to maintain the beneficiary's health or to facilitate treatment of the beneficiary's illness or injury.

The physician's order should indicate the frequency of the home health aide services required by the beneficiary. These services may include but are not limited to:

a. Personal Care.--Personal care means:

o Bathing, dressing, grooming, caring for hair, nail and oral hygiene which are needed to facilitate treatment or to prevent deterioration of the beneficiary's health, changing the bed linens of an incontinent beneficiary, shaving, deodorant application, skin care with lotions and/or powder, foot care, and ear care.

o Feeding, assistance with elimination (including enemas unless the skills of a licensed nurse are required due to the patient's condition, routine catheter care and routine colostomy care), assistance with ambulation, changing position in bed, assistance with transfers.

EXAMPLE 1: A physician has ordered home health aide visits to assist the beneficiary in personal care because the beneficiary is recovering from a stroke and continues to have significant right side weakness which causes him to be unable to bathe, dress or perform hair and oral care. The plan of care established by the home health agency nurse sets forth the specific tasks with which the beneficiary needs assistance. Home health aide visits at an appropriate frequency would be reasonable and necessary to assist in these tasks.

EXAMPLE 2: A physician ordered four home health aide visits per week for personal care for a multiple sclerosis patient who is unable to perform these functions because of increasing debilitation. The home health aide gave the beneficiary a bath twice per week and washed hair on the other two visits each week. Only two visits are reasonable and necessary since the services could have been provided in the course of two visits.

EXAMPLE 3: A physician ordered seven home health aide visits per week for personal care for a bed-bound, incontinent patient. All visits are reasonable and necessary because the patient has extensive personal care needs.

EXAMPLE 4: A beneficiary with a well established colostomy forgets to change the bag regularly and has difficulty changing it. Home health aide services at an appropriate frequency to change the bag would be considered reasonable and necessary to the treatment of the illness or injury.

Other services which may be covered when provided by home health aides include, but are not limited to:

b. Simple dressing changes which do not require the skills of a licensed nurse.

EXAMPLE 5: A beneficiary who is confined to the bed has developed a small reddened area on the buttocks. The physician has ordered home health aide visits for more frequent repositioning, bathing and the application of a topical ointment and a gauze 4x4. Home health aide visits at an appropriate frequency would be reasonable and necessary.

c. Assistance with medications which are ordinarily self-administered and which do not require the skills of a licensed nurse to be provided safely and effectively.

NOTE: Prefilling of insulin syringes is ordinarily performed by the diabetic as part of the self-administration of the insulin and, unlike the injection of the insulin, does not require the skill of a licensed nurse to be performed properly. Therefore, if the prefilling of insulin syringes is performed by home health agency staff, it is considered to be a home health aide service. However, where State law precludes the provision of this service by other than a licensed nurse or physician, Medicare will make payment for this service, when covered, as though it were a skilled nursing service. Where the beneficiary needs only prefilling of insulin syringes and does not need skilled nursing care on an intermittent basis, or physical therapy or speech therapy or have a continuing need for occupational therapy, then Medicare cannot cover any home health services to the beneficiary (even if State law requires that the insulin syringes be filled by a licensed nurse).

d. Assistance with activities which are directly supportive of skilled therapy services but do not require the skills of a therapist to be safely and effectively performed such as routine maintenance exercises, and repetitive speech routines to support speech therapy.

e. Routine care of prosthetic and orthotic devices.

When a home health aide visits a patient to provide a health related service as discussed above, the home health aide may also perform some incidental services which do not meet the definition of a home health aide service (e.g., light cleaning, preparation of a meal, taking out the trash, shopping, etc.) However, the purpose of a home health aide visit may not be to provide these incidental services since they are not health related services, but rather are necessary household tasks that must be performed by anyone to maintain a home.

EXAMPLE 1: A home health aide visits a recovering stroke patient whose right side weakness and poor endurance cause her to be able to leave the bed and chair only with extreme difficulty. The physician has ordered physical therapy and speech therapy for the beneficiary and has ordered home health aide services three or four times per week for personal care, assistance with ambulation as mobility increases, and assistance with repetitive speech exercises as her impaired speech improves. The home health aide also provides incidental household services such as preparation of meals, light cleaning and taking out the trash. The beneficiary lives with an elderly frail sister who is disabled and who cannot perform either the personal care or the incidental tasks. The home health aide visits at a frequency appropriate to the performance of the health related services would be covered, notwithstanding the incidental provision of noncovered services (i.e., the household services) in the course of the visits.

EXAMPLE 2: A physician orders home health aide visits 3 times per week. The only services provided are light housecleaning, meal preparation and trash removal. The home health aide visits cannot be covered, notwithstanding their importance to the beneficiary, because the services provided do not meet Medicare's definition of "home health aide services."

3119.3 Medical Social Services.--Medical social services which are provided by a qualified medical social worker or a social work assistant under the supervision of a qualified medical social worker may be covered as home health services where the beneficiary meets the qualifying criteria specified in §3117, and:

- o The services of these professionals are necessary to resolve social or emotional problems which are or are expected to be an impediment to the effective treatment of the beneficiary's medical condition or his or her rate of recovery, and

- o The plan of care indicates how the services which are required necessitate the skills of a qualified social worker or a social work assistant under the supervision of a qualified medical social worker to be performed safely and effectively.

Where both of these requirements for coverage are met, services of these professionals which may be covered include, but are not limited to:

- o Assessment of the social and emotional factors related to the beneficiary's illness, need for care, response to treatment and adjustment to care,

- o Assessment of the relationship of the beneficiary's medical and nursing requirements to the individual's home situation, financial resources and availability of community resources,

- o Appropriate action to obtain available community resources to assist in resolving the beneficiary's problem (Note: Medicare does not cover the services of a medical social worker to complete or assist in the completion of an application for Medicaid because Federal regulations require the State to provide assistance in completing the application to anyone who chooses to apply for Medicaid.), and

- o Counseling services which are required by the beneficiary. Counseling of beneficiaries' families is covered only when such services are incidental to other covered medical social services being provided to the beneficiary, and when they are reasonable and necessary to treat the beneficiary's illness or injury. Visits by a medical social worker are not covered when the only reason for the visit is to counsel the beneficiary's family.

NOTE: Participating in the development of the plan of treatment, preparing clinical and progress notes, participating in discharge planning and inservice programs, and acting as a consultant to other agency personnel are appropriate administrative costs to the home health agency.

EXAMPLE 1: The physician has ordered a medical social worker assessment of a diabetic beneficiary who has recently become insulin dependent and is not yet stabilized. The skilled nurse, who is providing skilled observation and evaluation to try to restabilize the beneficiary notices during her visits that the supplies left in the home for the beneficiary's use appear to be frequently missing, and that the beneficiary is not compliant with the regimen although she refuses to discuss the matter. The assessment by a medical social worker would be reasonable and necessary to determine if there are underlying social or emotional problems which are impeding the beneficiary's treatment.

EXAMPLE 2: A physician ordered an assessment by a medical social worker for a multiple sclerosis patient who was unable to move anything but her head and who had an indwelling catheter. The beneficiary had experienced recurring urinary tract infections and multiple infected ulcers. The physician ordered medical social services after the home health agency indicated to him that the home was not well cared for, and that the beneficiary appeared to be neglected much of the time and that the relationship between the beneficiary and family was very poor. The physician and home health agency were concerned that social problems created by family caregivers were impeding the treatment of the recurring infections and ulcers. The assessment and follow-up for counseling both the beneficiary and the family by a medical social worker were reasonable and necessary.

EXAMPLE 3: A physician is aware that a beneficiary with arteriosclerosis and hypertension is not taking medications as ordered and is not adhering to dietary restrictions because he is unable to afford the medication and is unable to cook. The physician orders several visits by a medical social worker to assist in resolving these problems. The visits by the medical social worker to review the beneficiary's financial status, to discuss options and to make appropriate contacts with social services agencies or other community resources to arrange for medications and meals would be a reasonable and necessary medical social service.

EXAMPLE 4: A physician has ordered counseling by a medical social worker for a beneficiary with cirrhosis of the liver who has recently been discharged from a 28-day inpatient alcohol treatment program to her home which she shares with an alcoholic and neglectful adult child. The physician has ordered counseling several times per week to assist the beneficiary in remaining free of alcohol and in dealing with the adult child. The services of the medical social worker would be covered until the beneficiary's social situation ceased to impact on her recovery and/or treatment.

EXAMPLE 5: A physician has ordered medical social services for a beneficiary who is worried about her financial arrangements and payment for medical care. The services ordered are to arrange Medicaid if possible and resolve unpaid medical bills. There is no evidence that the beneficiary's concerns are adversely impacting recovery or treatment of her illness or injury. Medical social services cannot be covered.

EXAMPLE 6: A physician has ordered medical social services for a beneficiary of extremely limited income who has incurred large unpaid hospital and other medical bills following a significant illness. The beneficiary's recovery is adversely affected because the beneficiary is not maintaining a proper therapeutic diet, and cannot leave the home to acquire the medication necessary to treat his illness. The Medical social worker reviews the beneficiary's financial status, arranges meal service to resolve the dietary problem, arranges for home delivered medications, gathers the information necessary for application to Medicaid to acquire coverage for the medications the beneficiary needs, files the application on behalf of the beneficiary, and follows up repeatedly with the Medicaid State agency.

The medical social services which are necessary to review the financial status of the beneficiary, to arrange for meal service, to arrange for the medications to be delivered to the home, and to arrange for the Medicaid State agency to assist the beneficiary with the application for Medicaid would be covered. The services related to the assistance in filing the application for Medicaid, and the followup on the application are not covered since they must be provided by the State agency free of charge, and hence the beneficiary has no obligation to pay for such assistance.

3119.4 Medical Supplies (Except for Drugs and Biologicals) and the Use of Durable Medical Equipment.—

A. Medical Supplies.--Medical supplies are items which, due to their therapeutic or diagnostic characteristics, are essential in enabling home health agency personnel to carry out effectively the care which the physician has ordered for the treatment or diagnosis of the patient's illness or injury. Certain items which, by their very nature, are designed only to serve a medical purpose are obviously considered to be medical supplies; e.g., catheters, needles, syringes, surgical dressings and materials used for dressings such as cotton gauze and adhesive bandages, and materials used for aseptic techniques. Other medical supplies include, but are not limited to, irrigating solutions, and intravenous fluids.

Other items which are often used by persons who are not ill or injured may be considered medical supplies but only where (1) the item is recognized as having the capacity to serve a therapeutic or diagnostic purpose in a specific situation, and (2) the item is required as a part of the actual physician- prescribed treatment of a patient's existing illness or injury. For example, items which generally serve a routine hygienic purpose, such as soaps and shampoos, and items which generally serve as skin conditioners, such as baby lotion, baby oil, skin softeners, powders, lotions, etc., would not be considered medical supplies unless the particular item is recognized as serving a specific therapeutic purpose in the physician's prescribed treatment of the patient's existing skin (scalp) disease or injury.

Limited amounts of medical supplies may be left in the home between visits where repeated applications are required and will be rendered by the patient or by family members. Such supplies as needles, syringes, and catheters which require administration by a nurse should not be left in the home between visits.

C. Drugs and Biologicals.-Drugs and biologicals are excluded from coverage as items or services administered by home health agencies, under both hospital insurance and medical insurance. They may, in certain cases, be covered under medical insurance, when administered by a physician as a part of his professional service, and are not capable of being self-administered.

D. Durable Medical Equipment.--Durable medical equipment which meets the requirements of §3113 may be covered under the home health benefit, with the beneficiary responsible for payment of a 20 percent coinsurance.

3119.5 Services of Interns and Residents.--Home health services include the medical services of interns and residents-in-training under an approved hospital teaching program (if the agency has an affiliation with or is under common control of a hospital providing such medical services). "Approved" means approved by the Council on Medical Education of the American Medical Association, or in the case of an osteopathic hospital, the Committee on Hospitals of the Bureau of Professional Education of the American Osteopathic Association and, in the case of an intern or resident-in-training in the field of dentistry, approved by the Council on Dental Education of the American Dental Association. Reimbursement is provided under Part B for other services hospital interns and residents furnish to beneficiaries receiving home health services.

The services of interns and residents-in-training in the field of podiatry under a teaching program approved by the Council on Podiatry Education of the American Podiatry Association are covered under Part A on the same basis as the services of other interns and residents-in-training in approved teaching programs.

3119.6 Outpatient Services.--Outpatient services include any of the items or services described above which are provided under arrangements on an outpatient basis at a hospital, skilled nursing facility, rehabilitation center, or outpatient department affiliated with a medical school, and (1) which require equipment which cannot readily be made available at the patient's place of residence, or (2) which are furnished while he is at the facility to receive the services described in (1). The hospital, skilled nursing facility, or outpatient department affiliated with a medical school must all be qualified providers of services. However, there are special provisions for the use of the facilities of rehabilitation centers. The cost of transporting an individual to a facility cannot be reimbursed as home health services.

3119.7 Part-time or Intermittent Home Health Aide and Skilled Nursing Services.--Where a beneficiary qualifies for coverage of home health services, Medicare covers either part time or intermittent home health aide services and skilled nursing services.

A. Definition of "Part-time".--"Part-time" means any number of days per week:

- Up to and including 28 hours per week of skilled nursing and home health aide services combined for less than 8 hours per day; or

- Up to 35 hours per week of skilled nursing and home health aide services combined for less than 8 hours per day subject to review by fiscal intermediaries on a case by case basis, based upon documentation justifying the need for and reasonableness of such additional care.

B. Definition of "Intermittent".-- "Intermittent" means:

- Up to and including 28 hours per week of skilled nursing and home health aide services combined provided on a less than daily basis;

- Up to 35 hours per week of skilled nursing and home health aide services combined which are provided on a less than daily basis, subject to review by fiscal intermediaries on a case by case basis, based upon documentation justifying the need for and reasonableness of such additional care; or

- Up to and including full-time (i.e., 8 hours per day) skilled nursing and home health aide services combined which are provided and needed 7 days per week for temporary, but not indefinite, periods of time of up to 21 days with allowances for extensions in exceptional circumstances where the need for care in excess of 21 days is finite and predictable.

C. Impact on Care Provided in Excess of "Intermittent" or "Part-time" care.--Home health aide and/or skilled nursing care in excess of the amounts of care which meet these definitions of part time or intermittent may be provided to a home care beneficiary or purchased by other payers without bearing on whether the home health aide and skilled nursing care meets the Medicare definitions of part-time or intermittent.

EXAMPLE: A beneficiary needs skilled nursing care monthly for a catheter change and the home health agency also renders needed daily home health aide services 24 hours per day which will be needed for a long and indefinite period of time. The HHA bills Medicare for the skilled nursing and home health aide services which were provided before the 35th hour of service each week and bills the beneficiary (or another payer) for the remainder of the care. If the intermediary determines that the 35 hours of care are reasonable and necessary, Medicare would therefore cover the 35 hours of skilled nursing and home health aide visits.

D. Application of This Policy Revision.--A beneficiary must meet the longstanding and unchanged qualifying criteria for Medicare coverage of home health services, before this policy revision becomes applicable to skilled nursing services and/or home health aide services. The definition of "intermittent" with respect to the need for skilled nursing care where the beneficiary qualifies for coverage based on the need for "skilled nursing care on an intermittent basis" remains unchanged. Specifically:

o This policy revision always applies to home health aide services when the beneficiary qualifies for coverage;

o This policy revision applies to skilled nursing care only when the beneficiary needs physical therapy or speech therapy or continued occupational therapy, and also needs skilled nursing care; and

o If the beneficiary needs skilled nursing care but does not need physical therapy or speech therapy or occupational therapy, the beneficiary must still meet the longstanding and unchanged definition of "intermittent" skilled nursing care in order to qualify for coverage of any home health services.

(next page is 3-54.1)

Special Conditions for Coverage for Home Health Services

3122. SPECIAL CONDITIONS FOR COVERAGE OF HOME HEALTH SERVICES UNDER SUPPLMENTARY MEDICAL INSURANCE

3122.1 Non-Eligibility Under Hospital Insurance.--For home health services to be covered under supplementary medical insurance, the patient may be currently enrolled in the medical insurance plan, and, where the home health services to be provided are covered under hospital insurance, not be eligible to receive such services under hospital insurance. Where a patient is eligible for home health services which are covered under both programs, the services are chargeable under hospital insurance. When the benefits payable under hospital insurance are exhausted, he may then utilize the benefits available under the supplementary medical insurance program. Effective July 1, 1981, the 100 visit limitation is eliminated and services continue to be covered under hospital insurance (Part A). A plan covering services under the medical insurance program must be established by the physician and must be reduced to writing before the agency bills for the services.

Prior inpatient care in a hospital or skilled nursing facility is not required for coverage of home health services under the supplementary medical insurance plan.

3122.2 Change to Medical Insurance Home Health Services on Change of Residence.--A patient who changes residence before exhausting his 100 home health visits under hospital insurance can receive further home health services only under the medical insurance program if there is no further eligibility for home health services under the hospital insurance plan. This might occur, for example, in the following situations:

A. The physician in the old locality terminates the posthospital home health plan, or

B. There is no physician in the new locality who agrees to accept both the patient and the plan, e.g., the new physician wants to establish an entirely new plan.

For coverage under medical insurance in these circumstances, the new physician must establish a new plan.

See section 3121.4 for conditions under which home health services under hospital insurance may continue in the new locality.

NOTE: Effective July 1, 1981, the 100 visit limitation is eliminated.

3123. DURATION OF HOME HEALTH SERVICES

3123.1 Duration of Home Health Services Under Hospital Insurance.--Under hospital insurance prior to July 1, 1981, the patient is entitled to up to 100 visits in the 1-year period after the most recent discharge from a qualifying inpatient stay and before a new spell of illness begins (§3121.1).

If before a series of home health visits is completed, a patient receives inpatient services which start a new spell of illness, the series of visits is terminated. Both the "prior inpatient stay" (§3121.1) and "timely establishment of plan" (§3121.2) requirements must be met in the new spell of illness to provide coverage for a new series of home health visits.

If, during the same spell of illness, the home health patient returns to a hospital or extended care facility for a stay which meets the prior-stay requirement, a new 1-year priod for his Part A visits is established dating from his latest discharge. The total number of visits available before the next spell of illness begins remains unchanged.

In rare cases a home health patient may return to a hospital for a stay which satisfies the prior-stay requirement but does not begin a new spell of illness, i.e., a 3-day noncovered stay in a non-participating hospital which meets all the conditions of participation except for the utilization review and health safety requirements (§3010). In this situation a new 1-year period begins with the discharge and the number of visits remains unchanged.

The end of the year for hospital insurance purposes is determined as follows:

Count 365 days (366 when February 29 is included) beginning with the latter of the following:

a. The date of discharge after June 30, 1966, from a 3-day stay in any hospital, or

b. The date of discharge after December 31, 1966, from a skilled nursing facility stay for which posthospital extended care benefits were payable on the patient's behalf.

Effective July 1, 1981, the 100 visit limitation under Part A and Part B, and the prior inpatient stay and the spell of illness requirements under Part A are eliminated.

3123.2 Duration of Home Health Services Under Supplementary Medical Insurance.—Under supplementary medical insurance a patient is entitled to 100 visits in a calendar year. Entitlement to visits under supplementary medical insurance is related to the calendar year and is unaffected by the patient's spell(s) of illness. Effective July 1, 1981, the 100 visit limitation is eliminated. If entitled to services under both hospital insurance and supplementary medical insurance, the visit must first be charged against the hospital insurance.

The end of the year under medical insurance is December 31.

3123.3 Examples of Duration of Services Under Hospital and Medical Insurance.—

EXAMPLE: 1. Jones is hospitalized on February 10 and discharged on March 15, 1967; he has no other hospital or skilled nursing facility stay in 1967, or 1968. He has 100 home health visits beginning the latter part of March and ending on February 20, 1968. All 100 visits are paid for under hospital insurance since the 1-year period runs from March 15, 1967, the date of the hospital discharge, to March 14, 1968. Although Jones' spell of illness ended on May 13, 1967, 60 days after the hospital discharge, home health eligibility was unaffected since a new spell of illness did not begin subsequently.

EXAMPLE: 2. Robinson was an inpatient in a hospital four times during the same spell of illness; i.e., there was no period of 60 consecutive days during which he was not hospitalized. He was discharged from the hospital, which meets the requirements to qualify subsequent home health services for payment under hospital insurance, on March 15, 1967, May 13, 1967, July 12, 1967, and September 9, 1967. Each hospital stay was for at least 3 consecutive days except the last one. He had home health visits beginning with May 23, 1967, based on a plan established after his hospital discharge of May 13. The 1-year period for home health services under hospital insurance began May 13, 1967, the date of his most recent discharge (in relation to the first home health visit in the spell of illness) from a hospital after a stay of 3 days; it can end no later than July 12, 1968, 1 year after the latest discharge from a hospital stay of at least 3 consecutive days. Thus, in some situations, the "1-year period" during which an individual may have up to 100 home health visits may in fact exceed a year overall.

EXAMPLE: 3. Smith is hospitalized on February 10 and discharged on March 15. He reenters the hospital on July 4. He had 30 some health visits between March 15 and July 4. Since he had been out of the hospital for more than 60 days after his discharge on March 15, a new spell of illness began on July 4, when he reentered the hsopital. Therefore, he is not entitled to any additional home health visits under hospital insurance based on his February-March hospital stay. However, an additional 100 home health visits under hospital insurance may begin based on his hospitalization beginning July 4, if he is confined for at least 3 days. If it is for less than 3 days, he will not qualify for home health visits under hospital insurance in the new spell of illness. However, if he is enrolled in the supplementary medical insurance program he is entitled to an additional 100 visits under Part B through December 31, subject to the deductible provisions.

EXAMPLE: 4. Brown is discharged from a hospital on February 15, 1967, after a 3-day stay. He begins receiving home health visits on February 18, 1967. He has until February 14, 1968, to use his 100 visits under hospital insurance. In July, however, he receives his 100th visit, exhausting the number of visits to which he is entitled under hospital insurance. Coverage of his home health visits may continue unbroken, if he is enrolled under supplementary medical insurance. In that event, he may receive an additional 100 visits under medical insurance through December. In January 1968, he becomes entitled to an additional 100 visits under supplementary medical insurance for the calendar year of 1968.

NOTE: The Omnibus Reconciliation Act of 1980 eliminates the prior inpatient stay requirement under Part A, the visit limitation under Part A and Part B and the Part B deductible. Therefore, the above examples pertain only to home health services furnished prior to July 1, 1981.

3124. COUNTING VISITS UNDER THE HOSPITAL AND MEDICAL PLANS.

The number of visits are counted in the same manner under both the hospital plan and medical plan.

3124.1 Visit Defined.--A visit is a personal contact in the place of residence of a patient made for the purpose of providing a covered service by a health worker on the staff of the home health agency or by others under contract or arrangement with the home health agency; or a visit by a patient on an outpatient basis to a hospital, skilled nursing care facility, or rehabilitation center, or outpatient department affiliated with a medical school when arrangements have been made by the home health agency for one or more of the covered services. (See §§ 3025ff.)

3124.2 Counting Visits.--If a visit is made simultaneously by two or more persons from the home health agency to provide a single service, for which one person supervises or instructs the other, it is counted as one visit. (See example 1.) If one person visits the patient's home more than once during a day to provide services, each visit is recorded as a separate visit (see example 2). If a visit is made by two or more persons from the home health agency for the purpose of providing separate and distinct types of services, each is recorded -- i.e., two or more visits (see example 3). If the patient is taken elsewhere for the service because the service could not be furnished in his residence, one visit is counted for each service he received (see example 4).

EXAMPLES:

1. If an occupational therapist and an occupational therapy assistant visit the patient together to provide therapy and the therapist is there to supervise the assistant, one visit is counted.

2. If a nurse visits the patient in the morning to dress a wound and later must return to replace a catheter, two visits are counted.

3. If the therapist visits the patient for treatment in the morning and the patient is later visited by the assistant for additional treatment, two visits are counted.

4. If an individual is taken to a hospital to receive outpatient therapy that could not be furnished in his own home (e.g., hydrotherapy) and, while at the hospital receives speech therapy and other services, two or more visits would be charged.

5. **Many home health agencies provide home health aide services on an hourly basis (ranging from 1 to 8 hours a day).** However, in order to allocate visits properly against a patient's maximum allowable visits, home health aide services are to be counted in terms of visits. Thus, regardless of the number of continuous hours a home health aide spends in a patient's home on any given day, one "visit" is counted for each such day. If, in a rare situation, a home health aide visits a patient for an hour or two in the morning, and again for an hour or two in the afternoon, two visits are counted.

Under both hospital insurance and supplementary medical insurance, visits count toward the 100-visit maximums only if payment was made for the visits by the program or, if payment would be made if requested by the patient, and the certification requirements (§§3326ff.) were met. Visits by personnel other than those providing covered services are not counted. Salaries of personnel employed by the agency to assist in overall operation of the program (e.g., a nutritionist) may be taken into consideration in computing overhead costs of the agency when claiming reimbursement.

An important item to remember about visits under supplementary medical insurance: Visits provided a patient during the period in which he is incurring sufficient expenses to satisfy the deductible will count toward the 100-visit maximum, even though reimbursement is not possible because the deductible has not been satisfied.

NOTE: The above discussion which relates to the visit limitation and the deductible requirement for home health benefits pertains to services furnished prior to July 1, 1981.

3124.3 Evaluation Visits.--Home health agencies are required by regulations to have written policies concerning the acceptance of patients by the agency. These include consideration of the physical facilities available in the patient's place of residence, the homebound status, and the attitudes of family members for the purpose of evaluating the feasibility of meeting the patient's medical needs in the home health setting. When personnel of the agency make such an initial evaluation visit, the cost of the visit is considered an administrative cost of the agency and is not chargeable as a visit since at this point the patient has not been accepted for care. If, however, during the course of this initial evaluation visit, the patient is determined suitable for home health care by the agency, and is also furnished the first skilled service as ordered under the physician's plan of treatment, the visit would become the first billable visit.

Cover an observation and evaluation (or reevaluation) visit made by a nurse (see § 3117.4 for a further discussion of skilled nursing observation and evaluation visits) or other appropriate personnel, ordered by the physician for the purpose of evaluating the patient's condition and his or her continuing need for skilled services, as a skilled visit.

A supervisory visit made by a nurse or other appropriate personnel (as required by the conditions of participation) to evaluate the specific personal care needs of the patient or to review the manner in which the personal care needs of the patient are being met by the aide is an administrative function, not a skilled visit.

3125. SPECIFIC EXCLUSIONS FROM COVERAGE AS HOME HEALTH SERVICES.

In addition to the general exclusions from coverage under health insurance listed in §§ 3150ff., the following are also excluded from coverage as home health services:

- Services or items which would not be paid for if provided to an inpatient of a hospital, such as a private-duty nursing service, or items of comfort which are not necessary for treatment, e.g., television;
- Meals-on-Wheels or similar food arrangements;
- Domestic or housekeeping services which are unrelated to patient care, and
- Transportation services, e.g., from place of residence to a facility to receive home health services on an outpatient basis.

3127. MEDICAL AND OTHER HEALTH SERVICES FURNISHED BY HOME HEALTH AGENCIES.

Reimbursement may be made to a home health agency which furnishes either directly or under arrangements with others the following "medical and other health services" to beneficiaries with Part B coverage.

- Surgical dressings, and splints, casts, and other devices used for reduction of fractures and dislocations. (See § 3110.3.)
- Prosthetic devices. (See § 3110.4.) Total parenteral nutrition (TPN) systems and enteral nutrition (EN) systems are covered as prosthetic devices when the criteria in §§ 65-10 - 65-10.3 of the Coverage Issues Manual are met. When these criteria are met, the equipment and supplies which (together with nutrients) comprise the prosthetic device are not considered durable medical equipment and medical supplies, and therefore are not covered as home health services. An HHA that supplies TPN or EN systems, that meet the criteria for coverage as a prosthetic device, must bill one of the two carriers designated to process claims for TPN and EN systems. (See § 3661.)

o Leg, arm, back, and neck braces, trusses, and artificial legs, arms, and eyes. (See § 3110.5.)

o Outpatient physical therapy, outpatient occupational therapy, and outpatient speech pathology services. (See §§ 3147ff.)

o Rental and purchase of durable medical equipment. (See §§ 3113ff. and 3119.3.) If a beneficiary meets all of the criteria for coverage of home health services and the HHA is providing home health care under the Hospital Insurance Program (Part A), any DME provided by the HHA to that patient must also be provided under Part A. Where the patient meets the criteria for coverage of home health services and the HHA is providing the home health care under the Supplementary Medical Insurance Program (Part B) because the patient is not eligible for Part A, the DME provided by the HHA may, at the beneficiary's option, be furnished under the Part B home health benefit or as a medical and other health service. Irrespective of how the DME is furnished, the beneficiary is responsible for a 20 percent coinsurance.

o Ambulance service. (See § 3114.)

NOTE: Sections 3213 and 3214 discuss the deductible and coinsurance under the supplementary medical insurance program.

3128. PHYSICIAN CERTIFICATION FOR MEDICAL AND OTHER HEALTH SERVICES FURNISHED BY HOME HEALTH AGENCY.

A physician must certify that the medical and other health services covered by medical insurance which were provided by (or under arrangements made by) the HHA were medically required. (See § 3350 for the special physician certification requirements applicable to outpatient physical therapy, occupational therapy and speech pathology services.) This certification needs to be made only once where the patient may require over a period of time the furnishing of the same item or service related to one diagnosis. There is no requirement that the certification be entered on any specific form or handled in any specific way as long as the approach adopted by the HHA permits you to determine that the certification requirement is, in fact, met. A written physician's order designating the services required would also be an acceptable certification.

(§ 3130 begins on page 3-55.5)

Coverage of Extended Care Services Under Hospital Insurance

3130. REQUIREMENTS—GENERAL

Posthospital extended care services furnished to inpatients of an SNF or a swing bed hospital (see §3130.1) are covered under the hospital insurance program. Patients having hospital insurance coverage are entitled to have payment made on their behalf for the reasonable cost of covered extended care services furnished by an SNF or swing bed facility or by others under arrangements with the SNF or swing bed hospital.

3130.1 HOSPITAL PROVIDERS OF EXTENDED CARE SERVICES

In order to address the shortage of rural SNF beds for Medicare patients, effective July 20, 1982, rural hospitals with fewer than 50 beds may be reimbursed under Medicare for furnishing post hospital extended care services to Medicare beneficiaries. Such a hospital, known as a swing bed facility, can "swing" its beds between the hospital and SNF levels of care, on an as needed basis, if it has obtained a swing bed approval from the Department of Health and Human Services. In order to obtain such an approval, the hospital must:

- o as noted above, be located in a rural area (i.e., located outside of an "urbanized area," as defined by the Census Bureau, and based on the most recent census) and have fewer than 50 beds (excluding beds for newborns and intensive care-type units);

- o have a Medicare provider agreement, as a hospital;

- o be granted any necessary certificate of need for the provision of extended care services, as required by the State;

- o be substantially in compliance with the SNF conditions of participation for patient rights, 42 CFR 405.1121(k)(2), (3), (4), (7), (8), (10), (11), (13) and (14); specialized rehabilitative services, 42 CFR 405.1126(a), (b) and (c); dental services, 42 CFR 405.1129; social services, 42 CFR 405.1130; patients activities, 42 CFR 405.1131; and discharge planning, 42 CFR 405.1137(h); (most other SNF conditions would be largely met by virtue of the facility's compliance with comparable hospital conditions);

- o not have in effect a 24-hour nursing waiver granted under 42 CFR 405.1910(c); and

- o not have had a swing bed approval terminated within the 2 years previous to application for swing bed participation.

However, the Department may grant a swing bed approval, on a demonstration basis, with hospitals meeting all of the statutory requirements except bed size and geographic location.

When a hospital has a swing bed approval from the Department, it may provide and be reimbursed by Medicare Part A for providing extended care or SNF-type services. When a swing bed hospital provides extended care services, Medicare reimbursement for those services will be at what is generally a SNF rate for comparable services. This rate is set under explicit statutory conditions and is described at 42 CFR 405.434 and 405.452.

When a hospital is providing extended care services, it will be treated as a SNF for purposes of applying coverage rules. This means that those services are subject to the same Part A coverage, deductible, coinsurance and physician certification/recertification provisions that are applicable to SNF extended care services (i.e., the coverage requirements in §§3130 through 3136 and the application of waiver of liability to some of those requirements as discussed in §3431.1; the coinsurance requirements in §§3203 and 3211, the Part A deductible provision in §3235 and the certification/recertification provisions in §§3333 through 3338).

Swing bed approvals do not cover services billed for under Part B. This means that pursuant to such an approval a hospital may be reimbursed under Part A for either SNF or hospital level services. However, if a service is to be reimbursed under Part B (due to Part A exhaustion, etc. (see §3110)), the hospital may be reimbursed for only hospital services covered under Part B.

Under §4005(b)(2) of the Omnibus Budget Reconciliation Act of 1987, effective for swing-bed agreements entered into after March 31, 1988, hospitals with more than 49 beds (but less than 100 beds) are subject to the following:

- If there is an available SNF bed in the geographic region, the extended care patient must be transferred within 5 days of the availability date (excluding weekends and holidays) unless the patient's physician certifies, within that 5-day period, that transfer of that patient to that facility is not medically appropriate on the availability date. In order to do this, hospitals need to identify all SNFs in their geographic region and enter into agreements with them for the transfer of extended care patients under which SNFs are to notify the hospitals of the availability of beds and the dates these beds will be available for extended care patients; and

- The 5 week day transfer requirement and the 15 percent payment limitation do not apply for Medicaid reimbursement purposes.

Hospitals having fewer than 50 beds and rural hospitals which entered into agreements before March 31, 1988 (i.e., those which were licensed for more than 49 beds but were operating as a 50 or less bed facility) are not subject to the 5 week day transfer requirement or the payment limitation for extended care days. (See §2230.7 of the Provider Reimbursement Manual for the explanation of the payment limitation.)

"Geographic region" is an area which includes the SNFs with which a hospital has traditionally arranged transfers and all other SNFs within the same proximity to the hospital. In the case of a hospital without existing transfer practices upon which to base a determination, the geographic region is an area which includes all the SNFs within 50 miles of the hospital unless the hospital can demonstrate that the SNFs are inaccessible to its patients. In the event of a dispute as to whether an SNF is within this region or the SNF is inaccessible to hospital patients, the HCFA regional office shall make a determination.

3131. PRIOR HOSPITALIZATION AND TRANSFER REQUIREMENTS

In order to qualify for posthospital extended care services, the individual must have been an inpatient of a hospital for a medically necessary stay of at least 3 consecutive calendar days. In addition, effective December 5, 1980, the individual must have been transferred to a participating SNF within 30 days after discharge from the hospital, unless the exception in §3131.3B applies.

3131.1 Three-Day Prior Hospitalization.--The hospital discharge must have occurred on or after the first day of the month in which the individual attained age 65 or, effective July 1, 1973, became entitled to health insurance benefits under the disability or chronic renal disease provisions of the law. The 3 consecutive calendar days requirement can be met by stays totalling 3 consecutive days in one or more hospitals. In determining whether the requirement has been met, the day of admission, but not the day of discharge, is counted as a hospital inpatient day.

To be covered, the extended care services must have been for the treatment of a condition for which the beneficiary was receiving inpatient hospital services or a condition which arose while in the SNF for treatment of a condition for which he was previously hospitalized. In addition, the qualifying hospital stay must have been medically necessary. Medical necessity will generally be presumed to exist. When the facts which come to you in your normal claims review process indicate that the hospitalization may not have been medically necessary, fully develop the case, checking with the attending physician and the hospital, as appropriate. Rule the stay unnecessary only when hospitalization for 3 days represents a substantial departure from normal medical practice.

The 3-day hospital stay need not be in a hospital with which the SNF has a transfer agreement. However, the hospital must be:

- a participating general or psychiatric hospital; or
- an institution which meets at least the conditions of participation for hospitals described in §3010E and G, i.e., an emergency services hospital.

A nonparticipating psychiatric hospital need not meet the special requirements applicable to psychiatric hospitals (§§3015 and 3016). Stays in Christian Science Sanatoriums (§3023) are excluded for the purpose of satisfying the 3-day period of hospitalization. (See §3520.3 for prohibition on use of waiver of liability days in meeting the 3-day requirement.)

NOTE: While a 3-day stay in a psychiatric hospital satisfies the prior hospital stay requirement, institutions which primarily provide psychiatric treatment cannot participate in the program as SNFs. Therefore, a patient with only a psychiatric condition who is transferred from a psychiatric hospital to a participating SNF is likely to receive only noncovered care. In the SNF, the term "noncovered care" refers to any level of care which is less intensive and skilled than the SNF level of care which is covered under the program. (See §§3132ff.)

3131.2 Three-day Prior Hospitalization—Foreign Hospital.—A stay of 3 or more days in a hospital outside the United States may satisfy the prior inpatient stay requirement for posthospital extended care services within the United States if the foreign hospital is qualified as an "emergency hospital." If a stay of 3 or more days in a hospital outside the United States is being considered to satisfy the prior inpatient stay requirement, the SNF will submit documentation to you. This evidence will be either:

A. An itemized bill or hospital form prepared by the foreign hospital showing dates of admission and discharge and a description of the illness or injury treated (obtained from the beneficiary); or

B. A medical report prepared by the foreign hospital and sent to the patient's U.S. physician showing dates of admission and discharge and a description of the illness or injury treated (obtained from the physician).

If neither type of evidence can be obtained, the SNF will secure whatever information is available. Such evidence or information will be attached to the admission notice sent to you. When you receive a notice of admission involving a prior inpatient stay in a foreign hospital, contact the regional office for a determination as to whether the prior stay requirement is met.

If the regional office states the hospital does not qualify as an "emergency hospital," advise the provider that the prior inpatient stay requirement is not met.

If the regional office states the hospital qualifies as an "emergency hospital" and documentation is submitted as outlined in either A or B which otherwise meets the prior-stay requirement, the intermediary will then process the admission notice.

3131.3 Thirty-Day Transfer.—

A. General.—Posthospital extended care services represent an extension of care for a condition for which the individual received inpatient hospital services. Extended care services are "posthospital" if initiated within 30 days after discharge from a hospital stay which included at least 3 consecutive days of medically necessary inpatient hospital services. In certain circumstances the 30-day period may be extended, as described in B below.) For SNF admissions occurring after October 29, 1972, but before December 5, 1980, see §D below.

In determining the 30-day transfer period, the day of discharge from the hospital is not counted in the 30 days. For example, a patient discharged from a hospital on August 1 and admitted to an SNF on August 31 was admitted within 30 days. The 30-day period begins on the day following actual discharge from the hospital and continues until the individual is admitted to a participating SNF, and requires and receives a covered level of care. Thus, an individual who is admitted to an SNF within 30 days after discharge from a hospital, but does not require a covered level of care until more than 30 days after such discharge, does not meet the 30-day requirement. (See B below for an exception under which such services may be covered.)

If an individual whose SNF stay was covered upon admission is thereafter determined not to require a covered level of care for a period of more than 30 days, payment could not be resumed for any extended care services he may subsequently require even though he has remained in the facility. Such services could not be deemed to be "posthospital" extended care services. (For exception, see B below.)

B. Medical Appropriateness Exception.--An elapsed period of more than 30 days is permitted for SNF admissions where the patient's condition makes it medically inappropriate to begin an active course of treatment in an SNF immediately after hospital discharge, and it is medically predictable at the time of the hospital discharge that he will require covered care within a predeterminable time period. The fact that a patient enters an SNF immediately upon discharge from a hospital, for either covered or noncovered care, does not necessarily negate coverage at a later date, assuming the subsequent covered care was medically predictable.

1. Medical Needs are Predictable.--In determining the type of case which this exception is designed to handle, it is necessary to recognize the intent of the extended care benefit itself. The extended care benefit covers relatively short-term care when a patient requires skilled nursing or skilled rehabilitation services as a continuation of treatment begun in the hospital. The requirement that covered extended care services be provided in an SNF within 30 days after hospital discharge is one of the means of assuring that the SNF care is related to the prior hospital care.

This exception to the 30-day requirement recognizes that for certain conditions, SNF care can serve as a necessary and proper continuation of treatment initiated during the hospital stay, although it would be inappropriate from a medical standpoint to begin such treatment within 30 days after hospital discharge. Since the exception is intended to apply only where the SNF care constitutes a continuation of care provided in the hospital, it will be applicable only where, under accepted medical practice, the established pattern of treatment for a particular condition indicates that a covered level of SNF care will be required within a predeterminable time frame. Accordingly, to qualify for this exception it must be medically predictable at the time of hospital discharge that a covered level of SNF care will be required within a predictable period of time for the treatment of a condition for which hospital care was received and the patient must begin receiving such care within that time frame.

An example of the type of care for which this provision was designed is care for a hip fracture case. Under the established pattern of treatment of hip fractures it is known that skilled therapy services will be required subsequent to hospital care, and that they can normally begin within 4-6 weeks after hospital discharge, when weight bearing can be tolerated. Under the exception to the 30-day rule, the admission of a hip fracture patient to an SNF within 4-6 weeks after his hospital discharge for skilled care, which as a practical matter can only be provided on an inpatient basis by an SNF, would be considered a timely admission.

2. Medical Needs are Not Predictable.—When a patient's medical needs and the course of treatment are not predictable at the time of hospital discharge because the exact pattern of care which he will require and the time frame in which it will be required is dependent on the developing nature of his condition, his admission to an SNF more than 30 days after discharge from the hospital could not be justified under this exception to the 30-day rule. For example, in some situations the prognosis for a patient diagnosed as having cancer is such that it can reasonably be expected that he will require additional care at some time in the future. However, at the time of discharge from the hospital it is difficult to predict the actual services which will be required or the time frame in which the care will be needed. Similarly, it is not known in what setting any future necessary services will be required; i.e., whether he will require the life-supporting services found only in the hospital setting, the type of care covered in an SNF, the intermittent type of care which can be provided by a home health agency, or custodial care which may be provided either in a nursing home or his place of residence. In some instances such patients may require care immediately and continuously; others may not require any skilled care for much longer periods, perhaps measured in years. Therefore, since in such cases it is not medically predictable at the time of the hospital discharge that the individual will require covered SNF care within a predeterminable time frame, such cases do not fall within the 30-day exception.

3. SNF Stay Prior to Beginning of Deferred Covered Treatment.-In some cases where it is medically predictable that a patient will require a covered level of SNF care within a predeterminable time frame, the individual will also have a need for a covered level of SNF care within 30 days of hospital discharge. In such situations,

this need for covered SNF care does not negate further coverage at a future date even if there is a noncovered interval of more than 30 days between the two stays, provided all other requirements are met. (See example No. 1 below.) However, this rule applies only where part of the care required involves deferred care which was medically predictable at the time of hospital discharge. If the deferred care is not medically predictable at the time of hospital discharge, then coverage may not be extended to include SNF care following an interval of more than 30 days of noncovered care (see example No. 2). Where it is medically predictable that a patient will require a covered level of SNF care within a specific time frame, the fact that an individual enters an SNF immediately upon discharge from the hospital for noncovered care does not negate coverage at a later date, assuming the requirements of the law are met (see example No. 3).

EXAMPLE NO. 1: A patient who has had an open reduction of a fracture of the neck of the femur and has a history of diabetes mellitus and angina pectoris is discharged from the hospital on January 30, 1981 and admitted immediately to an SNF. He requires among other services careful skin care, appropriate oral medications, a diabetic diet, a therapeutic exercise program to preserve muscle tone and body condition, and observation to detect signs of deterioration in his condition or complications resulting from his restricted mobility, which necessitates skilled management of his care to ensure his safety and recovery. It is also medically predictable that when he reaches weight bearing, skilled rehabilitative services will be required. After he is in the SNF for 2 days, he becomes unhappy and at his request is released to his home in the care of a full time private duty nurse. Five weeks later when he reaches weight bearing he is readmitted to the SNF for the needed rehabilitative care. The patient would be eligible for coverage under the program for the care furnished him during both of these stays.

EXAMPLE NO. 2: An individual is admitted to an SNF for daily skilled rehabilitative care which as a practical matter can only be provided on an inpatient basis in an SNF. After 3 weeks the therapy is discontinued because the patient's condition has stabilized and daily skilled services are no longer required. Six weeks later, however, as a result of an unexpected change in the patient's condition, daily skilled services are again required. Since the second period of treatment did not constitute care which was predictable at the time of hospital discharge and could not thus be considered as care which was deferred until medically appropriate, it would not represent an exception to the 30-day exception rule. Therefore, since more than 30 days of noncovered care had elapsed between the last period of covered care and the reinstitution of skilled services, reimbursement could not be made under the extended care benefit for the latter services.

EXAMPLE NO. 3: A patient whose right leg was amputated was discharged from the hospital and admitted directly to an SNF on January 30, 1981. Although upon admission to the SNF the patient required help with meeting his activities of daily living, he did not require daily skilled care. Subsequently, however, after the stump had healed, daily skilled rehabilitative services designed to enable him to use a prosthesis were required. Since at the time of the patient's discharge from the hospital it was medically predictable that at a predeterminable time interval covered SNF care would be required, and since such care was initiated when appropriate, the patient would be entitled to extended care benefits for the period during which such care was provided.

4. Effect of Delay in Initiation of Deferred Care.—As indicated, where the required care commences within the anticipated time frame the transfer requirement would be considered met even though more than 30 days have elapsed. However, situations may occur where complications necessitate delayed initiation of the required care and treatment beyond the usual anticipated time frame (e.g., skilled rehabilitative services which will enable an amputee patient to use a prosthetic device must be deferred due to an infection in the stump). In such situations, the 30-day transfer requirement may still be met even though care is not started within the usual anticipated time frame, if the care is begun as soon as medically possible and the care at that time is still reasonable and necessary for the treatment of a condition for which the patient received inpatient hospital care.

5. Effect on Spell of Illness.—In the infrequent situation where the patient has been discharged from the hospital to his home more than 60 days before he is ready to begin a course of deferred care in an SNF, a new spell of illness begins with the day the beneficiary enters the SNF thereby regenerating another 100 days of extended care benefits. Another qualifying hospital stay would not be required, providing the care furnished is clearly related to the hospital stay in the previous spell of illness and represents care for which the need was predicated at the time of discharge from such hospital stay.

C. Readmission to an SNF.—If an individual who is receiving covered posthospital extended care leaves an SNF and is readmitted to the same or any other participating SNF for further covered care within 30 days, the 30-day transfer requirement is considered to be met. Thus, the period of extended care services may be interrupted briefly and then resumed, if necessary, without hospitalization preceding the readmission to an SNF. (See B.3 above for situations where a period of more than 30 days between SNF discharge and readmission, or more than 30 days of noncovered care in an SNF, is followed by later covered care.)

D. Transfer Rules for SNF Admissions Subsequent to October 29, 1972 and Prior t December 5, 1980.—

1. General.—Under the transfer rules in effect during this time frame an individual must have been admitted to a participating SNF, and have required and received a covered level of care within 14 days after discharge from a qualifying hospital stay, unless one of the exceptions in D.2 or D.3 below applies.

2. Nonavailability of Appropriate Bed Space in a Participating SNF.—Intervals of up to 28 days were permitted where transfer to a participating SNF (for this purpose a "participating SNF" includes only those facilities participating under title XVIII) was deferred under the following conditions.

a. The individual required within the 14-day period after the hospital discharge, and continued to require through admission to the SNF, a covered level of SNF care for a condition for which he received inpatient hospital care, and he met all other extended care requirements, and either b or c below applied;

b. There was no bed available in the facilities ordinarily utilized in the geographic area in which the beneficiary resided. (A private room is considered an "available bed" for this purpose, and is subject to reimbursement per sections 3101.1ff.) The geographic area in which a beneficiary resides should be defined in such a way that a patient would not be taken away from his family and transported over great distances;

c. There was an available bed in an SNF but it did not constitute appropriate bed space for the patient. In determining whether appropriate bed space was available, consideration should be given only to whether the facility in which a vacant bed was available had the capacity to meet the individual's medical needs, i.e., was capable of providing the required skilled services. Such nonmedical considerations as the individual's or his physician's preference for a particular SNF should not be considered.

Absent evidence to the contrary, the intermediary may accept the statement of the provider reflected on the billing form (see section 3620, Item 12, Qualifying and Other Prior Stay Information—SNF Bills) that delayed admission to the SNF was due to the nonavailability of an SNF bed or to the inability of an available SNF to provide the necessary services. However, where the intermediary has information available to it which raises a question as to the validity of such statements, e.g., the information available to the intermediary indicates that local SNFs were operating at less than full census, the intermediary should undertake the development necessary to establish whether or not the delayed admission was in fact due to the nonavailability of an appropriate bed.

3. Medical Appropriateness.—An elapsed period of more than 14 days was permitted for SNF admissions where the patient's condition made it medically inappropriate to begin an active course of treatment in an SNF within 14 days after hospital discharge, and it was medically predictable at the time of the hospital discharge that he would require covered care within a predeterminable time period. The fact that a patient entered an SNF immediately upon discharge from a hospital, for either covered or noncovered care, does not necessarily negate coverage at a later date, assuming the subsequent covered care was medically predictable.

4. Readmission to an SNF.--If an individual who was receiving covered posthospital extended care left an SNF and was readmitted to the same or any other participating SNF for further covered care within 14 days, the 14-day transfer requirement was considered to be met. Thus, the period of extended care services could be interrupted briefly and then resumed, if necessary, without hospitalization preceding the readmission to an SNF. (See 3 above for situations where a period of more than 14 days between SNF discharge and readmission, or more than 14 days of noncovered care in an SNF, was followed by later covered care.)

3132. SKILLED NURSING FACILITY LEVEL OF CARE - GENERAL

Care in a SNF is covered if all of the following three factors are met:

- o The patient requires skilled nursing services or skilled rehabilitation services, i.e., services that must be performed by or under the supervision of professional or technical personnel (see §§3132.1 - 3132.3);

- o The patient requires these skilled services on a daily basis (see §3132.5); and

- o As a practical matter, considering economy and efficiency, the daily skilled services can be provided only on an inpatient basis in an SNF. (See §3132.6.)

If any one of these three factors is not met, a stay in an SNF, even though it might include the delivery of some skilled services, is not covered. For example, payment for an SNF level of care could not be made if a patient needs an intermittent rather than daily skilled service.

In reviewing SNF services to determine whether the level of care requirements are met, first consider whether a patient needs skilled care. If a need for a skilled service does not exist, then the "daily" and "practical matter" requirements do not have to be addressed.

In addition, the services must be furnished pursuant to a physician's orders and be reasonable and necessary for the treatment of a patient's illness or injury, i.e., be consistent with the nature and severity of the individual's illness or injury, his particular medical needs, and accepted standards of medical practice. The services must also be reasonable in terms of duration and quantity.

EXAMPLE: Even though the irrigation of a catheter may be a skilled nursing service, daily irrigations may not be "reasonable and necessary" for the treatment of a patient's illness or injury.

3132.1 Skilled Nursing and Skilled Rehabilitation Services

A. Skilled Services--Defined.—Skilled nursing and/or skilled rehabilitation services are those services, furnished pursuant to physician orders, that:

- o Require the skills of qualified technical or professional health personnel such as registered nurses, licensed practical (vocational) nurses, physical therapists, occupational therapists, and speech pathologists or audiologists; and

- o Must be provided directly by or under the general supervision of these skilled nursing or skilled rehabilitation personnel to assure the safety of the patient and to achieve the medically desired result.

NOTE: "General supervision" requires initial direction and periodic inspection of the actual activity. However, the supervisor need not always be physically present or on the premises when the assistant is performing services.

Assume that skilled services provided by a participating SNF are furnished by or under the general supervision of the appropriate skilled nursing or skilled rehabilitation personnel.

B. Principles for Determining Whether a Service is Skilled

o If the inherent complexity of a service prescribed for a patient is such that it can be performed safely and/or effectively only by or under the general supervision of skilled nursing or skilled rehabilitation personnel, the service is a skilled service; e.g., the administration of intravenous feedings and intramuscular injections; the insertion of catheters; and ultrasound, shortwave, and microwave therapy treatments.

o Consider the nature of the service and the skills required for safe and effective delivery of that service in deciding whether a service is a skilled service. While a patient's particular medical condition is a valid factor in deciding if skilled services are needed, a patient's diagnosis or prognosis should never be the sole factor in deciding that a service is not skilled.

EXAMPLE: Even where a patient's full or partial recovery is not possible, a skilled service still could be needed to prevent deterioration or to maintain current capabilities. A cancer patient, for instance, whose prognosis is terminal may require skilled services at various stages of his illness in connection with periodic "tapping" to relieve fluid accumulation and nursing assessment and intervention to alleviate pain or prevent deterioration. The fact that there is no potential for such a patient's recovery does not alter the character of the services and skills required for their performance.

When rehabilitation services are the primary services, the key issue is whether the skills of a therapist are needed. The deciding factor is not the patient's potential for recovery, but whether the services needed require the skills of a therapist or whether they can be carried out by nonskilled personnel. (See §3132.3.A.)

o A service that is ordinarily considered nonskilled could be considered a skilled service in cases in which, because of special medical complications, skilled nursing or skilled rehabilitation personnel are required to perform or supervise it or to observe the patient. In these cases, the complications and special services involved must be documented by physicians' orders and nursing or therapy notes.

EXAMPLE: The existence of a plaster cast on an extremity generally does not indicate a need for skilled care. However, a patient with a preexisting acute skin problem, preexisting peripheral vascular disease, or a need for special traction of the injured extremity might need skilled nursing or skilled rehabilitation personnel to observe for complications or to adjust traction.

EXAMPLE: Whirlpool baths do not ordinarily require the skills of a qualified physical therapist. However, the skills, knowledge, and judgment of a qualified physical therapist might be required where the patient's condition is complicated by circulatory deficiency, areas of desensitization, or open wounds.

o In determining whether services rendered in an SNF constitute covered care, it is necessary to determine whether individual services are skilled, and whether, in light of the patient's total condition, skilled management of the services provided is needed even though many or all of the specific services were unskilled.

EXAMPLE: An 81-year-old woman who is aphasic and confused, suffers from hemiplegia, congestive heart failure, and atrial fibrillation, has suffered a cerebrovascular accident, is incontinent and has a Grade 1 decubitus ulcer, and is unable to communicate and make her needs known. Even though no specific service provided is skilled, the patient's condition requires daily skilled nursing involvement to manage a plan for the total care needed, to observe the patient's progress, and to evaluate the need for changes in the treatment plan.

o The importance of a particular service to an individual patient, or the frequency with which it must be performed, does not, by itself, make it a skilled service.

EXAMPLE: A primary need of a nonambulatory patient may be frequent changes of position in order to avoid development of decubitus ulcers. However, since such changing of position does not ordinarily require skilled nursing or skilled rehabilitation personnel, it would not constitute a skilled service, even though such services are obviously necessary.

The possibility of adverse effects from the improper performance of an otherwise unskilled service does not make it a skilled service unless there is documentation to support the need for skilled nursing or skilled rehabilitation personnel. Although the act of turning a patient normally is not a skilled service, for some patients the skills of a nurse may be necessary to assure proper body alignment in order to avoid contractures and deformities. In all such cases, the reasons why skilled nursing or skilled rehabilitation personnel are essential must be documented in the patient's record.

C. Specific Examples of Some Skilled Nursing or Skilled Rehabilitation Services

1. Management and Evaluation of a Patient Care Plan.—The development, management, and evaluation of a patient care plan, based on the physician's orders, constitute skilled nursing services when, in terms of the patient's physical or mental condition, these services require the involvement of skilled nursing personnel to meet the patient's medical needs, promote recovery, and ensure medical safety. However, the planning and management of a treatment plan that does not involve the furnishing of skilled services may not require skilled nursing personnel; e.g., a care plan for a patient with organic brain syndrome who requires only oral medication and a protective

environment. Skilled management would be required where the sum total of unskilled services which are a necessary part of the medical regimen, when considered in light of the patient's overall condition, makes the involvement of skilled nursing personnel necessary to promote the patient's recovery and medical safety.

EXAMPLE 1: An aged patient with a history of diabetes mellitus and angina pectoris is recovering from an open reduction of the neck of the femur. He requires, among other services, careful skin care, appropriate oral medications, a diabetic diet, a therapeutic exercise program to preserve muscle tone and body condition, and observation to notice signs of deterioration in his condition or complications resulting from his restricted (but increasing) mobility. Although any of the required services could be performed by a properly instructed person, that person would not have the capability to understand the relationship among the services and their effect on each other. Since the nature of the patient's condition, his age and his immobility create a high potential for serious complications, such an understanding is essential to assure the patient's recovery and safety. The management of this plan of care requires skilled nursing personnel until the patient's treatment regimen is essentially stabilized, even though the individual services involved are supportive in nature and do not require skilled nursing personnel.

EXAMPLE 2: An aged patient is recovering from pneumonia, is lethargic, is disoriented, has residual chest congestion, is confined to bed as a result of his debilitated condition, and requires restraints at times. To decrease the chest congestion, the physician has prescribed frequent changes in position, coughing, and deep breathing. While the residual chest congestion alone would not represent a high risk factor, the patient's immobility and confusion represent complicating factors which, when coupled with the chest congestion, could create high probability of a relapse. In this situation, skilled overseeing of the nonskilled services would be reasonable and necessary, pending the elimination of the chest congestion, to assure the patient's medical safety.

Skilled planning and management activities are not always specifically identified in the patient's clinical record. Therefore, if the patient's overall condition supports a finding that recovery and safety can be assured only if the total care, skilled or not, is planned and managed by skilled nursing personnel, assume that skilled management is being provided even though it is not readily discernible from the record. Make this assumption only if the record as a whole clearly establishes that there was a likely potential for serious complications without skilled management.

2. Observation and Assessment of Patient's Condition.—Observation and assessment are skilled services when the likelihood of change in a patient's condition requires skilled nursing or skilled rehabilitation personnel to identify and evaluate the patient's need for possible modification of treatment or initiation of additional medical procedures, until the patient's treatment regimen is essentially stablized.

EXAMPLE 1: A patient with arteriosclerotic heart disease with congestive heart failure requires close observation by skilled nursing personnel for signs of decompensation, abnormal fluid balance, or adverse effects resulting from prescribed medication. Skilled observation is needed to determine whether the digitalis dosage should be reviewed or whether other therapeutic measures should be considered, until the patient's treatment regimen is essentially stabilized.

EXAMPLE 2: A patient has undergone peripheral vascular disease treatment including revascularization procedures (bypass) with open or necrotic areas of skin on the involved extremity. Skilled observation and monitoring of the vascular supply of the legs is required.

EXAMPLE 3: A patient has undergone hip surgery and has been transferred to an SNF. Skilled observation and monitoring of the patient for possible adverse reaction to the operative procedure, development of phlebitis, skin breakdown, or need for the administration of subcutaneous Heparin, is both reasonable and necessary.

EXAMPLE 4: A patient has been hospitalized following a heart attack and, following treatment but before mobilization, is transferred to the SNF. Because it is unknown whether exertion will exacerbate the heart disease, skilled observation is reasonable and necessary as mobilization is initiated, until the patient's treatment regimen is essentially stabilized.

EXAMPLE 5: A frail 85-year-old man was hospitalized for pneumonia. The infection was resolved, but the patient, who had previously maintained adequate nutrition, will not eat or eats poorly. The patient is transferred to an SNF for monitoring of fluid and nutrient intake, assessment of the need for tube feeding and forced feeding if required. Observation and monitoring by skilled nursing personnel of the patient's oral intake is required to prevent dehydration.

If a patient was admitted for skilled observation but did not develop a further acute episode or complication, the skilled observation services still are covered so long as there was a reasonable probability for such a complication or further acute episode. "Reasonable probability" means that a potential complication or further acute episode was a likely possibility.

Skilled observation and assessment may also be required for patients whose primary condition and needs are psychiatric in nature or for patients who, in addition to their physical problems, have a secondary psychiatric diagnosis. These patients may exhibit acute psychological symptoms such as depression, anxiety or agitation, which require skilled observation and assessment such as observing for indications of suicidal or hostile behavior. However, these conditions often require considerably more specialized, sophisticated nursing techniques and physician attention than is available in most participating SNFs. (SNFs that are primarily engaged in treating psychiatric disorders are precluded by law from participating in Medicare.) Therefore, these cases must be carefully documented.

3. Teaching and Training Activities.—Teaching and training activities which require skilled nursing or skilled rehabilitation personnel to teach a patient how to manage his treatment regimen would constitute skilled services. Some examples are:

o Teaching self-administration of injectable medications or a complex range of medications;

o Teaching a newly diagnosed diabetic to administer insulin injections, to prepare and follow a diabetic diet, and to observe foot-care precautions;

o Teaching self-administration of medical gases to a patient;

o Gait training and teaching of prosthesis care for a patient who has had a recent leg amputation;

o Teaching patients how to care for a recent colostomy or ileostomy;

o Teaching patients how to perform self-catheterization and self-administration of gastrostomy feedings;

o Teaching patients how to care for and maintain central venous lines, such as Hickman catheters;

o Teaching patients the use and care of braces, splints and orthotics, and any associated skin care; and

o Teaching patients the proper care of any specialized dressings or skin treatments.

D. Questionable Situations.—There must be specific evidence that daily skilled nursing or skilled rehabilitation services are required and received if:

o The primary service needed is oral medication; or

o The patient is capable of independent ambulation, dressing, feeding, and hygiene.

3132.2 Direct Skilled Nursing Services to Patients.—Some examples of direct skilled nursing services are:

o Intravenous, intramuscular or subcutaneous injections and hypodermoclysis or intravenous feeding (although giving an insulin injection is considered a skilled service, it is customary to teach patients to self-administer such an injection; if self-injection cannot be learned, however, insulin injection is a skilled service);

o Nasogastric tube, gastrostomy, and jejunostomy feedings;

o Naso-pharyngeal and tracheotomy aspiration;

- Insertion, sterile irrigation, and replacement of catheters; care of a suprapubic catheter and, in selected patients, urethral catheter (the mere presence of a urethral catheter, particularly one placed for convenience or the control of incontinence, does not justify a need for skilled nursing care. On the other hand, the insertion and maintenance of a urethral catheter as an adjunct to the active treatment of disease of the urinary tract may justify a need for skilled nursing care. In such instances, the need for a urethral catheter must be justified and documented in the patient's medical record; i.e., it must be established that it is reasonable and necessary for the treatment of the patient's condition.);

- Application of dressings involving prescription medications and aseptic techniques (see §3132.4 for exception);

- Treatment of decubitus ulcers, of a severity rated at Grade 3 or worse, or a widespread skin disorder (see §3132.4 for exception);

- Heat treatments which have been specifically ordered by a physician as part of active treatment and which require observation by skilled nursing personnel to adequately evaluate the patient's progress (see §3132.4 for exception);

- Rehabilitation nursing procedures, including the related teaching and adaptive aspects of nursing, that are part of active treatment and require the presence of skilled nursing personnel; e.g., the institution and supervision of bowel and bladder training programs;

- Initial phases of a regimen involving administration of medical gases such as bronchodilator therapy; and

- Care of a colostomy during the early postoperative period in the presence of associated complications. The need for skilled nursing care during this period must be justified and documented in the patient's medical record.

3132.3 Direct Skilled Rehabilitation Services to Patients

A. Skilled Physical Therapy

1. General.—Skilled physical therapy services must meet all of the following conditions:

- The services must be directly and specifically related to an active written treatment plan designed by the physician after any needed consultation with a qualified physical therapist;

- The services must be of a level of complexity and sophistication, or the condition of the patient must be of a nature that requires the judgment, knowledge, and skills of a qualified physical therapist;

- The services must be provided with the expectation, based on the assessment made by the physician of the patient's restoration potential, that the condition of the patient will improve materially in a reasonable and generally predictable period of time, or the services must be necessary for the establishment of a safe and effective maintenance program;

- The services must be considered under accepted standards of medical practice to be specific and effective treatment for the patient's condition; and

- The services must be reasonable and necessary for the treatment of the patient's condition; this includes the requirement that the amount, frequency, and duration of the services must be reasonable.

EXAMPLE 1: An 80-year-old, previously ambulatory, post-surgical patient has been bedbound for one week and, as a result, has developed muscle atrophy, orthostatic hypotension, joint stiffness and lower extremity edema. To the extent that the patient requires a brief period of daily skilled physical therapy services to restore lost functions, those services are reasonable and necessary.

EXAMPLE 2: A patient with congestive heart failure also has diabetes and previously had both legs amputated above the knees. Consequently, the patient does not have a reasonable potential to achieve ambulation, but still requires daily skilled physical therapy to learn bed mobility and transferring skills, as well as functional activities at the wheelchair level. If the patient has a reasonable potential for achieving those functions in a reasonable period of time in view of the patient's total condition, the physical therapy services are reasonable and necessary.

If the expected results are insignificant in relation to the extent and duration of physical therapy services that would be required to achieve those results, the physical therapy would not be reasonable and necessary, and thus would not be covered skilled physical therapy services.

Many SNF inpatients do not require skilled physical therapy services but do require services which are routine in nature. Those services can be performed by supportive personnel; e.g., aides or nursing personnel, without the supervision of a physical therapist. Such services, as well as services involving activities for the general good and welfare of patients (e.g., general exercises to promote overall fitness and flexibility and activities to provide diversion or general motivation) do not constitute skilled physical therapy.

2. Application of Guidelines.--Some of the more common physical therapy modalities and procedures are:

a. Assessment.--The skills of a physical therapist are required for the ongoing assessment of a patient's rehabilitation needs and potential. Skilled rehabilitation services concurrent with the management of a patient's care plan include tests and measurements of range of motion, strength, balance, coordination, endurance, and functional ability.

b. Therapeutic Exercises.--Therapeutic exercises which must be performed by or under the supervision of the qualified physical therapist, due either to the type of exercise employed or to the condition of the patient, constitute skilled physical therapy.

c. Gait Training.--Gait evaluation and training furnished a patient whose ability to walk has been impaired by neurological, muscular, or skeletal abnormality require the skills of a qualified physical therapist and constitute skilled physical therapy if they reasonably can be expected to improve significantly the patient's ability to walk.

Repetitious exercises to improve gait, or to maintain strength and endurance, and assistive walking are appropriately provided by supportive personnel, e.g., aides or nursing personnel, and do not require the skills of a physical therapist. Thus, such services are not skilled physical therapy.

d. Range of Motion.--Only the qualified physical therapist may perform range of motion tests and, therefore, such tests are skilled physical therapy. Range of motion exercises constitute skilled physical therapy only if they are part of active treatment for a specific disease state which has resulted in a loss or restriction of mobility (as evidenced by physical therapy notes showing the degree of motion lost and the degree to be restored).

Range of motion exercises which are not related to the restoration of a specific loss of function often may be provided safely by supportive personnel, such as aides or nursing personnel, and may not require the skills of a physical therapist. Passive exercises to maintain range of motion in paralyzed extremities that can be carried out by aides or nursing personnel would not be considered skilled care.

e. Maintenance Therapy.--The repetitive services required to maintain function sometimes involve the use of complex and sophisticated therapy procedures and, consequently, the judgment and skill of a physical therapist might be required for the safe and effective rendition of such services. (See §3132.1.B.) The specialized knowledge and judgment of a qualified physical therapist may be required to establish a maintenance program intended to prevent or minimize deterioration caused by a medical condition, if the program is to be safely carried out and the treatment aims of the physician achieved. Establishing such a program is a skilled service.

EXAMPLE: A Parkinson's patient who has not been under a restorative physical therapy program may require the services of a physical therapist to determine what type of exercises are required for the maintenance of his present level of function. The initial evaluation of the patient's needs, the designing of a maintenance program which is appropriate to the capacity and tolerance of the patient and the treatment objectives of the physician, the instruction of the patient or supportive personnel (e.g., aides or nursing personnel) in the carrying out of the program, and such infrequent reevaluations as may be required, would constitute skilled physical therapy.

While a patient is under a restorative physical therapy program, the physical therapist should regularly reevaluate his condition and adjust any exercise program the patient is expected to carry out himself or with the aid of supportive personnel to maintain the function being restored. Consequently, by the time it is determined that no further restoration is possible, i.e., by the end of the last restorative session, the physical therapist will have already designed the maintenance program required and instructed the patient or supportive personnel in the carrying out of the program.

f. Ultrasound, Shortwave, and Microwave Diathermy Treatments.—These modalities must always be performed by or under the supervision of a qualified physical therapist and are skilled physical therapy.

g. Hot Packs, Infra-Red Treatments, Paraffin Baths and Whirlpool Baths.—Heat treatments and baths of this type ordinarily do not require the skills of a qualified physical therapist. However, the skills, knowledge, and judgment of a qualified physical therapist might be required in the giving of such treatments or baths in a particular case, e.g., where the patient's condition is complicated by circulatory deficiency, areas of desensitization, open wounds, fractures or other complications.

B. Speech Pathology.—See §3101.10A.

C. Occupational Therapy.—See §3101.9.

3132.4 Nonskilled Supportive or Personal Care Services.—The following services are not skilled services unless rendered under circumstances detailed in §3132.1.B:

- Administration of routine oral medications, eye drops, and ointments (the fact that a patient cannot be relied upon to take such medications himself or that State law requires all medications to be dispensed by a nurse to institutional patients would not change this service to a skilled service);

- General maintenance care of colostomy and ileostomy;

- Routine services to maintain satisfactory functioning of indwelling bladder catheters (this would include emptying containers and cleaning them, and clamping tubing);

- Changes of dressings for noninfected postoperative or chronic conditions;

- Prophylactic and palliative skin care, including bathing and application of creams, or treatment of minor skin problems;

- Routine care of the incontinent patient, including use of diapers and protective sheets;

- General maintenance care in connection with a plaster cast (skilled supervision or observation may be required where the patient has a preexisting skin or circulatory condition or needs to have traction adjusted);

- Routine care in connection with braces and similar devices;

- Use of heat as a palliative and comfort measure, such as whirlpool or steam pack;

- Routine administration of medical gases after a regimen of therapy has been established (i.e., administration of medical gases after the patient has been taught how to institute therapy);

- Assistance in dressing, eating, and going to the toilet;

- Periodic turning and positioning in bed; and

- General supervision of exercises which have been taught to the patient and the performance of repetitious exercises that do not require skilled rehabilitation personnel for their performance. (This includes the actual carrying out of maintenance programs where the performance of repetitive exercises that may be required to maintain function do not necessitate a need for the involvement and services of skilled rehabilitation personnel. It also includes the carrying out of repetitive exercises to improve gait, maintain strength or endurance; passive exercises to maintain range of motion in paralyzed extremities which are not related to a specific loss of function; and assistive walking.) (See §3101.8D.)

3132.5 Daily Skilled Services—Defined.—Skilled nursing services or skilled rehabilitation services (or a combination of these services) must be needed and provided on a "daily basis," i.e., on essentially a 7-day-a-week basis. However, if skilled rehabilitation services are not available on a 7-day-a-week basis, a patient whose inpatient stay is based solely on the need for skilled rehabilitation services would meet the "daily basis" requirement when he needs and receives those services on at least 5 days a week. Accordingly, if a facility provides physical therapy on only 5 days a week and a patient in the facility requires and receives physical therapy on each of those days, the requirement that skilled rehabilitation services be provided on a daily basis is met. (If the services are available less than 5 days a week, though, the "daily" requirement would not be met.)

This requirement should not be applied so strictly that it would not be met merely because there is an isolated break of a day or two during which no skilled rehabilitation services are furnished and discharge from the facility would not be practical.

EXAMPLE: A patient who normally requires skilled rehabilitation services on a daily basis may exhibit extreme fatigue which results in suspending therapy sessions for a day or two. Coverage may continue for these days since discharge in such a case would not be practical.

3132.6 Services Provided on an Inpatient Basis as a "Practical Matter".—In determining whether the daily skilled care needed by an individual can, as a "practical matter," only be provided in an SNF on an inpatient basis, consider the individual's physical condition and the availability and feasibility of using more economical alternative facilities or services.

As a "practical matter," daily skilled services can be provided only in an SNF if they are not available on an outpatient basis in the area in which the individual resides or transportation to the closest facility would be:

- An excessive physical hardship;
- Less economical; or
- Less efficient or effective than an inpatient institutional setting.

The availability at home of capable and willing family or the feasibility of obtaining other assistance for the patient should be considered. Even though needed daily skilled services might be available on an outpatient or home care basis, as a practical matter, the care can be furnished only in the SNF if home care would be ineffective because the patient would have insufficient assistance at home to reside there safely.

EXAMPLE: A patient undergoing restorative physical therapy can walk only with supervision but has a reasonable potential to learn to walk independently with further training. Further daily skilled therapy is available on an outpatient or home care basis, but the patient would be at risk of further injury from falling, of dehydration or of malnutrition because insufficient supervision or assistance could be arranged for the patient in his home. In these circumstances, the physical therapy services as a practical matter can be provided effectively only in the inpatient setting.

A. The Availability of Alternative Facilities or Services.--Alternative facilities or services may be available to a patient if health care providers such as home health agencies were utilized. These alternatives are not always available in all communities and even where they exist they may not be available when needed.

EXAMPLE: Where the residents of a rural community generally utilize the outpatient facilities of a hospital located some distance from the area, the hospital outpatient department constitutes an alternative source of care that is available to the community. Roads in winter, however, may be impassable for some periods of time and in special situations institutionalization might be needed.

In determining the availability of more economical care alternatives, the coverage or noncoverage of that alternative care is not a factor to be considered. Home health care for a patient who is not homebound, for example, may be an appropriate alternative in some cases. The fact that such care cannot be covered by Medicare is irrelevant.

The issue is feasibility and not whether coverage is provided in one setting and not provided in another. For instance, an individual in need of daily skilled physical therapy might be able to receive the services needed on a more economical basis from an independently practicing physical therapist. However, the fact that Medicare reimbursement could not be made for the services because the $500 expense limitation applicable to the services of an independent physical therapist had been exceeded or because the patient was not enrolled in Part B, would not be a basis for determining that, as a practical matter, the needed care could only be provided in a SNF.

In determining the availability of alternate facilities or services, whether the patient or another resource can pay for the alternate services is not a factor to be considered.

B. Whether Available Alternatives are More Economical in the Individual Case.—If you determine that a generally more economical care alternative is available to provide the needed care, consider whether the use of the alternative actually would be more economical in the individual case.

EXAMPLE 1: If a patient's condition requires daily transportation to the alternative source of care (e.g., a hospital outpatient department) by ambulance, it might be more economical from a health care delivery viewpoint to provide the needed care in the SNF setting.

EXAMPLE 2: If needed care could be provided in the home, but the patient's residence is so isolated that daily visits would entail inordinate travel costs, care in an SNF might be a more economical alternative.

C. Whether the Patient's Physical Condition Would Permit Him to Utilize an Available, More Economical Care Alternative.—In determining the practicality of using more economical care alternatives, consider the patient's medical condition. If the use of those alternatives would adversely affect the patient's medical condition, conclude that as a practical matter the daily skilled services can only be provided by an SNF on an inpatient basis.

If the use of a care alternative involves transportation of the individual on a daily basis, consider whether daily transportation would cause excessive physical hardship. Determinations on whether a patient's condition would be adversely affected if an available, more economical care alternative were utilized should not be based solely on the fact that the patient is nonambulatory. There are individuals confined to wheelchairs who, though nonambulatory, could be transported daily by automobile from their homes to alternative care sources without any adverse impact. Conversely, there are instances where an individual's condition would be adversely affected by daily transportion to a care facility, even though he is able to ambulate to some extent.

EXAMPLE: A 75-year-old woman has suffered a cerebrovascular accident and cannot climb stairs with safety. The patient lives alone in a second-floor apartment accessible only by climbing a flight of stairs. She requires physical therapy and occupational therapy on alternate days, and they are only available in a CORF one mile away from her apartment. However, because of her inability to negotiate the stairs, the daily skilled services she requires cannot, as a practical matter, be provided to the patient outside the SNF.

The "practical matter" criterion should never be interpreted so strictly that it results in the automatic denial of coverage for patients who have been meeting all of the SNF level of care requirements, but who have occasion to be away from the SNF for a brief period of time. While most beneficiaries requiring an SNF level of care find that they are unable to leave the facility for even the briefest of time, the fact that a patient is granted an outside pass, or short leave of absence, for the purpose of attending a special religious service, holiday meal or family occasion, for going on a ride or for a trial visit home, is not by itself evidence that the individual no longer needs to be in a SNF for the receipt of his or her required skilled care. Very often special arrangements, not feasible on a daily basis, have had to be made to allow the absence from the facility. Where frequent or prolonged periods away from the SNF become possible, however, then questions as to whether the patient's care can, as a practical matter, only be furnished on an inpatient basis in an SNF may be raised. Decisions in these cases should be based on information reflecting the care needed and received by the patient while in the SNF and on the arrangements needed for the provision, if any, of this care during any absences. (See §3135.3 for counting inpatient days during a leave of absence.)

A conservative approach to retain the presumption for waiver of liability may lead a facility to notify patients that leaving the facility will result in denial of coverage. Such a notice is not appropriate. If an SNF determines that covered care is no longer needed, the situation does not change whether the patient actually leaves the facility or not. (See §3439.2, Improper Provider Coverage Decisions.)

Covered Extended Care Services

3133. COVERED EXTENDED CARE SERVICES

Patients covered under hospital insurance are entitled to have payment made on their behalf on a reasonable cost basis for covered extended care services. If a patient receives items or services in excess of, or more expensive than, those for which payment can be made, payment will be made only for the reasonable cost of the covered items or services. If the items or services were requested by the patient, the facility may charge him the difference between the amount customarily charged for the services requested and the amount customarily charged for covered services.

An inpatient is a person who has been admitted to a skilled nursing facility or swing bed hospital for bed occupancy for purposes of receiving inpatient services. A person is considered an inpatient if formally admitted as an inpatient with the expectation that he will remain at least overnight and occupy a bed even though it later develops that he can be discharged and does not actually use a bed overnight.

NOTES: 1. Custodial care (see S 3159) is not a covered extended care service.

2. When patients requiring inpatient hospital services occupy beds in an SNF, they are considered inpatients of the SNF. In such cases, the services furnished in the SNF may not be considered inpatient hospital services, and payment may not be made under the program for such services. Such a situation may arise where the SNF is a distinct part of an institution the remainder of which is a hospital, and either there is no bed available in the hospital, or for any other reason the institution fails to place the patient in the appropriate bed. The same rule applies where the SNF is a separate institution. For the same reason, where patients who require extended care services occupy beds in a hospital, payment cannot be made on their behalf for the services furnished to them in the hospital, unless the services are extended care services furnished pursuant to a swing bed approval. (See S 3101.)

3. When patients who require SNF services are placed in a noncertified part of an institution which contains a participating "distinct part" SNF, the services may be paid under certain conditions, based on the waiver of liability provisions. (See SS3431.3 - 3431.4B.)

The following extended care services are covered under hospital insurance:

3133.1 Nursing Care Provided by or Under the Supervision of a Registered Professional Nurse.—

NOTE: The services of a private-duty nurse or other private-duty attendant are not covered. Private-duty nurses or private-duty attendants are registered professional nurses, licensed practical nurses, or any other trained attendant whose services ordinarily are rendered to, and restricted to, a particular patient by arrangement between the patient and the private-duty nurse or attendant. Such persons are engaged or paid by an individual patient or by someone acting on his behalf, including an SNF that initially incurs the cost and looks to the patient for reimbursement for such noncovered services.

Where the SNF acts on behalf of a patient, the services of the private-duty nurse or other attendant under such an arrangement are not extended care services regardless of the control which the SNF may exercise with respect to the services rendered by such private-duty nurse or attendant.

3133.2 Bed and Board in Semi-Private Accommodations Furnished in Connection With Nursing Care.—(See S 3101.1 for provisions relating to inpatient accommodations.)

3133.3 Physical, Speech, and Occupational Therapy Furnished by the Skilled Nursing Facility or by Others Under Arrangements with the Facility and Under Its Supervision.—

A. Physical Therapy.—See §3101.8

B. Speech Pathology.—See §3101.10A.

C. Occupational Therapy.—See §3101.9A-D.

3133.4 **Medical Social Services to Meet the Patient's Medically Related Social Needs.**—Medical social services are those social services which contribute meaningfully to the treatment of a patient's condition. Such services include, but are not limited to, (a) assessment of the social and emotional factors related to the patient's illness, his need for care, his response to treatment, and his adjustment to care in the facility; (b) appropriate action to obtain case work services to assist in resolving problems in these areas; (c) assessment of the relationship of the patient's medical and nursing requirements to his home situation, his financial resources, and the community resources available to him in making the decision regarding his discharge.

3133.5 **Drugs and Biologicals.**—Drugs and biologicals for use in the facility which are ordinarily furnished by the facility for the care and treatment of inpatients are covered. Such drugs and biologicals are not limited to those routinely stocked by the skilled nursing facility but include those obtained for the patient from an outside source, such as a pharmacy in the community. Where a facility does not bill for such drugs and biologicals or include their costs in its cost reporting forms, the intermediary should bring the matter to the attention of the regional office for referral to the State agency for consideration whether the facility is in substantial compliance with the conditions of participation. Since the provision of drugs and biologicals is considered an essential part of skilled nursing care, a facility must assure their availability to inpatients in order to be found capable of furnishing the level of care required for participation in the program. When a facility secures drugs and biologicals from an outside source, their availability is assured only if the facility assumes financial responsibility for the necessary drugs and biologicals, i.e., the supplier looks to the facility, not the patient, for payment.

The drug or biological must be either included, or approved for inclusion, in the U.S. Pharmacopoeia, the National Formulary, or the U.S. Homeopathic Pharmacopoeia; or, except for those unfavorably evaluated, in AMA Drug Evaluations (the successor publication to New Drugs) or Accepted Dental Therapeutics (the successor publication to Accepted Dental Remedies).

Use of the drug or biological must be safe and effective and otherwise reasonable and necessary as specified in section 3151. Drugs or biologicals approved for marketing by the Food and Drug Administration (FDA) are considered safe and effective for purposes of this last requirement. Therefore, you may pay for the use of an FDA-approved drug or biological, if (1) it was administered on or after the date of the FDA's approval; (2) it is reasonable and necessary for the individual patient; and (3) all other applicable coverage requirements are met. Payment may not be made for particular uses of drugs that the FDA has expressly disapproved or that are designated as not covered in the Coverage Issues Appendix.

If you have reason to question whether the FDA has approved a drug or biological for marketing, you should obtain satisfactory evidence of FDA's approval. Acceptable evidence includes a copy of the FDA's letter to the drug's manufacturer approving the new drug application (NDA); or listing of the drug or biological in the FDA's Approved Drug Products or FDA Drug and Device Product Approvals; or a copy of the manufacturer's package insert, approved by the FDA as part of the labeling of the drug, containing its recommended uses and dosage, as well as possible adverse reactions and recommended precautions in using it. When necessary, the Medicare regional office may be able to help in obtaining information.

A. Drugs Included in the Drug Compendia.—Coverage is provided only for those drugs and biologicals included, or approved for inclusion, in the latest official edition or revision of the compendia listed above.

The exclusion from coverage of drugs and biologicals unfavorably evaluated in AMA Drug Evaluations (the successor publication to New Drugs) or Accepted Dental Therapeutics (the successor publication to Accepted Dental Remedies) applies to those drugs and biologicals which have been unfavorably evaluated for all medicinal uses. If a drug or biological has been unfavorably evaluated for one or more, but not all, medicinal uses, the exclusion applies only where the drug has been unfavorably evaluated for the medicinal use to which it is being put.

Drugs and biologicals are considered "approved for inclusion" in a compendium if approved under the established procedure by the professional organization responsible for revision of the compendium.

B. Drugs Not Included in the Compendia.—Drugs not included, or approved for inclusion, in the drug compendia are nevertheless covered if such drug (1) was furnished the patient during his prior hospitalization, (2) was approved for use in the hospital by the hospital's pharmacy and drug therapeutics (or equivalent) committee, (3) is required for the continuing treatment of the patient in the skilled nursing facility, and (4) is reasonable and necessary.

C. Combination Drugs.—Combination drugs are covered if the combination itself or all the therapeutic ingredients of the combination are included, or approved for inclusion, in any of the designated drug compendia. Under the limited circumstances mentioned in B. above, a combination drug approved by a hospital pharmacy and drug therapeutics committee may also be covered as an extended care service.

D. Drugs for Use Outside the Facility.--Drugs and biologicals furnished by a facility to an inpatient for use outside the facility are, in general, not covered as extended care services. However, if the drug or biological is deemed medically necessary to permit or facilitate the patient's departure from the facility, and a supply is required until he can obtain a continuing supply, the drugs or biologicals would be covered as an extended care service. Drugs and biologicals furnished to outpatients of skilled nursing facilities are not covered.

3133.6 Supplies, Appliances, and Equipment.--Supplies, appliances, and equipment furnished for use in the facility, which are ordinarily furnished by the facility for the care and treatment of inpatients are covered extended care services. However, under certain circumstances, supplies, appliances, and equipment used during the beneficiary's stay are covered even though they leave the facility with the patient when he is discharged. There are circumstances in which it would be unreasonable or impossible from a medical standpoint to limit the patient's use of the item to the periods during which the individual is an inpatient. An example of items covered under this rule is a brace temporarily attached to the patient's body while he is receiving treatment as an inpatient and which is also necessary to permit or facilitate the patient's release from the facility.

Supplies, appliances, and equipment furnished to a patient for use only outside the facility would not, in general, be covered as extended care services. However, a temporary or disposable item provided to a patient which is medically necessary to permit or facilitate his departure from the facility and is required until such time as he can obtain a continuing supply would be covered as an extended care service.

3133.7 Medical Service of an Intern or Resident-in-Training.--
The medical services of an intern or resident-in-training under an approved teaching program of a hospital with which the facility has in effect the required transfer agreement are covered under hospital insurance.

An "approved teaching program" means a program approved by the Council on Medical Education of the American Medical Association or, in the case of an osteopathic hospital, approved by the Committee on Hospitals of the Bureau of Professional Education of the American Osteopathic Association. In the case of services of an intern or resident-in-training in the field of dentistry in a hospital or osteopathic hospital, the teaching program must have the approval of the Council on Dental Education of the American Dental Association.

The medical and surgical services furnished to the facility's patients by interns and residents-in-training of a hospital with which the facility has a transfer agreement are covered under medical insurance if the services are not covered under hospital insurance.

The services performed by interns and residents--including a physician acting in the capacity of an intern or resident--are reimbursable to the facility on a reasonable cost basis even though the intern or resident is a licensed physician. These services are not reimbursable on a reasonable charge basis as physicians' services.

3133.8—Other Diagnostic or Therapeutic Services Provided by a Hospital.—Extended care services also include other diagnostic or therapeutic services provided by a hospital with which the facility has a transfer agreement. While a skilled nursing facility is permitted to secure diagnostic and therapeutic services for its inpatients from the transfer hospital, the hospital itself must have the capacity to provide the services directly. If the transfer hospital does not have the capacity to provide the services directly, but provides them through an arrangement with an outside source, these services would not constitute covered extended care services.

3133.9 Other Services.—

A. General.—Other services which are necessary to the health of the patients are covered if the services are generally provided by skilled nursing facilities. The medical and other health services described in SS 3110-3110.5 are generally provided by skilled nursing facilities and are therefore extended care services. For coverage of diagnostic services and radiological therapy under Part A, the conditions described in S 3137.1 must be met.

Items or services that would not be included as inpatient hospital services if furnished to an inpatient of a hospital are also excluded from coverage as extended care services. For instance, the provision of personal laundry services by skilled nursing facilities is not a covered service under Medicare, since it would not be covered if provided to an inpatient of an acute care hospital. See SS 3101ff. for covered inpatient hospital services.

The use of an operating room and any special equipment, supplies, or services would not constitute covered extended care services except when furnished to the facility by a hospital with which the facility has a transfer agreement, since operating rooms are not generally maintained by skilled nursing facilities. However, supplies and nursing services connected with minor surgery performed in a skilled nursing facility that does not require the use of an operating room or any special equipment or supplies associated with such a room would be covered extended care services and reimbursed as part of the cost of routine services.

B. Respiratory Therapy Provided by a Hospital with which the Skilled Nursing Facility has a Transfer Agreement.—See S3101.10

Duration of Covered Extended Care Services

3135. EXTENDED CARE BENEFIT DAYS

A patient having hospital insurance coverage is entitled subject to the coinsurance requirement (S 3210) to have payment made on his behalf for up to 100 days of covered inpatient extended care services in each spell of illness. (For definition of spell of illness, see S 3035.)

3135.1 Inpatient Day Defined.—The number of days of care charged to a beneficiary for inpatient extended care services is always in units of full days. A day begins at midnight and ends 24 hours later. The midnight-to-midnight method is to be used in reporting days of care for beneficiaries, even if the facility uses a different definition for day for statistical or other purposes.

A part of a day, including the day of admission, counts as a full day. However, the day of discharge or death or a day on which a patient begins a leave of absence is not counted as a day. (Charges for ancillary services on the day of discharge or death or the day on which a patient begins a leave of absence are covered.) If admission and discharge or death occur on the same day, the day is considered a day of admission and counts as one inpatient day. (For billing when a patient is discharged, dies, or is transferred to another facility before midnight of the day of admission, see S 3611).

3135.2 Late Discharge.—When a patient chooses to occupy his accommodations in a facility beyond the normal check-out time for personal reasons, the facility may charge the beneficiary for his continued stay. Such a stay beyond the check-out time, for the comfort or convenience of the patient, is not covered under the program and the facility's agreement to participate in the program does not preclude the facility from charging the patient. A facility may not impose late charges on a beneficiary unless he has been given reasonable notice (for example, 24 hours) of his impending discharge.

Where the patient's medical condition is the cause of the stay past the discharge hour (e.g., the patient needs further services, is bedridden and is awaiting transportation to his home, or dies in the facility), the stay beyond the discharge hour is covered under the program and the facility may not charge the patient. (See S 3620, Item 19, Accommodations.)

The imposition of a late charge by a facility does not affect the counting of days for (a) ending a spell of illness, and (b) the number of days of inpatient care available to the individual. (See §§ 3035 and 3136.) A late charge by a hospital does not affect counting of days for meeting the prior inpatient stay requirement for coverage of extended care services. (See § 3103.2)

3135.3 Leaves of Absence.--Treat the day on which the patient began a leave of absence as a day of discharge and do not count it as an inpatient day unless he returns to the facility by midnight of the same day. Treat the day the patient returns to the facility from a leave of absence as a day of admission and count it as an inpatient day if he is present at midnight of that day.

3135.4 Discharge or Death on First Day of a Skilled Nursing Facility's Participation.--Do not make program payment for accommodations on the day of discharge or death. Make payment for ancillary services (under Part A) where a patient dies or is discharged on the first day a facility becomes a participating facility and the other requirements for coverage of extended care services are met.

3136. INPATIENT EXTENDED CARE SERVICES COUNTING TOWARD MAXIMUMS.

Extended care services count toward the maximum number of benefit days payable per spell of illness only if:

o. Payment for the services is made, or

o. Payment for the services would be made if a request for payment were properly filed, the physician certified that the services were medically necessary, and the provider submitted all necessary evidence. (See § 3302.6 for patient's refusal to file, § 3333 for physician's refusal to certify, § 3600.1 for provider failure to submit evidence, and § 3610.1 for billing procedures in these situations.)

Where payment cannot be made because of the extended care coinsurance requirement, the day(s) used nevertheless count toward the beneficiary's maximum days of extended care.

Services Furnished by Skilled Nursing Facilities Covered Under Medical Insurance

3137. MEDICAL AND OTHER HEALTH SERVICES FURNISHED TO SNF PATIENTS.

The medical and other health services described in §§ 3110-3110.5 are covered under Part B when furnished by a participating SNF either directly or under arrangements to: inpatients who are not entitled to have payment made under Part A (e.g., benefits exhausted or 3-day prior-stay requirement not met); or outpatients. See § 3640.3 for information on billing for these services and § 3137.1 for the conditions under which diagnostic services and radiological therapy furnished by SNF's are covered. For coverage of total parenteral nutrition (TPN) and enteral nutrition (EN) as a prosthetic device, see §§ 3110.4 and 3111, and the Coverage Issues Manual §§ 65-10 - 65-10.3. See § 3661 for information on billing for TPN and EN services.

Rental or purchase of durable medical equipment from SNFs for use in the patient's home is covered under Part B in accordance with the provisions of § 3113. For coverage of outpatient physical therapy, occupational therapy, and speech pathology services furnished by SNFs, see §§ 3147- 3148.4. For coverage of provider ambulance services, see § 3114.

Drugs, biologicals, and blood are not covered under Part B when furnished by an SNF.

3137.1 Diagnostic Services and Radiological Therapy.--Diagnostic X-ray and radiological therapy may be provided directly by an SNF if, as part of its compliance with the conditions of participation, the SNF has a radiological department which meets the same standards required of a hospital furnishing such services under the program, or if the SNF meets the portable X-ray supplier standards. Portable X-ray services provided by an SNF under arrangements are covered only if furnished by an approved supplier.

When an SNF furnishes laboratory services directly, its laboratory must meet the same conditions required when laboratory services are furnished by participating hospitals. These services may be furnished under arrangements with another participating SNF whose laboratory meets the hospital conditions for laboratories or with either an approved independent laboratory, the laboratory of a participating hospital, or the laboratory of an "emergency" hospital which meets the hospital conditions for laboratories.

3138. AMBULANCE SERVICE.

For requirements relating to provider ambulance service, see § 3114.

Coverage of Hospice Services Under Hospital Insurance

3140. REQUIREMENTS - GENERAL.

Effective November 1, 1983, hospice care is a benefit under the hospital insurance program. In order to be eligible to elect hospice care under Medicare, an individual must be entitled to Part A of Medicare and be certified as being terminally ill. An individual is considered to be terminally ill if the individual has a medical prognosis that his or her life expectancy is six months or less.

The hospice must obtain the certification that an individual is terminally ill in accordance with the following procedures and maintain the certification statements:

A. For the first 90-day period of hospice coverage, the hospice must obtain, no later than two calendar days after hospice care is initiated, written certification statements signed by the medical director of the hospice or the physician member of the hospice interdisciplinary group and the individual's attending physician (if the individual has an attending physician). The attending physician is a physician who is a doctor of medicine or osteopathy and is identified by the individual, at the time he or she elects to receive hospice care, as having the most significiant role in the determination and delivery of the individual's medical care.

B. For the subsequent 90-day or 30-day period, the hospice must obtain, no later than two calendar days after the beginning of that period, a written certification statement prepared by the medical director of the hospice or the physician member of the hospice's interdisciplinary group. The certification must include the statement that the individual's medical prognosis is that his or her life expectancy is six months or less and the signature(s) of the physician(s).

3141. ELECTION PROCEDURES.

An individual may elect to receive Medicare coverage of three election periods of hospice care. The periods consist of two 90-day periods and one 30-day period. If an individual elects to receive hospice care, he or she must file an election statement with a particular hospice. An election may also be filed by a representative acting pursuant to State law. The two 90-day election periods must be used before the 30-day period. An election to receive hospice care will be considered to continue through the initial election period and through the subsequent election periods without a break in care as long as the individual remains in the care of the hospice and does not revoke the election. An individual may designate an effective date for the election period that begins with the first day of hospice care or any subsequent day of hospice care, but an individual may not designate an effective date that is earlier than the date that the election is made.

An individual must waive all rights to Medicare payments for the duration of the election of hospice care for the following services:

o Hospice care provided by a hospice other than the hospice designated by the individual (unless provided under arrangements made by the designated hospice); and

o Any Medicare services that are related to the treatment of the terminal condition for which hospice care was elected or a related condition or that are equivalent to hospice care except for services-

— Provided (either directly or under arrangement) by the designated hospice;

— Provided by another hospice under arrangements made by the designated hospice; and

— Provided by the individual's attending physician if that physician is not an employee of the designated hospice or receiving compensation from the hospice for those services.

3141.1 Election, Revocation and Change of Hospice.—Each hospice will design and print its election statement. The election statement must include the following items of information:

o Identification of the particular hospice that will provide care to the individual.

o The individual's or representative's (as applicable) acknowledgement that he or she has been given a full understanding of hospice care.

o The individual's or representative's (as applicable) acknowledgement that he or she understands that certain Medicare services are waived by the election.

o The effective date of the election.

o The signature of the individual or representative.

An individual or representative may revoke the election of hospice care at any time. To revoke the election of hospice care, the individual must file a document with the hospice that includes a signed statement that the individual revokes the election for Medicare coverage of hospice care for the remainder of that election period and the date that the revocation is to be effective. An individual may not designate an effective date earlier than the date that the revocation is made.

Upon revoking the election of Medicare coverage of hospice care for a particular election period, an individual resumes Medicare coverage of the benefits waived when hospice care was elected. An individual may at any time elect to receive hospice coverage for any other hospice election periods for which he or she is eligible.

An individual may change, once in each election period, the designation of the particular hospice from which he or she elects to receive hospice care. The change of the designated hospice is not considered a revocation of the election. To change the designation of hospice programs, the individual must file, with the hospice from which he or she has received care and with the newly designated hospice, a signed statement that includes the following information: the name of the hospice from which the individual has received care, the name of the hospice from which he or she plans to receive care and the date the change is to be effective. (A change of ownership of a hospice is not considered a change in the patient's designation of a hospice, and requires no action on the patient's part.)

3142. COINSURANCE

An individual who has elected hospice care is liable for the following coinsurance payments. Hospices may charge individuals for the applicable coinsurance amounts.

A. Drugs and biologicals.—An individual is liable for a coinsurance payment for each palliative drug and biological prescription furnished by the hospice while the individual is not an inpatient. The amount of coinsurance for each prescription approximates five percent of the cost of the drug or biological to the hospice determined in accordance with the drug copayment schedule established by the hospice, except that the amount of coinsurance for each prescription may not exceed $5.00. The cost of the drug or biological may not exceed what a prudent buyer would pay in similar circumstances. The drugs copayment schedule must be reviewed for reasonableness and approved by the intermediary before it is used.

B. Respite care.—The amount of coinsurance for each respite care day is equal to five percent of the payment made by HCFA for a respite care day. The amount of the individual's coinsurance liability for respite care during a hospice coinsurance period may not exceed the inpatient hospital deductible applicable for the year in which the hospice coinsurance period began.

The individual hospice coinsurance period begins on the first day an election is in effect for the beneficiary and ends with the close of the first period of 14 consecutive days on each of which an election is not in effect for the beneficiary.

Thus, if a beneficiary elects to use all three of his election periods consecutively (without a two week break), he or she would be subject to a maximum coinsurance for respite care equal to the hospital inpatient deductible. Similarly, if a break between election periods exceeds 14 days, the maximum coinsurance for respite care would double or triple (depending on the number of election periods used and the timing of subsequent elections).

EXAMPLE: Mr. Brown elected an initial 90 day period of hospice care. Five days after the initial period of hospice care ended, Mr. Brown began another period of hospice care under a subsequent election.

Immediately after the period ended, he began a third period of hospice care under a final election period. Mr. Brown received inpatient respite care during all three periods of hospice care. Since these election periods were not separated by 14 consecutive days, they constitute a single hospice coinsurance period. Therefore, a maximum coinsurance for respite care during all three periods of hospice care may not exceed the amount of the inpatient hospital deductible for the year which the first period began.

3143. REQUIREMENTS FOR COVERAGE

To be covered, hospice services must be reasonable and necessary for the palliation or management of the terminal illness and related conditions. The individual must elect hospice care in accordance with § 3141 and a plan of care must be established before services are provided. To be covered, services must be consistent with the plan of care. A certification that the individual is terminally ill must be completed as set forth in § 3140.

3143.1 Covered Services.—All services must be performed by appropriately qualified personnel, but it is the nature of the service, rather than the qualification of the person who provides it, that determines the coverage category of the service. The following services are covered hospice services:

A. Nursing care provided by or under the supervision of a registered nurse.

B. Medical social services provided by a social worker who has at least a bachelor's degree from a school accredited or approved by the Council on Social Work Education, and who is working under the direction of a physician.

C. Physicians' services performed by a physician (as defined in regulation § 405.232a) except that the services of the hospice medical director or the physician member of the interdisciplinary group must be performed by a doctor of medicine or osteopathy.

D. Counseling services provided to the terminally ill individual and the family members or other persons caring for the individual at home. Counseling, including dietary counseling, may be provided both for the purpose of training the individual's family or other care-giver to provide care, and for the purpose of helping the individual and those caring for him or her to adjust to the individual's approaching death.

E. Short-term inpatient care provided in a participating hospice inpatient unit, or a participating hospital, SNF, or ICF that additionally meets the special hospice standards regarding staffing and patient areas. Services provided in an inpatient setting must conform to the written plan of care. Inpatient care may be required for procedures necessary for pain control or acute or chronic symptom management. Inpatient care may also be furnished to provide respite for the individual's family or other persons caring for the individual at home.

F. Medical appliances and supplies, including drugs and biologicals. Only drugs as defined in § 1861(t) of the Act and which are used primarily for the relief of pain and symptom control related to the individual's terminal illness are covered. Appliances may include covered durable medical equipment as described in § 42 CFR 405.231(g) as well as other self-help and personal comfort items related to the palliation or management of the patient's terminal illness. Equipment is provided by the hospice for use in the patient's home while he or she is under hospice care. Medical supplies include those that are part of the written plan of care.

G. Home health aide services furnished by qualified aides and homemaker services. Home health aides may provide personal care services. Aides may also perform household services to maintain a safe and sanitary environment in areas of the home used by the patient, such as changing the bed or light cleaning and laundering essential to the comfort and cleanliness of the patient. Aide services must be provided under the general supervision of a registered nurse. Homemaker services may include assistance in personal care, maintenance of a safe and healthy environment and services to enable the individual to carry out the plan of care.

H. Physical therapy, occupational therapy and speech-language pathology services provided for purposes of symptom control or to enable the individual to maintain activities of daily living and basic functional skills.

3143.2 Special Coverage Requirements.—

A. Periods of crisis.—Nursing care may be covered on a continuous basis for as much as 24-hours per day during periods of crisis as necessary to maintain an individual at home. Either homemaker or home health aide services or both may be covered on a 24-hour continuous basis during periods of crisis but care during these periods must be predominantly nursing care. A period of crisis is a period in which the individual requires continuous care which is primarily nursing care to achieve palliation or management of acute medical symptoms.

B. Respite care.—Respite care is short-term inpatient care provided to the individual only when necessary to relieve the family members or other persons caring for the individual at home. Respite care may be provided only on an occasional basis and may not be reimbursed for more than five consecutive days at a time, except that any hospice that began operation before January 1, 1975 may be granted a waiver of the limitation on the frequency and number of respite care days. A hospice must be approved to receive this waiver. Applications should be sent to:

Health Care Financing Administration
Office of Coverage Policy, BERC
409 East High Rise
6325 Security Boulevard
Baltimore, Maryland 21207

C. Bereavement counseling.—Bereavement counseling consists of counseling services provided to the individual's family after the individual's death. Bereavement counseling is a required hospice service but it is not reimbursable.

3145. PROVIDER-BASED PHYSICIAN'S SERVICES.

The services of provider-based physicians (e.g., those on a salary, or percentage arrangement, lessors of departments, etc., whether or not they bill patients directly) include two distinct elements, the professional component, and the provider component. The services of interns and residents, however, are reimbursable to the provider on a reasonable cost basis even though the intern or resident is a licensed physician.

A. The Professional Component.--The professional component of provider-based physicians' services includes those services directly related to the medical care of the individual patient. (No Part B charge can be recognized for autopsy services.) Services to individual patients must be specially billed by the physician or, with his authorization, by the provider, or by a partnership, corporation, or other organization of physicians. When such services are performed by a faculty member of a medical, osteopathic, or dental school, billing by the school with the physician's authorization is an additional alternative. (See § 3604 for billing by the provider for these services.)

B. The Provider Component.--Provider-based physicians often perform professional services other than those directly related to the medical care of individual patients. These may involve teaching, administrative, and autopsy services, and other services that benefit the provider's patients as a group. Such physician services, not directly related to an individual patient, if compensated, must be considered in computing reimbursable provider costs. Reimbursement for such costs is made under Part A where they relate to inpatient services and under Part B where they relate to outpatient services and inpatient ancillary services where Part A coverage has been exhausted. (See § 3910 on distinguishing between professional and provider components for reimbursement purposes.)

C. The Roles of the Fiscal Intermediary and Carrier.--The provider's Part A intermediary will obtain from the provider the information that it and the Part B carrier need to make payment determinations where the services of provider-based physicians are involved. The Part A intermediary has the responsibility for reviewing and approving the reasonableness of the agreement between provider and physician on the allocation of physician compensation (received from or through the provider) between (1) the portion attributable to provider services, i.e., services to the institution and (2) the portion attributable to physician services, i.e., identifiable services rendered by the physician to individual patients. If the provider and physician fail to agree or if their agreement appears unreasonable, the Part A intermediary and the Part B carrier will jointly assist in resolving the issue. (§ 3912.1A) The Part B carrier is responsible for review and approval, in accordance with the applicable principles, of the basis for Part B charges for services of provider-based physicians, i.e., the schedule of such charges if the item-by-item method of determination is used, the uniform percentage if the optional method of determination is used, or the unit charge if the per diem or per visit method is used.

3145.1 Health Care Prepayment Plans (HCPPs), Health Maintenance Organizations (HMOs) and Competitive Medical Plans (CMPs).--Reimbursement of Professional Component.--An HCPP, HMO or CMP may make a written agreement with a hospital, or with physicians in a hospital, to reimburse the professional component of the hospital-based physician's charge for services to plan members entitled to Part B.

The hospital or physician agrees to provide services in return for a reasonable payment based on a stipulated amount. Billing is made directly to the plan. If the hospital bills, it may use any formal billing form normally used for this purpose. If the physician bills, he may use his personal billing form, or if he prefers, the Medicare billing form. The plan will arrange the billing method with the hospital and physicians and will verify that the physicians have authorized the hospital to bill for them. The plan will make reimbursement directly to the hospital or the physician based upon the stipulated amount.

Where a hospital has an arrangement with a group practice prepayment plan to provide services to the plan's members, and bills the plan, it will not submit a bill to the intermediary for the professional component for in-hospital or outpatient services provided by its salaried physicians.

Plans which have or propose to make these arrangements have been instructed to work closely with the hospital's intermediary to assure proper processing and payment of bills.

These arrangements do not alter existing instructions for determining provider costs of hospital-based physician services.

This procedure will not be used by HMOs and CMPs that have a risk contract with HCFA. All Part B nonprovider bills must be processed by the risk HMO/CMP except in the case where the enrolled member has selected the Hospice option.

3145.2 Preadmission Diagnostic Services Furnished at Hospital to Which Patient is Admitted.--(Effective only for otherwise covered services furnished after December 4, 1980, and before July 19, 1984.) Reimbursement is made under Part B for the full reasonable charge for otherwise covered physicians' services that are preadmission diagnostic services furnished on an outpatient basis in a qualified hospital, if the patient is admitted to that same hospital within 7 days and the physician agrees to accept assignment for all preadmission diagnostic services that he furnishes. This means that 100 percent reimbursement is made for the reasonable charges for such services, not subject to the coinsurance, regardless of whether inpatient benefits are payable. (These services remain subject, however, to the Part B deductible.)

NOTE: A qualified hospital, including a tuberculosis or psychiatric hospital, is a hospital that meets all of the conditions of participation. All participating hospitals are considered qualified hospitals. Assume that a nonparticipating hospital is not a qualified hospital unless there is evidence to the contrary, in which event request verification of the status of the institution from the appropriate RO.

A. Covered Services.--Physicians' services may be paid in full subject to the conditions described in the following paragraphs.

B. Reasonableness and Necessity.--The services must be reasonable and necessary as specified in § 3151. Also see Coverage Issues Appendix 50-28.

C. Inpatient Status.--Since preadmission diagnostic services may be paid in full only if the patient is admitted as an inpatient within 7 days, the usual requirements to establish inpatient status apply. See §§ 3101 and 3112.3D.

D. Conditions of Payment.--Preadmission diagnostic services must be:

1. Essential to the administration and interpretation of a diagnostic test, study or procedure;

2. Furnished within 7 calendar days prior to the date of the patient's admission to the hospital as an inpatient; and

3. Services which would have had to be performed after the admission if they had not been performed prior to the admission.

Additionally, the results of the testing must be available at the time of the patient's admission.

Such services as taking patients' histories or performing routine physical examinations are not "preadmission diagnostic services." Consultations by physician specialists to interpret test results and to decide whether or not additional tests are needed may fall within the definition of "preadmission diagnostic services," however.

These conditions are intended to permit payment for otherwise covered preadmission diagnostic services in connection with admissions for both medical and surgical treatment, as well as when the patient is admitted for diagnostic study.

If services are found not to meet the criteria for preadmission diagnostic services, but are reasonable and necessary, they may be paid at the usual 80 percent rate, and waiver of liability does not apply, as explained in F, below.

E. Reimbursement.--Use the regular reasonable charge process to determine the amount payable to physicians for preadmission diagnostic services, including existing guidelines to deal with special situations such as those involving medical complications and rare and unusual procedures.

F. Waiver of Liability.--Waiver of liability does not apply to a finding that services are not preadmission diagnostic services. That is, if payment of 80 percent of the reasonable charge is allowed, waiver does not apply.

3145.3 Agreement to Accept Assignment.--Carriers were previously instructed to notify physicians of the preadmission diagnostic services provision. In addition, they were instructed to advise physicians to furnish certain specific items of information with claims for services that could possibly meet the requirements of this provision and be reopened for full payment at a later date. Thus, for services which meet the requirements of § 3145.2 for full payment (or would meet those requirements if all or part of the deductible were not applicable), each claim which is reopened for full payment must include the following elements:

1. The place of services (hospital outpatient department) and the name and address of the hospital where the services were performed;

2. The date of the patient's admission to that hospital;

3. The date of each service performed on an outpatient basis in that hospital;

4. A notation on the claim form as follows: "preadmission diagnostic services;" and

5. An indication of agreement by the physician (or by a hospital, medical group or other entity when authorized to bill and receive payment for the services in its name—see §§ 3604.1ff.) to accept assignment for the preadmission diagnostic services on that particular claim and for all such services for which payment under the preadmission diagnostic services provision is claimed.

3146 RADIOLOGICAL AND PATHOLOGICAL SERVICES FURNISHED TO HOSPITAL INPATIENTS

Prior to the Omnibus Reconciliation Act of 1980 (P.L. 96-499), the Medicare Part B program in all cases paid 100 percent of the reasonable charges (no deductible and coinsurance) for physicians' radiological and pathological services covered under Part B, furnished to an inpatient of a qualified hospital by a physician in the field of radiology or pathology. Under the Omnibus Reconciliation Act, the Medicare Part B program pays 100 percent of the reasonable charges for such services only if the physician has in effect an agreement to accept Medicare Part B assignment for all such services he furnishes to hospital inpatients. If he does not have such an agreement in effect, the program pays 80 percent of the reasonable charges after the application of any unmet deductible.

The amendment is effective for services furnished after June 30, 1981. Radiological or pathological services furnished prior to July 1, 1981, to inpatients of qualified hospitals by physicians in the field of radiology or pathology will be reimbursed at the 100 percent rate in all cases even though the claim is filed after that date.

Expenses for which 100 percent of the reasonable charges are payable are not creditable to the Part B deductible, whether those expenses are incurred before July 1, or after June 30, 1981.

The definitions of such terms as "qualified hospital," "inpatient," radiological services," "pathological services," "field of radiology," and "field of pathology" are the same in applying the provisions in effect before July 1, and after June 30, 1981.

A qualified hospital is a hospital that meets all of the conditions of participation. All participating hospitals are considered qualified hospitals. Intermediaries and carriers may assume that a nonparticipating hospital is not a qualified hospital, unless they have information that raises a question as to the validity of that assumption. In the latter event, verification of the status of the institution should be requested from the appropriate regional office. The meaning of the other terms is explained below.

A. Inpatient Status, For 100 percent reimbursement to be made for services furnished by physicians in the field of radiology or pathology, the beneficiary must be an inpatient of a qualified hospital at the time the services are rendered. An inpatient is a person who has been admitted as an inpatient with the expectation that he will remain at least overnight and occupy a bed even though it later develops that he can be discharged or transferred to another hospital and does not actually use a bed overnight.

The beneficiary's relationship to the facility in which the physician furnishes the services does not affect the 100 percent reimbursement provision. For example, where an inpatient of a qualified hospital which is not equipped to provide radiation therapy is transported temporarily to another facility and returns the same day, the inpatient status is maintained.

In the case of services furnished before July 1, 1981, the method of billing does not affect the 100 percent reimbursement provision. The controlling factor is the inpatient status of the beneficiary. For example, in the case of a non-hospital-based radiologist who furnished radiology services to an inpatient of a qualified hospital, Part B reimbursement for services furnished before July 1, 1981, is at 100 percent whether the hospital or physician bills the program or the beneficiary. For 100 percent reimbursement to be made for physician radiology or pathology services to hospital inpatients after June 30, 1981, the person or entity doing the billing must enter into an agreement to accept assignment for all such services for which he or it is authorized to bill. See §§3146.1 - 3.46.2.

B. Billing for Radiological and Pathological Services Provided to Hospital Inpatients.--Subject to the requirements of §§3604.1ff and to the assignment agreement requirement that applies after June 30, 1981, a hospital and a physician are free to decide whether the charges for the physician's services are to be billed by the hospital or by the physician, as well as to determine the additional elements of the parties' financial arrangements with each other.

1. Where the physician has authorized the hospital to combine bill on his behalf, it will not be necessary, in most cases, to break down the bill into professional and hospital components on a patient-by-patient basis. The exceptions are situations in which:

a. the Part A expenses are less than the Part A deductible;
b. the patient is not enrolled under Part B; or
c. Part B, rather than Part A, benefits are involved.

Reimbursement for the combined charge will be made on an interim basis by the Part A intermediary from the Part A funds. Adjustments between the Part A and Part B trust funds will be made at the end of the hospital's fiscal year. Where the combined billing method is used, it must be used for the services of all radiologists or pathologists in the department. (See §3604.6)

2. Where a separate claim (HCFA-1554 or HCFA-1500) is filed by the hospital for the physician's services, reimbursement for the professional component is made from Part B funds by the carrier and is subject to adjustment as provided by §2108.7 of the Provider Reimbursement Manual. Reimbursement for the Part A component of these services is made by the intermediary.

3. A hospital-based physician in the field of radiology or pathology may, if he chooses, accept an assignment and submit a bill to the program, or may bill the beneficiary for the services furnished to the inpatient of a qualified provider. In the case of services furnished after June 30, 1981, one hundred percent reimbursement may be made, however, only where the physician has in effect the required agreement to accept assignments.

In some cases, the radiologist or pathologist may own or lease the equipment and bear some or all of the direct expenses of operating a hospital department. Where, under such an arrangement, the physician rather than the hospital bills patients and insurers, no allocation between Part A and Part B services is required, and the services are covered under Part B on a reasonable charge basis for 100 percent reimbursement for inpatients (subject after June 30, 1981, to the requirement for an agreement to accept assignments) and 80 percent (after the deductible) for outpatients and nonprovider patients. However, where the same conditions exist and the hospital bills for the physician services, Part A - Part B allocation must be made. The component representing physician compensation is reimbursed under Part B (at 80 or 100 percent depending on the status of the patient and, after June 30, 1981, on whether the hospital entered into the required agreement to accept assignments.) That is, program reimbursement is based on a determination of actual departmental costs rather than the physician's charges. (However, in this situation as indicated in 1 above, where the hospital uses the inpatient combined billing method, the Part A and Part B allocation would not be made on a claim by claim basis.)

C. Definition of Radiological and Pathological Services.—The term "radiological services" means services in which X-rays or rays from radioactive substances are used for diagnostic or therapeutic purposes. Such services include but are not limited to radium therapy, the use of radioisotopes for diagnostic or therapeutic purposes (as in nuclear medicine), and diagnostic tests such as angiograms, aortograms, pyelograms, myelograms, arteriograms, and ventriculograms, and ultrasonic diagnostic procedures performed before January 1, 1975. Effective with procedures performed after December 31, 1974, ultrasonic diagnostic procedures are not considered radiological services, i.e., the physician's charge for his professional service is subject to the applicable Part B deductible and coinsurance.

The term "pathological services" refers to services performed in both clinical and anatomical pathology. Included are microbiological, serological, chemical, hematological, biophysical, cytological, immunohematological, and pathological examinations performed on materials derived from the human body, to provide information for the diagnosis, prevention, or treatment of a disease or assessment of a medical condition.

Such tests as basal metabolism rate tests, electroencephalograms, and electrocardiograms are considered to be neither radiological nor pathological services. Therefore, reimbursement for such tests can be made only at the 80 percent rate after recognition of the deductible, and the combined billing method may not be used for such services rendered to hospital inpatients.

D. Field of Radiology or Pathology.—Reimbursement can be made at the 100 percent rate for only those radiological and pathological services performed by physicians in the fields of radiology and pathology. A physician in the "field of radiology or pathology" includes not only a specialist in one of those fields, i.e., a radiologist or a pathologist, but also a physican who normally performs or supervises the radiological or pathological services for all of the patients of a particular hospital, even though the physician does not otherwise specialize in radiology or pathology. An example of this situation is a small hospital which has no radiologist but designates a physician to handle or supervise the hospital's radiological procedures. The full reasonable charge for the radiological services of this physician rendered in such a capacity could be covered. (In addition, it is not always necessary that a physician perform the full range of radiological services for the 100 percent reimbursement provision to be applicable. A physician can be considered in the field of radiology if he normally performs one or more types of covered radiological services for the inpatients of a particular hospital. For example, where a neurosurgeon possesses equipment with which he performs a particular covered diagnostic radiological service for all the patients of a hospital who require the service, the neurosurgeon would be considered a physician in the field of radiology.) On the other hand, the reading of an X-ray film as part of his usual services for his own patients by, for example, an attending physician or a surgeon would normally be covered only as regular physician's services; i.e., the basis for reimbursement would be 80 percent of the reasonable charge, subject to the deductible.

E. Status of Independent Laboratory.—An independent laboratory is by definition independent of a physician's office or a hospital. It is not considered "a physician in the field of radiology or pathology" even where it is physician-directed and provides services requiring performance by a physician. (A radiological facility is not considered an "independent laboratory" for program purposes.) Where an independent laboratory provides diagnostic laboratory services to patients (including hospital inpatients) and bills the patient or program directly, the services are reimbursable at 80 percent of the reasonable charge, subject to the deductible.

A provider, however, may purchase the services of an independent laboratory for its patients "under arrangements," in which case the program reimburses on the basis of reasonable provider costs. For example, where a hospital obtains such services for its inpatients, the services are covered under Part A (regardless of whether the laboratory is physician-directed) and are reimbursable at 100 percent of the reasonable cost. (A hospital may not purchase services "under arrangements" from a leased laboratory on its premises.) In the case of services obtained by a hospital from a noncertified independent laboratory, see § 3101.5C.

3146.1 Who Must Execute the Agreement—The agreement to accept assignment (as required after June 30, 1981) for all radiological or pathological services furnished by a physician to hospital inpatients must be filed by:

A. The physician, with respect to those services for which he bills and receives payment in his own name.

B. The hospital, medical group, or other entity, with respect to those services for which it is authorized to bill and receive payment in its name.

3146.2 Scope of the Agreement.—

A. Physician Bills in His Own Name.—For full payment to be made directly to a physician in the field of radiology for his covered physician radiological services furnished to inpatients of qualified hospitals, he must agree to accept assignment for all such services for which he bills and receives payment in his own name.

For full payment to be made directly to a physician in the field of pathology for his covered physician pathological services furnished to inpatients of qualified hospitals, he must agree to accept assignment for all such services for which he bills and receives payment in his own name.

B. Hospital, Medical Group, or Other Entity Bills for Physician Services.—For full payment to be made to a hospital, medical group, or other entity for covered physician radiological services furnished to inpatients of qualified hospitals by physicians in the field of radiology, the entity must agree to accept assignment for all such services for which the entity is authorized to bill and receive payment in its name.

For full payment to be made to a hospital, medical group, or other entity for covered physician pathological services furnished to inpatients of qualified hospitals by physicians in the field of pathology, the entity must agree to accept assignment for all such services for which the entity is authorized to bill and receive payment in its name.

A hospital may not use the combined billing procedure for either radiological or pathological services unless it has in effect the agreement described in this subsection with respect to services in that field.

C. Examples of the Rules in A and B.—

EXAMPLE 1: A radiologist provides radiological and other services in Hospital A and Hospital B. He bills in his own name for his services in Hospital A and has entered into a contractual arrangement with Hospital B giving it the right to bill and receive payment for his radiological services in that hospital. He files an agreement to accept assignment in all cases for the radiological services for which he bills in his own name. Hospital B does not file such an agreement with respect to the physician radiological services for which it has the right to bill and receive payment. Medicare Part B pays the physician 100 percent of the reasonable charges for his covered radiological services to inpatients of Hospital A but all Medicare payments for the physician's services to inpatients in Hospital B are subject to deductible and coinsurance.

EXAMPLE 2: Same facts as in EXAMPLE 1 but Hospital B files the agreement to accept assignment from all inpatients for the physician radiological services for which it has the right to bill and receive payment but the physician does not file such an agreement with respect to the radiological services - in Hospital A - for which he bills and receives payment. Medicare Part B pays Hospital B 100 percent of the reasonable charges for the physician's covered radiological services to inpatients of Hospital B but the Medicare Part B payments for the physician's services to inpatients of Hospital A are subject to deductible and coinsurance.

EXAMPLE 3: A physician who engages in general practice in two small rural hospitals A and B also undertakes to provide the pathological services in those hospitals. He bills for his services in the field of general practice in his own name while Hospital A and Hospital B have the contractual right to bill and receive the payments for his pathological services in the respective hospitals. Hospital A, but not Hospital B, files an agreement to accept assignment in all cases with respect to physician pathological services that are furnished to hospital inpatients and for which it has the right to bill and receive payment. Medicare Part B pays Hospital A 100 percent of the reasonable charges for the covered physician pathological services furnished by the physician to inpatients of that hospital while all payments for such services in Hospital B are subject to deductible and coinsurance.

D. Requirements for Payment to an Entity for Physician Services.—The requirements for payment to a hospital, medical group, or other entity for a physician's services are stated in §§3604.1ff. Among other requirements, the contractual arrangement between the entity and the physician must apply to all or a well-defined category of his services. That category must be consistent with proper determination of Part B reimbursement and may not be based on whether the patient has Medicare or the entity accepts assignment.

3146.3 Language of the Agreement.—

A. Physician Bills in His Own Name. The following language must be used for the agreement to accept assignments, if the physician bills in his own name:

Name of Physician Identification Number

> As a condition for receiving direct payment from the Medicare Part B program of 100 percent of Medicare approved charges for covered physician (radiological or pathological) services which I furnish to inpatients of qualified hospitals and for which I bill and receive payment in my own name, I agree to accept Medicare Part B assignment with respect to all such services for which I bill and receive payment in my own name. Under the terms of an assignment, the Medicare approved charge is the full charge for the service. The agreement shall be effective with services furnished on or after . (The physician shows here the date he desires, subject to the condition that such date be no earlier than the day the agreement is mailed or handed over to a Medicare carrier having jurisdiction of claims for services included in the agreement and no later than the 90th day thereafter.) I agree to submit no claims for services included in the agreement to a carrier until the carrier has acknowledged in writing that it has received the agreement and accepted the specified effective date. The agreement shall cease to be effective with services furnished more than 15 days after a carrier having jurisdiction of claims included in the agreement receives my written request for revocation of the agreement.

(Signature) (Date)

Address:

Separate agreements should be entered into for radiology and pathology in the rare event the physician practices in both fields.

B. Hospital, Medical Group, or Other Entity Accepts Assignment on a General Basis for Inpatient Services by Radiologists or Pathologists.—The following language must be used for the agreement if a hospital, medical group, or other entity wishes to enter into an agreement to accept assignments for services which are furnished to hospital inpatients by physicians practicing in the field of radiology or pathology and for which the entity is authorized to bill and receive payment:

Name of Entity Identification Number

As a condition for receiving direct payment from the Medicare Part B program of 100 percent of Medicare approved charges for covered physicians' (radiological or pathological) services which are furnished to inpatients of qualified hospitals by physicians in the field of (radiology or pathology) and for which (name of entity), hereafter called "the entity," is authorized to bill and receive payment in its name, the entity agrees to accept Medicare Part B assignment with respect to all such services for which the entity is authorized to bill and receive payment in its name. Under an assignment, the Medicare approved charge is the full charge for the service. This agreement shall be effective with services furnished on or after . (The entity shows here the date it desires, subject to the condition that such date be no earlier than the day the agreement is mailed or handed over to a Medicare carrier or intermediary having jurisdiction of claims for services included in the agreement and no later than the 90th day thereafter.) The entity agrees to submit no claims for services included in the agreement to a carrier or intermediary until the carrier or intermediary has acknowledged in writing that it has received the agreement and accepted the specified effective date. The agreement shall cease to be effective with services furnished more than 15 days after a carrier or intermediary having jurisdiction of claims included in the agreement receives the entity's written request for revocation of the agreement.

____
(Signature of authorized official of entity)

____
(Date)

____
(Title)

Address of entity:

Separate agreements should be entered into for radiology and pathology.

3146.4 Where Agreement Should Be Filed.--The agreement to accept assignments for physician radiological or pathological services to hospital inpatients must be filed with a Medicare contractor (carrier or intermediary) having jurisdiction of claims for which 100 percent payment may be made under the agreement. (The term "Medicare contractor" includes HCFA's Office of Direct Reimbursement or Group Health Plans Operations Staff where that Office or Staff has jurisdiction.)

A hospital should file the agreement with its intermediary with respect to those services for which it uses the combined billing procedure and with the carrier with respect to those services for which it bills on HCFA-1554 or HCFA-1500 (and on HCFA-1490 as long as claims are filed on this form). A physician, medical group, or other carrier dealing entity should file its agreement with its area carrier. (See §3146.8B for the agreement requirements for carrier and direct dealing group practice prepayment plans (GPPPs) and Health Maintenance Organizations (HMOs)). In all cases, the person or entity filing the agreement should address it to the contractor, Attention: Medicare Program Section 943 Agreement. If a physician (or carrier dealing entity) submits claims to more than one area carrrier (e.g., because he has offices in more than one carrier's jurisdiction), he should file the agreement with the carrier to which he expects to submit the most claims for full payment and note on the agreement the other area carrier(s) to which he expects to submit such claims and the addresses of his offices in the other carrier jurisdiction(s).

3146.5 Effective Date of the Agreement and Contractor Action on Receiving It.--The agreement to accept assignments shall be effective with services furnished on or after the date the physician, or the entity entitled to bill and receive payment for physician services, specifies in the agreement, subject to the following conditions:

1. The date specified may be no earlier than the day on which the physician or entity mails or hands the agreement over to a carrier or intermediary having jurisdiction of claims included in the agreement and no later than the 90th day after that day; and

2. The physician or entity agrees to submit no claims to a carrier or intermediary for services included in the agreement until that carrier or intermediary has acknowledged in writing that it has received the agreement and accepted the specified effective date.

These requirements will enable physicians and entities to make their agreements effective immediately but preclude the submission of claims until the contractors have had the opportunity to reflect the filing of the agreements in their systems.

The Medicare contractor that receives the agreement must ordinarily immediately annotate it, preferably by stamp, with the following statement, which should be initialed:

Received by (name of contractor) (date)

Effective (date specified in the agreement)

Where an agreement with an acceptable effective date is filed with the area carrier, that carrier will immediately send a photocopy of the annotated agreement to any other area carrier noted in the agreement and to the Travelers Insurance Company, Railroad Retirement Board Claims Office for the region(s) in which the physician's or entity's office(s) are located. In Oklahoma, the area carrier, Aetna Life and Casualty, will also send a copy to the Oklahoma Department of Public Welfare. When a contractor sends a copy of the agreement to another contractor, it should address the copy to the contractor: Medicare Program Section 943 Agreement.

Each contractor receiving a copy of the annotated agreement from another contractor should also annotate it in the same manner as the original contractor. (Each annotation will show a different contractor but the same effective date.)

After a contractor that received a copy of the agreement either directly or indirectly from a physician or entity has processed the agreement into its system (see §3146.9A), it should send a photocopy of the annotated agreement back to the physician or entity that submitted the agreement. Thus, the physician or entity will receive an annotated copy of the agreement from each contractor having jurisdiction of his or its claims.

3146.6 Termination of Agreement.—A physician, hospital, medical group or other entity may revoke its agreement to accept assignments by filing a written revocation request with the contractor having jurisdiction of claims for which full payment may be made under the agreement (the intermediary in the case of a hospital doing combined billing for the services, the area carrier in other cases). The revocation is ordinarily effective for services furnished more than 15 days after the request is received by the contractor. However, the physician or entity revoking the agreement and the carrier or intermediary may establish a later effective date for the termination, by mutual consent.

The physician or entity should address the request for revocation to the contractor, Attention: Medicare Program Section 943 Agreement. A physician (or carrier dealing entity) filing a revocation request should note thereon any other area carrier(s) to which he submits claims for full payment, giving the address of his office(s) in the other carrier jurisdiction(s).

The Medicare contractor that receives the revocation request must immediately annotate it, preferably by stamp, with the following statement, which should be initialed:

> "Received by (name of contractor) (date)
>
> Effective date (16th day after date of receipt)."

The contractor should then immediately send a photocopy of the annotated revocation request back to the physician or entity that submitted the agreement.

The area carrier with which a revocation request is filed will also send a photocopy of the annotated revocation request to the other carriers noted on the revocation or in its files as being area carriers to which the physician or entity submits claims for full payment and to the Travelers Insurance Company, Railroad Retirement Board Claim

Office for the region(s) in which the physician's or entity's office(s) are located. In Oklahoma, the area carrier, Aetna Life and Casualty, will also send a copy to the Oklahoma Department of Public Welfare. When a contactor sends a copy of the revocation request to another contractor, it should address the copy to the other contractor, Attention: Medicare Program Section 943 Agreement.

3146.7 Physician or Entity Moves.—An agreement to accept assignments remains in effect if a physician (or entity) changes contractor jurisdiction. If there is such a change, the physician (entity) should furnish the new contractor with a copy of his annotated agreement before submitting any claims to that contractor.

3146.8 Submission of Claims Under Agreement.—

A. General.-The agreement to accept assignments does not change the procedures for submitting claims or the information to be shown on claims. Moreover, even though a physician (or entity) has entered into an agreement to accept assignments for certain services on a continuing basis, he should still indicate acceptance of assignment on the individual claims where this is called for by the claim form.

B. Group Practice Prepayment Plans (GPPPs) and Health Maintenance Organizations (HMOs).—Most GPPPs and HMOs permit physician radiological and pathological services that are furnished on an inpatient hospital basis to plan members who are Part B enrollees to be billed by the physician or medical group to the member or the carrier, or by the hospital to the intermediary or carrier, rather than to the GPPP or HMO. Only those GPPPs and HMOs that provide for those services to be billed to the GPPP or HMO must enter into an agreement under these instructions, in order for the GPPP or HMO to obtain the 100 percent reimbursement. The agreement should be filed by a carrier dealing GPPP with its carrier and by a direct dealing GPPP or HMO with the Group Health Plans Operation Staff, HCFA.

3146.9 Carrier and Intermediary Action.—

A. Payment controls.—Carriers and intermediaries must "flag" their systems with the necessary information to insure proper payment action on claims under their jurisdiction for radiological and pathological services furnished to hospital inpatients. This information would include the identification of the physician or entity which executed the agreement, whether radiology or pathology is involved, the effective date of the agreement, and, if the agreement has been terminated, its termination date.

B. Recordkeeping.—Each carrier and intermediary should maintain a file on each physician and entity under its jurisdiction which has entered into the agreement(s) required for the contractor to make full payment to that physician or entity for radiological and/or pathological services. That file should include the agreement(s), revocation requests and any related correspondence.

Outpatient Physical Therapy, Occupational Therapy, and Speech Pathology Services

3147. COVERAGE OF OUTPATIENT PHYSICAL THERAPY, OCCUPATIONAL THERAPY, AND SPEECH PATHOLOGY SERVICES.

Coverage of outpatient physical therapy, occupational therapy, and outpatient speech pathology services under Part B includes such services furnished by or under arrangements made by a participating provider of services. For the purpose of this coverage, the term "provider of services" includes approved clinics, rehabilitation agencies, and public health agencies as well as participating hospitals, SNFs, and HHAs. Reimbursement for these outpatient services is made to the provider on a reasonable cost basis. The patient is responsible only for the regular Part B deductible and coinsurance amounts (i.e., the annual deductible and 20 percent coinsurance).

NOTE: Although coverage is available for a limited amount of physical or occupational therapy services furnished a patient by a physical or occupational therapist as an independent practitioner, no similar coverage exists for speech pathology services furnished by a speech pathologist as an independent practitioner.

3147.1 Services Furnished Under Arrangements With Providers.--A provider may make arrangements with others to furnish covered outpatient physical therapy, occupational therapy, or speech pathology services. When such arrangements are made, receipt of payment by the provider for the arranged services must (as with services provided directly) relieve the beneficiary or any other person of further liability to pay for the services. (See § 3007.)

See § 3149 for the special provisions relating to arrangements for outpatient physical therapy services that may be made by public health agencies and hospitals in rural communities.

3148. CONDITIONS FOR COVERAGE OF OUTPATIENT PHYSICAL THERAPY, OCCUPATIONAL THERAPY, OR SPEECH PATHOLOGY SERVICES.

To be reimbursable under the Medicare program, outpatient physical therapy, occupational therapy, or speech pathology services furnished a beneficiary by a participating provider must meet all of the conditions set forth in § 3101.8 A, B, and C, 3101.9 A, B, and C, or 3101.10A and the following requirements:

3148.1 Physician's Certification and Recertification.--(See §§ 3322 and 3350.)

3148.2 Outpatient Must be Under the Care of a Physician.--Outpatient physical therapy, occupational therapy, or speech pathology services must be furnished to an individual who is under the care of a physician. There must be evidence in the clinical record of the patient that he has been seen by a physician at least every 30 days. If the patient has not been seen by the physician within a 30-day period, the provider is responsible for contacting the physician. This physician may be the patient's private physician, or a physician on the staff of the provider, or a physician associated with an institution which is the patient's residence, or a physician associated with a medical facility in which the patient is an inpatient. The attending physician establishes or

best copy available

reviews the plan of treatment and also makes the necessary certifications. A plan of treatment may be established by either the physician or the qualified physical therapist, occupational therapist, or speech pathologist who will be providing such services. However, the physician still must make the necessary certifications (see §§ 3148.3 and 3148.4).

3148.3 Outpatient Physical Therapy, Occupational Therapy or Speech Pathology Services Furnished Under a Plan.--Outpatient physical therapy, outpatient occupational therapy, or outpatient speech pathology services must be furnished under a written plan of treatment established by:

- a physician after any necessary consultation with the physical therapist, occupational therapist, or speech pathologist, as appropriate;
- the physical therapist who will provide the physical therapy services;
- the occupational therapist who will provide the occupational therapy services; or
- the speech pathologist who will provide the speech pathology services.

The plan must be established (that is, reduced to writing either by the person who established the plan or by the provider when it makes a written record of that person's oral orders) before treatment is begun. The plan should be promptly signed by the ordering physician, therapist, or pathologist and incorporated into the provider's permanent record for the patient.

The plan must relate the type, amount, frequency, and duration of the physical therapy, occupational therapy, or speech pathology services that are to be furnished the patient and indicate the diagnosis and anticipated goals. Any changes to this plan must be made in writing and signed by the physician, therapist, or pathologist. Changes to the plan may also be made pursuant to oral orders given by the attending physician to a qualified physical therapist (in the case of physical therapy services), a qualified occupational therapist (in the case of occupational therapy services), a qualified speech pathologist (in the case of speech pathology services), a registered professional nurse, or a physician on the staff of the provider.

Changes to such plans also may be made pursuant to oral orders given by the pathologist to another qualified speech pathologist, by the occupational therapist to another qualified occupational therapist, or by the physical therapist to another qualified physical therapist, or by the therapist or pathologist to a registered professional nurse on the staff of the provider. Such changes must be immediately recorded in the patient's records and signed by the individual receiving the orders. While the physician may change a plan of treatment established by the pathologist or therapist providing such services, the therapist or pathologist may not alter a plan of treatment established by a physician.

The plan must be reviewed by the attending physician, in consultation with the physical therapist(s), occupational therapist(s), or speech pathologist(s) of the provider, at such intervals as the severity of the patient's condition requires, but at least every 30 days. Each review of the plan should contain the initials of the physician and the date performed. The patient's plan normally need not be forwarded to the intermediary for review but will be retained in the provider's file. The provider must certify on the billing form that the plan is on file (see §§ 3120.3, 3640.8-Item 22, and 3640.9).

3148.4 Requirement That Services be Furnished on an Outpatient Basis.--Outpatient physical therapy, occupational therapy, and speech pathology services are covered when furnished by a provider to its outpatients, i.e., to patients in their homes, to patients who come to the facility's outpatient department, or to inpatients of other institutions. In addition, coverage includes physical therapy, occupational therapy, and speech pathology services furnished by participating hospitals and SNFs to those of their inpatients who have exhausted their Part A inpatient benefits or who are otherwise not eligible for Part A benefits. Providers of outpatient physical therapy, occupational therapy, and speech pathology services that have inpatient facilities, other than participating hospitals and SNFs, may not furnish covered outpatient physical therapy, occupational therapy, or speech pathology services to their own inpatients.

However, since the inpatients of one institution may be considered the outpatients of another institution, all providers of outpatient physical therapy, occupational therapy, and speech pathology services may furnish such services to inpatients of another health facility. It should be noted that the certified distinct part of an institution is considered to be a separate institution from a nonparticipating remainder. Consequently, when only part of an institution is certified as a participating provider of services, that certified distinct part may render covered outpatient physical therapy, occupational therapy, or speech pathology services to the inpatients of the noncertified remainder. The certified part must bill the program under Part B for outpatient physical therapy, occupational therapy, and speech pathology services it furnishes to inpatients of the noncertified part.

While outpatient physical therapy, occupational therapy and speech pathology are covered when furnished in the home, when added expense is caused by a visit to the home, a question must be raised as to whether the rendition of the service in the home is reasonable and necessary. Where the patient is not confined to his home, such added expense cannot be considered as reasonable and necessary for the treatment of an illness or injury since the home visit is substantially more costly than the medically appropriate and realistically feasible alternative pattern of care; e.g., in the facility's outpatient department. Consequently, these additional expenses incurred by providers due to travel to a person who is not homebound are not covered.

Under the Medicare law, there is no authority to require a provider to furnish a type of service. Therefore, a hospital or SNF may furnish physical therapy, occupational therapy, or speech pathology to its inpatients without having to set up facilities and procedures for furnishing those services to its outpatients. However, if the provider chooses to furnish a particular service, it is bound by its agreement not to charge any individual or other person for items or services for which the individual is entitled to have payment made under the program. Thus, whenever a hospital or SNF furnishes outpatient physical therapy, occupational therapy, or speech pathology to a Medicare beneficiary (either directly or under arrangements with others) it must bill the program under Part B and may only charge the patient for the applicable deductible and coinsurance.

3149. OUTPATIENT PHYSICAL THERAPY SERVICES FURNISHED IN THE OFFICE OF AN INDEPENDENTLY PRACTICING PHYSICAL THERAPIST UNDER ARRANGEMENTS MADE BY A PUBLIC HEALTH AGENCY OR HOSPITAL IN RURAL COMMUNITIES.

Where the provider is a public health agency or a hospital in a rural community, it may enter into arrangements to have outpatient physical therapy services furnished in the private office of a qualified physical therapist if the agency or hospital does not have the capacity to provide on its premises all of the modalities of treatment, tests, and measurements that are included in an adequate outpatient physical therapy program and the services and modalities which the public health agency or hospital cannot provide on its premises are not available on an outpatient basis in another accessible certified provider.

General Exclusions From Coverage

3150. GENERAL EXCLUSIONS.

No payment can be made under either the hospital insurance or supplementary medical insurance program for certain items and services.

A. Not reasonable and necessary (S 3151);

B. No legal obligation to pay for or provide (S 3152);

C. Paid for by a governmental entity (S 3153);

D. Not provided within United States (S 3154);

E. Resulting from war (S 3155);

F. Personal comfort (S 3156);

G. Routine services and appliances (S 3157);

H. Excluded foot care services and supportive devices for feet (S 3158);

I. Custodial care (S 3159);

J. Cosmetic surgery (S 3160);

K. Charges by immediate relatives or members of household (S 3161).

L. Dental services (S 3162)

M. Paid or expected to be paid under workers' compensation (S 3163).

N. Nonphysician services provided to a hospital inpatient which were not provided directly or arranged for by the hospital (S 3164).

3151. SERVICES NOT REASONABLE AND NECESSARY.

Items and services which are not reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member are not covered.

3151.1 Devices Not Approved by FDA.--Medical devices which have not been approved for marketing by the Food and Drug Administration (FDA) are considered investigational by Medicare and are not reasonable and necessary for the diagnosis or treatment of illness or injury, or to improve the functioning of a malformed body member. Program payment, therefore, may not be made for medical procedures or services performed using devices which have not been approved for marketing by FDA.

3152. NO LEGAL OBLIGATION TO PAY FOR OR PROVIDE SERVICES.

Program payment may not be made for items or services which neither the beneficiary nor any other person or organization has a legal obligation to pay for or provide. This exclusion applies where items and services are furnished gratuitously without regard to the beneficiary's ability to pay and without expectation of payment from any source, such as free X-rays or immunizations provided by health organizations. However, Medicare reimbursement is not precluded merely because a provider, physician, or supplier waives the charge in the case of a particular patient or group or class of patients, as the waiver of charges for some patients does not impair the right to charge others, including Medicare patients. The determinative factor in applying this exclusion is the reason the particular individual is not charged.

The following sections illustrate the applicability of this exclusion to various situations involving services other than those paid for directly or indirectly by a governmental entity. (For a discussion of the latter, see § 3153.)

A. Indigency.--This exclusion does not apply where items and services are furnished an indigent individual without charge because of his inability to pay, if the provider, physician, or supplier bills other patients to the extent that they are able to pay.

B. Provider, Physician, or Supplier Bills Only Insured Patients.--Some providers, physicians, and suppliers waive their charges for individuals of limited means, but they also expect to be paid where the patient has insurance which covers the items or services they furnish. In such a situation, because it is clear that a patient would be charged if insured, a legal obligation to pay exists and benefits are payable for services rendered to patients with medical insurance if the provider, physician, or supplier customarily bills all insured patients--not just Medicare patients--even though non-insured patients are not charged.

Individuals with conditions which are the subject of a research project may receive treatment financed by a private research foundation. The foundation may establish its own clinic to study certain diseases or it may make grants to various other organizations. In most cases, the patient is not expected to pay for his treatment out-of-pocket, but if he has insurance, the parties expect that the insurer will pay for the services. In this situation, a legal obligation is considered to exist in the case of a Medicare patient even though other patients may not have insurance and are not charged.

C. Medicare Patient Has Other Health Coverage.--Except as provided in §§ 3419ff., 3490ff. and 3491ff., payment is not precluded under Medicare even though the patient is covered by another health insurance plan or program which is obligated to provide or pay for the same services. This plan may be the type which pays money toward the cost of the services, such as a health insurance policy, or it may be the type which organizes and maintains its own facilities and professional staff. Examples of this latter type are employer and union sponsored plans which furnish services to special groups of employees or retirees or to union members, and group practice prepayment plans.

The exceptions to this rule are services covered by automobile medical or no-fault insurance (§§ 3419ff.), services rendered during a specified period of up to 12 months to individuals entitled solely on the basis of end stage renal disease who are insured under an employer group health plan (§§ 3490ff.) and services rendered employed individuals age 65 or over and spouses age 65 or over of employed individuals of any age who are insured under an employer group health plan (§§ 3491ff.) and services covered by workers' compensation. (See §§ 3407ff.) In these cases, the other plan pays primary benefits and if the other plan does not pay the entire bill, secondary Medicare benefits may be payable. Medicare is also secondary to the extent that services have been paid for by a liability insurer. (See §§ 3419ff.)

D. Items Covered Under Warranty.—When a defective medical device such as a cardiac pacemaker is replaced under a warranty, hospital or other provider services rendered by parties other than the warrantor are covered despite the warrantor's liability. However, consider recovering Medicare payment for such services under the liability insurance provisions in §§3419ff.

With respect to payment for the device itself, under cost reimbursement the following rules apply: If the device is replaced free of charge by the warrantor, no program payment may be made, since there was no charge involved. If, however, a replacement device from another manufacturer had to be substituted because the replacement device offered under the warranty was not acceptable to the beneficiary or his physician, payment may be made for the replaced device. Also, if the warrantor supplied the replaced device, but some charge or pro rata payment was imposed, program payment may be made for the partial payment imposed for the device furnished by the warrantor.

If a hospital could have obtained an acceptable device free of charge under a warranty but chose to purchase one instead, payment cannot be made for the purchased device under the prudent buyer rules. (See Provider Reimbursement Manual, Part 1, §2103.) Also, if an acceptable device could have been purchased at a reduced price under a warranty but the hospital did not take advantage of the warranty (i.e., it paid the full price to the original manufacturer or purchased the replacement device from a different manufacturer), the most the hospital can receive as reimbursement for the purchased device is the amount it would have had to pay if it had pursued the warranty.

While payments to a hospital for inpatient services under the prospective payment system (PPS) are not reduced to reflect collections by the provider under warranty provisions for medical devices, cost-based reimbursed hospitals and exempt units are subject to the prudent buyer rules.

E. Members of Religious Orders.--A legal obligation to pay exists where a religious order either pays for or furnishes services to members of the order. Although medical services furnished in such a setting would not ordinarily be expressed in terms of a legal obligation, the order has an obligation to care for its members who have rendered life-long services, similar to that existing under an employer's prepayment plan. Thus, payment may be made for such services whether they are furnished by the order itself or by independent sources that customarily charge for their services.

3153. ITEMS AND SERVICES FURNISHED, PAID FOR OR AUTHORIZED BY GOVERNMENTAL ENTITIES--FEDERAL, STATE OR LOCAL GOVERNMENTS.

The law contains three separate exclusions applicable to items and services furnished, paid for or authorized by governmental entities. In general payment may not be made for items and services: (1) furnished by a provider (Governmental or nongovernmental) or other person at public expense pursuant to an authorization issued by a Federal agency (§3153.1); (2) furnished by a provider of services or agency of the Federal government (§3153.2); and (3) paid for directly or indirectly by a Federal, State, or local governmental entity (§3153.3). Apply each of these exclusions separately, i.e., benefits are excluded where any one of the exclusions applies.

3153.1 Items and Services Which a Non-Federal Provider Furnishes Pursuant to an Authorization Issued by a Federal Agency.--

A. VA Authorized Services.—Medicare does not pay for any item or service rendered by a non-Federal provider pursuant to an authorization issued by a Federal agency, under the terms of which the Federal government agrees to pay for the services.

The VA may authorize non-Federal providers to render services at Federal expense. For example, the VA may pay for treatment of veterans in non-VA hospitals for service-connected disabilities and, in certain circumstances, for nonservice-connected disabilities, provided the VA has given prior authorization for the services. The VA may also agree to pay for emergency services furnished a veteran who appears at a hospital without prior authorization, provided a notification of the veteran's admission and a request for authorization to provide care at VA expense is submitted to the VA within 72 hours after the admission.

The VA may authorize up to 6 months of care in non-VA SNFs for veterans requiring such care after transfer from a VA hospital. Services furnished pursuant to a VA authorization do not count against the 100 days of extended care benefits available in a spell of illness. Where a veteran remains in an SNF until his VA benefits are exhausted, extended care benefits could begin under Medicare. Such benefits begin with the first day after the VA benefits are exhausted, provided a physician certifies that the individual still requires skilled nursing care on a continuing basis for a condition for which he received inpatient hospital services or which arose while he was still being treated in the facility for such a condition. The 3-day qualifying hospital stay and 30-day transfer requirements of the law must be met as of the time he entered the facility.

Where an authorization from the VA was not given to the party rendering the services, Medicare payment is not precluded even though the individual might have been entitled to have payment made by the VA had he requested the authorization. Also, Medicare secondary benefits may be payable where the VA authorizes fewer days than the total number of covered days in the stay. (See subsection C.)

Generally it is advantageous for Medicare beneficiaries who are veterans to have items and services paid for by the VA where possible, since in most cases (see subsection E for exception) the VA has no deductible or coinsurance requirements. Also, services paid for in full by the VA do not count against the individual's maximum number of benefit days or visits available in a benefit period.

B. Services Authorized by Indian Health Service.--The Division of Indian Health of the United States Public Health Service authorizes private physicians and privately owned hospitals and nursing homes to provide treatment to Indians and their dependents under contractual arrangements with the Division of Indian Health. In the case of such contract health services to Indians and their dependents entitled under the Indian Health Service (IHS) program and Medicare, Medicare is the primary payer and the IHS the secondary payer.

C. Medicare Secondary Payment Where VA Authorizes Fewer Days Than Total Number of Covered Days In the Stay.--The Medicare secondary payment is the lower of:

o The gross amount payable by Medicare for all covered days in the stay (without regard to deductible or coinsurance) minus the amount paid by the VA for Medicare covered services, or

o The gross amount payable by Medicare (without regard to deductible or coinsurance) minus any applicable Medicare deductible or coinsurance.

EXAMPLE: The VA authorizes payment for 4 days of a 7-day stay. Charges for the 4 days total $2,350. The VA reimburses the hospital that amount. The gross amount payable by Medicare (unreduced by deductible and coinsurance) for the 7-day stay is $3,350. The beneficiary's Part A deductible has not been met. The Medicare secondary payment is determined by subtracting the VA payment from the gross amount payable by Medicare: $3,350 - $2,350 = $1,000.

Medicare pays $1,000, which is less than the gross amount payable by Medicare minus the Medicare deductible ($3,350 - $540 = $2,810). The beneficiary's Part A deductible is met by the VA payment.

D. Effect of VA Payments on Medicare Deductible and Utilization.--Where an authorization issued by the VA binds the VA to pay in full for the items and services, no payment may be made under Medicare. When the VA pays in full, the services do not count against benefit maximums, e.g., the 90 days of inpatient hospital services or the 60-day lifetime reserve. Charges which would be reimbursable by Medicare except for the fact that the VA paid in full for authorized services may be credited to the Medicare deductibles.

When the VA authorizes fewer days than the total number of covered days in the stay, Medicare utilization is determined as follows:

o Divide the actual Medicare payment (as determined in subsection C) by the amount Medicare would have paid for covered charges as primary payer (i.e., the gross amount payable by Medicare for all covered days in the stay reduced by applicable Medicare deductible and coinsurance).

- o Multiply this percentage by the number of covered days in the stay.

A partial day resulting from this calculation is not charged as a full day if it is less than .5 of a day, but is charged as a full day if it is .5 or more of a day.

EXAMPLE: Same facts as presented in example in subsection C. The amount Medicare would pay as a primary payer is $2,810 ($3,350 - $540 deductible). Utilization is determined as follows: $1,000 ÷ $2,810 = .35 X 7 days = 2.45, rounded to 2 days.

When the VA pays an amount for Medicare covered services that is equal to, or less than, the deductible and coinsurance that would apply if Medicare was the primary payer, utilization is not reduced.

E. VA Copayments.—The VA charges veterans copayments for treatment of nonservice-connected conditions if a veteran's income exceeds a specified amount (38 CFR Part 17). The copayment amount is always paid by the veteran directly to the VA, i.e., the VA does not reduce its payments to providers. If a beneficiary is charged a copayment by the VA for authorized services, a Medicare secondary benefit may be payable. As a general rule, the VA does not authorize inpatient services at non-VA facilities for treatment of nonservice connected conditions. Accordingly, you should receive few, if any, requests for reimbursement for a VA copayment for treatment in a non-VA provider. If a beneficiary requests that you reimburse him for the amount of the VA copayment, he must submit to you, VA Form 10-9014, Statement of Charges for Medical Care, along with his request. These requests will be handled on an ad hoc basis. For further guidance contact:

HCFA, Bureau of Program Operations
Office of Program Operations Procedures
Division of Provider Procedures
1-H-3 Meadows East Building
6300 Security Boulevard
Baltimore, Maryland 21207

3153.2 Items and Services Furnished by Federal Provider of Services or Federal Agency.--Generally, Federal providers are excluded from participation in the Medicare program. However, Federal hospitals, like other nonparticipating hospitals, may be paid for emergency inpatient and outpatient hospital services. A provider or other facility acquired by the Department of Housing and Urban Development (DHUD) in the administration of an FHA mortgage insurance program is not considered to be a Federal provider or agency and this exclusion is not applicable to services furnished by such facilities. The law provides exceptions to this exclusion which permit the following categories of Federal providers to participate in Medicare:

- o A Federal provider which is determined to be providing services to the public generally as a community institution or agency. VA hospitals which have sharing agreements with non-VA participating hospitals, under which the VA hospitals furnish end-stage renal disease services to nonveterans, may be considered community hospitals with respect to any otherwise covered service rendered end-stage renal disease beneficiaries. This exception does not apply to Federal clinics or other Federal health facilities which are not "providers of services" as defined in the Medicare law, i.e., which are not hospitals, SNFs, HHAs or comprehensive outpatient rehabilitation facilities. HCFA, OMB is responsible for processing claims for services furnished directly by Federal providers. If you receive a request for Medicare reimbursement of such services forward the request to:

HCFA
Office of Management and Budget
Division of Accounting
P.O. Box 17255
Baltimore, Maryland 21203-7255

NOTE: The VA copayment provisions mentioned in §3153.1 also apply to inpatient services furnished in a VA hospital. If you receive a request for Medicare reimbursement of VA copayment amounts for emergency services furnished by VA hospitals, refer the request to HCFA, OMB.

- Hospitals and SNFs of Indian Health Service.

3153.3 Items or Services Paid For by Governmental Entity.—Medicare payment may not be made for items or services paid for directly or indirectly by a Federal, State or local governmental entity. However, the law specifies that this exclusion does not prohibit payment for: (1) items or services furnished under a health benefits or insurance plan established for employees of the governmental entity; (2) items or services furnished under one of the titles of the Social Security Act (such as medical assistance under title XIX); or (3) rural health clinic services.

A. Application of Exclusion to State and Local Government Providers.-- Except for the two categories of facilities referred to below, payment may not be made for items and services which a State or local government facility furnishes free of charge; i.e., without expectation of payment from any source and without regard to the individuals' ability to pay. A facility which reduces or waives its charges for patients unable to pay, or charges patients only to the extent of their Medicare and other health insurance coverage, is not viewed as furnishing free services and may therefore receive program payment.

Medicare regulations permit payment to the following two categories of governmental providers even though they furnish services free of charge:

1. Payment may be made for items and services furnished in or by a participating State or local Government hospital, including a psychiatric or tuberculosis hospital, which serves the general community. A psychiatric hospital to which patients convicted of crimes are committed involuntarily is considered to be serving the general community if State law provides for voluntary commitment to the institution. However, payment may not be made for services furnished in or by State or local hospitals which serve only a special category of the population, but do not serve the general community, e.g., prison hospitals.

2. Payment may be made for items and services paid for by a State or local governmental entity and furnished an individual as a means of controlling infectious diseases or because the individual is medically indigent.

B. Application of Exclusion to Nongovernmental Providers.—Payment may not be made for items or services furnished by a nongovernmental provider if the charges have been paid for by a government program other than Medicare, or if the provider intends to look to another government program for payment, unless the payment by the other program is limited to the Medicare deductible and coinsurance amounts, as it is for certain individuals covered under CHAMPUS/CHAMPVA. (See §3153.3D.).

The mere fact that a nongovernmental provider receives government financing does not mean that the items and services it furnishes are considered paid for by a governmental entity. However, if a clinic receives government financing earmarked for particular services to patients (e.g., in the form of a research grant), Medicare may not pay for the same services.

If an individual has the option of receiving care free of charge at a government provider or care which is not free at a nongovernment provider, and he chooses the latter, Medicare payment may be made for the care at the nongovernment provider. However, items and services authorized by a Federal agency (for example, by the VA at a nongovernmental hospital) are excluded. (See § 3153.1.)

C. Examples of Application of Government Entity Exclusion.--The following paragraphs explain the application of the governmental entity exclusion to various situations involving services rendered by governmental and nongovernmental facilities:

1. State Veterans Homes.--Many State governments operate veterans homes and hospitals. These institutions are generally open only to veterans and certain dependents of veterans, and include domiciliary, hospital, infirmary, and/or nursing home type facilities. These institutions are financed primarily from State funds; in addition, most receive nominal per diem payments from the VA for domiciliary care, hospital care, or nursing home type care for each veteran who would also qualify for admission to a VA hospital or domiciliary.

When such a participating institution charges its residents and patients to the extent of their ability to pay, or seeks payment from available sources other than Medicare, benefits are payable for covered items and services furnished to Medicare beneficiaries. However, if it is the policy of the institution to admit and treat a veteran without charge simply because he is a veteran, or because he has a service-connected condition, payment would be precluded under title XVIII.

Per diem amounts paid by the VA to State veterans homes on behalf of those patients who are otherwise eligible for care in a VA facility may be credited towards any deductible, coinsurance, or noncovered amounts required to be paid by the patient. However, if a State veterans home collects amounts from the VA in excess of the applicable deductible and coinsurance, reduce the Medicare payment to the extent of such payments.

2. State and Local Psychiatric Hospitals.--In general, payment may be made under Medicare for covered services furnished without charge by State or local psychiatric hospitals which serve the general community. (See §3153.3A(1).) However, payment may not be made for services furnished without charge to individuals who have been committed under a penal statute (e.g., defective delinquents, persons found not guilty by reason of insanity, and persons incompetent to stand trial). For Medicare purposes such individuals are "prisoners," as defined in subsection 3, and may have services paid by Medicare only under the exceptional circumstances described there.

A psychiatric hospital to which patients convicted of crimes are committed is considered to be serving the general community if State law also provides for voluntary admissions to the institution.

3. Prisoners.--Generally, no payment is made for services rendered to prisoners, since the State (or other government component which operates the prison) is responsible for their medical and other needs. (For this purpose, the term "prisoner" means a person who is in the custody of the police, penal authorities, or other agency of a governmental entity.) This is a rebuttable presumption that may be overcome only at the initiative of the government entity. However, the entity must establish to your satisfaction, in consultation with the RO, that:

- State or local law requires that individuals in custody repay the cost of the services.

- The State or local government entity enforces the requirement to pay by billing and seeking collection from all individuals in custody with the same legal status (e.g., not guilty by reason of insanity), whether insured or uninsured, and by pursuing collection of the amounts they owe in the same way and with the same vigor that it pursues the collection of other debts. This includes collection of any Medicare deductible and coinsurance amounts and the cost of items and services not covered by Medicare.

NOTE: Require evidence that routine collection efforts include the filing of lawsuits to obtain liens against individuals' assets outside the prison and income derived from nonprison sources.

- The State or local entity documents its case with copies of regulations, manual instructions, directives, etc., spelling out the rules and procedures for billing and collecting amounts paid for prisoners' medical expenses. As a rule, inspect a representative sample of cases in which prisoners have been billed and payment pursued, randomly selected from both Medicare and non-Medicare eligibles. The existence of cases in which the State or local entity did not actually pursue collection, even though there is no indication that the effort would have been unproductive, indicates that the requirement to pay is not enforced.

D. CHAMPUS (Civilian Health and Medical Program of Uniformed Services) and CHAMPVA (Civilian Health and Medical Program of Veterans Administration.--

1. General.-- CHAMPUS and CHAMPVA are similar programs administered by the Department of Defense, except that the Veterans Administration determines the eligibility of persons seeking to establish entitlement to CHAMPVA coverage. CHAMPUS provides benefits for health care services furnished by civilian providers, physicians, and suppliers to retired members of the Uniformed Services and to spouses and children of active duty, retired, and deceased members. The term "Uniformed Services" includes the Army, Navy, Air Force, Marine Corps, Coast Guard, and the Commissioned Corps of the U.S. Public Health Service and of the National Oceanic and Atmospheric Administration. CHAMPVA provides similar benefits for spouses and children of veterans who are entitled to VA permanent and total disability benefits and to widows and children of veterans who died of service-connected disabilities.

The governmental entity exclusion does not preclude Medicare payment for items or services furnished to a beneficiary who is also eligible for CHAMPUS/CHAMPVA benefit payments for the same services. Medicare is the primary payer for such items and services, and CHAMPUS/CHAMPVA is a supplementary payer. (See subsection D3.)

2. Effect of Medicare Eligibility on CHAMPUS/CHAMPVA Entitlement.-- CHAMPUS/CHAMPVA beneficiaries, other than dependents of active duty members, lose their entitlement to CHAMPUS/CHAMPVA if they qualify for Medicare Part A on any basis except the premium-HI provisions. (See §3001.4.) Individuals who are eligible for Medicare Part B benefits only, do not lose their entitlement to CHAMPUS/CHAMPVA benefits. If a Medicare beneficiary who has lost entitlement to CHAMPVA upon becoming entitled to Part A of Medicare, thereafter exhausts any Part A benefits, the individual can again be entitled to CHAMPVA. Once the individual reattains CHAMPVA benefits, he or she will not lose them by virtue of later again becoming eligible for Medicare Part A benefits. There is no similar provision for CHAMPUS which enables an individual to reattain CHAMPUS eligibility after exhausting Medicare Part A benefits. Direct questions concerning this provision to the CHAMPVA Center.

3. Medicare-CHAMPUS/CHAMPVA Relationship.--If a CHAMPUS/CHAMPVA beneficiary also has Medicare coverage, CHAMPUS/CHAMPVA reduces its liability in all cases by the amount payable by Medicare, i.e., Medicare is the primary payer and CHAMPUS/CHAMPVA supplements Medicare by paying the Medicare deductible and coinsurance amounts and portions of the bill not covered by Medicare. Thus, dually entitled individuals may be reimbursed up to 100 percent of expenses for items and services covered by both programs.

CHAMPUS/CHAMPVA has established policies and procedures which provide for (a) the identification of claimants who have coverage under both CHAMPUS/CHAMPVA and Medicare and (b) the detection of duplicate payments under both programs. If CHAMPUS/CHAMPVA inadvertently pays amounts which duplicate Medicare payments for the same items or services, CHAMPUS/CHAMPVA will take steps to recover the incorrect CHAMPUS/CHAMPVA payments.

E. Active Duty Members of Uniformed Services.-- In limited circumstances, active duty members of the Uniformed Services may have care in civilian facilities paid for by the Army, Navy, Air Force, Marine Corps, or other appropriate uniformed service. Except for emergency services, prior approval is generally required before such payment can be made. Services furnished pursuant to such approval and services paid for or expected to be paid for by the Uniformed Services are not reimbursable under Medicare.

3154. SERVICES NOT PROVIDED WITHIN UNITED STATES

Items and services furnished outside the U.S. are excluded from coverage except for the following Canadian and Mexican services:

- Emergency inpatient hospital services where the emergency occurred:
  - While the beneficiary was physically present in the U.S. (§3698.4).
  - In Canada while the beneficiary was traveling without unreasonable delay by the most direct route, between Alaska and another State. (See §3698.4.)
- Emergency or nonemergency inpatient hospital services furnished in a Canadian or Mexican hospital closer to, or substantially more accessible from the beneficiary's U.S. residence than the nearest participating U.S. hospital which was adequately equipped to deal with and available to provide treatment of the illness or injury. (See §§3698.5 and 3698.13.)
- Physician and ambulance services furnished in connection with, and during a period of, covered foreign hospitalization. Program payment may not be made for any other Part B medical and other health services, including outpatient services furnished outside the U.S. (See §3698.6.)
- Christian Science services furnished under specified conditions in a Christian Science sanatorium. (See §3698.8.)

Under the Railroad Retirement Act, payment is made to QRRBs by the RRB for covered hospital services furnished in Canadian hospitals as well as in the U.S. Physician and ambulance services are not covered by the Railroad Retirement Act; however, under an agreement between HCFA and RRB, if the QRRB claims payment for Part B services in connection with Canadian hospitalization, RRB processes the Part B claim. In such cases the RRB determines:

- Whether the requirements in §§3698B and 3698.6 are met in regard to the inpatient services; and
- Whether the physician and/or ambulance services were furnished in connection with the services.

Payment may not be made for any item provided or delivered to the beneficiary outside the United States, even though the beneficiary may have contracted to purchase the item while he was within the United States or purchased the item from an American firm. See §3113.7B for rules on rental and periodic purchase payments for DME used outside the United States.

3155. SERVICES RESULTING FROM WAR

Items and services which are required as a result of war, or of an act of war, occurring after the effective date of the patient's current coverage are not covered.

3156. PERSONAL COMFORT ITEMS

Items which do not contribute meaningfully to the treatment of an illness or injury or the functioning of a malformed body member are not covered.

Charges for special items requested by the patient such as radio, television, telephone, and air conditioner, and beauty and barber services are excluded from coverage. The patient may be charged for such a service if he has requested it with knowledge that he will be charged. To avoid misunderstanding and disputes, the provider will inform the individual when he requests such an item or service that there will be a specified charge (not exceeding the customary charge). Thereafter, the provider may not charge the patient more for the item or service than the charge specified. A provider may not require a beneficiary to request noncovered items or services as a condition of admission or of continued stay.

Basic personal services such as simple barber and beautician services (e.g., shaves, haircuts, shampoos and simple hair sets) which patients need and cannot perform for themselves may be viewed as ordinary patient care when furnished by a long-stay institution. Such services are covered costs reimbursable under Part A when included in the flat rate charge and provided routinely without charge to the patient by an SNF or by a general psychiatric or tuberculosis hospital. The services are maintenance of at least a minimum level of personal hygiene, decency, and presentability essential to the well-being of the patient himself and of other patients who must associate with him. However, under the personal comfort exclusion, more elaborate services, such as professional manicures, hair styling, etc., are excluded even when furnished routinely and without special charge.

3157. ROUTINE SERVICES AND APPLIANCES.

Routine physical checkups; eyeglasses, contact lenses, and eye examinations for the purpose of prescribing, fitting, or changing eyeglasses; eye refractions by whatever practitioner and for whatever purpose performed; hearing aids and examinations for hearing aids; and immunizations are not covered.

The routine physical checkup exclusion applies to (a) examinations performed without relationship to treatment or diagnosis for a specific illness, symptom, complaint, or injury; and (b) examinations required by third parties such as insurance companies, business establishments, or Government agencies.

(If the claim is for a diagnostic test or examination performed solely for the purpose of establishing a claim under title IV of Public Law 91-173, "Black Lung Benefits," the service is not covered under Medicare and the claimant should be advised to contact his local social security office regarding the filing of a claim for reimbursement under the "Black Lung" program.)

The exclusions apply to eyeglasses or contact lenses, and eye examinations for the purpose of prescribing, fitting, or changing eyeglasses or contact lenses for refractive errors. The exclusions do not apply to physicians' services (and services incident to a physicians' service) performed in conjunction with an eye disease, as for example, glaucoma or cataracts, or to postsurgical prosthetic lenses which are customarily used during convalescence from eye surgery in which the lens of the eye was removed, or to permanent prosthetic lenses required by an individual lacking the organic lens of the eye, whether by surgical removal or congenital disease. Such prosthetic lens is a replacement for an internal body organ--the lens of the eye. (See § 3110.4.)

Expenses for all refractive procedures, whether performed by an ophthalmologist (or any other physician) or an optometrist and without regard to the reason for performance of the refraction, are excluded from coverage.

A. Vaccinations or inoculations—Vaccinations or inoculations are excluded as "immunizations" unless they are directly related to the treatment of an injury or direct exposure such as antirabies treatment, tetanus antitoxin, or booster vaccine, botulin antitoxin, antivenin or immune globulin.

1. Pneumococcal Pneumonia Vaccinations.—With the enactment of P.L. 96-611, effective July 1, 1981, Part B of Medicare pays 100 percent of the reasonable charges for pneumococcal pneumonia vaccine and its administration to a patient if it is ordered by a physician who is a doctor of medicine or osteopathy. When furnished by a provider of services, payment is on a reasonable cost basis.

Cross Refer: §§3112.4B, 3213 and 3214.

2. Hepatitis B Vaccine.—With the enactment of P.L. 98-369, coverage under Part B is extended to hepatitis B vaccine and its administration, furnished to a Medicare beneficiary who is at high or intermediate risk of contracting hepatitis B. This coverage is effective for services furnished on or after September 1, 1984.

High-risk groups currently identified include:

End-Stage Renal Disease (ESRD) patients;
Hemophiliacs who receive Factor VIII or IX concentrates;
Clients of institutions for the mentally retarded;
Persons who live in the same household as an Hepatitis B Virus (HBV) carrier;
Homosexual men;
Illicit injectable drug abusers.

Intermediate risk groups currently identified include:

Staff in institutions for the mentally retarded;
Workers in health care professions who have frequent contact with blood or blood-derived body fluids during routine work.

Exception:

> Persons in the above-listed groups would not be considered at high or intermediate risk of contractng hepatitis B, however, if there is laboratory evidence positive for antibodies to hepatitis B. (ESRD patients are routinely tested for hepatitis B antibodies as part of their continuing monitoring and therapy.)

For Medicare program purposes, the vaccine may be administered—upon the order of a doctor of medicine or osteopathy—by home health agencies, skilled nursing facilities, ESRD facilities, hospital outpatient departments, persons recognized under the "incident to physicians' services" provision of the law, and, of course, doctors of medicine and osteopathy.

A charge separate from the ESRD composite rate will be recognized and paid for administration of the vaccine to ESRD patients.

For reimbursement, see Section 2745 of the Provider Reimbursement Manual, Part I.
Cross Refer: CIA 50-17 & §§3112.4B and 3174.3.

B. Antigens.— Prior to the Omnibus Reconciliation Act of 1980, a physician who prepared an antigen for a patient could not be reimbursed for that service unless the physician also administered the antigen to the patient. Effective January 1, 1981, payment may be made for a reasonable supply of antigens that have been prepared for a particular patient even though they have not been administered to the patient by the same physician who prepared them if: (1) the antigens are prepared by a physician who is a doctor of medicine or osteopathy, and (2) the physician who prepared the antigens has examined the patient and has determined a plan of treatment and a dosage regimen. The associations of allergists that we consulted advised us that a reasonable supply of antigens is considered to be not more than a 12-week supply of antigens that has been prepared for a particular patient at any one time. The purpose of the reasonable supply limitation is to assure that the antigens retain their potency and effectiveness over the period in which they are to be administered to the patient. Cross Refer: §3112.4B.

Exclusion of Foot Care and Supportive Devices for the Feet

3158. EXCLUDED FOOT CARE SERVICES.

Effective January 1, 1968, the scope of covered foot care services under both Part A and B was limited by excluding the following types of services:

A. Treatment of Flat Foot.-- The term "flat foot" as defined as a condition in which one or more arches in the foot have flattened out. Services directed toward the care or correction of such condition are not covered. (See § 3158.2 for supportive devices; see also § 3158.1 for situations where the initial diagnostic service will be covered.)

B. Treatment of Subluxations of the Foot.-- Subluxations of the foot are defined as partial dislocations or displacements of joint surfaces, tendons, ligaments or muscles of the foot.

Surgical or nonsurgical treatments undertaken for the sole purpose of correcting a subluxated structure in the foot as an isolated entity are not covered.

Reasonable and necessary diagnosis and treatment (except by the use of orthopedic shoes or other supportive devices for the foot) of symptomatic conditions such as osteoarthritis, bursitis (including bunion), tendonitis, etc., that result from or are associated with partial displacement of foot structures are covered services. Surgical correction of a subluxated foot structure that is an integral part of the treatment of a foot injury or that is undertaken to improve the function of the foot or to alleviate an induced or associated symptomatic condition is a covered service.

This exclusion does not apply to the ankle joint (talo-crural joint).

C. Routine Foot Care.-- Routine foot care includes the cutting or removal of corns, or calluses, the trimming of nails (including mycotic nails) and other hygienic and preventive maintenance care in the realm of self-care, such as cleaning and soaking the feet, the use of skin creams to maintain skin tone of both ambulatory and bedfast patients, and any services performed in the absence of localized illness, injury or symptoms involving the foot. For example, foot care such as routine soaking and application of topical medication on the physician's order between required visits to the physician is not covered. In addition, any treatment of a fungal (mycotic) infection of the toenail is considered routine and not covered in the absence of (1) clinical evidence of mycosis of the toenail, and (2) compelling medical evidence documenting that the patient either (A) has a marked limitation of ambulation requiring active treatment of the foot, or (B) in the case of a nonambulatory patient has a condition that is likely to result in significant medical complications in the absence of such treatment.

NOTE: Effective July 1, 1981, the treatment of warts (including plantar warts) is no longer considered routine foot care. As a result, services provided for the treatment of warts on the foot are covered to the same extent as services provided for the treatment of warts located elsewhere on the body.

Certain foot care procedures that are generally considered to be routine foot care--e.g., cutting or removal of corns, calluses, or nails--may pose a hazard when performed by a nonprofessional person on patients with a systemic condition that has resulted in severe circulatory embarrassment or areas of desensitization in the legs or feet. Although not intended as a comprehensive list, the following metabolic, neurological, and peripheral vascular diseases (with synonyms in parenthesis) most commonly represent the underlying conditions contemplated:

*Diabetes mellitus

Arteriosclerosis obliterans (A.S.O. arteriosclerosis of the extremities, occlusive peripheral arteriosclerosis)

Buerger's disease (thromboangiitis obliterans)

*Chronic thrombophlebitis

Peripheral neuropathies involving the feet

- *Associated with malnutrition and vitamin deficiency
  - malnutrition (general, pellagra)
  - alcoholism
  - malabsorption (celiac disease, tropical sprue)
  - pernicious anemia
- *Associated with carcinoma
- *Associated with diabetes mellitus
- *Associated with drugs and toxins
- *Associated with multiple sclerosis
- *Associated with uremia (chronic renal disease)
- Associated with traumatic injury
- Associated with leprosy or neurosyphilis
- Associated with hereditary disorders
  - hereditary sensory radicular neuropathy
  - angiokeratoma corporis diffusum (Fabry's)
  - amyloid neuropathy

Where the patient's condition is one of these designated by an asterisk (*), routine procedures can be reimbursable but only if the patient is under the active care of a doctor of medicine or osteopathy for such a condition.

In evaluating whether the routine services can be reimbursed, a presumption of coverage may be made where the evidence available discloses certain physical and/or clinical findings consistent with the diagnosis and indicative of severe peripheral involvement. For purposes of applying this presumption the following findings are pertinent:

Class A Findings

- Nontraumatic amputation of foot or integral skeletal portion thereof

Class B Findings

- Absent posterior tibial pulse
- Advanced trophic changes as: (Three required.) hair growth (decrease or absence) nail changes (thickening) pigmentary changes (discoloration) skin texture (thin, shiny) skin color (rubor or redness)
- Absent dorsalis pedis pulse

Class C Findings

- Claudication
- Temperature changes (e.g., cold feet)
- Edema
- Paresthesias (abnormal spontaneous sensations in the feet)
- Burning

The presumption of coverage may be applied when the physician rendering the routine foot care has identified: (1) a Class A finding; (2) two of the Class B findings; or (3) one Class B and two Class C findings. Cases evidencing findings falling short of these alternatives may involve podiatric treatment that may constitute covered care and should be reviewed by the intermediary's medical staff and developed as necessary.

For purposes of applying the coverage presumption where the routine services have been rendered by a podiatrist, the intermediary may deem the active care requirement met if the claim or other evidence available discloses that the patient has seen an M.D. or D.O. for treatment and/or evaluation of the complicating disease process during the 6-month period prior to the rendition of the routine-type services. The intermediary may also accept the podiatrist's statement that the diagnosing and treating M.D. or D.O. also concurs with his findings as to the severity of the peripheral involvement indicated.

Services ordinarily considered routine may also be covered if they are performed as a necessary and integral part of otherwise covered services, such as diagnosis and treatment of diabetic ulcers, wounds, and infections.

3158.1 Application of Foot Care Exclusions to Provider Services.-- Charges for provider services furnished in connection with noncovered foot care which are normally separately identified by the provider must be shown as noncovered charges and excluded from reimbursement. However, the provider will not be expected to identify services in connection with noncovered foot care where it is neither the normal practice to separately identify the services nor administratively feasible to establish a separate charge for such services, or where such services are performed as a necessary and integral part of otherwise covered services. In addition, where services or procedures are performed in connection with the diagnosis of specific symptoms or complaints which suggest the need for covered services, the initial diagnostic services will be considered covered services regardless of the resulting diagnosis.

Where a patient who is receiving covered hospital services in connection with treatment of an illness or injury also receives hospital services in connection with noncovered foot care (e.g., routine hygienic foot care included as a regular part of the nursing care) and a separate charge is not made for such services, it would not be necessary to compute and exclude that portion of the hospital's charge which is attributable to the noncovered foot care. If, however, a patient receives inpatient or outpatient hospital services for the purpose of noncovered foot care all of the hospital services received by the patient can be attributed to noncovered services and hence must be excluded from coverage.

An exception to this latter rule may be made where a doctor of medicine or osteopathy certifies that hospitalization is required for proper medical management of a systemic disease during noncovered foot treatment. In such cases, the inpatient hospital services, including all ancillaries, may be covered even though no payment may be made for the professional services performed by the podiatrist or other physician in connection with the foot care. (Development of such claims by the intermediary should follow the same guidelines outlined in Part A Intermediary Manual, § 3101.7, with respect to claims for hospitalization for a noncovered dental procedure where a nondental impairment exists which requires medical management.)

It is expected that the foot care exclusions will have greater application to outpatient hospital services than to inpatient services. For example, in the outpatient department it is more likely that the total services received on an occasion can be attributed to noncovered foot care and hence excluded. In an outpatient situation it is also more likely that separate itemization of charges for noncovered foot care not integrally related to a covered procedure may be the usual practice, thereby permitting exclusion of such charges (as in the case of a separate excludable charge for routine foot care furnished as a hospital service as part of followup visits to a diabetic clinic).

3158.2 Supportive Devices for Feet.--Orthopedic shoes or other supportive devices for the feet are not covered. The exclusion of orthopedic shoes does not apply to such a shoe if it is an integral part of a leg brace.

3159. CUSTODIAL CARE

Custodial care is excluded from coverage. Custodial care serves to assist an individual in the activities of daily living, such as assistance in walking, getting in and out of bed, bathing, dressing, feeding, and using the toilet, preparation of special diets, and supervision of medication that usually can be self-administered. Custodial care essentially is personal care that does not require the continuing attention of trained medical or paramedical personnel. In determining whether a person is receiving custodial care, consider the level of care and medical supervision required and furnished. Do not base the decision on diagnosis, type of condition, degree of functional limitation, or rehabilitation potential.

Institutional care that is below the level of care covered in a SNF is custodial care. (See §3132.) Some examples of custodial care in hospitals and SNFs are:

- A stroke patient who is ambulatory, has no bladder or bowel involvement, no serious associated or secondary illnesses and does not require medical or paramedical care but requires only the assistance of an aide in feeding, dressing, and bathing;
- A cardiac patient who is stable and compensated and has reasonable cardiac reserve and no associated illnesses, but who because of advanced age has difficulty in managing alone in the home, and requires assistance in meeting the activities of daily living; and
- A senile patient who has diabetes which remains stabilized as long as someone sees to it that the patient takes oral medication and sticks to a prescribed diet.

Even if a patient's stay in a hospital or SNF is determined to be custodial, some individual services may still be covered under Part B if they are reasonable and necessary. (See §§3110 and 3137.)

3159.1 Custodial Care Under A Hospice Program.--Care furnished to an individual who has elected the hospice care option is custodial only if it is not reasonable and necessary for the palliation or management of the terminal illness or related conditions. (See §3143.)

(§3160 begins on page 3-64.9)

3160. COSMETIC SURGERY

Cosmetic surgery or expenses incurred in connection with such surgery is not covered. Cosmetic surgery includes any surgical procedure directed at improving appearance, except when required for the prompt (i.e., as soon as medically feasible) repair of accidental injury or for the improvement of the functioning of a malformed body member. For example, this exclusion does not apply to surgery in connection with treatment of severe burns or repair of the face following a serious automobile accident, or to surgery for therapeutic purposes which coincidentally also serves some cosmetic purpose.

3161. CHARGES IMPOSED BY IMMEDIATE RELATIVES OF THE PATIENT OR MEMBERS OF HIS HOUSEHOLD

A. General.--Payment may not be made for expenses which constitute charges by immediate relatives of the beneficiary or by members of his household. The intent of this exclusion is to bar Medicare payment for personal services of physicians or suppliers which would ordinarily be furnished gratuitously because of the relationship of the beneficiary to the person imposing the charge. Payment may be made, however, for reasonable charges imposed on such individuals by a physician or supplier to recover out-of-pocket expenses he has incurred in furnishing covered items or supplies, e.g., expenses for covered drugs and biologicals, prosthetic devices, etc. In such cases, the charge may not exceed the physician's or supplier's actual out-of-pocket costs.

B. Services of Providers and Provider-Based Physicians.--This exclusion applies only to services reimbursed on a charge basis and does not apply to provider services and to the services of group practice prepayment plans which are reimbursed for their costs rather than charges. Thus, reimbursement may be made for covered services furnished by a provider to an owner of the institution or to an immediate relative of an owner, or a member of an owner's household.

Reimbursement may not be made, however, for the professional component of services of provider-based physicians furnished to an immediate relative of the physician or to a member of the physician's household. Since the personal services of provider-based physicians are billed on a charge basis, they would be subject to this exclusion whether the bill is submitted by the physician or. with his authorization, by the provider.

C. Immediate Relative.--The following degrees of relationship are included within the definition of "immediate relative": (1) husband and wife; (2) natural parent, child, and sibling; (3) adopted child and adoptive parent; (4) stepparent, stepchild, stepbrother, and stepsister; (5) father-in-law, mother-in-law, son-in-law, daughter-in-law, brother-in-law, and sister-in-law; (6) grandparent and grandchild.

NOTE: A brother-in-law or sister-in-law relationship does not exist between a physician (or supplier) and the spouse of his wife's (husband's) brother or sister.

A father-in-law or mother-in-law relationship does not exist between a physician and his spouse's stepfather or stepmother.

A step-relationship and an in-law relationship continues to exist even if the marriage upon which the relationship is based is terminated through divorce or through the death of one of the parties. Thus, for example, if a physician treats his stepfather after the death of his natural mother or after the stepfather and natural mother are divorced, or if he treats his father-in-law or mother-in-law after the death of his wife, the services would be considered to have been furnished to an immediate relative and, therefore, excluded from coverage.

D. Members of the Patient's Household.--These are persons sharing a common abode with the patient as a part of a single family unit, including those related by blood, marriage or adoption, domestic employees and others who live together as part of a single family unit. A mere roomer or boarder is not included.

E. Charges by Professional Corporation or Business Organization Such as Supplier and Clinic.--Charges imposed by a medical group, clinic, or supplier which is not a corporation are, in effect, imposed by the owner or owners of the business. Thus, this exclusion applies where such a firm is owned by a sole proprietor who bears one of the excluded relationships to the patient. In the case of a partnership, the exclusion applies only where all of the partners bear one of the excluded relationships to the patient. Charges imposed by a corporation are not subject to this exclusion except in the case of charges imposed by a professional corporation for items or services furnished (1) by an owner who bears one of the excluded relationships to the patient or (2) by an employee under the supervision of a related owner. "Professional corporation" means a corporation that is operated solely for the purpose of conducting the practice of medicine, osteopathy, dentistry, podiatry, optometry, or chiropractic. Only members of the profession can own stock in a professional corporation. Any physician or group of physicians which is incorporated constitutes a professional corporation. (Generally, physicians who are incorporated identify themselves by adding letters such as P.C. or P.A. after their title.)

The exclusion does not apply to charges imposed by a corporation other than a professional corporation, regardless of the patient's relationship to any of the stockholders of the corporation or to the person who furnished the service.

3162. DENTAL SERVICES EXCLUSION.

Items and services in connection with the care, treatment, filling, removal, or replacement of teeth, or structures directly supporting the teeth are not covered. "Structures directly supporting the teeth" means the periodontium, which includes the gingivae, dentogingival junction, periodontal membrane, cementum, and alveolar process. However, payment may be made for certain other services of a dentist. (See S3030.2 and Coverage Issues Manual S50-26.)

When an excluded service is the primary procedure involved, it is not covered regardless of its complexity or difficulty. For example, the extraction of an impacted tooth is not covered. Similarly, an alveoplasty (the surgical improvement of the shape and condition of the alveolar process) and a frenectomy are excluded from coverage when either of these procedures is performed in connection with an excluded service; e.g., the preparation of the mouth for dentures. In like manner, the removal of the torus palatinus (a bony protuberance of the hard palate) could be a covered service. However, with rare exception, this surgery is performed in connection with an excluded service; i.e., the preparation of the mouth for dentures. Under such circumstances, reimbursement should not be made for this purpose.

The extraction of teeth to prepare the jaw for radiation treatments of neoplastic disease is also covered. This is an exception to the requirement that to be covered, a noncovered procedure or service performed by a dentist must be an incident to and an integral part of a covered procedure or service performed by him. Ordinarily, the dentist extracts the patient's teeth, but another physician; e.g., a radiologist, administers the radiation treatments.

Whether or not such services as the administration of anesthesia, diagnostic X-rays, and other related procedures are covered depends upon whether the primary procedure being performed by the dentist is itself covered. Thus, an X-ray taken in connection with the reduction of a fracture of the jaw or facial bone would be covered. However, a single X-ray or X-ray survey taken in connection with the care or treatment of teeth or the periodontium would not be covered.

See also SS3101.7 and 3030.2 for additional information on dental services.

3163. ITEMS AND SERVICES UNDER A WORKERS' COMPENSATION LAW.

Items and services to the extent that payment has been made, or can reasonably be expected to be made under a workers' compensation law or plan of the United States or State may not be paid for by the program. Payments for items and services under the health insurance program are subject to repayment to the appropriate trust fund if notice or information is received that payment is available for the items and services under a workers' compensation plan. (See SS3407ff.)

3164. INPATIENT HOSPITAL SERVICES NOT DELIVERED DIRECTLY OR UNDER ARRANGEMENT BY THE HOSPITAL.

Unless a hospital has been granted a waiver as described in SS3110 and 3618C, any nonphysician service provided to an inpatient of a hospital which is not provided directly by the hospital or under arrangement is excluded from coverage under Medicare. (See S3007.)

3165. INTRODUCTION

End-stage renal disease (ESRD) or "chronic kidney failure" is that stage of renal impairment that requires either a regular course of dialysis or kidney transplantation. ESRD occurs from the destruction of normal kidney tissues over a long period of time. Often there are no symptoms until the kidney has lost more than half its function. The loss of kidney function in ESRD is usually irreversible and permanent.

3166. COMPOSITE RATE REIMBURSEMENT FOR OUTPATIENT MAINTENANCE DIALYSIS

The composite rate reimbursement system is a prospective, incentive system for the payment of outpatient maintenance dialysis services furnished to Medicare beneficiaries. All maintenance dialysis treatments furnished to Medicare beneficiaries in an approved ESRD facility are covered by this system. Further, the composite rate system is one of two methods by which Medicare pays for maintenance dialysis performed in a beneficiary's home. (For a description of the other method see §3169.)

The facility's composite rate is a comprehensive payment for all modes of infacility and home dialysis. It is payment for the complete dialysis treatment except for physicians' professional services, separately billable laboratory services and separately billable drugs. This payment is subject to the normal Part B deductible and coinsurance requirements.

Under composite rate reimbursement, an ESRD facility must furnish all of the necessary dialysis services, equipment and supplies. If it fails to furnish (either directly or under arrangements or under an agreement with another approved ESRD facility) any part of the items and services covered under the rate, then the facility cannot be paid any amount for the part of the items and services that the facility does furnish.

3166.1 Definitions.—Some services are listed in the definitions shown below. These services are covered by Medicare unless otherwise noted.

A. Dialysis.—A process by which waste products are removed from the body by diffusion from one fluid compartment to another across a semi-permeable membrane. There are two types of renal dialysis procedures in common clinical usage: hemodialysis and peritoneal dialysis. Both hemodialysis and peritoneal dialysis are acceptable modes of treatment for end-stage renal disease under Medicare.

1. Hemodialysis.—Blood passes through an artificial kidney machine and the waste products diffuse across a manmade membrane into a bath solution known as dialysate after which the cleansed blood is returned to the patient's body. Hemodialysis is accomplished usually in 4-5 hours, 3 times a week.

2. Peritoneal

a. Continuous Ambulatory Peritoneal Dialysis (CAPD).—CAPD is a continuous dialysis process using the patient's peritoneal membrane as a dialyzer. For more information, see §3171.

b. Continuous Cycling Peritoneal Dialysis (CCPD).—CCPD is a treatment modality which combines the advantages of the long dwell, continuous steady state dialysis of CAPD, with the advantages of automation inherent in intermittent peritoneal dialysis (IPD). The major difference between CCPD and CAPD is that the solution exchanges which are performed manually during the day by the patient on CAPD are moved to the nighttime with CCPD and are performed automatically with a peritoneal dialysis cycler. The long nighttime dwell of CAPD is moved to the daytime with CCPD.

At night, the patient connects a surgically implanted catheter to the cycler system, which has 4 two-liter containers of dialysate suspended. The cycler automatically empties the patient's peritoneal cavity of the all-day dwell. The cycler then cycles the noctural exchanges automatically while the patient sleeps. The number of nocturnal exchanges with CCPD are prescribed by the physician; generally there are 3 nocturnal exchanges occurring at intervals of 2 1/2 to 3 hours, with the fourth exchange being instilled in the morning upon awakening. The patient then disconnects from the cycler and leaves the last 2-liter fill inside the peritoneum to continue the daytime long dwell dialysis.

c. Intermittent Peritoneal Dialysis (IPD).—Waste products pass from the patient's body through the peritoneal membrane into the peritoneal cavity where the dialysate is introduced and removed periodically by machine. Peritoneal dialysis generally is required for approximately 30 hours a week, either as 3-ten hour sessions or less frequent, but longer, sessions.

B. ESRD Facility.—A facility which is approved to furnish at least one specific ESRD service. Such facilities are:

1. Renal Transplantation Center.—A hospital unit which is approved to furnish transplantation and other medical and surgical specialty services required for the care of the ESRD transplant patients, including inpatient dialysis furnished directly or under arrangement. A renal transplantation center may also be a renal dialysis center.

2. Renal Dialysis Center.—A hospital unit which is approved to furnish the full spectrum of diagnostic, therapeutic, and rehabilitative services required for the care of ESRD dialysis patients (including inpatient dialysis furnished directly or under arrangement). A hospital need not provide renal transplantation to qualify as a renal dialysis center.

3. Renal Dialysis Facility.—A unit which is approved to furnish dialysis service(s) directly to ESRD patients.

4. Self-Dialysis Unit.—A unit that is part of an approved renal transplantation center, renal dialysis center, or renal dialysis facility, and furnishes self-dialysis services.

5. Special Purpose Renal Dialysis Facility.—A renal dialysis facility which is approved to furnish dialysis at special locations on a short-term basis to a group of dialysis patients otherwise unable to obtain treatment in the geographical area. The special locations must be either special rehabilitative (including vacation) locations serving ESRD patients temporarily residing there, or locations in need of ESRD facilities under emergency circumstances.

C. ESRD Service.—The type of care or services furnished to an ESRD patient. Such types of care are:

1. Transplantation service.—A process by which (a) a kidney is excised from a live or cadaveric donor, (b) a kidney is implanted in an ESRD patient, and (c) supportive care is furnished to the living donor and to the recipient following implantation.

2. Dialysis Service:

a. Acute Dialysis.—Dialysis given to patients who are not ESRD patients, but who require dialysis because of temporary kidney failure due to a sudden trauma; e.g., traffic accident or ingestion of certain drugs.

b. Back-Up Dialysis.—Dialysis given to patients under special circumstances. Examples are dialysis of a home dialysis patient in a dialysis facility when his equipment fails; inpatient dialysis when a patient's illness requires more comprehensive care on an inpatient basis; and pre- and postoperative dialysis provided to transplant patients.

c. Institutional Dialysis Services.—Institutional dialysis services include all services, supplies, items, and equipment and ESRD related laboratory tests covered under the composite rate necessary to perform dialysis in an approved renal dialysis facility or center.

d. Inpatient Dialysis.—Dialysis which, because of medical necessity, is furnished to an ESRD patient on a temporary inpatient basis in a hospital.

e. Outpatient Dialysis.—Dialysis furnished on an outpatient basis at a renal dialysis center or facility. Outpatient dialysis includes:

(1) Staff-assisted Dialysis.—Dialysis performed by the staff of the center or facility.

(2) Self-Dialysis.—Dialysis performed by an ESRD patient who has completed an appropriate course of training with little or no professional assistance .

(3) Home Dialysis.—Dialysis performed by an appropriately trained patient at home.

(4) Self-Dialysis and Home Dialysis Training. A program that trains ESRD patients to perform self-dialysis or home dialysis with little or no professional

assistance, and trains other individuals to assist patients in performing self-dialysis or home dialysis.

3. Hemofiltration.—Hemofiltration is a safe and effective technique for the treatment of ESRD patients and an alternative to peritoneal dialysis and hemodialysis. Hemofiltration (which is also known as diafiltration) removes fluid, electrolytes and other low molecular weight toxic substances from the blood by filtration through hollow artificial membranes and may be routinely performed in 3 weekly sessions. (See §3174.)

D. Hemoperfusion.—Hemoperfusion is a process which removes substances from the blood through the dialysis membrane by using a charcoal or resin artificial kidney. When used in the treatment of life threatening drug overdose, hemoperfusion is a covered service for patients with or without renal dialysis. Hemoperfusion is also covered when used in conjunction with DFO to treat aluminum toxicity. (See §3175.) However, hemoperfusion is not covered when used to improve the results of hemodialysis nor when used in conjunction with deferoxamine (DFO) to remove iron overload.

E. Home Dialysis—Supplies, Equipment and Support Services

1. Home Dialysis Equipment.—Home dialysis equipment includes all of the medically necessary home dialysis equipment prescribed by the attending physician, including (but not limited to) artifical kidney and automated peritoneal dialysis machines, and support equipment. Home dialysis supplies and equipment may be covered if used by an ESRD beneficiary in a nursing home.

2. Installation.—Installation includes (but is not limited to): the identification of any minor plumbing and electrical changes required to accommodate the equipment; the ordering and performing of these changes; delivery of the equipment and its actual installation (i.e., hooking-up), as well as any necessary testing to assure proper installation and function.

Minor plumbing and electrical changes include those parts and labor required to connect the dialysis equipment to plumbing and electrical lines that already exist in the room where the patient will dialyze. Medicare does not cover wiring or rewiring of the patient's home, or installing any plumbing to the patient's home or to the room of the home where the patient will dialyze.

3. Maintenance.—Maintenance includes (but is not limited to): travel to the patient's home, or if needed, transportation of the equipment to a repair site; the actual performance of the maintenance or repair; and all necessary parts. Water purification equipment maintenance includes replacing the filter on a reverse osmosis device, regenerating the resin tanks on a deionization device, and the chemicals used in a water softener, and periodic water testing to assure proper performance. Routine maintenance tasks customarily performed by a patient are not covered services except for the cost of parts involved in this maintenance furnished by the facility to a patient.

4. Supplies.—Supplies include all durable and disposable items and medical supplies necessary for the effective performance of a patient's dialysis. Supplies include (but are not limited to): dialyzers, forceps, sphygmomanometer with cuff and stethoscope, scales, scissors, syringes, alcohol wipes, sterile drapes, needles, topical anesthetics, and rubber gloves.

5. Support Services.—Support services include (but are not limited to): 1) periodic monitoring of a patient's adaptation to home dialysis and performance of dialysis; 2) visits by trained technical personnel made in accordance with a plan prepared and periodically reviewed by a professional team which includes the physician; 3) individual's unscheduled visits made on an as-needed basis; e.g., assistance with difficult access situations; 4) ESRD related laboratory tests covered under the composite rate; and 5) providing, installing, repairing, testing, and maintaining home dialysis equipment, including appropriate water testing and treatment. (See §3171.3 for CAPD support services.)

6. Support Equipment.—Support equipment is equipment used in conjunction with the basic dialysate delivery system. Such equipment includes (but is not limited to) pumps, such as blood and heparin pumps, alarms, such as bubble detectors, water purification equipment used to improve the quality of the water used for dialysis, and adjustable dialysis chairs.

F. Hospital-based ESRD Facility.—An ESRD facility is hospital-based if it is an integral and subordinate part of a hospital and is operated with other departments of the hospital under common licensure, governance and professional supervision, with all services of the hospital and facility fully integrated. Specifically, the facility would be hospital-based only if all the following conditions are met:

o The facility and hospital are subject to the bylaws and operating decisions of a common governing board. All authority in management flows from this administrative body which approves all personnel actions, appoints medical staff and carries out similar management functions.

o The ESRD facility's director or administrator is under the supervision of the hospital's chief executive officer and reports through him to the governing board.

o The facility personnel policies and practices conform to those of the hospital.

o The administrative functions of the facility (that is, records, billing, laundry, housekeeping, and purchasing) are integrated with those of the hospital.

o The dialysis unit and hospital are financially integrated, as evidenced by the cost report, which must reflect allocation of hospital overhead to the facility through the required step-down methodology.

The existence of an agreement or an arrangement between a facility and a hospital with respect to the referral of patients, a shared service arrangement between a facility and a hospital (a common practice recognized by both Medicare and Medicaid), or the physical location of a dialysis unit on the premises of a hospital, does not mean that a facility is hospital-based. Any facility that does not meet all of the above criteria would be considered an independent facility.

G. Therapeutic Pheresis (Apheresis).—Apheresis is a medical procedure utilizing specialized equipment to remove selected blood constitutents (plasma or cells) from whole blood and return the remaining constitutents to the person from whom the blood was taken. Apheresis has been used for both pre and post transplant services. When used for these purposes, it is considered an experimental procedure and is not a covered service under the Medicare program.

H. Ultrafiltration.—A process of removing excess fluid from the blood through a dialysis membrane by exerting pressure. It is not a substitute for dialysis. Occasionally, medical complications may occur which require that ultrafiltration be performed separately from the dialysis treatment.

3166.2 Frequency of Dialysis Sessions.—Hemodialysis and peritoneal dialysis are covered under the composite rate:

A. Hemodialysis

The usual pattern of hemodialysis consists of three sessions weekly, and these may be covered routinely. If the ESRD facility bills for any sessions in excess of this frequency, the bills must be accompanied by medical justification acceptable to the intermediary.

B. Peritoneal Dialysis

Peritoneal dialysis sessions are covered routinely at the same frequency as hemodialysis described above. However, the pattern of peritoneal dialysis may vary, in which case an equivalence is established between peritoneal and hemodialysis as described in §3644. If the facility bills for any sessions in excess of this frequency, the bills must be accompanied by medical justification acceptable to the intermediary.

3167. OUTPATIENT MAINTENANCE DIALYSIS —COVERAGE

Maintenance dialysis treatments are covered by Medicare when they are provided to end-stage renal disease (ESRD) patients by an approved ESRD hospital-based renal dialysis facility, including a renal dialysis center, an independent renal dialysis facility, or a special purpose renal dialysis facility. Dialysis treatments are covered in various settings: hospital inpatient, hospital outpatient, independent renal dialysis facility, or the patient's home. Dialysis treatments at renal dialysis facilities differ according to the types of patients being treated, the types of equipment and supplies used, the preferences of the treating physician, and the capability and makeup of the support staff. Although all facilities do not provide an identical range of services, the most common elements of a dialysis treatment are overhead costs, personnel services, administrative services (registered nurse, licensed practical nurse, technician, social worker, dietitian), equipment and supplies—dialysis machine and its maintenance, ESRD related laboratory tests, certain injectable drugs (such as heparin and its antidote) and biologicals.

Facilities with self-dialysis units must meet certain health and safety requirements specific to self-dialysis, and certain standards applicable to staff-assisted dialysis have been adjusted for self-dialysis units in consideration of the differences in the two modalities. Before participating in self-dialysis, patients must have completed an appropriate training program in emergency procedures, and have a safe storage area for their supplies. Access to the self-dialysis unit is limited to patients for whom the facility maintains patient care plans, in order to exclude transient patients who might not be familiar with the facility's equipment or emergency procedures. The self-dialysis unit need not be physically separate from the rest of the facility nor operate on a separate shift.

3167.1 Laboratory Services Included Under the Composite Rate.--The costs of certain ESRD laboratory services performed by either the facility's staff or an independent laboratory were included in the composite rate calculations. Therefore, payment for all of the tests is included in the facility's composite rate and the tests may not be billed separately to the Medicare program. Laboratory tests are either performed by the facility, in which case reimbursement is included in the composite rate, or by an outside laboratory for the facility, in which case the laboratory would bill the facility and be reimbursed only under the rate. (See §3644.) These laboratory tests are listed in §§3167.3 and 3171.2A. (See §2710 of the Provider Reimbursement Manual for reimbursement instructions.)

3167.3 Laboratory Tests for Hemodialysis, Intermittent Peritoneal Dialysis (IPD), Continuous Cycling Peritoneal Dialysis (CCPD) and Hemofiltration.--The tests listed below are usually performed for dialysis patients and are routinely covered, at the frequency specified in the absence of indications to the contrary, i.e., no documentation of medical necessity is required other than knowledge of the patient's status as an ESRD beneficiary. When any of these tests are performed at a frequency greater than that specified, the additional tests are separately billable and will be covered only if they are medically justified by accompanying documentation. A diagnosis of ESRD alone is not sufficient medical evidence to warrant coverage of the additional tests. The nature of the illness or injury (diagnosis, complaint or symptom) requiring the performance of the test(s) must be present on the claim. Such information must be furnished using the ICD-9-CM coding system.

Per Treatment

All hematocrit and clotting time tests furnished incident to dialysis treatments.

Weekly

Prothrombin time for patients on anticoagulant therapy
Serum Creatinine
BUN

Monthly

Serum Calcium
Serum Potassium
Serum Chloride
CBC
Serum Bicarbonate
Serum Phosphorous
Total Protein
Serum Albumin
Alkaline Phosphatase
SGOT
LDH

Automated Battery of Tests.--If an automated battery of tests, such as the SMA-12, is performed and contains most of the tests listed in one of the weekly or monthly categories, it is not necessary to separately identify any tests in the battery that are not listed.

The following list identifies certain separately billable laboratory tests that are covered routinely, i.e., without documentation of medical necessity other than knowledge of the patient's status as an ESRD beneficiary, when furnished at the specified frequencies. If they are performed at a frequency greater than that specified, they are covered only if accompanied by medical documentation. A diagnosis of ESRD alone is not sufficient documentation. In order to document the medical necessity of the test(s), the nature of the illness or injury (diagnosis, complaint or symptom) requiring the performance of the test(s) must be present on the claim. Such information must be furnished using the ICD-9-CM coding system.

Guidelines for Separately Billable Tests for Hemodialysis, IPD, CCPD and Hemofiltration

Shown below is the recommended schedule for the administration of the hepatitis B vaccine. However, the actual frequency is determined by the physician based on medical necessity. (See §3157A2.)

Hepatitis B vaccine - 3 (two ml doses) doses

First dose
Second dose - 1 month after the first dose
Third dose - 6 months after the first dose

All vaccinees should be tested for antibody (hepatitis B surface antibody) to hepatitis B surface antigen no sooner than 1 month after the third dose of vaccine is administered to determine whether they have responded to the vaccine. Thereafter, individuals who have responded to the vaccine by showing evidence of surface antibody need only be tested annually for hepatitis B surface antibody to confirm continued immunity.

For Seronegative Patients -- (including patients who have received hepatitis B vaccine but did not have a positive response to the vaccine) Hepatitis B Surface Antigen (HB_sAg)--one a month.

Bone Survey (either the roentgenographic method or the photon absorptiometric procedure for bone mineral analysis) - one a year

Chest X-ray - one every 6 months

EKG - one every 3 months

Hepatitis B Surface Antibody or Hepatitis B Core Antibody - one, but not both, once a year

Nerve Conductor Velocity Test (Peroneal NCV) - one every 3 months

Serum aluminum - one every 3 months

Serum ferritin - one every 3 months

(See §3171.2A for laboratory tests rendered to CAPD patients.)

EKGs and X-rays.--EKGs and X-rays are covered. When furnished by an independent facility, these tests should be billed on the HCFA-1450. However, if the physician incurs a cost for these tests, he must bill the Medicare carrier on the HCFA-1500.

3168. DRUGS AND BIOLOGICALS

Parenteral items that are dialysis related and are furnished by ESRD facilities are covered as described in paragraphs A and B, below.

Blood furnished by a hospital-based or an independent dialysis facility is covered by Medicare.

Drugs and biologicals, such as blood, are generally not covered in the home dialysis setting unless they are provided under the direct personal supervision of a physician. When this condition is met, the physician must bill the carrier.

Certain drugs and biologicals, however, can be considered home dialysis supplies, and can be covered as such. This exception is limited to heparin, the heparin antidote, local anesthetics such as xylocaine and antibiotics for peritoneal dialysis patients when used to treat infections of the catheter site, or peritonitis.

Other drugs and biologicals generally are covered only if all of the following requirements are met: (a) they meet the definition of "drugs" or "biologicals"; (b) they are of the type that cannot be self-administered (see below); (c) they are not excluded as immunizations; (d) they are reasonable and necessary for the diagnosis or treatment of the illness or injury for which they are administered according to accepted standards of medical practice; and (e) they meet all the general requirements for coverage of items as "incident-to" a physician's service.

Whether a drug or biological is of a type which cannot be self-administered is based on the usual method of administration of the form of that drug or biological as furnished by the physician. Thus, where a physician gives a patient pills or other oral medication, these are excluded from coverage since the form of the drug given to the patient is usually self-administered. Similarly, if a physician gives a patient an injection which is usually self-injected (for example, insulin), the drug is excluded from coverage, unless administered to the patient in an emergency situation (for example, diabetic coma). Where, however, a physician injects a drug which is not usually self-injected, this drug is not subject to the self-administrable drug exclusion (regardless of whether the drug may also be available in oral form) since it is not self-administrable in the form in which it was furnished to the patient. (See §3112.4B.)

A. Drugs Covered Under the Composite Rate.--Certain parenteral items used in the dialysis procedure are covered under the facility's composite rate and may not be billed separately. Drugs that are used as a substitute for any of these items, or are used to accomplish the same effect, are also covered under the composite rate. For home patients choosing Method II payments (See S3169.), these items may be covered without documentation for medical necessity and may be billed by an ESRD facility regardless of where they are furnished.

Following is a list of these items:

heparin
protamine
mannitol
saline
pressor drugs
glucose
dextrose
antihistamines
antiarrythmics
antihypertensives

The administration of these items (both the staff time and the supplies) is covered under the composite rate and may not be billed separately.

Nonparenteral items are not covered under the Medicare program.

B. Separately Billable Drugs.--There are other parenteral items that are not covered under the composite rate, but that may be medically necessary for some patients receiving dialysis. When furnished to infacility dialysis patients, these items must be billed separately and be accompanied by medical justification either through information on the claims form or as requested by the intermediary. They include:

antibiotics
hematinics
anabolics
muscle relaxants
analgesics
sedatives
tranquilizers

These separately billable parenteral items may only be billed by an ESRD facility if they are actually administered in the facility by the facility staff. Staff time used to administer separately billable parenteral items is covered under the composite rate and may not be billed separately. However, the supplies used to administer these parenteral items may be billed in addition to the composite rate. (See S3644.)

NOTE: Albumin may be reasonable and medically necessary for the treatment of certain medical complications in renal dialysis patients. In such cases facilities must document medical need to the satisfaction of the intermediary's medical staff. If the intermediary approves, then separate payment in addition to the facility's composite rate may be made. However, if albumin is used as a substitute for any parenteral item covered under the composite rate or used to accomplish the same effect, for example, as a volume expander, then payment for it must be included in the facility's composite rate payment for maintenance dialysis.

3169. COMPOSITE RATE REIMBURSEMENT FOR PATIENTS DIALYZING AT HOME

Medicare beneficiaries dialyzing at home can choose between two methods of payment. This choice is recorded on the Beneficiary Selection Form, HCFA-382. (See §3169.2.)

Method I - The Composite Rate

If the Medicare home dialysis patient choses Method I, the dialysis facility with which the patient is associated must assume responsibility for providing all home dialysis equipment and supplies, and home support services. For these services, the facility receives the same Medicare dialysis payment rate as it would receive for an infacility patient under the composite rate system. (See Provider Reimbursement Manual §§2702-2717.) Under this arrangement, the beneficiary is responsible for paying the Part B deductible and the 20 percent coinsurance on the Medicare rate to the facility.

Method II - Dealing Direct

If the beneficiary elects to deal directly with the Medicare program and make arrangements for securing the necessary supplies and equipment to dialyze at home, the beneficiary deals with the various suppliers. The beneficiary or a supplier other than a facility bills the Part B carrier if assignment is taken. If the beneficiary obtains supplies and equipment from a facility, see §2740.1 of the Provider Reimbursement Manual. The beneficiary is also responsible to the suppliers for any unmet Part B deductible and the 20 percent Medicare coinsurance requirement. The dialysis facility will not receive a regular per treatment payment for a patient who chooses this option. However, if the facility provides any home dialysis equipment, supplies or support services to a beneficiary who selects this option, the facility is reimbursed for these items or services.

3169.1 Items and Services Included Under the Composite Rate for Home Dialysis.—All items and services are covered and included under the composite rate and must be furnished by the facility, either directly or under arrangements, to all of its dialysis patients who elect this method of reimbursement. If it fails to furnish (either directly or under arrangements) any part of the items and services covered under the rate, then the facility cannot be paid any amount for the part of the items and services that the facility does furnish. These items and services include:

- o Medically necessary home dialysis equipment;

- o Home dialysis support services, which include the delivery, installation, maintenance, repair and testing of home dialysis equipment and support equipment;

- o Purchase and delivery of all necessary home dialysis supplies;

- ESRD related laboratory tests listed as covered under the composite rate; and
- All dialysis services furnished by the facility's staff.

Some examples (but not an all-inclusive list) of items and services that are covered and included in the composite rate and may not be billed separately when furnished by a dialysis facility are:

- Staff time used to administer blood;
- Declotting of shunts and any supplies used to declot shunts;
- Oxygen and the administration of oxygen; and
- Staff time used to administer separately billable parenteral items.

3169.2 Beneficiary Selection Form (HCFA-382) for Home Dialysis Patients

Each Medicare home dialysis beneficiary must choose the method by which he wants Medicare to pay for his dialysis services. To do this, each beneficiary must complete the Beneficiary Selection Form HCFA-382, sign it and return it to the facility that supervises his care. See §2740.2 of the Provider Reimbursement Manual, Part I.

3169.3 Coverage of Infacility Dialysis Sessions Furnished to Home Patients Who Are Traveling.— Patients who are normally home dialysis patients may be dialyzed by a facility on an infacility basis when traveling away from home. (See §2713 of the Provider Reimbursement Manual.)

3170. HOME DIALYSIS EQUIPMENT—GENERAL

Home dialysis equipment and other medically necessary items for home dialysis prescribed by a physician are covered under Part B.

There are two methods by which a patient can be reimbursed for his dialysis equipment—the composite rate method and the direct dealing method. Under the composite rate method, the facility with which the patient is associated assumes responsibility for providing all home dialysis equipment and supplies. Under the direct dealing method the beneficiary deals directly with the Medicare program and makes his own arrangements for securing the necessary supplies and equipment to dialyze at home. (See §3169.)

The direct dealing patient has the choice of buying or renting (leasing) the equipment. With the exception of purchased items costing $120 or less, which may be reimbursed in a single payment, Medicare pays for both rented and purchased equipment in monthly installments. Installment payments are made regardless of whether the patient pays for purchased equipment in a lump sum or in installments. Medicare makes monthly payments at a rate which approximates the reasonable monthly rental charge for similar equipment until either its share of the reasonable purchase price is paid, or until the equipment is no longer medically necessary, whichever comes first. Likewise, when covered home dialysis equipment is rented or leased, Medicare will pay 80 percent of the reasonable rental (lease) charge as long as the equipment is medically necessary.

When payments stop because the beneficiary's condition has changed and the equipment is no longer necessary, the beneficiary is responsible for the remaining charges. Similarly, when payments stop because the beneficiary dies, his estate is responsible for the remaining charges. A beneficiary may sell or otherwise dispose of purchased equipment for which he has no further use. If, after disposal of such equipment, there is again medical need for similar equipment, Medicare can pay for the rental or purchase of that equipment. Under Part B, payment can also be made for the installation, delivery, repair, maintenance, or replacement of home dialysis equipment. This payment also includes the costs of necessary supply items needed to effectively perform the dialysis. These items are covered only under the specified conditions discussed in the following sections. When covered, these items are reimbursed in a lump sum.

A variety of contractual agreements may be entered into by the patient for the leasing or purchase of home dialysis equipment and supplies:

o Manufacturers or suppliers may deal directly with a paying patient;

o Facilities may furnish equipment and supplies on a sale or rental basis to a patient. (See §3644.)

o Equipment or supplies may be furnished to a patient by a manufacturer or supplier through a facility (i.e., items may be shipped directly to a patient but billed to a facility).

3170.1 Installation and Delivery of Home Dialysis Equipment.--Medicare will cover all reasonable and necessary expenses incurred in the original installation of home dialysis equipment. This coverage is not extended to expenses attributable to home improvement (e.g., plumbing or electrical work beyond that necessary to tie in with existing plumbing and power lines). Testing and assurance of equipment performance which may be billed for as part of the basic delivery charge are also covered. Medicare does not cover maintenance contracts on equipment, since Medicare pays only for costs which are actually incurred. The delivery and installation charge should be itemized, either on the face of the bill or on an attached invoice.

3170.2 Current Use of Equipment.--Monthly rental or installment payments for purchased items may be made only if the item was actually used during the month for which payment is claimed. Exceptions are allowed only under the circumstances outlined below and apply only to items of dialysis equipment necessary for home dialysis. Monthly rental charges or payments for purchased items may be continued for a period of up to three months after the month the equipment is last used because high installation charges could be paid a number of times for the same equipment if it is removed for temporary periods of non-use. Non-use is covered under the following circumstances:

- o Beneficiary requires infacility treatment either for restabilization or as a result of some acute condition, but is expected to return to home dialysis;
- o Beneficiary is temporarily without a suitable home dialysis assistant;
- o Beneficiary is temporarily away from home but expects to return; (However, when a beneficiary consistently spends periods exceeding three months away from his home, this section does not apply).
- o Beneficiary is a transplant candidate and is taken off home dialysis preparatory to transplant. (If the transplant cannot occur, or if the transplant is not successful, the patient will probably resume home dialysis and an evaluation can be made whether it will be within the immediate or forseeable future.)

3170.3 Other Requirements For Coverage of Home Dialysis Equipment.--

In addition to meeting the specific requirements of home dialysis equipment, the equipment must also meet the requirements outlined in S3113ff:

- o The device is required because the patient has ESRD; and
- o The equipment is appropriate for home use and is of the type prescribed by recognized specialists at approved home dialysis training centers.

Payment can also be made under the home dialysis equipment provision for supportive equipment which is used in conjunction with the basic dialysate delivery system. This includes blood and heparin pumps, air bubble detectors, blood leak detectors, unipuncture devices, water purification systems, and adjustable dialysis chairs.

Adjustable chairs, such as recliners, are covered when required as a component of a home hemodialysis delivery station. These chairs serve to preserve patients' health by allowing rapid manipulation in body position when medical circumstances warrant such changes during dialysis (e.g., when acute hypotension occurs and the patient is in danger of going into shock). Reasonable costs of recliner chairs may not include a premium for style or for the capacity to rock, swivel, heat, or vibrate. Claims for recliner chairs will be reviewed to ensure that payment is consistent with what is reasonable and medically necessary to serve the intended therapeutic purpose. Since the adjustable chair is desirable in the absence of illness or injury, instructions in S60-1 (Coverage Issues Manual) should be followed closely when replacement is claimed.

3170.4 Home Dialysis Equipment Provided To Home Hemodialysis and Peritoneal Dialysis Patients.—Coverage of any item of home dialysis equipment used for home dialysis depends on its medical necessity. Medical necessity is established by the physician's prescription, and by the equipment meeting Medicare guidelines which define home dialysis equipment. The beneficiary has the option of having the facility provide the equipment under the composite rate, or of renting or purchasing such equipment directly from a supplier. Reimbursement for the equipment is affected by the manner in which it is supplied (i.e., sold, rented or leased), whether the supplier is reimbursed based on charges or costs, and the relationship of the supplier with the equipment manufacturer or equipment owner.

3170.5 Coverage of Home Dialysis Supplies.—Supplies necessary to perform all modalities of home dialysis are covered, including such items as alcohol wipes, sterile drapes, gloves, telfa pads, bandages, etc.

Instruments and nonmedical supplies, such as scales, stopwatches, and blood pressure apparatus, are covered, regardless of whether provided separately or as part of a start-up kit. However, these items may not be provided separately on a rental basis. They must either be purchased or be provided as part of the dialysis equipment and included in the charge for the equipment. These items do not qualify as dialysis equipment.

3170.6 Coverage of Home Dialysis Support Services.—If a beneficiary chooses Method II (direct dealing) all home dialysis supplies and support services required to perform dialysis at home are covered.

Some home dialysis support services must be furnished by a dialysis facility which is approved under Subpart U to furnish home dialysis services. Under the composite rate, ESRD facilities are required by rules of Method I to furnish items A through G either directly or under arrangements. Under Method II a facility may also furnish them under an agreement. Covered support services include:

- Periodic monitoring of the patient's home adaptation (including visits to the home, in accordance with a written plan prepared and periodically reviewed by a team that includes the patient's physician and other professionals familiar with the patient's condition);
- Emergency visits by qualified ESRD facility personnel;
- Providing and arranging for supplies (If Method II, supplier can provide.);
- Installation and maintenance of dialysis equipment (If Method II, supplier can provide.);

- ESRD related laboratory tests included under the composite rate and listed in §3167.3 and §3171.2A, (If Method II, either a facility, a doctor or an independent laboratory can furnish);

- Testing and appropriate treatment of water; and

- Monitoring the functioning of the dialysis equipment (If Method II, supplier can provide.).

Some covered support services may involve indirect patient contact. The patient, for example, may need to consult with a nurse regarding dietary restrictions or with a social worker if he is having problems adjusting. The consultations may be by phone.

3171. CONTINUOUS AMBULATORY PERITONEAL DIALYSIS

Continuous ambulatory peritoneal dialysis (CAPD) is a variation of peritoneal dialysis that was developed as an alternative mode of dialysis for home dialysis patients. In CAPD the patient's peritoneal membrane is used as a dialyzer. The patient connects a 2 liter plastic bag of dialysate to a surgically implanted indwelling catheter and allows the dialysate to pour into his peritoneal cavity.

Four to six hours later the patient drains the fluid out into the same bag, and replaces the old bag with a new bag of fresh dialysate. This is done three to five times a day, with the first exchange being made when the patient wakes up in the morning, and the last exchange being made at bed time. Because no machine is used, CAPD frees patients from the confinement of a machine, and because it is continuous, CAPD frees patients from the dietary restrictions associated with intermittent hemodialysis or intermittent peritoneal dialysis.

3171.1 Certification of Facilities Furnishing CAPD Services.—In order to furnish covered CAPD services, a facility must be a Medicare approved ESRD facility, and must meet additional standards established by the Health Care Financing Administration (HCFA).

3171.2 Institutional Dialysis Services Furnished to CAPD Patients.—Institutional dialysis services that are specifically CAPD services are training services and include associated services that are furnished in the facility during training. (Once the patient is trained, CAPD is primarily a home service, as the patient performs CAPD 24 hours per day.) Persons who are primarily treated by CAPD may also require infacility dialysis, either intermittent peritoneal dialysis (IPD) or hemodialysis, from time to time.

A. Laboratory Tests.--The following laboratory tests are covered routinely at the frequencies specified below if furnished to a CAPD patient in a certified setting. Any test furnished in excess of this frequency, or any test furnished that is not listed here is covered only if there is documentation of its medical necessity. A diagnosis of ESRD alone is not sufficient medical documentation. The nature of the illness or injury (diagnosis, complaint or symptom) requiring the test(s) must be present on the claims form. Such information must be furnished using the ICD-9-CM coding system. The nature of the illness or injury (diagnosis, complaint or symptom) requiring the performance of any test not listed here must also be present on the form.

1. Laboratory Tests for CAPD Covered Routinely and Included Under the Composite Rate

Monthly

BUN
Creatinine
Sodium
Potassium
CO2
Calcium
Magnesium
Phosphate
Total Protein
Albumin
Alkaline Phosphatase
LDH
SGOT
HCT
Hgb
Dialysate Protein

2. Laboratory Tests for CAPD Covered Routinely and Separately Billable

Every 3 Months

WBC
RBC
Platelet count

3. Every 6 Months

Residual renal function
24 hour urine volume
Chest X-ray
Bone mineral density
MNCV
EKG

(See S3167.3 for laboratory tests rendered to hemodialysis, intermittent peritoneal dialysis (IPD), continuous cycling peritoneal dialysis (CCPD) and hemofiltration patients.)

B. Equipment and Water Testing.--CAPD does not require the use of any equipment or testing of water because the dialysate is prepared and delivered by the manufacturer. Therefore, neither a dialysis machine nor water testing or water treatment are covered for CAPD patients. Patients changing from another form of home dialysis to CAPD may have their claims for rental or lease-purchase of home dialysis equipment reimbursed up to 3 months after completing the CAPD training course, in accordance with the coverage tolerance rule in S3170.2.

3171.3 Support Services and Supplies Furnished to Home CAPD Patients.--CAPD certification requires facilities furnishing CAPD services to provide directly, or via an agreement or arrangement with another renal dialysis facility (approved to furnish staff-assisted peritoneal dialysis or peritoneal self-dialysis training) the provision of home dialysis services required to support home patients. Home dialysis support services may be furnished in the home or in the facility. Support services may be provided directly or via an agreement or arrangement with another approved renal dialysis facility (approved to furnish staff-assisted peritoneal dialysis or peritoneal self-dialysis training), or by a physician's direct personal supervision.

A. Home Dialysis Support Services.--The full range of home dialysis support services required by home CAPD patients is covered. In addition to the general support services furnished to home hemodialysis patients, support services specifically applicable to CAPD patients include but are not limited to: (1) changing the connecting tube (also referred to as an administration set), (2) watching the patient perform CAPD and assuring that it is done correctly, and reviewing for the patient any aspects of the technique he may have forgotten, or informing the patient of modifications in apparatus or technique, (3) documenting whether the patient has or has had peritonitis that requires physician intervention or hospitalization (unless there is evidence of peritonitis, a culture for peritonitis is not necessary), and (4) inspection of the catheter site.

The CAPD support services must be furnished periodically (not less than once every 90 days) either directly by the sponsoring CAPD facility or through agreement or arrangement with a facility approved to furnish training in peritoneal self-dialysis or peritoneal staff assisted dialysis. These services will usually be furnished during a periodic follow-up visit, but they may be furnished at separate times. They may be furnished in the facility or in the home.

Normally, the changing of the connecting tube is performed in the facility, and all of the other CAPD support services can be performed at the same time. However, sometimes a member of the facility's staff may go to the patient's home to observe the patient's CAPD technique, take blood samples, etc. In any case, each of the CAPD support services may be covered routinely at a frequency of once per month.

Because these services must be furnished periodically, any claims under Method II for additional support services furnished more frequently than monthly (whether by the sponsoring CAPD facility or under an agreement or arrangement) must be documented for medical necessity.

B. Supplies.--All supplies required to perform CAPD are covered. These include start-up durable supplies (whether or not they are part of a start-up kit) such as weight scales, sphygmomanometer, I.V. stand, and dialysate heaters; and consumable and disposable supplies such as dialysate, tubing and gauze pads.

3172. TRAINING

3172.1 Hemodialysis Training.--The average training time for hemodialysis patients is approximtately 3 months, based upon 5 hour sessions given 3 times per week. In some dialysis programs, the dialysis partner is trained to perform the dialysis treatment in its entirety. The patient plays a secondary role. In other programs, the patient performs most of the treatment and is only aided by a helper.

Hemodialysis training services and supplies include personnel services, dialysis supplies parenteral items used in dialysis, written training manuals and materials, and laboratory tests covered under the composite rate. See S3167.3 for these laboratory tests which are covered during training.

3172.2 Intermittent Peritoneal Dialysis Training (IPD).—IPD patients can be trained in approximately 4 weeks. IPD is usually accomplished in sessions of 10-12 hours. It is sometimes accomplished in fewer sessions of longer duration. (See S3112.6D for other types of IPD training programs.) In the IPD program, the patient's partner is usually trained to carry out the dialytic care. The patient plays a secondary or very minimal role as most are unable to perform self-care dialysis. IPD patients are usually unable to perform self-care dialysis because of other debilitating conditions. Training services and supplies include personnel services, dialysis supplies, parenteral items routinely used in dialysis, written manuals and materials, and laboratory tests covered under the composite rate. These laboratory tests are covered during training (See S3167.3).

3172.3 Continuous Ambulatory Peritoneal Dialysis (CAPD) Training.—CAPD training is furnished in sessions that can last up to 8 hours (one session per day) 5-6 days per week. Typically, 6-8 CAPD exchanges can be performed per day for the purpose of teaching the patient the CAPD technique; however, no specific number of exchanges is required. Normally patients are trained within 2 weeks (5-6 training sessions per week); however, up to 15 sessions (i.e., 15 training days) may be covered routinely. Additional CAPD training sessions are covered only when documented for medical necessity. Extra training sessions raise questions about either the adequacy of CAPD for the patient or the patient's capacity to learn or perform the CAPD technique. The patient's physician should address these questions in his explanation of the need for extra training sessions. The intermediary will make a determination whether or not to permit training sessions in excess of 15.

CAPD training services and supplies include personnel services, dialysis supplies, parenteral items routinely used in dialysis, training manuals and materials, and CAPD laboratory tests included under the composite rate.

CAPD laboratory tests included under the composite rate are those monthly tests listed in S3171.2A and they are covered during training. The coverage frequency screens for these laboratory tests do not apply during training, as these tests are commonly given during each training session. All of these tests are included in the training screen, regardless of how frequently they are given, and may not be billed separately. However, separately billable laboratory tests must be documented for medical necessity.

A. CAPD Training Furnished to Inpatients.—Normally, CAPD training is covered only on an outpatient basis. While CAPD training itself does not justify inpatient status, CAPD training is covered under Part A when furnished during a medically necessary inpatient stay. If Part A payment is not made for the stay, the CAPD training sessions would be reimbursed under Part B and be subject to the normal Part B deductible and coinsurance requirements.

B. CAPD Training for Patients Already Trained in Another Mode of Self-Dialysis.—Services furnished in training a patient who is already trained in some other form of self-dialysis are covered. Fewer sessions should be required because of the transferability of certain basic skills.

C. Supplemental Dialysis During CAPD Training.—It may be necessary to supplement the patient's dialysis during CAPD training with intermittent peritoneal dialysis because the CAPD technique has not yet been mastered by the patient. Generally, no more then three supplemental intermittent peritoneal dialysis sessions are required during the course of CAPD training, and these may be covered routinely. If more than three sessions are billed during training, the claims must be documented for medical necessity. Under certain circumstances, the form of supplemental dialysis may be hemodialysis.

3172.4 Continuous Cycling Peritoneal Dialysis (CCPD) Training.—Continuous cycling peritoneal dialysis training is furnished in sessions of 8 hours per day 5 days per week. Typically, 5 exchanges can be performed per day to teach the patient the technique; however, no specific number of exchanges is required. Most patients are trained within 2 weeks; however, up to 15 sessions may be covered routinely. The intermediary will determine whether or not training sessions over 15 are medically necessary.

All training services and supplies are covered. These include personnel services, dialysis supplies, parenteral items routinely used in dialysis, training manuals and materials, and CCPD laboratory tests covered under the composite rate and listed in S3167.3.

3172.5 Physician's Services During Self-Dialysis Training.—

A. Initial Training.—All physician's services required to create the capacity for self-dialysis are covered as shown below:

- o Direction of and participation in, training of dialysis patients.
- o Review of family, home status, and environment, and counseling and training of family members.
- o Review of training progress.

B. Subsequent Training.—Occasionally, it is necessary to furnish additional training to an ESRD self-dialysis beneficiary after the initial training course is completed; e.g., because of a change from hemodialysis to peritoneal dialysis, or a change in equipment. The amount of additional training required depends upon the transferability of the skills the patient has already learned; subsequent training would normally be very limited.

Physicians' training services furnished during subsequent training of an ESRD beneficiary are covered and reimbursed in addition to the initial training fee. The payment for subsequent training sessions should be based on the amount of $20 per training session. The total payment for a course of subsequent training may not be based on an amount that exceeds $500.

Subsequent training sessions that are reimbursable under this rule must be distinguished from the ongoing services for which the original training fee is considered payment in full; e.g., answering the patient's questions arising after home dialysis has begun about the machine the patient has already been trained to use. No additional payment is made after the initial training course unless the subsequent training is required because of a change from the patient's treatment machine to a machine that he had not been trained to use in the initial training course, a change in the type of dialysis, or a change in setting or dialysis partner.

3173. INPATIENT HOSPITAL DIALYSIS

3173.1 Inpatient Dialysis in Hospitals Certified to Provide ESRD Services.—Dialysis services are covered when furnished to an ESRD patient by a hospital that meets the Conditions for Coverage of Suppliers of End-Stage Renal Disease Services (Subpart U). In many cases, patients who require inpatient care are experiencing complications that affect the nature of the dialysis services. Payment for medically necessary inpatient dialysis is not subject to the composite rate.

3173.2 Inpatient Dialysis in Hospitals Certified to Provide Medicare Services.—In special situations, dialysis services are covered when furnished to an ESRD patient by a hospital that meets the Conditions of Participation for Hospitals (Subpart J), but is not certified under the ESRD Conditions (Subpart U). For example, dialysis services provided by any participating Medicare hospital are covered if the inpatient stay is medically necessary and the primary reason for the admission is not maintenance dialysis. To illustrate, if an ESRD patient needs surgery unrelated to his kidney condition, and the surgeon has operating privileges only at a participating Medicare, but non-ESRD certified hospital, the inpatient dialysis he receives while being treated for the unrelated condition is covered.

In addition, services may be covered in back-up dialysis situations when significant travel distances, severe weather, or other conditions preclude patients from dialyzing at their usual facility.

A Subpart J hospital may decide not to provide dialysis services directly. In this situation, the hospital must make arrangements with an ESRD certified facility to provide the dialysis services.

Inpatient dialysis services are also covered if an ESRD emergency occurs. However, when the emergency is over, inpatient dialysis must be performed in an ESRD certified facility or coverage will be denied. All claims for inpatient dialysis services in hospitals that are not certified under the ESRD Conditions for Coverage should be examined by the intermediary to assure that one or more of these special situations existed.

3173.3 Inpatient Dialysis in Nonparticipating Hospitals.—Emergency inpatient dialysis services provided by a nonparticipating U.S. hospital are covered if the Health Care Financing Administration's Regional Office determines that the requirements in §3173.2 are met.

3173.4 Extended Intermittent Peritoneal Dialysis.—Extended intermittent peritoneal dialysis (EIPD) is performed once a week, usually for 30 hours or more, and is provided in the hospital due to the duration of treatment. Although the services are provided in the hospital, they are billed as outpatient maintenance dialysis services and reimbursed under Part B as long as the patient is not admitted as an inpatient for another reason. EIPD is an acceptable, but not optimal, mode of treatment, appropriate only when the patient cannot attend a facility two or three times a week, for geographic or other reasons, and is not suited for home dialysis. (See S3112.6.)

3173.5 Services Provided Under An Agreement.—An approved ESRD facility may make a written agreement with a second facility under which the second facility furnishes certain covered outpatient dialysis items or services to patients. When services are provided under an agreement, the first facility is discharged from professional responsibility for the services furnished. The second facility is responsible for obtaining reimbursement directly from the Medicare program and the beneficiary, but may not bill the beneficiary for amounts in excess of the normal coinsurance and any applicable deductible.

3173.6 Services Provided Under An Arrangement.—An approved ESRD facility may make written arrangements with a second facility to provide certain covered outpatient dialysis items or services to patients. When services are provided under an arrangement, the first facility retains professional responsibility for those services and also for obtaining reimbursement for them. The first facility may bill the patient any applicable coinsurance and deductible amounts. The second facility is permitted to seek payment only from the first facility, and may not bill the patient or the Medicare program. (See S3007.)

3173.7 Dialysis Services Provided Under Arrangements to Hospital Inpatients.—Any nonphysician service provided to a hospital inpatient either must be provided directly by the hospital or be arranged for by the hospital. (See S3101.) Therefore, a hospital may not contract an agreement as described in S3173.6 above, for care (except for physician's care) provided to its inpatients unless a waiver has been granted to the hospital consistent with S3618C. See S3101.B for a description of situations when inpatient dialysis services are covered in hospitals.

3174. HEMOFILTRATION

Hemofiltration is a covered procedure under the Medicare program. Payment for this procedure is at the composite rate. Hemofiltration is a safe and effective alternative treatment to hemodialysis and is performed in 3 weekly sessions. While the procedure may be used for any ESRD patient, it appears to be most advantageous when applied to high-risk unstable patients such as older patients with cardiovascular diseases or diabetes, since it is associated with fewer side effects such as hypotension, hypertension or volume overload.

Hemofiltration is a new method of blood purification for the removal of toxic substances that accumulate in patients with renal insufficiency. In contrast to both hemodialysis and peritoneal dialysis treatments, which eliminate dissolved substances via diffusion across semipermeable membranes, hemofiltration mimics the filtration process of the normal kidney. Solutes are removed by the use of convective transport through semipermeable membranes in a manner similar to that of the glomerular membrane of the normal kidney. The technique requires an arteriovenous access. Hemofiltration is usually performed in facility; since the technique is new to this country, it is unlikely that it will be performed in the home.

3175. HEMOPERFUSION

General

Hemoperfusion is covered under Medicare when furnished as described below for the types of covered conditions described in this instruction. Contractors should use the following as general guidelines of what may be considered covered. As with all items and services, the services must be reasonable and necessary for the diagnosis or treatment of the specific patient involved.

Hemoperfusion is an extracorporeal technique which uses activated charcoal or ion-resins as an artificial kidney for the removal of toxic substances from the blood and for the treatment of acute and chronic renal failure.

A. Covered.—Hemoperfusion is a covered service when it is used in the treatment of life-threatening drug overdose, for patients with or without renal failure effective for services performed on or after September 1, 1979. Hemoperfusion generally requires a physician to be present to initiate treatment and to be present in the hospital or an adjacent medical office during the entire procedure as changes may be sudden. Special staff training and equipment are required.

One or two treatments are usually all that is necessary to remove the toxic compound; additional treatments should be documented. Hemoperfusion may be performed concurrently with dialysis, and in those cases payment for the hemoperfusion should reflect only the additional care rendered over and above the care given for the dialysis.

In addition, the use of hemoperfusion in conjunction with deferoxamine (DFO) for the treatment of patients with aluminum toxicity has been demonstrated to be clinically efficacious and is therefore regarded as a covered service.

B. Noncovered—The effects of using hemoperfusion to improve the results of chronic hemodialysis are not known. Therefore, when used for this purpose, hemoperfusion is not covered because it is not considered reasonable and necessary within the meaning of §1862(a)(1) of the law. In addition, it has not been demonstrated that the use of hemoperfusion in conjunction with deferoxamine (DFO), in treating symptomatic patients with iron overload, is efficacious. There is also a paucity of data regarding its efficacy in treating asymptomatic patients with iron overload. Therefore, hemoperfusion used in conjunction with DFO in treating patients with iron overload is not a covered service; i.e., it is not considered reasonable and necessary within the meaning of §1862(a)(1) of the law.

3178. TRANSPLANTATION

Introduction.—Renal transplantation is a principal form of treatment for patients with ESRD. We have developed a method of reimbursement for the variety of medical services required to support a transplant program, including payment for Medicare's share of the costs of organ procurement.

In addition, Medicare has developed coverage and reimbursement criteria for necessary medical services provided to potential donors and recipients. In some situations these services are provided before the effective date of Medicare entitlement for the potential transplant recipient.

NOTE: Therapeutic Apheresis.—Apheresis is considered an experimental procedure when used to treat kidney transplant recipients for steroid resistant renal allograft rejection episodes and when used prior to kidney transplant as a method of removing lymphocytes to prevent or modify rejection episodes. Therefore, apheresis is not covered under the Medicare program when used for these procedures. (See Coverage Issues Appendix §35-60 for situations when apheresis is covered by Medicare.)

3178.1 Identifying Candidates for Transplantation.—After a patient is diagnosed as having ESRD, the physician should determine if the patient is suitable for transplantation. If the patient is a suitable transplant candidate, a live donor transplant is considered first because of the high success rate in comparison to a cadaveric transplant. Whether one or multiple potential donors are available, the following sections provide a general description of the usual course of events in preparation for a live-donor transplant.

3178.2 Identifying Suitable Live Donors.—Generally, potential live donors include only parents, brothers and sisters, or children. Those who are willing and medically able to donate a kidney are tested to determine whether they are of the same blood type as the recipient. After blood typing, the recipient and the donors are tissue typed. Only those candidates with blood and tissue types similar to the recipient are considered further.

After tissue typing, those medically suitable donors are evaluated on physical, psychological, and social factors. Potential donors who remain after the above testing may be hospitalized for about two days for further evaluation using procedures not appropriately performed on outpatients. These procedures may include intravenous urography and renal arteriography.

If the results of the above tests identify several suitable donors, the most suitable donor is selected and arrangements are made for the transplant. At such time, the donor and recipient will enter the hospital to undergo the excision and transplantation, respectively. When tests do not identify an acceptable living donor, the patient is considered for a cadaveric transplant and placed on hemo- or peritoneal dialysis, if this has not already proved necessary. If the ultimate goal is transplantation, the patient is registered with a kidney transplant registry.

3178.3 Pretransplant Outpatient Services.—All hospital outpatient services provided to live donors and recipients in anticipation of a transplant during the pre-entitlement period and after entitlement, but prior to admission to the hospital for transplantation, are covered. Such services would include kidney recipient registration fees, laboratory tests (including tissue typing of recipient and donors) and general medical evaluations of the recipient and the donor(s). Physicians' services are also covered.

3178.4 Pretransplant Inpatient Services.—The following rules apply to kidney transplant inpatient medical evaluations when the kidney recipient has Medicare entitlement or is in the pre-entitlement period. The pre-entitlement period is that period prior to the patient's actual Medicare entitlement, during which services are furnished in anticipation of a transplant, after the patient has been diagnosed to have end-stage renal disease. If the potential kidney recipient does not have entitlement, or is not in the pre-entitlement period, no services rendered to the kidney recipient or to the related living donor for kidney transplant medical evaluations will be covered by the Medicare program.

3178.5 Living Donor Evaluation, Patient Has Entitlement or is in Pre-Entitlement Period.—When a living donor is admitted to a hospital (before admission for excising the donor kidney) for a medical evaluation in anticipation of a kidney donation, all hospital and physicians' services costs applicable to medical evaluation are considered kidney acquisition service costs. As such, the hospital statistics (charges, patient days, etc.) and the physicians' charges should be treated in accordance with all other kidney acquisition service statistics and the related costs are included in Medicare costs.

When the live donor subsequently enters the hospital for the actual excision, the hospital costs of services rendered to the donor will continue to be treated as kidney acquisition service costs under Part A. However, at that point physician services are no longer considered kidney acquisition services and are not reimbursable under Part A. Instead, during the donors inpatient stay for the excision surgery and during any subsequent donor inpatient stays resulting from a direct complication of the organ donation, physician services are billed under Part B. They are billed in the normal manner but on the account of the recipient at 100 percent of the reasonable charge as determined by the physicians' Medicare carrier. Note that services furnished to kidney donors are covered under the account of the recipient.

Services listed in the following sections are also covered. However, they are not billed as such but become a part of the kidney acquisition costs.

3178.6 Kidney Recipient Admitted for Transplant Evaluation.—When a potential recipient is admitted to a hospital (before admission for the actual transplant) solely for a medical evaluation for an anticipated kidney transplant, all hospital and physicians' services costs applicable to the anticipated transplant are considered kidney acquisition service costs.

3178.7 Kidney Recipient Evaluated for Transplant During Inpatient Stay.—When a recipient is admitted to a hospital for a medical reason other than in anticipation of a transplant, but during the stay, a medical evaluation for an anticipated kidney transplant is performed, all hospital and physicians' services costs applicable to the medical evaluation are considered kidney acquisition service costs. Accordingly, those services will be treated the same as the services above. However, all hospital and physicians' services applicable to the nontransplant related services (i.e., related to the medical services for which the patient was actually admitted) must not be included with kidney acquisition services costs; instead such services must be billed in the same manner as any other inpatient service on the account of the recipient. These latter services may only be billed to the Medicare program if the recipient has actual Medicare entitlement.

3178.8 Kidney Recipient Admitted for Transplantation and Evaluation.—When the medical evaluation for a transplant is performed on the recipient or the living donor during the same inpatient stay in which the actual transplant occurs, all such services will be billed and the costs will be accumulated in the normal manner. For example, all hospital services rendered to the donor will be considered kidney acquisition services. However, all physicians' services rendered to the living donor and all hospital and physicians' services rendered to the recipient will be billed in the same manner as any other inpatient services on the account of the recipient.

3178.9 Post-Transplant Services Provided to Live Donor.—The donor is covered for an unlimited number of days of care in connection with the kidney removal operation. Days of inpatient hospital care used by the donor should not be charged against either party's utilization record. However, the program's assumption of liability is limited to those donor expenses that are incurred directly in connection with the kidney donation. Expenses incurred for complications that arise with respect to the donor are covered only if they are directly attributable to the surgery.

Coverage of kidney donor services includes postoperative recovery services directly related to the kidney donation. The period of postoperative recovery ceases when the donor no longer exhibits symptoms related to the kidney donation. Claims for services rendered more than 3 months after donation surgery will be reviewed carefully. However, follow-up examinations may be covered up to 6 months after the donation to monitor for possible complications. The requirement that additional payment cannot be made for services included in the donor nephrectomy charge still applies.

3178.10 Physicians' Services.—Expenses for physicians' services to the donor are treated as though they had been incurred by the recipient. If the recipient dies, donor expenses actually incurred after death of the recipient will be treated as incurred before the death of the recipient.

3178.11 Coverage After Recipient Has Exhausted Part A.—If the recipient has exhausted Part A benefits while the donor still requires and receives inpatient hospital care, the program continues to pay for such donor care under Part A at 100 percent reimbursement.

3178.12 Cadaver Kidneys.—Costs incurred by the provider in connection with the acquisition of a cadaver kidney are reimbursable by the program through the kidney acquisition cost center. Typical covered costs involved in excising the cadaver kidney include: surgeons' service, operating room, anesthetist, donor evaluation and support, preservation supplies (perfusion materials and equipment), preservation technician, telephone consultation charge, intensive care costs, pathology, central supply costs, organ transportation costs, and transportation costs for a technician. There is no provision in the law for coverage of charges by an agent transporting a kidney for transplant into an eligible beneificary, if the agent bills the program or the patient directly. However, reimbursement may be made to hospitals and included in kidney acquisition costs.

3178.13 Services Involved.—When there is no suitable living donor, a patient with renal failure may be considered for a cadaveric transplant. In such cases, the services provided to recipients of "live donor" kidneys (i.e., tissue typing and other related tests) are also provided to potential recipients of cadaver kidneys. However, because a kidney may not be available for a long period of time, additional services may be provided in the form of direct physician care for the patient's renal condition, and certain tests may be performed on a regular basis to allow the physician to have current information regarding the status of the patient and his suitability for transplant. In addition, the number of mixed lymphocyte cultures which are prepared whenever a kidney is procured that may suit the recipient depends on the number of kidneys which become available for transplant. The cost of registering a potential recipient with a kidney transplant registry is also covered, as well as the services furnished to maintain organ viability after excision; i.e., preservation, and transporting the kidney to the place of transplantation.

3178.14 Tissue Typing Services For Cadaver Kidney.—Tissue typing services for cadaveric kidney recipients are treated in a similar manner to the way in which such services are covered and reimbursed in live donor cases. Tissue typing of the cadaveric organ by the excising hospital becomes an organ acquisition cost which is included in the charges for organs which are supplied by the hospital.

3178.15 Cadaver Excision Yielding Two Kidneys.—When two kidneys are obtained from a cadaver, and both kidneys are shipped to the same transplant hospital or organ procurement agency, the hospital should adjust its normal charges to reflect any increased perfusion, preservation and shipping costs due to the additional kidney. On the other hand, when the kidneys are sent to separate organizations or transplant hospitals, the excising hospital should prorate its charges to the receiving organizations so that the total charges do not exceed the amount that would have been billed if one transplant hospital or agency had received both kidneys.

3178.16 Provider Costs Related To Cadaver Kidney Excisions.—Typical provider costs involved in excising a cadaver kidney whether or not it is eventually transplanted include:

- Intensive care costs;
- Surgeon's services;

- Anesthetist services;
- Operating room;
- Preservation supplies (perfusion materials and equipment);
- Preservation technician's services;
- Donor evaluation and support;
- Pathology;
- Central exchange costs (transportation and packaging);
- Administration costs (overhead items).

3178.17 Noncovered Transplant Related Items and Services.—The following list represents some of the transplant related items and services which are not covered and for which no program payment can be made:

- Travel, room, and board expenses incurred by a live donor;
- Travel, room, and board expenses (to any transplant center) incurred by the recipient;
- Reimbursement for the kidney itself when the live donor or the cadaver donor's next of kin sells the kidney;
- Transportation of the potential cadaveric donor to the transplant hospital (only transportation of the organ is reimbursable as part of the organ procurement charge);
- Pronouncement of death and burial expenses for the cadaveric donor.

3178.18 Other Covered Services.—

A. Tissue Typing.—Tissue typing of the recipient, as well as tissue typing and tests to determine the suitability of a living donor or a cadaveric kidney, are covered as medical expenses, necessary for the treatment of an eligible recipient. The costs of these services are covered under the hospital insurance or medical insurance programs, (Part B coverage after recipient has exhausted Part A) and are reflected in the kidney acquisition costs.

B. Preservation Laboratories.—The services performed by preservation laboratories are medically necessary for the treatment of a beneficiary's illness. A participating hospital is reimbursed for the reasonable cost of such services which are performed by its own laboratory or which the hospital purchases from a freestanding preservation laboratory or organ procurement agency.

C. Registration Fees.—A participating hospital which expects to perform a kidney transplant will be reimbursed for the reasonable cost incurred in listing the patient and his blood characteristics with a professionally recognized organization that maintains a registry of potential transplant candidates, and which provides a regular listing of such patients to hospitals engaged in kidney procurement.

3178.19 Hospitals that Excise But Do Not Transplant Kidneys.—The excising hospital plays an important part in the national organ procurement effort. Most of these hospitals are community hospitals which neither excise kidneys on a regular basis nor perform transplants. A hospital that excises but does not transplant kidneys must be certified to participate in the Medicare program. Where the hospital is not participating in the Medicare program, organs may be accepted from it only if they cannot be obtained from any other source.

A hospital that excises but does not transplant kidneys may perform excisions on cadavers or on live donors; however, regardless of the vital status of the donor, most of the hospital services utilized in the excision are the same.

3180. COMPREHENSIVE OUTPATIENT REHABILITATION FACILITY (CORF) SERVICES

Section 933 of P.L. 96-499 (the Omnibus Reconciliation Act of 1980) added to the scope of benefits available to beneficiaries under Part B, certain services furnished by CORFs.

A CORF is recognized as a provider of services, reimbursable on the basis of its reasonable costs. The CORF must provide at least the following three services:

- o Physicians' services;
- o Physical therapy; and
- o Social or psychological services.

In addition to this basic package of services, the CORF may furnish and receive reimbursement for as many of the other items and services listed in §3181 as it wishes.

Under regulations which implement the amendment, the facility must have adequate space and equipment necessary to provide any of the services it elects to provide. Additionally, in order to accept a patient, the CORF must be able to provide all of the services required by the patient, as established in the plan of treatment. If the CORF does not have personnel to provide the service, it must arrange for the services to be provided at the CORF, as needed, by outside practitioners. Reimbursement will be made by assigned intermediaries acting in the role of Part B carriers. (See §§3370-3370.2.)

CORF services are subject to the Medicare Part B deductible and coinsurance provisions; i.e., the CORF may bill the beneficiary only the unmet portion of the deductible and 20 percent of its customary charges for covered services.

In enacting this legislation, the Congress indicated its concern that although rehabilitation services were covered in various settings under the provisions of the existing law, there was no provision that would permit the beneficiary to receive a variety of rehabilitation services at a central location. Section 933 provides coverage for a broad array of rehabilitation services furnished on an outpatient basis in a coordinated fashion by a CORF.

3181. COVERED CORF SERVICES AND NONCOVERED SERVICES

A. Covered CORF Services.—The following are covered CORF services:

- o Physicians' services related to administrative functions;

- o Physical therapy, occupational therapy, speech pathology services, and respiratory therapy;

- o Social and psychological services;

- o Nursing care provided by or under the supervision of a registered professional nurse;

- o Prosthetic and orthotic devices, including testing, fitting, or training in the use of such devices;

- Drugs and biologicals which cannot be self-administered;

- Supplies, appliances, and equipment, including the purchase or rental of DME from the CORF; and

- A single home visit to evaluate the potential impact of the home environment on the rehabilitation goals.

B. Noncovered Services.--The statute specifies that no service may be covered as a CORF service if it would not be covered as an inpatient hospital service if provided to a hospital patient. This does not mean that the beneficiary must require a hospital level of care or meet other requirements unique to hospital care. This provision merely requires that the service, if otherwise covered, would be covered if provided in a hospital. Accordingly, coverage determinations for CORF services will be based on established coverage guidelines.

CORF services are not covered if not reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the function of a malformed body member. Thus, there must be potential for restoration or improvement of lost or impaired functions. For example, services involving repetitive services that do not require the skilled services of nurses or therapists, such as maintenance programs or general conditioning or ambulation, are not covered. These services could be performed in the patient's residence by nonmedical personnel such as family members. It is not reasonable and necessary for such services to be performed in an ambulatory care setting by CORF personnel.

3182. PROVISION OF SERVICES

A. Place of Treatment.--In general, all services must be furnished on the premises of the CORF. The only exceptions are the home evaluation (see §3181A) and, effective December 22, 1987, physical therapy, occupational therapy, and speech pathology services. There is no restriction on where these services may be furnished. They may be covered if furnished pursuant to the plan of treatment, and they do not duplicate services for which payment has been made under Medicare.

CORFs have been instructed to clearly identify each service performed off the premises of the facility. Establish controls to guard against the duplication of services provided at the facility and elsewhere. (See §3650.)

B. Personnel Qualification Requirements.--Services must be furnished or supervised by personnel determined to be qualified in accordance with HCFA regulations 42 CFR 485.70.

Determinations regarding whether services are furnished by or under the supervision of qualified personnel are primarily the responsibility of the State agency responsible for certifying the facility. You may assume, in the absence of evidence to the contrary, that the services of a participating CORF are furnished or supervised by qualified personnel. Refer any questions in this regard to the regional office. If there is evidence that services are not being furnished or supervised by qualified personnel, withhold payment until the matter is resolved.

C. Services Furnished Under Arrangements.--CORF services provided under arrangements are subject to the provisions of §3007.

D. Referral for Treatment.--To become a patient of a CORF, the beneficiary must be under the care of a physician who certifies that the beneficiary needs skilled rehabilitation services.

The referring physician must advise the CORF of the beneficiary's medical history, current diagnosis and medical findings, desired rehabilitation goals, and any contraindications to specific activity or intensity of rehabilitation services.

E. Plan of Treatment.--CORF services must be furnished under a written plan of treatment established by a physician. The physician may be either a physician associated with the CORF, or the referring physician if he or she provides a detailed plan of treatment that meets the following requirements.

The plan of treatment must contain the diagnosis, the type, amount, frequency and duration of services to be performed, and the anticipated rehabilitation goals.

The plan of treatment should be sufficiently detailed to permit an independent evaluation of the patient's specific need for the indicated services and of the likelihood that he or she will derive meaningful benefit from them.

The plan of treatment must be reviewed by the CORF physician at least once every 60 days. Following the review, the physician should certify that the plan of treatment is being followed and that the patient is making progress in attaining the established rehabilitation goals. When the patient has reached a point where no further progress is being made toward one or more of the goals, Medicare coverage ends with respect to that aspect of the plan of treatment.

3183 Specific CORF Services

3183.1 Physicians' Services. Certain administrative services provided by the physician associated with the CORF are considered CORF services and are reimbursable to the CORF. These services include: examinations for the purpose of establishing and reviewing the plan of treatment, consultation with and medical supervision of non-physician staff, and other medical and facility administration activities.

Physicians' diagnostic and therapeutic services furnished to an individual patient are not CORF physicians' services. If covered, payment for these services is made by the carrier on a reasonable charge basis subject to the same limitations applicable to physicians' services furnished in outpatient hospital settings.

3183.2 Physical Therapy Services.

The coverage guidelines in §3101.8 apply to physical therapy services provided by CORFs. Note that under those guidelines, maintenance physical therapy, i.e., repetitive services required to maintain a level of functioning, would not be covered. However, the establishment of a maintenance program for a patient whose restoration potential has been reached would be a covered service. This could include examinations, evaluations of the patient's condition, preparation of the maintenance program, and the training of nonskilled persons to carry out the program.

3183.3 Occupational Therapy Services. The coverage guidelines in §3101.9 also apply to occupational therapy services furnished by a CORF.

Note that services involving vocational or prevocational assessment are not covered when they are related solely to vocational rehabilitation; that is, to prepare the patient to qualify for specific employment opportunities, achieve certain work skills, or accommodate a certain work setting. Such services are not considered reasonable and necessary for the diagnosis or treatment of illness or injury.

3183.4 Speech Pathology Services. Speech pathology services are subject to the guidelines in §3101.10A.

Services related to congenital speech difficulties, such as stuttering or lisping, would not be covered unless such services are incident to the treatment of otherwise covered CORF services.

Although in other outpatient settings, a speech pathologist is permitted to establish a plan of treatment, this is not the case with CORF services. Under the statute, all CORF services must be provided under a plan established by a physician. However, as with other specialties, it is expected that the physician will rely heavily on advice from the speech pathologist.

3183.5 Respiratory Therapy Services. Respiratory therapy services furnished by a CORF are covered under the guidelines in §3101.10.

3183.6 Prosthetic and Orthotic Devices. Prosthetic devices, other than dental devices and renal dialysis machines, are covered CORF services. Prosthetic devices are defined as devices that replace all or part of an internal body organ or external body member (including contiguous tissue), or that replace all or part of the function of a permanently inoperative or malfunctioning internal body organ or external body member.

Coverage of a prosthetic device includes all services necessary for formulating its design, material, and component selection; measurement, fittings, static and dynamic alignments; and instructing the patient in its use. Such coverage is included as an integral part of the fabrication of the device.

Orthotic devices are those orthopedic appliances or apparatus used to support, align, prevent, or correct deformities, or to improve the function of moveable parts of the body. As with prosthetic devices, the coverage of an orthosis includes its design, materials, measurements, fabrications, testing, fitting, or training in the use of the orthosis.

3183.7 Social Services. Social services are covered CORF services if they are included in the plan of treatment and contribute to the improvement of the individual's condition. Such services include:

A. Assessment of the social and emotional factors related to the patient's illness, need for care, response to treatment, and adjustment to care in the CORF.

B. Assessment of the relationship of the patient's medical and nursing requirements to his or her home situation, financial resources, and the community resources available upon discharge from the CORF.

C. Counseling and referral for casework assistance in resolving problems in these areas.

3183.8 Psychological Services. Covered services include:

- Assessment, diagnosis and treatment of the beneficiary's mental and emotional functioning as it relates to his or her rehabilitation.

- Psychological evaluations of the individual's response to and rate of progress under the treatment plan.

- Assessment of those aspects of an individual's family and home situation that affect the individual's rehabilitation treatment.

Although everyone who has a serious illness or injury may suffer from some degree of anxiety, the coverage of psychological services do not automatically extend to every CORF patient. For example, diagnostic testing for a mental problem is covered for a cardiac patient who exhibits excessive anxiety or fear following the acute phase of a cardiac problem. However, the routine testing or treatment of all cardiac rehabilitation patients for mental, psychoneurotic, or personality disorders is not covered.

Family counseling services are covered only where the primary purpose of that counseling is the treatment of the patient's condition; that is, when there is a need to observe the patient's interaction with family members or to assess the capability of family members to aid in the rehabilitation of the patient. Family counseling services that are primarily directed toward the treatment of a family member's problem with respect to the patient's condition are not covered.

3183.9 Nursing Services. Nursing services provided by or under the supervision of a registered professional nurse are covered CORF services.

3183.10 Drugs and Biologicals. Drugs and biologicals are covered when they cannot be self-administered, are administered by or under the supervision of a physician or registered nurse, and are not otherwise excluded from Medicare coverage, such as most injections for immunization. Determinations on whether a drug or biological is of a type that cannot be self-administered is based on the usual method of administration of the form of that drug or biological as furnished to the CORF patient.

Thus, when a patient is given tablets or other oral medication, these are excluded from coverage since the form of the drug given to the patient is usually self-administered. Similarly, if a patient is given an injection that is usually self-injected, such as insulin, this drug is excluded from coverage unless administered in an emergency situation, such as a diabetic coma, or where, because of the patient's mental or physical condition, self-administration is impossible or unwarranted. However, if a patient receives an injection of a drug that is not usually self-injected and that is also available in oral form, that drug is not subject to the self-administerable drug exclusion, since it is not self-administerable in the form in which it was furnished to the patient.

3183.11 Supplies, Appliances, and Equipment.—Covered services include:

- Nonreusable supplies, such as oxygen, bandages, or ceramic tiles, used in the various therapeutic modalities.

- Medical equipment and appliances for the use of patients at the facility.

- Durable medical equipment (DME) for use outside the CORF, whether furnished at the CORF or delivered to the beneficiary's home. The beneficiary may obtain DME from the CORF or other DME supplier. The guidelines in §3113 apply to DME furnished by the CORF. Thus, exercise appliances and other self-help devices that can be used for general conditioning do not qualify as DME. The equipment may be purchased or rented. Payment is made by the intermediary on a reasonable cost basis.

3183.12 Home Environment Evaluation.—One offsite service is permitted - a single home visit to evaluate the potential impact of the home environment on the rehabilitation goals. The purpose of the evaluation is to permit the plan of treatment to be tailored to take into account the patient's home environment. It is not intended that the Medicare program underwrite physical alterations to the home that facilitates the patient's rehabilitation.

The home evaluation is not covered as a routine service for all CORF patients. It is covered only if, in establishing or carrying out the plan of treatment, there is a clear indication that the home environment might adversely affect the patient's rehabilitation. Coverage is limited to the services of one professional who is selected by the CORF.

3185 Psychiatric Services Limitation.—

A. Basis for Limitation—Section 1833(c) of the Act imposes a limitation on reimbursement under Part B for outpatient psychiatric treatment, (i.e., treatment when the beneficiary is not a hospital inpatient). This provision limits the amount of a beneficiary's incurred expenses for those services that are recognized for any calendar year to the lesser of 62.50 percent of those expenses, or a fixed dollar amount as follows: $312.50 for any year before 1988; $562.50 for 1988; and $1,375 for any year after 1988. Payment for the incurred expenses, as limited, is subject to the Part B deductible and coinsurance.

The limitation generally applies only to expenses incurred for services furnished by physicians. However, under the regulations which implement the CORF provision, the limitation also applies to CORF services furnished by physicians and nonphysicians for services related to the treatment of a psychiatric condition, i.e., mental, psychoneurotic, and personality disorders. The term "mental, psychoneurotic, and personality disorders" is defined as the specific psychiatric conditions described in the American Psychiatric Association's *Diagnostic and Statistical Manual - Mental Disorders*.

B. Application of the Limitation.—

1. The CORF psychiatric limitation is not a limit separate from the limitation on physician's outpatient psychiatric services. Physician outpatient services and CORF services for the treatment of a mental, psychoneurotic and personality disorders are combined for purposes of the limitation.

2. The limitation applies only to therapeutic services and to follow-up diagnostic services performed to evaluate the treatment. It does not apply to initial psychiatric or psychological diagnostic testing and evaluation.

3. In applying the fixed dollar amount and 62.50 percent limitations to incurred expenses, use the customary charges for the CORF services. Carriers use reasonable charges for physician services. The $312.50, $562.50, and $1,375 amounts represent 62.50 percent respectively of $500, $900, and $2,200. Therefore, $500, $900, and $2,200 are the maximum amount of customary charges for CORF psychiatric services, plus reasonable charges for outpatient physician psychiatric services, that are covered respectively in any year before 1988, in 1988, and in any year after 1988.

C. Computation.—To compute the CORF's reimbursement for services related to a psychiatric condition:

1. Ascertain the total accumulated covered reasonable charges for outpatient physicians' psychiatric services and covered customary charges for CORF psychiatric services previously processed for the calendar year.

2. If the answer to 1. is $500 or more for any year before 1988, $900 or more for 1988, and $2,200 or more for any year after 1988, no further CORF reimbursement is available for the treatment of the patient's psychiatric condition on the current claim.

3. If the answer to 1. is less than $500 for any year before 1988, less than $900 for 1988, or less than $2,200 for any year after 1988, subtract the amount in 1 from $500, $900, or $2,200, as applicable.

4. Determine the lesser of the customary charges for CORF psychiatric services on the current claim or the figure in 3. The amount so determined is the covered customary charges for CORF psychiatric services.

5. Multiply the amount in 4. by .625. The result is the customary charges for CORF psychiatric services which, subject to Part B deductible and coinsurance, are reimbursable in the current claim.

D. Determining When the Limitation Applies.—

If the CORF services rendered are for both a psychiatric condition and one or more nonpsychiatric conditions, separate the charges for the psychiatric aspects of treatment from the charges for the nonpsychiatric aspects. However, in any case in which the psychiatric and nonpsychiatric components are not readily distinguishable, allocate the charges under the following rules.

1. Psychological services, whether furnished by psychologists or other personnel, are always subject to the limitation, regardless of the patient's diagnosis.

2. Physical therapy, respiratory therapy, speech therapy, and services furnished in connection with prosthetic and orthotic devices and the use of equipment and appliances related to these services, are not subject to the limitation.

3. For those services not specified in 1. and 2. above, such as occupational therapy, determine the primary reason for the patient being referred to the CORF.

a. If the referral is primarily on the basis of a psychiatric condition, all such services are subject to the limitation except as specified in b. below.

b. If the referral is primarily on the basis of a diagnosis of Alzheimer's Disease (coded 331.0 in the International Classification of Diseases 9th Revision) or Alzheimer's or other disorders coded 290.XX in the American Psychiatric Association's Diagnostic and Statistical Manual—Mental Disorders, such services typically represent medical management of the patient's condition (rather than psychiatric treatment) and is not subject to the benefit limitation. However, where a particular service provided a patient with such a diagnosis is primarily for psychological services as specified in 1. above, it is subject to the limitation.

c. If the referral is primarily on the basis of a physical condition, such services are not subject to limitation.

d. If the primary reason for referral is not clear, 50 percent of the customary charges are subject to the limitation.

E. Examples

1. Patient A is referred to the CORF for psychological evaluation and counseling. The plan of treatment includes services that are provided by a psychologist, a psychiatric nurse, a social worker, and an occupational therapist. Since all of the CORF services are furnished in connection with patient A's mental condition, all are subject to the psychiatric limitation.

2. Patient B, who has chronic schizophrenia, is injured in an accident resulting in amputation of his right hand and foot. Following a period of hospitalization, during which he is fitted with an artificial hand and foot, he is referred to the CORF for physical therapy, occupational therapy, and social services. Even though Patient B has a psychiatric condition, the CORF services are not furnished in connection with that condition and are not subject to the psychiatric limitation.

3. Same facts as Example 2, except that after treatment is initiated, it is determined that B's mental condition was aggravated by the results of the accident, and that he also needs psychological counseling and that the occupational therapy and social services should be continued but revised to also take into account his mental state.

The physical therapy still would not be subject to the psychiatric limitation. The psychological counseling would be subject. Because it cannot be clearly established whether the occupational therapy and social services are in connection with his physical or mental problem, 50 percent of the customary charges for these services would be applied to the psychiatric limitation.

A3101.1 Elimination of the Private Room Subsidy.

A. General.—For cost reporting periods beginning after December 31, 1971 and before October 1, 1982, the program has paid the same amount for routine services (excluding intensive care type units) whether the patient had a medically necessary private room, a nonmedically necessary private room, a semiprivate room or ward accommodations (if use of ward accommodations was consistent with program purposes). Under section 111 of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), Public Law 97-248, the program may ordinarily no longer allow as a reasonable cost the estimated amount by which costs incurred by a hospital or SNF for private room accommodations exceed the costs which would have been incurred by that hospital or SNF for semiprivate accommodations. The program may allow this extra cost only where the use of those accommodations by a Medicare beneficiary is medically necessary. Final regulations reflecting this provision have been issued effective for cost reporting periods beginning on or after October 1, 1982. (47 F.R. 42676, September 28, 1982.)

Under the methodology for reimbursing for routine services for cost reporting periods beginning after December 31, 1971 and before October 1, 1982, the intermediary in most cases did not review a hospital's or SNF's assertions regarding the medical necessity of a private room. The only situation in which the intermediary previously made a determination regarding the medical necessity of a private room was the unusual one in which the hospital or SNF stated that the room was not medically necessary, informed the beneficiary (or his representative) that he would have to pay a specified private room charge differential, and the beneficiary disagreed and requested a determination. With the change in reimbursement guidelines effective for cost reporting periods beginning on or after October 1, 1982, intermediaries will now also have to review on a postpayment sample basis all other hospital and SNF allegations of the medical necessity of a private room.

B. Provider Responsibility.—For cost reporting periods beginning on or after October 1, 1982, a hospital or SNF should submit an HCFA-1453 showing the charges for a private room as fully covered charges (see §3620, Item 19B for the way in which this is done) only if the private room was medically necessary under the guidelines in §3101.1B (Medical Necessity: Need for Isolation) or §3101.1C (Medical Necessity: Admission Required and Only Private Rooms Available). The provider must maintain the documentation needed to establish that the requirements of §3101.1B or §3101.C were met.

C. Intermediary Review Process.— Contact the provider on a postpayment sample review basis with such frequency as seems appropriate, to obtain the provider's explanation of why a private room was medically necessary under the guidelines in subsection B, request any additional information or any documentation that may be needed, and determine whether the private room was in fact medically necessary in the cases reviewed. If the postpayment sample review reveals erroneous allegations of the medical necessity of private rooms, do not attempt to recover the incorrect payments unless:

1. The purported basis for the medical necessity of the private room was the need for isolation but a physician did not order the private room; or

2. The purported basis for the medical necessity of the private room was the nonavailability of semiprivate or ward accommodations but such accommodations were in fact available;

3. The provider made some other obvious error in alleging the medical necessity of a private room.

Whether or not recovery is sought, furnish the provider appropriate remedial training. If this training fails to produce accurate provider determinations regarding the medical necessity of a private room, require the provider to attach the statement justifying the medical necessity of a private room to each HCFA-1453 that shows the charges for a private room as fully covered charges and make a case by case prepayment review of these billings. This case by case review must continue until you find that the provider is making accurate private room determinations.

D. When Charge for Private Room Differential is Permissible.--Denials of private room coverage are not subject to the waiver of liability provisions. However, under section 1866(a)(2)(B)(i) of the Social Security Act, a provider may charge the private room differential described in S3101.1A for a nonmedically necessary private room only if the private room was requested by the beneficiary. Where the provider alleges the medical necessity of a private room but you deny private room coverage on prepayment review, the provider may be considered to have furnished the private room at the request of the beneficiary, and may charge the private room differential, unless the allegation of medical necessity was made in obvious error. If the allegation was made in obvious error, the provider may not be considered to have furnished the private room at the request of the beneficiary and may not charge the differential. When you deny private room coverage in the postpayment sample review, the provider may never charge the differential, because you do not seek recovery unless the allegation of medical necessity was made in obvious error.

A provider may also charge the beneficiary the private room differential, as in the past, where the private room was requested by the beneficiary or his representative with knowledge of the charge and the provider shows the differential as a noncovered charge in the HCFA-1453.

E. Notice and Correction of Bills.—If you deny private room coverage in a prepayment case by case review, correct the bill, notify the provider and advise the provider whether or not the provider may charge the beneficiary the private room differential under the rules described above. If a charge is permissible, notify the beneficiary of the denial, indicating his appeal rights. If you deny private room coverage on postpayment sample review and seek recovery, correct the bill and remind the provider that no charge may be made for the private room differential. In correcting bills, S3620, Item 19 B applies —paragraph 2 if a charge is permissible and paragraph 5 if a charge is not permissible.

F. All-private Room Providers.—In an all-private room provider, the Medicare program continues to pay the full reasonable cost of a private room in all cases, and beneficiaries may not be charged any private room differential.

A.3101.7, Inpatient Services in Connection with Dental Services—For hospital admissions after June 30, 1981, hospital inpatient services which are necessary because of the severity of a noncovered dental procedure are covered. The dental procedure itself is excluded from coverage if it is a service described in §3162. Hospital inpatient services which are necessary for the performance of a dental procedure because of the patient's underlying medical condition and clinical status continue to be covered.

Cross-refer: §§3101.7, 3431B.1, 3610B.10, and 3783.1C.

A3146 Reimbursement for Inpatient Radiology and Pathology.--Sec. 112 of Public Law 97-248 amends section 1833(a)(1) and 1833(b) of the Social Security Act to eliminate the 100 percent reimbursement rate currently applicable to radiological and pathological services furnished to hospital inpatients by physicians who practice in the field of radiology or pathology and have entered into (or on whose behalf there have been entered into) agreements to accept assignments in all cases for these services. Effective for services furnished on or after October 1, 1982, Medicare will pay for these services on the same basis as it pays for other physicians' services, i.e., at 80 percent of the reasonable charges after application of any unmet deductible under §3213. The agreements in question are void with respect to services furnished on or after October 1, 1982. The physician (or entity authorized to bill and receive payment for his services) may decide on a claim by claim basis whether or not to accept assignment with respect to services furnished on or after that date (subject to existing consistency requirements of combined billing when the hospital bills the intermediary for the physician component).

Where a hospital has been combined billing for the physician and hospital components of inpatient radiology and pathology, the different rates of reimbursement now applicable to these components will require the hospital to determine what portion of the hospital charge is for each. In determining the portion of the hospital charge that relates to the physicians' professional services and is subject to coinsurance, the hospital may use one of the methods described in §§2108.4 and 2108.11 of the Provider Reimbursement Manual. In most cases, the use of the optional method will be appropriate. For example, if the combined hospital departmental charges are $800 and the physician receives 25 percent of those charges and spends 80 percent of his time furnishing professional services, then the professional component will be identified on the bill as $160 (800 x .25 x .80) and (assuming the deductible to be met) the coinsurance will be $32 (160 x .20). Any issues that arise regarding the determination of the professional and hospital components of charges that have been combined billed are in the jurisdiction of the intermediary. See §§A3604.6A and A3620, Item 19 for a description of the procedure under which a hospital will submit a single claim to its intermediary for both the professional and hospital components of the charges.

Radiological and pathological physician services furnished before October 1, 1982, will continue to be reimbursed under the provisions in effect at the time the services were rendered even though the claim is filed on or after October 1, 1982.

Reuse of Bloodlines in ESRD Facilities................ IM 3179

IM 3179 REUSE OF BLOODLINES IN ESRD FACILITIES

Section 9335(k), of the Omnibus Budget Reconciliation Act of 1986 (OBRA 86), as amended by Section 4036(c) of the Omnibus Budget Reconciliation Act of 1987 (OBRA 87), requires that no dialysis facility may reuse dialysis supplies unless the Secretary of Health and Human Services has established protocols for reuse by July 1, 1988 and the facility follows the protocols. Final regulations providing standards and conditions for the reuse and reprocessing of hemodialyzers and dialyzer caps were published in the Federal Register on October 2, 1987. However, protocols for the reuse of bloodlines are not yet available. Therefore, beginning July 1, 1988, Medicare dialysis facilities may not reuse bloodlines.

We wish to emphasize that this prohibition is strictly a matter of conformance with the law. The Public Health Service advises us that there is no imminent public health hazard involved in the reuse of bloodlines, but work on appropriate protocols has not been completed. Reuse of bloodlines is not associated with any increased risk of hepatitis B virus (HBV) infection in either patients or staff members or with the occurrence of pyrogenic reactions or septicemia in patients.

Hospital Insurance (Part A) - Cash Deductible and Coinsurance

3201. INPATIENT HOSPITAL DEDUCTIBLE

The patient is responsible for a deductible amount for inpatient hospital services in each benefit period. The Secretary of Health and Human Services has in the past been required to determine each year the amount of the deductible for the following year. For 1987, however, the amount of the deductible has been set by law at $520. For each year after 1987, the Secretary is required to promulgate the deductible and related coinsurance amounts between September 1 and September 15 of the preceeding year. The deductible will be set at an amount equal to the deductible for the preceeding year, changed by the same percentage as applies to PPS payment rates and adjusted to reflect changes in real case mix. The deductible and related coinsurance amounts for the years through 1987 are shown on the chart in §3211.

For inpatient hospital services rendered in years prior to 1982 and after 1986, the applicable inpatient deductible is the one in effect during the calendar year in which the patient's benefit period begins (i.e., in most cases, the year in which the first inpatient hospital services are furnished in the benefit period). For services rendered in 1982 through 1986, the applicable deductible is the one in effect during the year in which the services were furnished. (For hospital and SNF coinsurance days occuring before 1982, the coinsurance amount is based on the deductible applicable for the calendar year in which the benefit period began, even though the coinsurance days may fall in a subsequent year for which a higher deductible is applicable. For coinsurance days after 1982, the coinsurance amount is based on the deductible applicable for the calendar year in which the coinsurance days occur.)

The deductible is satisfied only by charges for covered Part A services. Expenses for covered services count toward the deductible on an incurred rather than paid basis. Expenses incurred in one benefit period cannot be applied toward the deductible in a later benefit period. Expenses incurred in meeting the blood deductible do not count toward the inpatient hospital deductible.

A reduction in benefit days resulting from confinement in a psychiatric hospital on and immediately preceding the date of entitlement (see § 3104) does not affect the amount of the deductible for which the patient is responsible.

If the actual charge is less than the deductible to be met and the customary charge, the customary charge should be applied to the deductible. (See § 3101.1G for a definition of customary charges.)

3203. COINSURANCE

A. Inpatient Services.—In each benefit period, the patient is responsible for coinsurance amounts equal to one-fourth of the inpatient hospital deductible for each day of inpatient hospital services from the 61st through the 90th days, one-half of the inpatient hospital deductible for each lifetime reserve day (the 91st through the 150th days of inpatient hospital services) and one-eighth of the inpatient hospital deductible for each day of extended care services from the 21st through the 100th days.

The chart in § 3211 should be used to determine the applicable coinsurance amounts for recent years.

Where the actual charge to the patient for the 61st through the 90th days of inpatient hospital services is less than the applicable coinsurance amount, the coinsurance is the actual charge per day. Where the actual charge to the patient for lifetime reserve days is less than the coinsurance amount for those days, the beneficiary may be deemed to have elected not to use the days because he/she would not benefit from their utilization. (See § 3106.2.)

B. DME Furnished as a Home Health Benefit.—The patient is responsible for 20 percent of the reasonable charge for durable medical equipment furnished as a home health benefit on or after July 18, 1984. (Reimbursement to the HHA is the lesser of the reasonable cost or customary charge less the coinsurance, but reimbursement may not exceed 80 percent of the reasonable cost.)

3206. BASIS FOR DETERMINING THE COINSURANCE AMOUNTS

For services furnished prior to January 1, 1982, the coinsurance amounts are based on the inpatient hospital deductible applicable for the year in which the individual's benefit period began.

For services furnished on or after January 1, 1982, the coinsurance amounts are based on the inpatient hospital deductible for the year in which the services are furnished.

EXAMPLE: A beneficiary begins a benefit period with admission to a hospital on December 31, 1983 and pays a $304 inpatient hospital deductible. He continues to be hospitalized in the same benefit period until May 31, 1984. Since the coinsurance amounts are based on the inpatient hospital deductible applicable for the year in which the services were rendered, and since the deductible for 1984 is $356, the coinsurance amount for each day of inpatient hospital services from the 61st through the 90th days will be $89 and for the lifetime reserve days, it will be $178.

PART A - DEDUCTIBLE AND COINSURANCE AMOUNTS

For inpatient hospital services rendered in years prior to 1982 and after 1986, the applicable inpatient deductible is the one in effect during the calendar year in which the patient's benefit period begins (i.e., in most cases, the year in which the first inpatient hospital services are furnished in the benefit period). For services rendered in 1982 through 1986, the applicable deductible is the one in effect during the year in which the services were furnished. (For hospital and SNF coinsurance days occuring before 1982, the coinsurance amount is based on the deductible applicable for the calendar year in which the benefit period began, even though the coinsurance days may fall in a subsequent year for which a higher deductible is applicable. For coinsurance days after 1982, the coinsurance amount is based on the deductible applicable for the calendar year in which the coinsurance days occur.)

YEAR	INPATIENT HOSPITAL			SKILLED NURSING FACILITY	HOME HEALTH AGENCY[1]	BLOOD
	FIRST 60 DAYS	61ST THRU 90TH DAY	60 LIFETIME RESERVE DAYS (Nonrenewable)	21ST THRU 100TH DAY		
	DEDUCTIBLE	COINSURANCE PER DAY Always equal to 1/4 of inpatient hospital deductible	COINSURANCE PER DAY Always equal to 1/2 of inpatient hospital deductible	COINSURANCE PER DAY Always equal to 1/8 of inpatient hospital deductible	NO DEDUCTIBLE NO COINSURANCE (EXCEPT FOR 20 PERCENT COINSURANCE FOR DURABLE MEDICAL EQUIPMENT (eff. 7/18/84))	DEDUCTIBLE First 3 pints (or equivalent units of packed red blood cells) in a benefit period

[1] PRIOR TO JULY 1, 1981, THERE WAS A 100 VISIT LIMITATION

Supplementary Medical Insurance (Part B)

3212. SUPPLEMENTARY MEDICAL INSURANCE INCURRED EXPENSES.

The supplementary medical insurance plan includes coverage for expenses incurred for the following medical and other health services:

- Physicians' services, including surgery, consultation, home office, institutional calls, and services and supplies furnished incident to a physician's professional service;
- Outpatient hospital services furnished incident to physicians' services;
- Outpatient diagnostic services furnished by a hospital;
- Outpatient physical therapy, outpatient occupational therapy, and outpatient speech pathology services;
- Diagnostic X-ray tests, laboratory tests and other diagnostic tests;
- X-ray, radium, and radioactive isotope therapy;
- Surgical dressings, and splints, casts, and other devices used for reduction of fractures and dislocations;
- Rental or purchase of durable medical equipment for use in the patient's home;
- Ambulance service;
- Prosthetic devices which replace all or part of an internal body organ;
- Leg, arm, back, and neck braces, trusses, and artificial legs, arms, and eyes;
- Pneumococcal vaccine and its administration; hepatitis B vaccine and its administration, and blood clotting factors for hemophiliac patients and their administration.
- Certain medical supplies used in connection with home dialysis delivery systems;
- ESRD composite rate for all outpatient maintenance dialysis items and services;
- Antigens prepared by a physician;
- Rural health clinic services;
- Comprehensive outpatient rehabilitation facility services;

- Ambulatory surgical facility services furnished in connection with certain surgical procedures; and

- Services furnished in a health maintenance organization by a clinical psychologist, a physician assistant, or nurse practitioner, and services and supplies furnished incident to such services.

Supplementary medical insurance also covers unlimited home health visits for which the Part A intermediary makes payment on the basis of the reasonable cost. Outpatient hospital services are also reimbursed by the Part A intermediary.

Payment may not be made under Part B for services furnished an individual if he is entitled to have payment made for those services under Part A. An individual is considered entitled to have payment made under Part A if the expenses incurred were used to satisfy a Part A deductible or coinsurance amount, or if payment would be made under Part A except for the lack of request for payment or physician certification.

3213. PART B ANNUAL DEDUCTIBLE

In each calendar year, a cash deductible must be satisfied before payment can be made under the supplementary medical insurance plan. (See §3215 for exceptions.)

- As of January 1, 1982, the deductible is $75.

- From 1973 through 1981, the deductible was $60.

- From 1966 through 1972, the deductible was $50.

Expenses count toward the deductible on the basis of incurred, rather than paid expenses, and are based on the reasonable charge. Noncovered expenses do not count toward the deductible. Even though an individual is not entitled to Part B benefits for the entire calendar year, i.e., his insurance coverage begins after the first month of a year or he dies before the last month of the year, he is still subject to the full deductible for that year. Medical expenses incurred in the portion of the year preceding entitlement to medical insurance are not credited toward the deductible.

The date of service generally determines when expenses were incurred, but expenses are allocated to the deductible in the order in which the bills are received by the intermediary. Services which are not subject to the deductible cannot be used to satisfy the deductible.

3213.1 Special Carryover Rule For Expenses Incurred Prior To 1981.--Expenses incurred in the last 3 months of a calendar year prior to 1981, which were applied toward the Part B deductible for the year in which they were incurred, may also be credited towards the deductible for the following year.

NOTE: This deductible carryover provision was repealed effective with expenses incurred on or after October 1, 1981.

3214. PART B COINSURANCE

After the deductible has been satisfied, providers will generally be paid the lesser of the reasonable costs or the customary charges, less 20% of the reasonable charges, but no more than 80% of the reasonable costs, and physicians and other suppliers 80 percent of the reasonable charges, incurred during the balance of the calendar year. The patient is responsible for a coinsurance amount equal to 20 percent of the reasonable charges for the items and services. (See §3215 for exceptions.)

3215. EXCEPTIONS TO ANNUAL DEDUCTIBLE AND COINSURANCE

A. The 20 percent coinsurance does not have to be met with respect to the following:

1. Purchased used durable medical equipment (DME) including DME furnished as a home health benefit, if the charge does not exceed 75 percent of the reasonable charge of new equipment.

2. Preadmission Diagnostic Testing services furnished from December 5, 1980 through July 18, 1984.

B. Neither the annual deductible nor the 20 percent coinsurance apply with respect to:

1. Radiology and pathology services furnished before October 1, 1982 to inpatients of qualified hospitals by physicians in the fields of radiology or pathology. (Services furnished on or after July 1, 1981, were exempt from the deductible and coinsurance only if the physician agreed to accept assignment for all radiology or pathology physician services furnished to hospital inpatients);

2. Part B home health services, except that there is a coinsurance of 20 percent of the reasonable charge for durable medical equipment furnished as a home health benefit on or after July 18, 1984.

3. Clinical diagnostic laboratory tests (including specimen collection fees) performed or supervised on or after July 1, 1984, by a physician, laboratory, or other entity reimbursed on an assigned basis.

4. Certain surgical procedures performed by a physician in an ambulatory surgical center or outpatient department of a hospital.

5. Ambulatory surgical facility services in an ambulatory surgical center.

6. Pneumococcal vaccine and its administration furnished on or after July 1, 1981.

NOTE: Services which are not subject to the deductible cannot be used to satisfy the deductible.

Blood Deductibles (Part A and Part B)

3235. BLOOD DEDUCTIBLES

3235.1 Part A Blood Deductible.-- Program payment may not be made for the first 3 pints of whole blood or equivalent units of packed red cells received by a beneficiary in a benefit period. However, payment may be made for blood processing; (i.e., administration, storage, etc.) beginning with the first pint or unit in a benefit period. (See § 3620, Item 19A, for rules on distinguishing between blood charges and blood processing charges.)

The Part A blood deductible applies only to the first 3 pints of blood furnished in a benefit period, even if more than one provider furnished blood. The Part A and Part B blood deductibles are applied separately. The blood deductibles are in addition to any other applicable deductible and coinsurance amounts for which the patient is responsible.

To be covered as a Part A service and count toward the blood deductible, the blood must be furnished on a day which counts as a day of inpatient hospital services or extended care services. (See §§ 3107 and 3137.) Thus, blood is not covered under Part A and does not count toward the Part A blood deductible when furnished to an inpatient after he has exhausted his benefit days in a benefit period, or where the individual has elected not to use lifetime reserve days. However, where the patient is discharged on his first day of entitlement or on the provider's first day of participation, the provider is permitted to submit a billing form with no accomodation charge, but with ancillary charges including blood. (See § 3611B.)

3235.2 Part B Blood Deductible.-- Where blood is furnished on an outpatient basis, it is subject to a Part B blood deductible applicable to the first 3 pints of whole blood or equivalent units of packed red cells received by a beneficiary in a calendar year. It should be noted that payment for blood may be made to the hospital under Part B only for blood furnished in the outpatient setting (see § 3640.6).

The Part B blood deductible applies only to the first 3 pints of blood furnished in a calendar year, even if more than one provider furnished blood. The Part A and Part B blood deductibles are applied separately. The blood deductibles are in addition to any other applicable deductible and coinsurance amounts for which the patient is responsible.

3235.3 Items Subject to Blood Deductibles.-- The blood deductibles apply only to whole blood and packed red cells. The term whole blood means human blood from which none of the liquid or cellular components have been removed. Where packed red cells are furnished, a unit of packed red cells is considered equivalent to a pint of whole blood. Other components of blood such as platelets, fibrinogen, plasma, gamma globulin, and serum albumin are not subject to the blood deductible. However, these components of blood are covered as biologicals (see § 3103.3).)

3235.4 Obligation of the Beneficiary to Pay for or Replace Deductible Blood.--A provider may charge the beneficiary or a third party its customary charge for whole blood or units of packed red cells which are subject to either the Part A or Part B blood deductible, unless the individual, another person, or a blood bank replaces the blood or arranges to have it replaced.

A. Replacement.--For replacement purposes, a pint of whole blood is considered equivalent to a unit of packed red cells. A deductible pint of whole blood or unit of packed red cells is considered replaced when a medically acceptable pint or unit is given or offered to the provider or, at the provider's request, to its blood supplier. Accordingly, where an individual or a blood bank offers blood as a replacement for a deductible pint or unit furnished a Medicare beneficiary, the provider may not charge the beneficiary for the blood, whether or not the provider or its blood supplier accepts the replacement offer. Thus a provider may not charge a beneficiary merely because it is the policy of the provider or its blood supplier not to accept blood from a particular source which has offered to replace blood on behalf of the beneficiary. However, a provider would not be barred from charging a beneficiary for deductible blood, if there is a reasonable basis for believing that replacement blood offered by or on behalf of the beneficiary would endanger the health of a recipient or that the prospective donor's health would be endangered by making a blood donation. Once a provider accepts a pint of replacement blood from a beneficiary or another individual acting on his behalf, the blood is deemed to have been replaced, and, the beneficiary may not be charged for the blood, even though the replacement blood is later found to be unfit and has to be discarded.

When a provider accepts blood donated in advance, in anticipation of need by a specific beneficiary, whether the beneficiary's own blood, that is, an autologous donation, or blood furnished by another individual or blood assurance group, such donations are considered replacement for pints or units subsequently furnished the beneficiary.

B. Adjustment of Provider's Cost Reimbursement to Reflect Deductible Amounts Collected.--At the end of the year when program reimbursement for blood is being computed, the cost of all unreplaced deductible and unreplaced nondeductible blood supplied will be reduced by the amount the provider collected from beneficiaries or other parties for unreplaced deductible pints. If more blood is donated by, or on behalf of, a beneficiary than is needed for full replacement on a pint-for-pint or unit basis, the value of the excess blood is not deducted from the amount payable to the provider. But, such donations would tend to reduce the cost of blood to the provider.

3235.5 Distinction Between Blood Costs and Blood Processing Costs.--Since the blood deductible applies only to blood costs, and does not apply to blood processing costs, it is necessary that providers distinguish between those two costs for purpose of Medicare cost reporting in accordance with the following rules:

A. Blood Costs.--In general, a provider's blood costs will consist of amounts it spends to procure blood, including:

1. The cost of such activities as soliciting and paying donors and drawing blood for its own blood bank, and

2. Where a provider purchases blood from an outside blood source (e.g., a commercial or voluntary blood bank or a blood bank operated by another provider) an amount equal to the amount of credit which the outside blood source customarily gives the provider if the blood is replaced.

B. Blood Processing Costs.--In general, a provider's blood processing costs will consist of amounts spent to process and administer blood after it has been procured, including:

1. The cost of such activities as storing, typing, cross-matching, and transfusing blood,

2. The cost of spoiled or defective blood, and

3. Where a provider purchases blood from an outside blood source, the portion of the outside blood source's blood fee which remains after credit is given for replacement; i.e., the amount which cannot be credited or rebated by replacement of the blood. Thus, where an outside blood source charges the provider the same amount, whether or not the blood is replaced, the entire blood fee is a blood processing cost to the provider.

NOTE: The above rules for distinguishing blood costs and blood processing costs where blood is obtained from an outside blood source apply only where the source charges the same for blood furnished Medicare beneficiaries as it charges for blood furnished nonbeneficiaries and gives the same credit for blood which is furnished Medicare beneficiaries as for blood which is furnished nonbeneficiaries.

Where an outside blood source charges providers more for blood furnished Medicare beneficiaries than for blood furnished nonbeneficiaries, or gives a larger credit for blood replaced by nonbeneficiaries than it gives for blood replaced by beneficiaries, the program will use only the lower charge and higher credit as a basis for determining the provider's reasonable costs for blood furnished by that particular blood source.

EXAMPLE: The XYZ Blood Bank operates a blood assurance plan under which it does not charge for blood furnished members of the plan, unless the member is a Medicare beneficiary, in which case a charge is made only for nondeductible pints. It charges for all blood furnished nonmembers of the plan regardless of their Medicare status. Since the XYZ Blood Bank charges hospitals for blood furnished members who are Medicare beneficiaries, but does not charge where the member is not a Medicare beneficiary, providers serviced by XYZ are paying more for blood furnished to members who are Medicare beneficiaries than for blood furnished nonbeneficiaries. Accordingly, amounts which providers pay the XYZ Blood Bank for blood furnished to Medicare beneficiaries who are members of the blood bank's blood assurance plan may not be recognized as a reasonable cost, nor may providers charge Medicare beneficiaries for such blood since blood is a covered inpatient hospital service. However, since the blood bank charges the same amount for blood furnished to all nonmembers of its blood assurance plan (i.e., whether or not the nonmembers are entitled to Medicare), reimbursement may be made to hospitals for blood furnished by the blood bank to nonmembers who are Medicare beneficiaries.

3235.6 Blood Furnished to an SNF Patient.--Extended care services covered under Part A include unreplaced blood (after satisfaction of the three pint blood deductible) and processing costs beginning with the first pint. However, blood transfusions are ordinarily performed by hospitals and not by SNF's. Thus, in the usual case, where an SNF patient needs blood, a participating hospital will provide the blood and the laboratory services and perform the transfusion for the SNF. In such a case, the hospital's charge for such blood and services is a blood cost and/or a blood processing cost to the SNF (see § 3235.5 for rules for distinguishing between blood costs and blood processing costs where blood is obtained from an outside source). The SNF's charges to the beneficiary must be in accordance with § 3235.4. (Note: Ambulance transportation of the patient between the hospital and SNF for the purpose of obtaining a blood transfusion is covered under Part B if the conditions for coverage of ambulance services are met. See § 3114.)

In the unusual situation where the SNF stores, cross-matches, or types blood, rather than having this done by a qualified hospital or independent laboratory, the SNF must, as a condition of participation, meet Standard (j) of section 405.1028 of the Regulations on Conditions of Participation for Hospitals. Where the SNF only transfuses blood to inpatients, it would be required to meet only factors (1), (3), (4), (6) and (9) of section 405.1028(j). (See section 405.1128 of Regulations on Conditions of Participation for Skilled Nursing Facilities.) (42 CFR 405, Subpart K.)

Filing for Payment

3301. FILING A REQUEST FOR PAYMENT AND CLAIM FOR PAYMENT

Medicare payment of reasonable costs may not be made for hospital services, extended care services, or home health services furnished under Part A or Part B, or outpatient physical therapy or speech pathology services furnished under Part B by a rehabilitation center or public health agency, unless the beneficiary or his representative files a timely written request for payment and the provider files a timely claim. (See §§ 3307-3312.5 for an explanation of time limits.)

The provider should ask the patient to complete the request for payment at the time the covered services begin, if he is or may be a Medicare beneficiary, i.e., he is at least age 65 or there is other reason to believe he may be a beneficiary. If the beneficiary does not file his request upon admission or start of care, he may file it later with the provider or (less preferably) with an intermediary, carrier, or HCFA. Once the patient or his representative has filed his request for payment with the provider, the provider (including an emergency or foreign hospital which has elected to bill the program) must file a claim for payment (billing) with its intermediary (Health Care Financing Administration in the case of an emergency, foreign, or direct-dealing hospital.) (See §§ 3308 for provider and beneficiary liability where a claim is not filed timely.)

3301.1 Claims for Payment in Alcohol and Drug Abuse Cases-- The law requires providers to observe more stringent rules when disclosing medical information for claims processing purposes from the records of alcohol and drug abuse patients than when disclosing information for other Medicare beneficiaries. Since the standard consent statement on the provider billing form is not sufficient authority under the law to permit the provider to release information from the records of alcohol or drug abuse patients, more explicit consent statements are required.

Providers participating in the Medicare program that raise issues of confidentiality with intermediaries should be advised to obtain written consent from beneficiaries in each alcohol or drug abuse case. This written consent, which will allow the provider to disclose the records of the patient, should include all of the following:

1. The name of the organization (hospital, etc) which is to make the disclosure;

2. The name or title of the person or organization to which disclosure is to be made (e.g. the Health Care Financing Administration, including the appropriate intermediary or carrier, specified by name);

3. The name of the patient;

4. The purpose or need for disclosure (e.g. for processing a claim fo Medicare payment and for such evaluation of the treatment program as is legally and administratively required in the overall conduct of the Medicare program);

5. The specific extent or nature of information to be disclosed (e.g. all medical records regarding the beneficiary's treatment, hospitalization and/or outpatient care including treatment for drug abuse or alcoholism);

6. A statement that the beneficiary may revoke his consent at any time to prohibit disclosures on or after date of revocation;

7. A statement specifying a date (not to exceed 2 years), event, or condition upon which consent will expire without revocation;

8. The date on which the consent is signed; and

9. The signature of the patient; or the signature of his authorized or legal representative.

If the beneficiary wishes, the consent statement may be expanded to permit disclosure by the provider to any other person, organization, or program, such as PSRO, as appropriate. Authorization may also be given to HCFA and its contractors to redisclose specific information to third party payers for complementary insurance purposes.

The provider should keep the consent statement with the patient's medical and other records. The duration of the consent statement is not to exceed 2 years, after which it must be renewed by the beneficiary if further disclosures are necessary.

3302. REQUEST FOR PAYMENT

3302.1 Billing Form as Request for Payment.-- Each of the billing forms (Inpatient Hospital and Skilled Nursing Facility Admission and Billing, Form HCFA-1453; Provider Billing for Medical and Other Health Services, Form HCFA-1483; Home Health Agency Report and Billing, Form HCFA-1487; Provider Billing for Patient Services by Physicians, Form HCFA-1554; and Request for Medicare Payment, Form HCFA-1490) contains a patient's signature line incorporating the patient's request for payment of benefits, authorization to release information, and assignment of benefits. When the billing form is used as the request for payment, it must be signed. The request for payment will then be forwarded to the intermediary or carrier, or to HCFA where the provider deals directly with the Government.

A. The billing form as request for payment will be signed in connection with each inpatient hospital or skilled nursing facility admission, even though multiple admissions may occur during the same spell of illness. Only one request for payment has to be signed, however, for each inpatient admission even though an extended stay occasions multiple billings. Where a provider billing form is used as the request for payment for Part B services, a signature is required with each billing.

E. When the home health agency billing form is used as the request for payment, a single signed request ordinarily suffices for each plan. However, a subsequent signed request for payment is required if the patient's care is transferred from one home health agency to another.

Where a beneficiary wants information released to another health insurer or to a State Assistance Agency listed in item 14 of form HCFA-1487, the following authorization must be typed in the signature block (Item 15) before the beneficiary signs the form: "I authorize release of information about this claim to those listed in Item 14, upon their request."

3302.2 Request for Payment on Provider Record.—In place of signatures on billing forms, a participating provider (hospital, skilled nursing facility, home health agency, outpatient physical therapy provider, or comprehensive rehabilitation facility), ESRD facility, or independent rural health clinic may use a procedure under which the signature of the patient (or his representative under 3302.5) on its records will serve as the request for payment for services of the provider, for physician services for which the provider is authorized to bill under §3604.1, and for any other physician services furnished in the provider. In the case of physician services, claims may be submitted on either an assigned or unassigned basis.

To implement this procedure, the provider must incorporate language to the following effect in its records:

Statement to Permit Payment of Medicare Benefits to Provider, Physicians and Patient.

NAME OF BENEFICIARY
HI CLAIM NUMBER

I request payment of authorized Medicare benefits to me or on my behalf for any services furnished me by or in (name of provider), including physician services. I authorize any holder of medical or other information about me to release to Medicare and its agents any information needed to determine these benefits or benefits for related services.

For services furnished to inpatients of a hospital, or SNF, the request is effective for the period of confinement. For services furnished by or in a provider on an outpatient basis, the request is effective until revoked. If a patient objects to part of the request for payment, the provider should annotate the statement accordingly and notify any physician affected.

best copy available

representative of an institution (other than the provider) usually responsible for his care, or a representative of a governmental entity providing welfare assistance, if present at time of admission or start of services, should be asked and permitted to sign on his behalf.

A. Provider Signs Request.—If, at the time of admission or start of care, the patient cannot be asked to sign the request for payment and there is no person present exercising responsibility for him, an authorized official of the provider may sign the request. Except in the outpatient case described below, where the patient is not physically present, a provider should not routinely sign the request on behalf of any patient. If experience reveals an unusual frequency of such provider-signed requests from a particular provider, the matter will be subject to review by the intermediary.

The hospital or SNF need not attempt to obtain the patient's signature where the physician sends a specimen (e.g., blood or urine sample) to a laboratory of a participating hospital or SNF for analysis, the patient does not go to the hospital or SNF, but the tests are billed through that provider. The hospital or SNF may sign on behalf of the patient and should note in the space provided for the patient's signature in Item 12 on the Provider Billing for Medical and Other Health Services (SSA-1483) and any accompanying Provider Billing for Patient Services by Physicians (SSA-1554), "Patient not physically present for tests." This does not apply in cases in which the patient actually goes to the hospital or SNF laboratory for tests and the provider fails to obtain the patient's signature while he is there.

If it is impractical to obtain the patient's signature because a home health agency does not make a visit to his home (e.g., the physician certifies that the patient needs a certain item of durable medical equipment but no visits are certified), the agency may furnish the equipment and need not obtain the patient's signature. An agency representative should sign on behalf of the patient and write in Item 12 of the SSA-1483 "Patient not visited."

B. Patient Dies.--If the patient dies before the request for payment is signed, it may be signed by the legal representative of his estate, or by any of the persons or institutions (including an authorized official of the provider) who could have signed it had he been alive and incompetent.

A request for payment for inpatient hospital services filed with the hospital may serve as an application for HI entitlement when filed by or on behalf of a live patient, but not when filed on behalf of a deceased patient. (See § 3302.5.)

C. Need for Explanation of Signer's Relationship to Patient.--When someone other than the patient signs the request for payment, the signer will submit a brief statement explaining his relationship to the patient and the circumstances which made it impracticable for the patient to sign. The provider will forward this statement with its billing, or retain it in its files if the signature is obtained on the provider's own record. The intermediary will generally accept such a statement as representing the true facts of the case in the absence of evidence to the contrary. If such a statement is not forwarded, and development is needed for some other reason, the intermediary will ask the provider to furnish the explanation of relationship and circumstances. However, processing the claim should not ordinarily be delayed to obtain the explanation if nothing else prevents payment.

3302.6 Request for Payment as a Claim for Hospital Insurance Entitlement.--To become entitled to hospital insurance, an individual must not only be eligible, but must also, prior to his death, apply for such entitlement (or for monthly social security benefits) with SSA. Even though he meets all eligibility requirements, if he does not file the necessary application before death, he cannot be entitled to Part A benefits and no payment can be made under the HI program for his hospital services.

Occasionally a patient aged 65 or over who is admitted to a hospital, though eligible, has never applied for monthly benefits and has no health insurance card. In very rare instances he may have a card even though he has not filed the necessary application. To protect the eligible patient, his estate, and the hospital against the possibility that timely application will not be filed with SSA, a written request for title XVIII payment filed with the hospital may serve as an application for hospital insurance entitlement filed with SSA. The request must be filed with the hospital prior to the death of the patient. A presribed application form properly executed must be filed with SSA within 6 months of the date of SSA's written notice to a proper applicant of the need for such application. Section 308 of the Hospital Manual contains the details of this procedure.

This function of the written request as an informal claim for HI entitlement under certain conditions is distinct from its far more general and basic function as a request that payment may be made on behalf of an entitled individual to the provider. A request for payment in this latter sense can validly be executed after the death of the entitled individual.

3302.7 Refusal by Patient to Request Payment Under the Program.--A patient on admission to a hospital or skilled nursing facility may refuse to request Medicare payment and agree to pay for his services out of his own funds or from other insurance. Such patients may have a philosophical objection to Medicare or may feel that they will receive better care if they pay for services themselves or they are paid for under some other insurance policy. The patient's impression that another insurer will pay for the services may or may not be correct, as some contracts expressly disclaim liability for services covered under Medicare. Where the patient refuses to request Medicare payment, the provider should obtain his signed statement of refusal wherever possible. If the patient (or his representative) is unwilling to sign, the provider should record that the patient refused to file a request for payment but was unwilling to sign the statement of refusal.

In any event, there is no provision which requires a patient to have covered services he receives paid for under Medicare if he refuses to request payment. Therefore, a provider may bill an insured patient who positively and voluntarily declines to request Medicare payment. However, if such a person subsequently changes his mind (because he finds out his other insurance will not pay or for another reason) and requests payment under the health insurance program within the prescribed time limit, the provider must bill the intermediary. If the provider is reimbursed under Medicare it should then refund to the patient any amounts he paid in excess of the permissible charges.

Where a patient who has declined to request payment dies, his right to request payment may be exercised by the legal representative of his estate, by any of the persons or institutions mentioned in the second paragraph of § 3302.4, by a person or institution which paid part or all of the bill, or in the event a request could not otherwise be obtained, by an authorized official of the provider. This permits payment to the provider for services which would not otherwise be paid for and allows a refund to the estate or to a person or institution which paid the bill on behalf of the deceased.

See § 3308 for affect on beneficiary and provider of refusal to file.

3305. FILING CLAIMS FOR PAYMENT

3305.1 Definition of a Claim for Payment.--A provider has filed a claim for an item or service reimbursable on a cost basis if it submits to its intermediary an SSA billing form that includes the item or service. The fact that the item or service is shown on the wrong form (e.g., Part B ancillary services on an SSA-1453 rather than SSA-1483), or under the wrong item of the form, (e.g., a blood processing service under "blood") is immaterial if it is clear or can be established that the provider was claiming reimbursement for the item or service.

3305.2 Establishing Date of Filing.--Whenever the last day for timely filing of a claim for payment falls on a Saturday, Sunday, legal holiday, or other day all or part of which is a nonworkday for Federal employees because of Federal statute or executive order, the claim will be considered timely if it is filed on the next workday.

3305.3 Use of Postmark to Establish Filing Date.--Where the provider claim is submitted to the intermediary by mail, if it is material and to the advantage of the provider, the claim can be considered filed on the day the envelope was postmarked in the United States. Thus, where an undated claim is received by the intermediary in the mail early in the month after the filing date, the envelope should, if practical, be retained. If, in such a case, an envelope with a legible postmark is not available, a 7-day tolerance will usually apply. For example, a claim for services provided in May 1976 received by an intermediary on or before January 10, 1978, may be presumed by the intermediary, in the absence of evidence to the contrary, to have been mailed on or before January 3, 1978 (which is the date the time limit expires because it is the first Federal workday after Saturday, December 31). This rule will be applicable where the claim was mailed within the contiguous 48 States and the District of Columbia and received by an intermediary within such States. In other cases, the reasonable tolerance may be longer and will depend on the usual mailing time under the particular circumstances.

Time Limits--Cost Reimbursement

3307. TIME LIMITS FOR REQUESTS AND CLAIMS FOR PAYMENT FOR SERVICES REIMBURSED ON A REASONABLE COST BASIS

Program payment of reasonable costs may not be made under Part A or Part B for provider services (including emergency services) unless the beneficiary or his representative has filed a timely request for payment, and the provider has filed a timely claim. (See § 3301.)

3307.1 Usual Time Limit.--Effective with claims filed after December 31, 1974, the beneficiary request and the provider claim must be filed on or before December 31 of the calendar year following the year in which the services were furnished except as provided in §§ 3307.2 and 3307.3 below. Services furnished in the last quarter of the year are considered furnished in the following year; i.e., the time limit is 2 years after the year in which such services were furnished.

EXAMPLE 1: A Medicare beneficiary received inpatient hospital services at General Hospital in September 1974. The beneficiary signed a request for Medicare payment at the time of admission. The hospital immediately submitted an admission notice and received a prompt reply. The provider billing for the services must be filed with the intermediary on or before December 31, 1975, the close of the year following the year in which the services were furnished.

EXAMPLE 2: A Medicare beneficiary received diagnostic tests at the outpatient department of General Hospital in November 1974 but did not inform the hospital of his entitlement to Part B of Medicare at that time. His request for Medicare payment must be filed with the provider and the provider billing must be filed with the intermediary by December 31, 1976, the close of the year following the year the services were "furnished." (The services furnished in November 1974 are deemed to be furnished in 1975.)

3307.2 Extension of Time Limit Due to Delay in Transmitting Reply to Notice of Admission or Start of Care.--For purposes of the time limit in § 3307.1, a provider shall be deemed to have filed a claim for payment for inpatient hospital services, posthospital extended care services, or home health services on the date it submitted an admission or start of care notice for such services, provided the claim is submitted within 60 days after the intermediary or Social Security Administration, as appropriate, replied to the admission or start of care notice. Where the provider is establishing timely filing of the claim on this basis (i.e., the claim would not otherwise be timely filed), it should so note on the billing or an attachment to the billing, and indicate the date the admission notice was sent and the date the reply was received.

3307.3 Extension of Time Limit Where Late Filing Is Due to Administrative Error.—Where SSA error (i.e., misrepresentation, delay, mistake, or other action of SSA or its intermediaries or carriers) causes the failure of the provider to file a claim for payment within the time limit in § 3307.1, the time limit will be extended through the last day of the sixth calendar month following the month in which the error is rectified by notification to the provider or beneficiary, but not beyond December 31 of the third calendar year after the year in which the services were furnished. (For services furnished during October - December of a year, the time limit may be extended no later than the end of the fourth year after that year.)

The administrative error which prevents timely filing of the claim may affect the provider directly (or indirectly, i.e., by preventing the beneficiary or his representative from filing a timely request for payment). Situations in which failure to file within the usual time limit in § 3307.1 will be considered to have been caused by administrative error include but are not limited to the following:

1. The failure resulted because the individual's entitlement to HI or SMI was not established until long after the month for which it is effective (e.g., a beneficiary is awarded 2 years of retroactive coverage).

2. The failure resulted from SSA's failure to notify the individual that his entitlement to HI or SMI had been approved, or in giving him (or his representative or the provider) cause to believe that he is not entitled to HI or SMI.

3. The failure resulted from misinformation from SSA or the intermediary or carrier, e.g., that certain services were not covered under HI or SMI, although in fact they were covered.

4. The failure resulted from excessive delay by SSA, the intermediary, or the carrier in furnishing information necessary

for the filing of the claim (see § 3307.2 concerning delay in replying to the provider's admission or start of care notice).

5. The failure resulted from advice by SSA or an authorized agent for SSA that precluded the filing of a claim until the provider receives certain information from the intermediary (e.g., a hospital following manual instructions does not file a billing for outpatient services where the services are expected to be paid for by workmen's compensation; but the hospital learns after the expiration of the time limit of the ultimate denial of workmen's compensation liability).

Any claim involving situations other than those listed above, where it appears that an extension of the time limit might be justified on the basis of administrative error should be submitted with a recommendation, before payment, to Social Security Administration, Beneficiary Eligibility Branch, BHI, 1-H-5 East Building, Baltimore, Maryland 21235. Also, any claim, whether involving the situations listed above or others, in which administrative error prevented timely filing until after the close of the third year following the year in which the services were furnished (fourth year, in the case of services furnished in the October - December quarter) should be submitted to that address for advice before denial action.

EXAMPLE 1: Information submitted in connection with a claim for services during the period May 1974 - September 1974, filed in March 1976, shows that the beneficiary's application for HI was initially denied. He was first notified on January 15, 1976, that he had HI effective May 1974. Under these circumstances, the intermediary may pay appropriate HI benefits for the services. Although the usual time limit expired December 31, 1975, the error in this case--delay in establishing HI entitlement--was not corrected until January 15, 1976, thus extending the time limit to July 31, 1976.

EXAMPLE 2: An individual requested enrollment in SMI in March 1975, the month before he attained age 65. He received covered outpatient services in July 1975, but did not request payment because he had received no notice of his SMI entitlement. Such notice was mailed to him on October 3, 1976. Although the regular time limit for the services in July 1975 expired on December 31, 1976, the claim will be considered promptly and timely filed if it is filed on or before April 30, 1977 (within the 6-month period following the month in which the notice was sent).

A. Developing Administrative Error.--Where administrative error is alleged to be responsible for late filing, the necessary evidence would ordinarily include:

1. A statement from the beneficiary, his representative or the provider, depending on whom the error directly affected, as to how he learned of the error, and when it was corrected, and one of the following:

2. A written report by the agency (SSA, carrier, intermediary) based on agency records, describing how its error caused failure to file within the usual time limit; or

3. Copies of an agency letter or written notice reflecting the error; or

4. A written statement of an agency employee having personal knowledge of the error.

However, the statement of the beneficiary, his representative, or the provider is not essential if the other evidence establishes that his failure to file within the usual time limit resulted from administrative error, and that he filed a claim within 6 months after the month in which he was notified that the error was corrected. There must be a clear and direct relationship between the administrative error and the late filing of the claim. Where the evidence is in the intermediary's own records, it should note the claims file to this effect.

B. Coordinating Claims Which Involve Administrative Error.--Where the initial allegation of administrative error on the part of the Government is made to SSA, the servicing social security office (SSO) will forward any necessary report, statement and/or other evidence to the intermediary and will obtain and forward a request by the beneficiary or his representative for Medicare payment if such request was not previously filed with the provider or intermediary. The intermediary will then obtain a billing from the provider if not previously submitted.

If an allegation that administrative error caused late filing is made to the intermediary or if the information furnished by the SSO is incomplete the intermediary will request the necessary evidence (see A above) from the SSO servicing the beneficiary. Such request may be made on Form SSA-1980 (Carrier or Intermediary Request for SSA Assistance) and, unless regional office instructions provide otherwise, will be made through the parallel SSO. (See § 3706.) Where another carrier or intermediary allegedly caused the delay, the request for necessary information and evidence may be made by letter directly to the other carrier or intermediary.

Where covered expenses in excess of deductible and coinsurance exceed $100 and the provider has assigned responsibility for the late filing to the beneficiary (or his representative), corroboration of such responsibility should be obtained since otherwise the beneficiary could be forced to pay substantial charges for which he may not be liable. If the provider has not obtained a written explanation of the circumstances from the beneficiary, and there is no other corroboration of such responsibility, the intermediary should request the assistance of the SSO in obtaining it. Corroboration may be in the form of a signed statement, a report of the oral explanation given by the beneficiary (or his representative or relative) of the late filing, or pertinent information in the SSO's own files.

C. Intermediary Decides Whether Time Limit Will Be Extended.—The intermediary has the responsibility for deciding, on the basis of all pertinent circumstances, whether a late claim may be honored. The intermediary may ordinarily accept a statement from some other component which shows whether there was an administrative error which could reasonably have prevented or deterred the claimant from filing within the usual time limit. Similarly, the intermediary will ordinarily accept a statement from the component which corrected the error as to whether and when this was done. However, where information submitted to the intermediary by another component involved in HI or SMI administration is incomplete or questionable, the intermediary may request clarification.

3308. EFFECT ON BENEFICIARY AND PROVIDER OF LATE FILING OR BENEFICIARY'S REFUSAL TO FILE

A. Provider Is Responsible for Not Filing Timely.—Where the beneficiary request was filed timely (or would have been filed timely had the provider taken action to obtain a request from the patient whom the provider knew or had reason to believe might be a beneficiary) but the provider is responsible for not filing a timely claim, the provider may not charge the beneficiary for the services except for such deductible and/or coinsurance amounts as would have been appropriate if Medicare payment had been made. The beneficiary is charged utilization days. (See § 3610.1B.)

B. Patient Refuses to Request Medicare Payment or Provider Is Unaware of His Eligibility.—The provider may charge the beneficiary for covered services where no timely request for payment is filed by or on behalf of the beneficiary because:

(1) the beneficiary refused to file. (The deductible is credited to his SSA record and utilization days are charged.) Or

(2) the patient failed to bring his entitlement or possible entitlement to the attention of the provider and the provider had no other reason to believe the patient had Medicare. If the patient later brings his entitlement to Part A or Part B (whichever is required for payment for the services) to the provider's attention after the time limit and the bill is not filed timely, the deductible and coinsurance will not be credited and utilization days will not be charged.

C. Late Filing Reveals Continuation of Benefit Period.—The services furnished in (2) above could affect a benefit period in which later services were furnished by linking together what were originally thought to be two benefit periods. For example: Claims were timely filed and payment made for 75 days of inpatient hospital services at hospital A during the period July 20 - October 3, 1975, and 25 days of inpatient hospital services furnished at hospital C during the period January 15 - February 9, 1976. After the expiration of the time limit, the beneficiary requested payment for 2 days of inpatient hospital services furnished at hospital B during the period November 26 - 28, 1975. Although the untimely request for payment for 2 days did not result in charging the 2 days against his utilization record, it did reveal that the stay in hospital C was in the same benefit period as the stay in A. Thus, assuming that lifetime reserve days were previously exhausted, only 15 days of coverage were available for the stay in hospital C and overpayment was made for the remaining 10 days of the stay.

Do not collect any overpayment from either the beneficiary or provider based on the continuation of a benefit period that was revealed when the beneficiary filed a late request for payment as illustrated in the example above, unless evidence shows that the overpayment was the result of fraud or similar fault. (See §3709.1.) Collection of such an overpayment would be inequitable since it would impose another penalty because of the late filing, in addition to the denial of the late bill.

Since corrected bills are required in such overpayment cases, follow the procedure in §3711.8 to assure that the provider does not have the overpayment recouped in the cost settlement. Report the overpayment to SSA by letter.

3309. FILING CLAIM WHERE USUAL TIME LIMIT HAS EXPIRED

As a general rule, where you receives a late filed claim submitted by a provider with no explanation attached as to the circumstances surrounding the late filing, assume that the provider accepts responsibility for the late filing.

Where it comes to the attention of a provider that health services which are or may be covered were furnished to a beneficary but that the usual time limit in §3307.1 on filing a claim for such services has expired, the provider should take the following action.

3309.1 Part A Institutional Provider Services and Part A and Part B Home Health Services.--Where the provider accepts responsibility for late filing, it should file a no-payment bill. (See §§3610ff.) Where the provider believes the beneficiary is responsible for late filing, it should also file a no-payment bill and attach a statement explaining the circumstances which led to the late filing and giving the reasons for believing that the beneficiary (or other person acting for him) is responsible for the late filing and, if practicable, attach the statement of the beneficiary as to his view on these circumstances.

Where the provider believes SSA or its agents are responsible for the late filing, it should file a regular payment bill and attach a statement explaining the circumstances which led to the late filing. If SSA, you, or carrier error prevented the beneficiary or his representative from filing a timely request for payment, if practicable, the provider should obtain the written explanation of the beneficiary as to the circumstances.

3309.2 Part B Services Other Than Home Health Service.--Where the provider accepts the responsibility for the late filing, it submits a no-payment bill.

Where the provider believes the beneficiary is responsible for late filing, it files a no-payment bill, attaches a statement explaining the circumstances which led to late filing and setting forth reasons for belief that the beneficiary (or person acting for him) is responsible for the late filing and, if practicable, attaches the statement of the beneficiary as to his view of the circumstances. Where the provider believes SSA or its agent is responsible for the late filing, it proceeds as in §3309.1.

3310. CLAIMS FOR PAYMENT FOR EMERGENCY HOSPITAL SERVICES AND SERVICES OUTSIDE THE UNITED STATES

The time limit for requests and claims for payment for emergency hospital services and hospital services outside the United States, whether or not the hospital has elected to bill the program, is the same as for participating hospitals. (See §§3307ff.) Where the hospital has not elected to bill Medicare, the beneficiary claims payment for emergency hospital services in the United States and hospital services outside the United States.

The beneficiary may also claim payment for physician and ambulance services furnished in connection with foreign hospitalization. The time limit for claims involving these services is the same as for other services reimbursed on a reasonable charge basis. (See §3312.)

The claim for emergency hospital services and other services outside the United States will be considered timely filed if filed with any carrier or intermediary within the time limit.

3311. APPEALS
Where the beneficiary does not agree with the determination that the claim was not filed timely or with the assignment to him of the responsibility for the late filing, the usual appeal rights are available to him, i.e., reconsideration, hearing (if the amount in controversy equals $100 or more), etc. (See §§ 3780ff.) Where the provider is protesting the denial of payment or the assignment of responsibility, no formal channels of appeal are available. However, the intermediary may, at the request of the provider, informally review its initial determination.

Time Limits--Part B Charge Claims

3312. TIME LIMIT FOR FILING PART B REASONABLE CHARGE CLAIMS
For Medicare payment to be made for a claim for physician and other Part B services reimbursable on a reasonable charge basis (including those services for which the charge is related to cost) the claim must be filed no later than the end of the calendar year following the year in which the service was furnished, except for services furnished in the last 3 months of a year, where the time limit is December 31 of the second year following the year in which the services were rendered. This time limit was effective with claims filed after March 1968. (See §§ 3305.2 and 3305.3 for effect of Federal nonworkdays and rules applicable to claims received in the mail.)

EXAMPLE: An enrollee received laboratory tests at a nonparticipating hospital in August 1975. The claim for reimbursement for such services must be billed on or before December 31, 1976. If the tests were performed in October 1975, the claim must be filed on or before December 31, 1977.

3312.1 Extension of Time Limit Due to Administrative Error.--Consideration of possible extension of the time limit on Part B reasonable charge claims will be initiated only if there is a basis for belief that the claimant (the enrollee or his representative or assignee) has been prevented from timely filing by an administrative error; for example, he states that official misinformation caused the late filing, or the social security office calls to the intermediary's attention a situation in which such error has caused late filing.

Where administrative error (that is, misrepresentation, delay, mistake, or other action of SSA or its intermediaries or carriers) causes the failure of the beneficiary or the providers, physicians, and suppliers to file a claim for payment within the time limit specified in § 3312, the same evidence requirements and development procedures apply as set forth in § 3307.3.

312.2 Definition of a Part B Reasonable Charge Claim.--For purposes of this time limit, a claim is any writing submitted by or on behalf of a claimant, which indicates a desire to claim payment from the Medicare program for medical services of a specified nature to an identified enrollee. For example, a note from the enrollee's spouse or a bill for ancillary services in a nonparticipating hospital could constitute a claim for payment.

If such a claim is mailed or delivered to SSA or to any carrier or intermediary within the time limit, the claim is filed timely provided the necessary claims information (e.g., SSA-1490 and itemized bill in the case of an enrollee-filed claim, SSA-1483 in the case of a nonparticipating hospital-filed claim) is submitted within the time limit or, if later, within 6 months after the month in which the claimant is advised to furnish it.

312.3 Time Limit Where Provider Has Billed Improperly for Professional Component.--In some cases, a hospital or other provider may have incorrectly billed for a Part B professional component as a provider expense. For example, a physician's services were erroneously considered entirely administrative in nature and the error was not discovered until the final cost settlement. Where the claim which included the physician services was filed within the time limit, it establishes protective filing for a subsequent perfection of a Part B claim. Such claims will be considered filed as of the date the incorrect billing was submitted to the intermediary provided the usual claims information (e.g., the SSA-1554 in the case of a hospital-filed claim) is submitted within 6 months after the month in which the notice was sent that payment for the patient care services was disallowed.

The perfected claim may be filed by the physician on the basis of assignment, or by the hospital (where the hospital has a contractual arrangement to bill and receive payment for the physician's services) or may be filed by the patient on the basis of an itemized bill. The carrier and intermediary should make their own arrangements regarding exchange of information and submission of the delayed claims. When there are claims for more than one patient or more than one claim for a single patient it is preferable that they be submitted as a group.

A provider claim filed within the Part B time limit will not establish a filing date for the related professional component where such component was recognized and not included in the provider bill, e.g., no claim was filed for the professional component as a nonprovider expense because the physician and hospital could not agree on the exact amount of the component charge or who would bill for it.

3312.4 Time Limit for Combined Billing.--Where the hospital bills for physician and hospital services under the combined billing procedure (see § 3604.1) presume that the billing is timely filed as to the physician component if it is timely filed as to the hospital component and that it is not timely as to the physician component if it is not timely filed as to the hospital component.

3312.5 Responsibility When Claim Not Filed Timely.--Where the time limit has expired on services reimbursable on a reasonable charge basis, there is no requirement that a billing be filed. However, where a person (or organization) accepts assignment within the time limit but fails to submit a timely claim, he is barred by the terms of the assignment from collecting from the patient or others amounts in excess of the deductible and coinsurance for the services involved.

Restrictions on Provider Conditions for Admission

3313. WAIVER OF HEALTH INSURANCE BENEFITS AS A CONDITION OF ADMISSION

It is not permissible for a provider to require as a condition of admission or treatment that a patient agree to waive his right to have provider services paid for under Medicare. Requiring such a "waiver" is inconsistent with the provider's contract with SSA and the waiver is not binding on the patient. Each participating provider agrees not to charge an individual (except for specified deductible and coinsurance amounts) for services for which such individual is entitled to have payment made or for which he would be so entitled if the provider complied with the procedural and other requirements of the program. Further, under this provision the provider must refund any amounts incorrectly collected.

Where a patient who has signed such a waiver nevertheless requests payment under the health insurance program, the provider must bill the intermediary for the services and refund any payments made by the patient or on his behalf in excess of permissible charges.

3314. HOSPITAL PREPAYMENT REQUESTS AND REQUIREMENTS

3314.1 Requiring Prepayment as a Condition of Admission Is Prohibited.--Hospitals may not require advance payment of the Part A inpatient deductible or coinsurance as a condition of admission for inpatient services. In addition, hospitals may not require that the beneficiary prepay any Part B charges as a condition of his admission except when all of the following conditions are met and when they are met, the hospital can collect no more than any unmet Part B cash deductible: (Where the patient does not have Part B entitlement, see § 3314.3.)

A. The hospital regularly requires prepayment from all other patients who have comparable insurance or other protection assuring satisfaction of substantially all hospital charges or costs.

B. The beneficiary is expected to incur expenses for the services of a salaried physician employed by the hospital and such services are subject to the cash deductible and coinsurance provisions of Part B. (Radiological and pathological services performed by physicians in the fields of radiology and pathology are not subject to either the deductible or coinsurance. See § 3146C.) A hospital cannot deny admission to a beneficiary for failure to prepay physician charges which the hospital is collecting only on behalf of a physician.

C. The beneficiary has medical insurance (Part B) coverage but has not met his Part B deductible or cannot, upon being asked, submit evidence that he has met the deductible.

3314.2 When Prepayment May Be Requested.--In admitting a beneficiary, hospitals may request the deductible or coinsurance amounts only where it appears that the patient will owe such amounts and it is the hospital's routine and customary policy to request similar prepayment from nonbeneficiary patients with hospital insurance (or similar benefits) which leaves them responsible for a small part of the cost of their hospital services. In admitting the patient, such a hospital should ascertain whether he has medical insurance coverage, and where he does, should ask if he has an Explanation of Monthly Benefits form showing his deductible status. If a beneficiary with medical insurance coverage shows that he has met the Part B cash deductible, the hospital should not request or require prepayment of the deductible.

Except in the rare cases where prepayment may be required, any request for payment must be made as a request and without undue pressure; the beneficiary (and his family) must not be given cause to fear that admission will be denied for failure to make the advance payment.

Hospitals should insure that all their admitting office personnel are informed and kept fully aware of the hospital's policy on prepayment, which must be consistent with this section. For this purpose, and for the benefit of the hospital and the public, it would be desirable that a notice be posted prominently in the admitting office or lobby of the hospital to the effect that no patient will be refused admission for inability to make an advance payment or deposit if Medicare is expected to pay for his hospital costs.

3314.3 Hospital May Require Prepayment for Non-Covered Services.--With regard to noncovered services (i.e., personal comfort items, a private duty nurse, etc.), a hospital may deny such services for which the beneficiary has not paid or offered satisfactory assurance of payment if that is the hospital's practice with its nonbeneficiary patients. For example, a hospital need not furnish a private room or TV set to a patient who requests it but is unable to prepay or offer the assurance of payment which the hospital usually requires.

In cases where the aged person has exhausted his covered inpatient hospital benefits and in cases where an aged applicant cannot supply satisfactory evidence of entitlement under Part A, the hospital is free to apply to such persons its usual policy with respect to requiring prepayment or other assurance of payment where the patient has no insurance. Also, for that small minority of beneficiaries receiving covered inpatient services who are not enrolled for medical insurance (Part B), a hospital is free to apply its usual policy on prepayment or assurance of payment with regard to services of salaried physicians provided by the hospital.

3314.4 Compliance with Agreement.-- It is anticipated that most hospitals will conform to the policy set forth in this instruction. However, the intermediary should be alert for any information that would indicate the possibility of a violation. The Health Care Financing Administration (HCFA) regional offices should refer to the intermediary for investigation the names of hospitals which, according to beneficiary complaints, require prepayment or apply undue pressure to obtain prepayments in violation of the rules above. Intermediaries should contact the appropriate hospital officials to review with them the policy on prepayments, and try to obtain the hospital's agreement to discontinue this practice. Noncompliance will be considered in determining whether the hospital is honoring its agreement under which the hospital may not charge for services for which payment may be made under the Medicare program. A report of the results of the contact should be forwarded to the regional office.

Certification and Recertification by Physicians for Hospital Services

3315. CERTIFICATION AND RECERTIFICATION BY PHYSICIANS-- GENERAL.

Payments may be made for covered hospital services only if a physician certifies and recertifies to the medical necessity for the services at designated intervals of the hospital inpatient stay. Appropriate supporting material may be required. The physician certification or recertification statement must be based on a current evaluation of the patient's condition.

For patients admitted to a general hospital whether or not the patients are under the prospective payment system (PPS), which is applicable to patients who are discharged in hospital fiscal years beginning on or after October 1, 1983 a physician's certificaton is not required at the time of admission for inpatient services. For services continued over a period of time or for a day outlier case (i.e., an appropriately admitted case results in an extraordinary long stay) or for a PPS cost outlier case (i.e. an appropriately admitted case results in the expenditure of extraordinary resources) a physician must certify or recertify the continued need for the services at specified intervals. (See § 3319 for timing of physicians certification and recertification. See § 3637.5 for definition of outlier.) Psychiatric and tuberculosis hospitals (which are excluded from PPS) are required to obtain a physician's certification on admission.

Hospitals will not transmit physician certification and recertification statements to the intermediary, or to the Health Care Financing Administration (HCFA) if the hospital deals directly. The hospital must itself certify, on the appropriate billing form, that the required physician certificaton and recertification statements have been obtained and are on file. The physician certification and recertification statements will be retained in the hospital's files where they will be available for verification, if needed.

A hospital must also have available in its files a written description of the procedure it adopts on the timing of certifications and recertifications, that is, the intervals at which the necessary certification statements will be required and whether review of long-stay cases by the utilization review committee will serve as an alternative to recertification by a physician in the case of the second or subsequent recertification.

3315.1 Failure to Certify or Recertify.-- If a hospital fails to obtain the required certification and recertification statements in an individual case, program payment cannot be made in that case.

If the hospital's failure to obtain a certification or recertification is not due to a question as to the necessity for the services, but rather to the physician's refusal to certify based on other grounds (e.g., he objects in principle to the concept of certification and recertification), the hospital may not bill the program or the beneficiary for covered items or services. The provider agreement which the hospital files with the Secretary precludes it from charging the patient for covered items and services.

3315.2 Professional Standards Review Organization (PSRO) Performs Review.-- In those hospitals where a conditionally designated or operational PSRO has assumed responsibility for the performance of review, the PSRO statutory physician certification requirements will apply in lieu of Medicare's physician certification requirements. Such hospitals will not be required to comply with the physician certification requirements set forth in §§ 3317 and 3319. Intermediaries reviewing bills from these hospitals will no longer be responsible for verifying their certifications (see §3620, Item 29). Where a PSRO determines that a patient no longer requires hospital care and that continued care could be appropriately provided in an SNF, the inpatient hospital stay may continue to be covered as long as the patient needs a covered level of SNF care and no SNF bed is available in the area. Hospital records must adequately document the lack of available SNF beds. The patient's physician should place the patient in an SNF as soon as a bed becomes available.

3316. WHO MAY SIGN CERTIFICATION OR RECERTIFICATION.

A certification or recertification statement must be signed by the attending physician responsible for the case, or by another physician who has knowledge of the case and is authorized to do so by the attending physician, or by a member of the hospital's medical staff with knowledge of the case.

Ordinarily for purposes of certification and recertification, a "physician" must meet the definition in §§3030 and 3030.3.

3316.1 Certification for Hospital Admissions for Dental Services.—The attending doctor of dental surgery or of dental medicine is authorized to certify that the patient's underlying medical condition and clinical status, or the severity of the dental procedure, requires the patient to be admitted to the hospital for the performance of the dental procedure (see §3101.7); and to recertify the patient's continuing need for hospitalization when required. This applies even if the dental procedure is not covered.

3317. INPATIENT HOSPITAL SERVICES CERTIFICATION AND RECERTIFICATION

A Contents of Statement.—A certification or recertification statement must contain the following information:

o an adequate written record of the reason for either:

— continued hospitalization of the patient for medical treatment or for medically required inpatient diagnostic study, or

— special or unusual services for cost outlier cases for hospitals under the prospective payment system (PPS);

o the estimated period of time the patient will need to remain in the hospital and, for cost outlier cases, the period of time for which the special or unusual services will be required; and

o any plans for posthospital care.

B. Selection by Hospital of Format and Method for Obtaining Statement.—The individual hospital determines the method by which certifications and recertifications are to be obtained and the format of the statement. Thus, the medical and administrative staffs of each hospital may adopt the form and procedure they find most convenient and appropriate.

There is no requirement that the certification or recertification be entered on any specific form or handled in any specific way, as long as the approach adopted by the hospital permits the intermediary (or the Health Care Financing Administration where the hospital deals directly with the government) to determine that the certification and recertification requirements are, in fact, met. The certification or recertification could, therefore, be entered or preprinted on a form the physician already has to sign; or a separate form could be used. If all the required information is included in progress notes, the physician's statement could indicate that the individual's medical record contains the information required and that continued hospitalization is medically necessary.

C. Criteria for Continued Inpatient Stay.—A physician who certifies or recertifies to the need for continued inpatient stay should use the same criteria that apply to the hospital's utilization review committee (§§3421ff).

These criteria include not only medical necessity, but also the availability of out-of-hospital facilities and services which will assume continuity of care. A physician should certify or recertify need for continued hospitalization if the physician finds that the patient could receive treatment in an SNF but no bed is available in the participating SNF. Where the basis for the certification or recertification is the need for continued inpatient care because of the lack of SNF accommodations, the certification or recertification should so state. The physician is expected to continue efforts to place the patient in a participating SNF as soon as the bed becomes available.

D. Utilization Review (UR) in Lieu of Separate Recertification Statement.—For cases not subject to PPS and for PPS day outlier cases a separate recertification statement is not necessary where the requirements for the second or subsequent recertification are satisfied by review of a stay of extended duration, pursuant to the hospital's UR plan. However, it is necessary to satisfy the certification and recertification content standards. It would be sufficient if records of the UR committee show that consideration was given to the three items mentioned above— the reasons for continued hospitalization (e.g., consideration was given to the need for special or unusual care in cost outlier status under PPS), estimated time the patient will need to remain in the hospital (e.g., the time period during which such special or unusual care would be needed), and plans for posthospital care.

3319. TIMING OF CERTIFICATIONS AND RECERTIFICATIONS.

A. Admissions on or after January 1, 1970 for Non-PPS hospitals.—For services furnished to beneficiaries admitted on or after January 1, 1970, the initial certification is required no later than as of the 12th day of hospitalization. A hospital may at its option, provide for the certification to be made earlier, or it may vary the timing of the certification within the 12-day period by diagnostic or clinical categories. The first recertification is required no later than as of the 18th day of hospitalization. Subsequent recertifications must be made at intervals established by the UR committee (on a case-by-case basis), but in no event may the interval between recertifications exceed 30 days.

The UR committee will be reviewing long-stay cases and may be in the best position to decide when subsequent recertifications are needed.

A hospital can, if it wishes, coordinate its physician recertifications with the process of review by the UR committee of longstay cases not subject to PPS, and for PPS day - outlier cases. At the option of the hospital, review of a stay of extended duration under the hospital's utilization review plan may take the place of the second and any subsequent physician recertifications. (Such review may be the initial review, or a second or subsequent review of an extended case by the UR committee.)

Where review of an extended stay case by the UR committee is deemed to take the place of a physician recertification, it would be possible for the recertification to be made later than the specified day, because the review of an extended duration case may be made at any time within the 7-day period following the last day of the period of extended duration defined in the utilization review plan. Such a recertification will be treated as a delayed recertification; however, no explanation for the normal delay is required.

B. Patients Discharged During Hospital Fiscal Years Beginning on or after October 1, 1983 Under PPS -- For cases subject to the prospective payment system (PPS), certification is not required at the time of admission for inpatient services. The admission is reviewed by a hospital review organization upon discharge of the patient. For day and cost outlier cases the certification is required as follows:

(1) For day - outlier cases, certification is required no later than one day after the hospital reasonably assumes that the case meets the established outlier criteria, or no later than 20 days into the hospital stay, whichever is earlier.

The first and subsequent recertifications are required at intervals established by the utilization review committee, on a case-by-case basis if it so chooses, but not less than every 30 days.

(2) For cost - outlier cases, if possible, certification must be made before the hospital incurs cost for which it will seek cost outlier payment. However, certification is required no later than the date on which the hospital requests cost outlier payment or 20 days into the hospital stay, whichever is earlier.

For cost outlier cases, the first and subsequent recertifications are required at intervals established by the UR committee, on a case-by-case basis if it chooses.

As previously stated the UR committee will be reviewing long-stay cases and may be in the best position to decide when subsequent recertifications are needed. (See § 3319A above if a hospital wishes to coordinate its physician recertifications with the process of review by the UR committee of long-stay cases not subject to PPS, and for PPS day - outlier cases). Review by the UR committee used in place of recertification for PPS day outlier cases is considered timely if performed within 7 days after the physician recertification would have been required.

C. Admissions Between January 3, 1968, and December 31, 1969.-- For services furnished to beneficiaries admitted on or after January 3, 1968, and prior to January 1, 1970, the procedures in A. above were applicable but the timing of the certification and recertification was at longer intervals. The initial certification was required no later than as of the 14th day of hospitalization. The first recertification was required no later than as of the 21st day of hospitalization. Subsequent recertifications must have been made at intervals established by the utilization review committee (on a case-by-case basis if it so chooses) but not exceeding 30 days.

3320. INPATIENT PSYCHIATRIC HOSPITAL SERVICES CERTIFICATION AND RECERTIFICATION.

The requirements for physician certification and recertification for inpatient psychiatric hospital services are similar to the requirements for certification and recertification for inpatient hospital services. However, there is an additional certification requirement: At the time of admission or as soon thereafter as is reasonable and practicable, a physician (the admitting physician or a medical staff member with a knowledge of the case) must certify the medical necessity for inpatient psychiatric hospital services. As a result, the first and second recertification for psychiatric hospital services correspond to the initial certification and first recertification requirements for inpatient hospital services (see §3319).

For services furnished to beneficiaries admitted on or after January 1, 1970, the first recertification is required no later than as of the 12th day of hospitalization. The second recertification is required no later than as of the 18th day of hospitalization. Subsequent recertifications must be made at intervals established by the utilization review committee (on a case-by-case basis) but in no event may the interval between recertifications exceed 30 days.

For services furnished to beneficiaries admitted before January 1, 1970, the first recertification was required no later than as of the 14th day of hospitalization. The second recertification was required no later than as of the 21st day of hospitalization and subsequent recertifications at intervals of no more than 30 days thereafter.

There is also a difference in the content of the certification and recertification statements. The required physician's statement should certify that the inpatient psychiatric hospital admission was medically necessary, for either (1) treatment which could reasonably be expected to improve the patient's condition, or (2) diagnostic study.

The physician's recertfication should state (1) that inpatient psychiatric hospital services furnished since the previous certification or recertification were, and continue to be, medically necessary for either (a) treatment which could reasonably be expected to improve the patient's condition, or (b) diagnostic study; and (2) that the hospital records indicate that the services furnished were either intensive treatment services, admission and related services necessary for diagnostic study, or equivalent services.

For convenience, the period covered by the physician's certification and recertification is referred to a period during which the patient was receiving active treatment (see § 3102.1). If the patient remains in the hospital but the period of "active treatment" ends (e.g., because the treatment cannot reasonably be expected to improve the patient's condition, or because intensive treatment services are not being furnished), program payment can no longer be made even though the patient has not yet exhausted his benefits. Where the period of "active treatment" ends, the physician is to indicate the ending date in making his recertification. If "active treatment" thereafter resumes, the physician should indicate, in making his recertification, the date on which it resumed.

3321. INPATIENT TUBERCULOSIS HOSPITAL SERVICES CERTIFICATION AND RECERTIFICATION.

The requirements for physician certification and recertifications for inpatient tuberculosis hospital services are similar to the requirements for certification and recertification for inpatient hospital services. However, there is an additional certification requirement: At the time of admission or as soon thereafter as is reasonable and practicable, a physician (the admitting physician or a medical staff member with a knowledge of the case) must certify the medical necessity for inpatient tuberculosis hospital services. As a result, the first and second recertifications for tuberculosis hospital services correspond to the initial certification and first recertification requirements for inpatient hospital services (see § 3319).

For services furnished to beneficiaries admitted on or after January 1, 1970, the first recertification is required no later than as of the 12th day of hospitalization. The second recertification is required no later than as of the 18th day of hospitalization. Subsequent recertifications must be made at intervals established by the utilization review committee (on a case-by-case basis) but in no event may this interval between recertifications exceed 30 days.

For services furnished to beneficiaries admitted before January 1, 1970, the first recertification was required no later than as of the 14th day of hospitalization. The second recertification was required no later than as of the 21st day of hospitalization and subsequent recertifications at intervals of no more than 30 days thereafter.

There is also a difference in the content of the certification and recertification statements.

The physician's certification should state that the inpatient tuberculosis hospital admission was medically necessary for treatment which could reasonably be expected either to (1) improve the patient's condition, or (2) render the condition noncommunicable.

The physician's recertification should state (1) that inpatient tuberculosis hospital services furnished since the previous certification or recertification were, and continue to be, medically necessary for treatment which could reasonably be expected either to (a) improve the patient's condition, or (b) render the condition noncommunicable; and (2) that the hospital records indicate such medical necessity.

For convenience, the period covered by the physician's certification and recertifications is referred to as a period during which the patient was receiving active treatment. If the patient remains in the hospital but the period of "active treatment" ends (e.g., because the treatment cannot reasonably be expected to improve the patient's condition), program payment can no longer be made even though the patient has not yet exhausted his benefits. Where the period of "active treatment" ends, the physician is to indicate the ending date in making his recertification. If "active treatment" thereafter resumes, the physician should indicate, in making his recertification, the date on which it resumed.

3322. CERTIFICATION FOR HOSPITAL SERVICES COVERED BY THE SUPPLEMENTARY MEDICAL INSURANCE PROGRAM.

A physician must certify that medical and other health services covered by medical insurance which were provided by (or under arrangement made by) the hospital were medically required.

Physician certification is not required for the following outpatient services furnished on or after January 3, 1968: (a) hospital services and supplies incident to physicians' services rendered to outpatients (see § 3112.2) and (b) diagnostic services furnished by a hospital or which the hospital arranges to have furnished in other facilities operated by or under the supervision of the hospital or its medical staff (see §§ 3112.3ff.).

Hospitals must obtain a physician's certification with respect to services furnished to outpatients that are not covered as outpatient hospital therapeutic, or diagnositc services under (a) or (b) above.

Primarily, this means that a certification statement is needed for diagnostic services furnished under arrangements by a facility that is not operated by or under the supervision of the hospital or its organized medical staff (see §§ 3112.3), e.g., services obtained from an independent laboratory.

This certification requires a brief description of the services and the signature of the physician. It need be made only once for a course of treatment. Where services are provided on a continuing basis, such as a course of radium treatments, the physician's certification may be made at the beginning or end of the course of treatment, or at any other time during the period of treatment.

There is no requirement that the certification be entered on any specific form or handled in any specific way, as long as the approach adopted by the hospital permits the intermediary (or the Health Care Financing Administration where the hospital deals directly with the Government) to determine that the certification requirement is in fact met. Therefore, the certification could be entered or pre-printed on a form the physician already has to sign; or a separate certification form could be used.

Certification by a physician in connection with ambulance services furnished by a participating hospital is required. In cases in which the hospital provides ambulance service to transport the patient form the scene of an accident and no physician is involved until the patient reaches the hospital, any physician in the hospital who examines the patient or has knowledge of the case may certify as to the medical need for the ambulance service.

In addition, physician's certifications are required for the rental and purchase of durable medical equipment (see § 3113), outpatient physical therapy (see §3149.1), and outpatient speech pathology services (see § A3148).

3323. DELAYED CERTIFICATIONS AND RECERTIFICATIONS.

Hospitals are expected to obtain timely certification and recertification statements. However, delayed certifications and recertifications will be honored where, for example, there has been an oversight or lapse.

In addition to complying with the appropriate content requirements delayed certifications and recertifications must include an explanation for the delay and any medical or other evidence which the hospital considers relevant for purposes of explaining the delay. The hospital will determine the format of delayed certification and recertification statements, and the method by which they are obtained. A delayed certification and recertification may appear in one statement; separate signed statements for each certification and recertification would not be required as they would if timely certification and recertification had been made.

3324. TIMING OF CERTIFICATION AND RECERTIFICATION FOR BENEFICIARY ADMITTED BEFORE ENTITLEMENT.

If an individual is admitted to a hospital (including a psychiatric or tuberculosis hospital) before he is entitled to hospital insurance benefits (for example, before he reaches age 65), the following exception is applicable when he does become entitled.

No certification is required as of the date of admission or entitlement. Certifications and recertifications are required as of the time they would be required if the patient had been admitted to the hospital on the day he became entitled. (The time limits for certification and recertification are computed from the date of entitlement instead of the date of admission.) Other than the above mentioned exception, see §§ 3319-3329 for the applicable requirements for content, signature, and timing of certifications and recertifications. For example, if a patient became entitled on September 1, 1968, but was admitted to a general hospital 1 week prior to that date, the certification was required no later than September 14; the first recertification no later than September 21; subsequent recertifications were required at intervals not to exceed 30 days. Similarly, if a patient became entitled on March 1, 1983, but is admitted prior to that date, the first certification is required no later than March 12; the second no later than March 18, and so forth.

Certification and Recertification By Physicians For Home Health Services

3326. CONTENT OF THE PHYSICIAN'S CERTIFICATION.

Under both the hospital insurance and the supplementary medical insurance programs, no payment can be made for covered home health services unless a physician certifies that:

A. The home health services are or were required because the individual is or was confined to his home (except when receiving outpatient services);

B. The individual needed skilled nursing care on an intermittent basis or needed physical or speech therapy, or effective July 1, 1981 through November 30, 1981, needed occupational therapy;

C. A plan for furnishing such services to the individual has been established and is periodically reviewed by a physician; and

D. The services are or were furnished while the individual was under the care of a physician.

In addition, for services received under hospital insurance prior to July 1, 1981, the physician must also certify that services were needed to treat any of the conditions for which the beneficiary received inpatient hospital or posthospital extended care services during the related hospital or extended care facility stay. Effective July 1, 1981, the prior inpatient stay requirement for home health services under hospital insurance is eliminated. Where services are provided under supplementary medical insurance, it is not necessary to relate the need for these services to a period of prior hospitalization or a stay in an extended care facility.

Since the certification is closely associated with the plan of treatment, the same physician who establishes the plan must also certify to the necessity for home health services. Certifications must be obtained at the time the plan of treatment is established or as soon thereafter as possible.

See § 3315.1 for the effects of failure to certify or recertify.

3327. METHOD AND DISPOSITION OF CERTIFICATIONS.

There is no requirement that the certification, or recertification discussed below, be entered on any specific form or handled in any specific way, as long as the intermediary can determine, where necessary, that the certification and recertification requirements are met. The certification by the physician will be retained by the home health agency, but the agency must certify on the billing form that the requisite certification and recertifications have been made by the physician and are on file in the agency when it forwards the request for reimbursement to the intermediary.

3328. RECERTIFICATION.

Under both the hospital insurance and supplementary medical insurance programs, when services are continued for a period of time, the physician must recertify at intervals of at least once every 2 months that there is a continuing need for services and should estimate how long services will be needed. The recertification should be obtained at the time the plan of treatment is reviewed since the same interval (at least once every two months) is required for the review of the plan. Effective December 1, 1981, the physician must recertify that an individual needs or needed skilled nursing care on an intermittent basis or physical or speech therapy or, in the case of an individual who has been furnished home health services based on such a need and who no longer has such a need for such care or therapy, needs or continues to need occupational therapy. Recertifications must be signed by the physician who reviews the plan of treatment. The form of the recertification and the manner of obtaining timely recertifications is up to the individual agency.

3329. DELAYED CERTIFICATION.

The home health agency should obtain certifications and recertifications as promptly as possible. Payment will not be made unless the necessary certifications have been secured. In addition to complying with the usual content requirements, delayed certifications and recertifications must include an explanation for the delay and any other evidence the agency considers necessary in the case. The format of delayed certifications and recertifications and the method by which they are obtained, will be left to the agency.

Certification and Recertification by Physicians for Extended Care Services

3333. CERTIFICATION AND RECERTIFICATION BY PHYSICIANS--EXTENDED CARE SERVICES.

Payment for covered posthospital extended care services may be made only if a physician makes the required certification and, where services are furnished over a period of time, the required recertification regarding the services furnished.

The skilled nursing facility is responsible for obtaining the required physician certification and recertification statements and for retaining them in file for verifications, if needed, by the intermediary (or by the Health Care Financing Administration, if the skilled nursing facility deals directly with the government). The skilled nursing facility determines the method by which the physician certification and recertification statements are to be obtained. There is no requirement that a specific procedure or specific forms be used, as long as the approach adopted by the faciltiy permits a verification to be made that the certification and recertification requirement is in fact met. Certification and recertification statements may be entered on or included in forms, notes, or other records a physician normally signs in caring for a patient, or a separate form may be used. Except as otherwise specified (see § 3338), each certification and recertification statement is to be separately signed by a physician.

If the facility's failure to obtain a certification or recertification is not due to a question as to the necessity for the services, but rather to the physician's refusal to certify based on other grounds (e.g., he objects in principle to the concept of certification and recertification), the facility may not bill the program or the beneficiary for covered items or services. The provider agreement which the facility files with the Secretary precludes it from charging the patient for covered items and services.

If a physician refuses to certify because, in his opinion, the patient does not require skilled nursing care on a continuing basis for a condition for which he was receiving inpatient hospital services, the services are not covered and the facility can bill the patient directly. The reason for the physician's refusal to make the certification must be documented in the facility records. For such documentation to be adequate, there must be some statement in the facility's records, signed by a physician or a responsible facility official, indicating that the patient's physician feels that the patient does not require skilled nursing care on a continuing basis for any of the conditions for which he was hospitalized.

3334. WHO MAY SIGN CERTIFICATION OR RECERTIFICATION

A certification or recertification statement must be signed by the attending physician or a physician on the staff of the skilled nursing facility who has knowledge of the case.

Ordinarily, for purposes of certification and recertification, a "physician" must meet the definition contained in § 3030.3.

3335. CERTIFICATION

The certification must clearly indicate that posthospital extended care services were required to be given on an inpatient basis because of the individual's need for skilled nursing care on a continuing basis for any of the conditions for which he was receiving inpatient hospital services, including services of an emergency hospital (§ 3012) prior to transfer to the SNF. Certifications must be obtained at the time of admission, or as soon thereafter as is reasonable and practicable. The routine admission procedure followed by a physician would not be sufficient certification of the necessity for posthospital extended care services for purposes of the program.

If ambulance service is furnished by a skilled nursing facility, an additional certification is required. It may be furnished by any physician who has sufficient knowledge of the patient's case including the physician who requested the ambulance or the physician who examines the patient upon his arrival at the facility. The physician must certify that the ambulance service was medically required.

3336. RECERTIFICATIONS

The recertification statement must meet the following standards as to its contents: it must contain an adequate written record of the reasons for continued need for extended care services, the estimated period of time the patient will need to remain in the facility, and any plans, where appropriate, for home care. The recertification statement made by the physician has to meet the content standards, unless, for example, all of the required information is in fact included in progress notes, in which case the physician's statement could indicate that the individual's medical record contains the required information and that continued posthospital extended care services are medically necessary. A statement reciting only that continued extended care services are medically necessary is not, in and of itself, sufficient.

If the circumstances require it, the first recertification and any subsequent recertifications must state that the continued need for extended care services is for a condition requiring such services which arose after the transfer from the hospital and while the patient was still in the facility for treatment of the condition(s) for which he had received inpatient hospital services.

Where the requirements for the second or a subsequent recertification are satisfied by review of a stay of extended duration, pursuant to the utilization review plan, a separate recertification statement is not required. It is sufficient if the records of the utilization review committee show consideration was given to the recertification content standards.

3337. TIMING OF RECERTIFICATIONS

The first recertification must be made no later than as of the 14th day of inpatient extended care services. An skilled nursing faciltiy can, at its option, provide for the first recertification to be made earlier, or it can vary the timing of the first recertification within the 14-day period by diagnostic or clinical categories. Subsequent recertifications must be made at intervals not exceeding 30 days. Such recertifications may be made at shorter intervals as established by the utilization review committee and the skilled nursing facility.

At the option of the skilled nursing facility, review of a stay of extended duration, pursuant to the facility's utilization review plan, may take the place of the second and any subsequent physician recertifications. The skilled nursing facility should have available in its files a written description of the procedure it adopts with respect to the timing of recertifications. The procedure should specify the intervals at which recertifications are required, and whether review of long-stay cases by the utilization review committee serves as an alternative to recertification by a physician in the case of the second or subsequent recertifications.

3338. DELAYED CERTIFICATIONS AND RECERTIFICATIONS

Skilled nursing facilities are expected to obtain timely certification and recertification statements. However, delayed certifications and recertifications will be honored where, for example, there has been an oversight or lapse.

In addition to complying with the content requirements, delayed certifications and recertifications must include an explanation for the delay and any medical or other evidence which the skilled nursing facility considers relevant for purposes of explaining the delay. The facility will determine the format of delayed certification and recertification statements, and the method by which they are obtained. A delayed certification and recertification may appear in one statement; separate signed statements for each certification and recertification would not be required as they would if timely certification and recertification had been made.

3339. DISPOSITION OF CERTIFICATION AND RECERTIFICATION STATEMENTS

Skilled nursing facilities do not have to transmit certification and recertification statements to the intermediary or the Administration; instead, the facility must itself certify, in the admission and billing form, that the required physician certification and recertification statements have been obtained and are on file.

Tuberculosis and Psychiatric Hospital Records

3345. TUBERCULOSIS AND PSYCHIATRIC HOSPITAL RECORDS

The law requires that psychiatric and tuberculosis hospital records contain certain specific information concerning the individual patient's condition and the nature of the treatment provided.

3345.1 In the case of inpatient psychiatric hospital services the hospital records must show that the services were furnished to the patient during periods when he was receiving intensive treatment services, admission and related services necessary for a diagnostic study, or equivalent services. As noted in § 3314, the physician recertification for inpatient psychiatric hospital services must include a statement that the hospital records so indicate.

3345.2 In the case of inpatient tuberculosis hospital services the hospital records must show that the services were furnished to the patient during periods when he was receiving treatment (including diagnostic services) which could reasonably be expected to improve his condition or render it noncommunicable. As noted in § 3315, the physician recertification for inpatient tuberculosis hospital services must include a statement that the hospital records so indicate.

Certification and Recertification for Outpatient Services

3350. PHYSICIAN'S CERTIFICATION AND RECERTIFICATION FOR OUTPATIENT PHYSICAL THERAPY, OCCUPATIONAL THERAPY, AND SPEECH PATHOLOGY SERVICES.

A. Content of the Physician's Certification.--No payment may be made for outpatient physical therapy, occupational therapy, or speech pathology services unless a physician certifies that:

1. the services are or were furnished while the patient was under the care of a physician (see § 3148.2);

2. a plan for furnishing such services is or was established by the physician, physical therapist, occupational therapist, or speech pathologist and periodically reviewed by the physician. (See § 3148.3); and

3. the services are or were required by the patient.

Since the certification is closely associated with the plan of treatment, the same physician who establishes or reviews the plan must certify to the necessity for the services. Certification should be obtained at the time the plan of treatment is established or as soon thereafter as possible. "Physician" means a doctor of medicine, a doctor of osteopathy (including an osteopathic practitioner), or a doctor of podiatric medicine legally authorized to practice by the State in which he performs the services. In addition, physician certifications or recertifications by doctors of podiatric medicine must be consistent with the scope of the professional services provided by a doctor of podiatric medicine as authorized by applicable State law, and the policy of the institution or agency with respect to which the services are performed.

B. Recertification.--When outpatient physical therapy, occupational therapy, or speech pathology services are continued under the same plan of treatment for a period of time, the physician must recertify at intervals of at least once every 30 days that there is a continuing need for such services and should estimate how long services will be needed. The recertification should be obtained at the time the plan of treatment is reviewed since the same interval (at least once every 30 days) is required for the review of the plan. Recertifications must be signed by the physician who reviews the plan of treatment. The form of the recertification and the manner of obtaining timely recertification is up to the individual provider.

C. Method and Disposition of Certifications.--There is no requirement that the certification or recertification be entered on any specific form or handled in any specific way as long as the fiscal intermediary or carrier can determine, where necessary, that the certification and recertification requirements are met. The certification by the physician will be retained by the provider, but the provider must certify on the billing form that the requisite certification and recertifications have been made by the physician and are on file when it forwards the request for reimbursement to you.

D. Delayed Certification.-- (See § 3323.)

3360. PARTICIPATION OF HEALTH MAINTENANCE ORGANIZATIONS (HMO'S) IN MEDICARE

Section 1876 of the Social Security Act permits a Medicare beneficiary eligible for Part A and Part B, or Part B only, to choose to have covered items and services furnished through a health maintenance organization (HMO), by enrolling in a qualified organization which has entered into a contract with the Secretary to participate as an HMO under Medicare. An HMO is defined, for Medicare purposes, as a public or private organization which provides either directly or through arrangements with others, a comprehensive range of health services to enrolled members who live within a specified service area, on a predetermined periodic rate or periodic per capita rate basis without regard to the frequency or extent of covered services furnished to any particular member, and which meets other statutory requirements. An HMO's service area is defined as the geographic area in which the HMO offers the full range of its services to its members. It may be distinguished from the HMO's enrollment area which may include locations outside the HMO's service area where it offers less than its full range of services (e.g., an HMO may cover house calls in emergencies in its service area, but not for members who live outside the service area).

A. Mature and Developing HMO's.—Under regulations published in the Federal Register July 2, 1975, organizations may qualify for participation under Medicare as either mature or developing HMO's. A "mature HMO" refers to an organization which has a current enrollment of at least 5,000 members; provides all health services covered under Part A and Part B that are available to nonmembers in the HMO's service area; and which meets all the applicable qualification requirements set forth in sections 405.2003-405.2012 of Subpart T of Regulations No. 5, including requirements related to operating history, composition of membership, range of services, etc. An organization which does not meet all the applicable statutory and regulatory requirements for a "mature HMO," may still qualify for participation under Medicare as a "developing HMO" if it meets certain less demanding requirements established in the regulations and demonstrates the capability of meeting the full statutory and regulatory requirements for a "mature HMO" within 3 years. For example, the regulations do not require developing HMO's to furnish the comprehensive range of covered services that mature HMO's are required to provide. (This 3-year time requirement may be waived by the Secretary for good cause.)

B. Cost-Basis and Risk-Basis HMO's.—For reimbursement purposes, a distinction is made between HMO's which contract with the Medicare program on an incentive (or risk) basis and those which contract on a cost-basis. A cost-basis HMO is either a mature or developing HMO which enters into a cost reimbursement contract with the Secretary under section 1876 of the act. Such HMO's are reimbursed by the Medicare program for the reasonable cost of providing covered items or services to Medicare enrollees. On the other hand, a risk-basis HMO is a mature HMO which meets additional size and experience requirements (e.g., where the HMO serves an urban geographic area it must have a current enrollment of at least 25,000 prepaid members) and elects to enter into an incentive reimbursement contract with the Secretary (for additional information on the size and experience requirements for risk-basis HMO's, see section 405.2004(a)(1) and (a)(2) of Subpart T of Regulations No. 5). Such HMO's are reimbursed by the Medicare program on the basis of a comparison of the HMO's incurred cost and the Adjusted Average Per Capita Cost (AAPCC) which is the average cost of providing covered items or services in the HMO's enrollment area to Medicare beneficiaries not enrolled in the HMO, actuarially adjusted to reflect the makeup of the HMO's Medicare enrollment. If the risk-basis HMO's incurred cost is less than the AAPCC, the HMO may earn a "savings" up to prescribed limits; if the risk-basis HMO's incurred cost exceeds the AAPCC, the HMO absorbs the "loss" which may be carried forward and offset against future savings. (See § 3360A for definitions of mature and developing HMO's.)

A risk-basis HMO must assume financial responsibility for a wider range of services for its enrollees than is required of a cost-basis HMO. A mature HMO that opts for a cost reimbursement contract is required to furnish its Medicare enrollees directly, or through arrangements, all of the Part A and Part B items and services covered under Medicare which are available to individuals (nonenrollees) residing in the organization's service area. On the other hand, a risk-basis HMO must provide the same range of covered Medicare services required of cost-basis, mature HMO's, and must also assume financial responsibility for covered items and services furnished to its Medicare enrollees by a physician, supplier, or provider of services outside the HMO, even in the absence of the HMO's prior approval, where such services are: (1) emergency services (see § 3360.1A); or (2) urgently needed services (see § 3360.1B) furnished to enrollees while they are temporarily absent (see § 3360.1B) from the HMO's service area; or (3) other covered Medicare items or services which are determined by the Secretary not to have been made reasonably available by the HMO to its Medicare enrollees (see § 3360.1C).

C. In-Plan and Out-of-Plan Services.--For purposes of these instructions, covered items or services furnished Medicare enrollees by an HMO, either directly through its facilities or through arrangements with others, are termed "in-plan". Where covered items or services are provided by a physician, supplier of services, or provider of services outside the HMO, such items or services are termed "out-of-plan".

D. Source of Covered Services.--The type of Medicare reimbursement contract (see § 3360C) which an HMO has with the Secretary is important to a beneficiary because those beneficiaries enrolled in risk-basis HMO's can have payment made by Medicare only for covered services they receive through the HMO, and for emergency services, urgently needed services, and other covered services which the Secretary determines have not been made reasonably available by the HMO (see § 3360.1). Such a beneficiary is referred to as a "restricted" beneficiary. However, if the beneficiary moves out of the HMO's enrollment area, this restriction ceases to apply the month following the month in which he moves. The beneficiary then has the same status as a beneficiary enrolled in a cost-basis HMO.

Beneficiaries enrolled in cost-basis HMO's can have payment made for covered services they receive through the HMO or from sources other than the HMO. Such a beneficiary is referred to as an "unrestricted" beneficiary.

3360.1 Definition of Emergency, Urgently Needed, and Other Covered Services.--

A. Emergency Services.--Emergency services are covered inpatient or outpatient medical and other health services provided by an appropriate source within or outside the HMO's service area, which may not be delayed until facilities or suppliers of services of the HMO (or alternatives authorized by the HMO) can be used without possible serious effects on the health of the patient. Such services must be or must appear to be needed immediately to prevent the death of the enrollee or serious impairment of his health, and are considered emergency services as long as the transfer of the enrollee to the appropriate provider of services of the HMO (including those with which the healthmaintenance organization has an arrangement) or an alternative designated by the HMO is precluded because of the risk to the enrollee's health, or the distance and nature of illness involved would make such transfer unreasonable.

B. Urgently Needed Services.--Urgently needed services are covered services which enrollees require in order to prevent a serious deterioration in their health while they are temporarily absent from the HMO's service area. While the immediacy of need for these services is not as great as it is for emergency services, the medical need is such that the provision of medical services cannot be delayed until the enrollee returns to a place where he could receive the HMO services. In this context, the term, "temporarily absent," refers to circumstances, such as a vacation trip, where the enrollee has left the HMO's service area, but intends to return within a reasonable period of time. An enrollee whose primary place of residence is in either the HMO's service area or enrollment area, but who resides in a temporary home elsewhere for a number of weeks up to a reasonable limit that may be established by the HMO, would also be considered temporarily absent from the HMO's service area during those periods of time when such enrollee is residing in the temporary home.

C. Other Covered Services.--Other covered services are services which are determined by the Secretary not to have been made reasonably available by the HMO to its Medicare enrollees.

3360.2 Intermediary Involvement With Reimbursement for HMO Services.--Services for HMO members who are Medicare beneficiaries are reimbursed either through the HMO itself or through the intermediary. The HMO may select from a number of options the one method by which its bills will be handled. Intermediaries will receive admission notices for all Medicare inpatient services for enrolled members of HMO's (see §§ 3555ff.). The jurisdiction of the subsequent inpatient bills is indicated in the "R-trailer" of the query reply. The intermediary will also determine jurisdiction of forms HCFA-1483 from information in the query reply (§ 3555.2). The contents of the "R-trailer" are described in § 3512.8.

In addition to the option codes in the R-trailer, the intermediary will have a listing (See § 3558), which shows which providers of services have arrangements with a particular HMO, or are owned by a particular HMO. If the services were furnished by a provider, owned by, or having an arrangement with the beneficiary's HMO, the intermediary will assume that the services were furnished in-plan.

If the services are out-of-plan and the R-trailer shows Codes A or B, the intermediary will refer to its HMO service area directory to help develop whether a service might be covered as being urgently needed if the emergency requirements are not met.

Intermediary actions in relation to query responses and receipt of Part A bills are described in §§ 3555ff.

When the HMO has jurisdiction of its bills, HCFA makes the interim capitation payments to the HMO, a periodic accounting, and an end-of-year adjustment.

When the intermediary has jurisdiction over bills for services to HMO members, the intermediary processes the bills (including services in HMO-owned facilities) in the same manner it presently processes bills for non-HMO beneficiaries. If the intermediary or HMO has jurisdiction over bills for services in an HMO-owned facility, the facility must have a provider number (the same as any other provider not owned by an HMO).

COMPREHENSIVE OUTPATIENT REHABILITATION FACILITIES

3370. PAYMENT FOR SERVICES FURNISHED BY COMPREHENSIVE OUTPATIENT REHABILITATION FACILITIES (CORFs)

3370.1 General--The Omnibus Reconciliation Act of 1980 (Public Law 96-499, Section 933) defines CORFs (Comprehensive Outpatient Rehabilitation Facilities) as a distinct type of Medicare provider and adds CORF services as a new benefit under Medicare Part B.

CORFs certified as meeting health, safety, and other standards prescribed by the Secretary will be eligible for reimbursement by a fiscal intermediary for the services it renders on a reasonable cost basis. Diagnostic and therapeutic services furnished to an individual patient by a physician are not CORF physician services. If covered, these services will be reimbursed on a reasonable charge basis by the area carrier subject to the physician reimbursement limitation on services furnished in an outpatient setting.

3370.2 Intermediary Designations--CORFs associated with a certified provider facility will be reimbursed by the provider's current intermediary. However, for all "free standing" or independent CORFs, HCFA has designated the following intermediaries. Except as noted below, CORFS will be serviced by the designated intermediary in its State.

STATE	INTERMEDIARY
Alabama	Blue Cross and Blue Shield of Alabama
Alaska	Blue Cross and Blue Shield of Washington and Alaska
Arizona	Blue Cross and Blue Shield of Arizona, Inc.
Arkansas	Arkansas Blue Cross and Blue Shield, Inc.
California	Blue Cross of California (Woodland Hills)
Colorado	Blue Cross of Colorado
Connecticut	Aetna
Delaware	Blue Cross of Delaware

District of Columbia	Group Hospitalization, Inc. (Washington, D.C.)
Florida	Blue Cross & Blue Shield of Florida, Inc.
Georgia	Blue Cross of Georgia/Columbus, Inc.
Hawaii	Hawaii Medical Service Association
Idaho	Blue Cross of Idaho Health Services
Illinois	Health Care Service Corporation (Chicago, Ill)
Indiana	Mutual Hospital Insurance, Inc. (Indianapolis, Inc.)
Iowa	Blue Cross of Iowa, Inc.
Kansas	Blue Cross of Kansas, Inc.
Kentucky	Blue Cross and Blue Shield of Kentucky, Inc.
Louisiana	Blue Cross of Louisiana (Louisiana Health Service and Indemnity Co.)
Maine	Associated Hospital Service of Maine
Maryland	Blue Cross of Maryland, Inc.
Massachusetts	Aetna
Michigan	Blue Cross and Blue Shield of Michigan
Minnesota	Blue Cross of Minnesota
Mississippi	Blue Cross and Blue Shield of Mississippi, Inc.
Missouri	Blue Cross Hospital Service, Inc., of Missouri (St. Louis, Missouri)

Montana	Blue Cross of Montana
Nebraska	Mutual of Omaha Insurance Company
Nevada	Aetna
New Hampshire	New Hampshire-Vermont Health Service, Inc.
New Jersey	The Prudential Insurance Company of America
New Mexico	New Mexico Blue Cross and Blue Shield, Inc.
New York	Blue Cross and Blue Shield of Greater New York
North Carolina	Blue Cross and Blue Shield of North Carolina
North Dakota	Blue Cross of North Dakota
Ohio	Hospital Care Corporation (Cincinnati, Ohio)
Oklahoma	Blue Cross and Blue Shield of Oklahoma
Oregon	Blue Cross of Oregon
Pennsylvania	Blue Cross of Western Pennsylvania (Pittsburgh)
Puerto Rico	Cooperativa de Seguros De Vidas
Rhode Island	Hospital Service Corporation of Rhode Island
South Carolina	Blue Cross and Blue Shield of South Carolina
South Dakota	Blue Cross of Western Iowa and South Dakota

Tennessee	Blue Cross and Blue Shield of Tennessee (Chattanooga, Tennessee)
Texas	Group Hospital Service, Inc. (Dallas, Texas)
Utah	Blue Cross of Utah
Vermont	New Hampshire-Vermont Health Services, Inc.
Virginia	Blue Cross of Virginia (Richmond, VA)
Virgin Islands	Cooperativa de Seguros De Vidas
Washington	Blue Cross of Washington and Alaska
West Virginia	Blue Cross Hospital Service, Inc. (Charleston, West Virginia)
Wisconsin	Blue Cross/Blue Shield United of Wisconsin
Wyoming	Blue Cross of Wyoming

Certain designated intermediaries will service CORFs across State lines in keeping with their longstanding service areas in the following cases.

Group Hospitalization, Inc.--services the District of Columbia; Prince Georges and Montgomery Counties in Maryland; Arlington County, Fairfax County, and the cities of Alexandria, Falls Church and Fairfax in Virginia.

Blue Cross of Western Iowa and South Dakota--services all of South Dakota and 26 counties in Iowa.
Oregon Blue Cross--services Oregon and Clark County in Washington, a suburb of Portland.

St. Louis Blue Cross--services Missouri, and Johnson and Wyandotte Counties in Kansas

Chattanooga Blue Cross--services Walker, Dade and Catossa Counties in Georgia.

A3316 Who May Sign Certification or Recertification.--The phrase "doctor of podiatry or surgical chiropody" in section 1861(r)(3) of the Social Security Act has been changed in the 1980 Amendments to read "doctor of podiatric medicine."

Effective January 1, 1981, a podiatrist is considered a "physician" for the purpose of making the required physician certification and recertifications of the medical necessity for Part A and Part B services if the podiatrist's performance of these functions is: (1) consistent with the policy of the institution or agency with respect to which he performs them; and (2) legally authorized by the State.

Cross refer: Section 3316

A.3316.1, Certification of Need for Hospital Admissions for Dental Procedures--Effective with admissions after June 30, 1981, the attending doctor of dental surgery or of dental medicine is authorized to certify that the patient's underlying medical condition and clinical status, or the severity of the dental procedure, requires the patient to be admitted to the hospital for the performance of the dental procedure (see § A3101.7). This applies even if the dental procedure is not covered.

Cross-refer: §3316.1.

Medicare as Secondary Payer for Disabled Individuals........ 3492 96.57

3401. REFUNDS.

In its agreement for participation, the provider has agreed not to charge any individual or other person (e.g., relatives, other insurance carriers, or welfare) for items and services covered by the health insurance program other than allowable charges and deductibles and coinsurance amounts. The provider also agreed to make provision for the refund (or other required disposition) of any moneys incorrectly collected from the individual or other person on his behalf.

Amounts incorrectly collected and not refunded represent improper charges for covered services under the provisions of section 1866(a)(1) of the Social Security Act, and a provider's retention of these moneys without making provision for refund (or other required disposition) constitutes a violation of its provider agreement.

A. Moneys incorrectly collected means amounts in excess of allowable charges and deductible or coinsurance amounts, if applicable, paid to a provider of services by an individual (or other person on his behalf) as payment for covered items and services for which the individual is entitled to have payment made under the Medicare program.

B. A majority of incorrect collections are made inadvertently and may involve a simple error on the part of the provider in billing a beneficiary. However, there are other situations where incorrect collections may be made, such as:

1. In a retroactive entitlement case (§ 3001), where the beneficiary (or other person) paid for covered services and later becomes entitled to have payment made for them under Medicare;

2. Where payment was initially denied and a subsequent finding is made (e.g., as the result of a reconsideration or hearing decision) that payment for all or part of the same services may be made;

3. Where the beneficiary or other person has protested a direct charge by a provider; and

4. Where a claim for payment is submitted by a provider under the guarantee of payment provisions. (See § 3714.)

Adequate safeguards must be instituted to assure that providers refund moneys incorrectly collected. Therefore, in the situations described above (and other situations recognized by you), ascertain on an individual case basis whether the provider has already received reimbursement for covered services from the individual or other person (e.g., relatives, other insurance carriers, or welfare) before making Medicare payment. (See §3401.6.) If the provider advises, in writing, that it has not been reimbursed by the individual or other person for covered services, payment can be made. If the provider has already been reimbursed in whole or in part, see § 3401.1.

Where the provider has overcollected deductible and coinsurance amounts for Part B services, make direct refund to the beneficiary. (See the bill review instructions in §§ 3640.7 and 3650.)

3401.1 Return o. Other Disposition of Moneys Incorrectly Collected.-- A provider of services in possession of any incorrect collection is required to refund or make final disposition of the money in accordance with applicable State law. If refund or final disposition will be delayed for a prolonged period, the provider is required to set aside the money in a separate account until refund or final disposition can be made. Until the provider advises, in writing, that it has properly refunded or disposed of the money or, as necessary, set aside the money, withhold an amount equal to such incorrect collection against amounts otherwise due the provider, except in a guarantee of payment case withhold the full amount due the provider for the guarantee period.

A. Refund.-- Refund is to be made to the beneficiary (or any other person) from whom the provider collected the moneys. If the beneficiary or other person cannot be located after the provider has made a reasonable effort including an attempt at contact by mail at the last known address, check HCFA's records in an effort to learn the individual's address. If the individual to whom refund is to be made still cannot be located or has died, the provider is to make final disposition of the moneys in accordance with the law of the State in which the provider is situated.

B. Moneys Set Aside.-- In some situations refund or final disposition may be delayed for a prolonged period (e.g., where the beneficiary's whereabouts is being developed or where there is a delay in the appointment of a legal representative to dispose of the estate of a deceased individual). When such a delay in making refund or final disposition is encountered, the provider of services is required to set the funds aside in a separate account identified by the name of the individual to whom the payment is due. These amounts will be carried on the provider's records in this manner until refund or final disposition, as provided in paragraph A above, can be made.

3401.2 Appropriate Time Limits Within Which Provider Must Dispose of Sums Incorrectly Collected.-- Refund or final disposition in accordance with applicable State law of sums incorrectly collected should be accomplished as promptly as possible. In any event, refund, final disposition, or as necessary, setting funds aside in a separate account should be accomplished within a period of 60 days after the provider is notified that an incorrect collection was made.

In discharging your administrative functions, you should attempt through discussion with the provider to effect timely disposition of sums incorrectly collected. You should also maintain adequate controls to insure that refunds or final dispositions are made on a timely basis.

3401.3 Provider Agreement May Be Terminated.-- Advise the RO of any problems which may arise in establishing the existence of an incorrect collection and in disposing of it. Where there is a continued or recurring failure to refund or otherwise dispose of incorrectly collected funds, HCFA may in an extreme case terminate the provider agreement.

3401.4 Former Participating Providers of Service.-- Once a provider of services has become a participating provider, it remains responsible, notwithstanding the subsequent termination of its program participation, for the required refund or final disposition of any moneys incorrectly collected for covered services furnished to Medicare beneficiaries during the effective period of its provider agreement. Incorrect collection situations involving former participating providers may occur as the result of a beneficiary's or other person's allegation of having paid the former provider for covered services, or as the result of a reconsideration, hearing, or judicial decision which entitles the beneficiary to have program payment made for covered services furnished by the former provider.

A. Former Participating Provider Cooperates.-- Where the former participating provider (or an authorized representative) is available and cooperative, any required claims development should be completed, the amount of any moneys incorrectly collected should be established, and final disposition made, in the same manner as for currently participating providers. Any program payment due the provider on behalf of the beneficiary should be paid after disposition of any incorrect collections.

Program payments released to a former provider are to be reflected as a live item under "Retroactive Adjustments" on the Monthly Intermediary Financial Report. (See Part A, Part 1, § 1414ff.) However, before making payment to a former provider which continues to have a financial obligation to the Medicare program, e.g., an unrecovered overpayment, undertake an appropriate recomputation and adjust the former provider's final cost settlement.

This includes advising the former provider, in writing, of any changes in the previously determined settlement and updating the overpayment case file.

B. Former Participating Provider Does Not Cooperate.-- Where the information available shows or alleges that an incorrect collection was made and all reasonable efforts to locate and/or secure the cooperation of the former provider have been exhausted, document the case and refer it to the RO. (See § 3401.5.) Once the case has been referred, notify the RO of any direct contact received from the former provider on this matter. The RO will advise you of any subsequent actions to be taken.

Where the information available does not show or allege that an incorrect collection was made, record the circumstances of the individual case in the former provider's final cost settlement (overpayment) records. This may be done by a short memorandum, and should indicate the documentation, information, etc., necessary to resolve the issue. Where a former provider contact is known, advise him or her of the action taken. If the former provider subsequently cooperates (e.g., by claiming payment, submitting requested information, advising whether it has made an incorrect collection), the case should then be processed as in paragraph A above.

3401.5 Documentation Guide List.-- The following is a guide list for use in documenting cases involving situations where the information available shows or alleges that an incorrect collection was made and you have been unable to locate or secure the cooperation of a former provider. (See § 3401.3B.) As available and appropriate to the individual case, the documentation forwarded to the RO should include:

A. A copy of the beneficiary's or other person's allegation that he made payment to the former provider for covered services.

B. A copy of any reconsideration, hearing, or judicial decision which may be involved.

C. A copy of reports relating to consultative efforts with the former provider and copies of related correspondence with the provider.

D. A copy of all pertinent claims forms that were filed by the former provider for services furnished to the beneficiary during the period in question. If the provider has not filed a claim, secure status information for the involved beneficiary. (See § 3507.3, query code 5.)

E. A report on the final cost settlement status of the former provider (e.g., underpaid, overpaid, any amounts due and used to reduce an overpayment).

F. For those cases where you are unable to determine the amount of program payment due the provider (generally, where you have been unable to complete the necessary claims development), a written opinion based on available medical records, billings, etc., as to the probability for having program payment made. Attempt to secure any pertinent medical, billing, etc., information which would assist you in giving this opinion. This would include, for example, any information which can be made available from your own records or by contacting other providers, including the successor-owner where the provider has undergone a change of ownership.

3401.6 Intermediary Request for Information Required for the Development of Provider Refunds.— The means used to contact a provider in a refund situation (§3401.B) is discretionary, either by telephone or mail. Inform the provider of the situation for which it may have made an incorrect collection and the actions it is required to take to fulfill its program obligation. Follow the procedure explained below in your refund development.

The Office of Management and Budget (OMB) has approved your requesting the following information from providers for the resolution of refund situations. You may not routinely collect information other than that given on this list. You may have forms printed requesting the provider to complete all applicable information on the list. However, if you elect to do so, the form you produce must have the OMB approval number printed in the upper right-hand corner of the first page. It should read:

Form Approved
OMB No. 0938-0383

The items of information that may be collected for refund situations are:

A. Ascertain whether an incorrect collection was made with respect to the covered services furnished to the beneficiary.

B. If an incorrect collection was made:

1. The amount of the incorrect collection; and

2. The amount refunded, the name and address of the person or entity to whom the refund was paid, and the provider's explanation when refund was made to a person or entity other than from whom the provider collected the money; or

3. The amount set aside in a separate account in the provider's records, the name on the account, and the provider's reason for setting the money aside; or

4. The amount disposed of in accordance with applicable State law and the name and address of the person or entity to whom the money was paid; or

5. Other disposition or explanation by the provider.

C. Signature and title of authorized provider representative and the date.

The information collected for refund situations must be limited to those items given on the list. A distinction is drawn between information which is sought routinely and that which is sought non-routinely. The distinction is based on a requirement in the Paperwork Reduction Act that OMB approval be obtained when the identical question is posed to ten or more members of the public in a given year. Since the three (3) numbered items on the above list are OMB approved, you may ask for this information whenever necessary. OMB approval is not required when information for a specific application is requested annually from fewer than ten members of the public. You may use this exemption to seek additional information to resolve a refund situation on an exemption basis, i.e., the information requested is not sought on a routine basis.

Workers' Compensation

3407. GENERAL

Payment under Medicare may not be made for any items and services to the extent that payment has been made or can reasonably be expected to be made for such items or services under a WC law or plan of the United States or any State. If it is determined that Medicare has paid for items or services which can be or could have been paid for under WC, the Medicare payment constitutes an overpayment.

This limitation also applies to the WC plans of the District of Columbia, American Samoa, Guam, Puerto Rico, and the Virgin Islands.

It also applies to the Federal WC plans provided under the Federal Employees' Compensation Act, the U.S. Longshoremen's and Harbor Workers' Compensation Act and its extensions, and the Federal Coal Mine Health and Safety Act of 1969 as amended (the Federal Black Lung Program). These Federal programs provide WC protection for Federal civil service employees and certain other categories of employees not covered, or not adequately covered, under State WC programs; e.g., coal miners totally disabled due to pneumoconiosis, maritime workers (with the exception of seamen), employees of companies performing overseas contracts with the United States government, employees of American companies who are injured in an armed conflict, employees paid from non-appropriated Federal funds (such as employees of post exchanges), and offshore oil field workers. The Federal Employers' Liability Act, which covers merchant seamen and employees of interstate railroads, is not a WC law or plan for purposes of this exclusion. Similarly, some States have employers' liability acts. These also are not considered WC acts for purposes of this exclusion.

All WC acts require that the employer furnish the employee with necessary medical and hospital services, medicines, transportation, apparatus, nursing care, and other necessary restorative items and services. However, in some States there are limits to the amount of medical and hospital care provided. For specific information regarding the WC plan of a particular State or territory, contact the appropriate agency of the individual State or territory.

If payment for services cannot be made by WC because they were furnished by a source not authorized by WC, such services can be paid for by Medicare.

The beneficiary is responsible for taking whatever action is necessary to obtain payment under WC where payment under that system can reasonably be expected (e.g., timely filing a claim, furnishing all necessary information). If failure to take proper and timely action results in a loss of WC benefits, Medicare benefits are not payable to the extent that payment could reasonably have been expected under WC.

3407.1 Definitions

A. Workers' Compensation Law or Plan.— A WC law or plan is a government-supervised and employer-supported system for compensating employees for injury or disease suffered in connection with their employment, whether or not the injury was the fault of the employer. Workers' compensation does not usually cover agricultural employees, interstate railroad employees, employees of small businesses, employees whose work is not in the course of the employer's business (e.g., domestic employees), casual employees, and self-employed people. Although WC programs were initially designed to cover accidental injuries suffered in the course of employment, all States now provide compensation for at least some occupational diseases as well.

B. Workers' Compensation Agency.—The term "workers' compensation agency" means any governmental entity that administers a Federal or State WC law. This term includes workers' compensation commissions, industrial commissions, industrial boards, workers' compensation insurance funds, workers' compensation courts and, in the case of Federal workers' compensation programs, the U.S. Department of Labor.

C. Workers' Compensation Carrier.-- The term "workers' compensation carrier" means any insurance carrier authorized to write WC insurance under the state or federal law, the state compensation fund where the state administers the WC program, and the beneficiary's employer where the employer is self-insured.

D. Lump Sum Commutation Settlement.--The beneficiary accepts a lump sum payment which compensates for all future medical expenses and disability benefits related to the work injury or disease.

E. Lump Sum Compromise Settlement.--A settlement which provides less in total compensation than the individual would have received if the claim had not been compromised. This may occur when compensability is contested.

F. HCFA's Claim.--Is the amount that is determined to be owed to the Medicare program. This is the amount that was paid out by Medicare, less any applicable procurement costs.

3407.2 Effect of Payments Under a Workers' Compensation Plan

A. General.--No Medicare payment may be made if WC has paid an amount:

- Which equals or exceeds the gross amount payable by Medicare without regard to deductible and coinsurance;
- Equals or exceeds the provider's charges for Medicare covered services; or
- Which the provider accepts or is required under the WC law to accept as payment in full.

B. Deductibles.--Payments made under WC cannot be applied toward the Medicare deductibles.

C. Benefit Utilization.-- In most instances, where an injury or illness is covered under a WC plan, that plan pays all hospital and medical expenses. Where this is the case, services paid for under WC are not counted against the individual's entitlement to 90 days of inpatient hospital services, 60 lifetime reserve days, or 100 days of skilled nursing facility services. However, if a Medicare secondary payment is made, benefit utilization is charged in accordance with §3679 C3 & H3 for providers reimbursed on a cost reimbursement basis and §3685A3 for hospitals reimbursed on a prospective payment basis.

3407.3 Secondary Medicare Payments

A. General.--If WC pays for Medicare covered services (including outpatient services) an amount which is less than the provider's charges and less than the gross amount payable by Medicare, as defined below (without considering the effect of the

Medicare deductible or coinsurance or the payment by WC), and the provider does not accept and is not required, under the WC law to accept the payment as payment in full, Medicare secondary payments can be made.

B. Amount of Secondary Payments.--The Medicare secondary payment is the gross amount payable by Medicare minus the amount paid by WC for Medicare covered services, minus any applicable deductible or coinsurance amount.

The gross amount payable by Medicare is:

o The current Medicare interim reimbursement amount (as defined in §3683) for providers reimbursed on a reasonable cost basis;

o The Medicare payment rate as defined in §3685, for providers reimbursed on a prospective payment basis;

o The composite rate for maintenance dialysis services; or

o The reasonable charge for separately billable items furnished by independent ESRD facilities. (See §3644.1.)

C. Charges Included Non-Work Related Items or Services.--If WC does not pay all of the charges because only a portion of the services is compensable, i.e., the patient received services for a condition which was not work related concurrently with services which were work-related, secondary Medicare benefits may be paid in accordance with paragraph B above, to the extent that the services are not covered by any other source which is primary to Medicare (see §3679 for billing procedures). A provider is permitted, under WC law, to charge an individual or the individual's insurer for services which are not work related.

3407.4 Workers' Compensation Cases Involving Liability Claims.--Most State laws provide that if an employee is injured at work due to the negligent act of a third party, the employee cannot receive payments from both WC and the third party for the same injury. Generally, WC benefits are paid while the third party claim is pending. However, once a settlement of the third party claim is reached or an award has been made, WC may recover the benefits it paid from the third party settlement and may deny any future claims for that injury up to the amount of the liability payment made to the individual.

If WC does not pay for services or recovers benefits it previously paid for services solely because a third party is determined to be liable, Medicare is not secondary under this provision, to the extent of the nonpayment or recovery by WC. However, Medicare may be secondary for services covered under the liability insurance provision. Consider these cases under the policies in §§3419ff.

3407.5 Possible Coverage of Work Related Services Under Automobile Medical or No Fault Insurance or Employer Group Health Plan.--Where services are covered in part by WC and also under automobile medical or no-fault insurance, WC pays first, the automobile medical or no-fault insurance pays second and Medicare would be the residual payer. (See §3489ff.) If the individual is covered by an EGHP, and is age 65 or over or is under age 65 and entitled to Medicare solely because of ESRD, or is entitled as an active individual, including the member of the family of such individual, who is entitled to benefits on the basis of disability, the employer plan coverage may also be primary to Medicare. (See §§3491ff., 3490ff..) Section 3408.1B for provider billing where there is also coverage by another primary payer.

3407.6 Contested Workers' Compensation Claims

A. General.--An employee may appeal the refusal of an employer to pay WC benefits, or an employer may appeal the award of benefits to an employee by the WC agency. Such appeals are generally heard by a hearing officer or judge of the agency, with further appeal to the WC agency or appeals board and from there to the courts. Sometimes contested claims are settled by compromise between the parties with the approval of the WC agency.

In general, a decision by a State WC agency on a contested claim, or a compromise settlement which has been approved by a WC agency, should be accepted as a basis for applying the WC limitation, except where the settlement did not make reasonable provision for payment under WC of all work-related medical expenses. Thus, where an individual has been denied WC benefits for a particular illness or injury, allow claims for treatment of that condition, unless the decision or settlement is clearly inconsistent with the medical facts and applicable State law and has the effect of shifting to the Medicare program, liability for medical expenses which are the responsibility of the State WC program. Where it is clear that an attempt was made to shift responsibility to the Medicare program, deny the Medicare claim. In your denial notice explain your conclusions in detail and state that the beneficiary may wish to request a reopening under the WC law.

B. Conditional Medicare Payment.--There is frequently a long delay between the occurrence of an injury and the decision by the State WC agency in cases where compensability is being contested. A denial of Medicare benefits pending the outcome of the final decision means that beneficiaries might be required to advance their own funds to pay for expenses which are eventually borne by either WC or Medicare. To avoid imposing a hardship on Medicare beneficiaries pending such decision, conditional Medicare payments may be made. Such payments are conditioned upon reimbursement to the trust fund if it is later determined that the services are covered by WC.

3407.7 Lump Sum Compromise Settlement.--If a WC agency approves a lump sum settlement of a case where compensability is contested, the lump sum settlement is deemed to be a WC payment, even if the settlement agreement stipulates that there is no WC liability. (See §§3416 and 3417.)

If the beneficiary agrees to a compromise lump sum settlement, i.e., a settlement which provides less in total compensation than the individual would have received if the claim had not been compromised, and the settlement has given reasonable recognition to the income replacement objectives of the WC law, the settlement may be accepted as a basis for applying the WC limitation.

Medicare does not accept manipulation of any settlement proceedings intended to shift liability to the Medicare program. Where such manipulation is apparent, Medicare denies payment.

If the individual signed a final release of all rights under WC (which precludes the possibility of further WC benefits) medical expenses incurred after the date of the final release are reimbursable under Medicare, insofar as such subsequent medical expenses were not contemplated by and incorporated into the settlement.

Where the settlement specifies that a portion of the settlement is for future medical expenses Medicare may not pay for those expenses until such time that the beneficiary has submitted bills related to the injury or illness totalling the amount of the lump sum settlement allocated to medical treatment.

See §3416 for further discussion of lump sum settlements and examples of how this provision is applied.

Where the award does not identify the items of medical or hospital expense it is intended to cover, the amount of the award allocated to medical and hospital expense incurred up to the date of the award is applied at the prevailing WC schedule in that jurisdiction in the following manner. First to those services covered by WC but not by Medicare. Second to expenses covered by WC and by Part B (including any deductible and coinsurance.) Third any remainder of the WC settlement is treated as payment for provider services.

Calculate the sum of the award deemed to be payment of medical and hospital expenses in accordance with §3416.2.

3407.8 Lump Sum - Commutation of Future Benefits.--When a beneficiary accepts a lump-sum payment that represents a commutation of all future medical expenses and disability benefits, and the lump-sum amount is reasonable considering the future medical services that can be anticipated for the medical condition, Medicare does not pay for any items or services directly related to the injury or illness for which the commutation lump sum is made, until such time that the beneficiary presents medical bills related to the injury equal to the total amount of the lump sum settlement allocated to medical treatment.

3407.9 Right of Recovery.--All Medicare payments are conditioned on reimbursement to the appropriate Trust Fund, when notice or other information is received that payment with respect to the same items or services has also been made, or could be made, under a WC law or plan of the United States or a State.

Section 1862(b)(1) as amended, now expressly provides that:

A. The Government may recover directly from employers and WC carriers, Medicare benefits it paid for services that are reimbursable under WC. The Government may recover from WC whether or not the beneficiary is filing a WC claim with respect to the injuries.

B. The Government may recover benefits it paid for services that are covered under WC, from any entity that has been paid by an employer or by a WC carrier.

C. The Government is subrogated to the right of any entity to receive payment from an employer or a WC carrier. "Subrogation" literally means the substitution of one person or entity for another. Under the Medicare subrogation provision, the Government is given whatever rights the beneficiary or any other entity had against the employer and the WC carrier to the extent that Medicare has made payments to or on behalf of the beneficiary.

D. The Government may join or intervene in any WC claim where the compensability of the injury is at issue.

3407.10 Private Right of Action.--Section 1862(b)(5) provides that where an individual is awarded WC benefits but the WC carrier does not pay primary benefits, the Medicare beneficiary has a right to take legal action against the WC carrier and can collect double the amount that would have been payable had primary benefits been paid. If such litigation is successful the Medicare program can recover the amount paid by Medicare.

3407.11 Conflicting Claims by Medicare and Medicaid.--Under the law (§1862(b)(1)), Medicare has the right to recover its benefits from WC before any other entity, including a State Medicaid agency. Also Medicare has the right to recover its benefits from any entity, including a State Medicaid agency, that has been paid by WC. In other words, Medicare's recovery rights where WC is primary payer are higher than and take precedence over the rights of any other entity.

The superiority of Medicare's recovery right over those of other entities including Medicaid, derives from the Medicare statute, which provides that where Medicare has made a conditional payment for services covered by a WC plan:

- HCFA may recover Medicare benefits directly from the employer or WC carrier;
- HCFA is subrogated to the right of the Medicare beneficiary and the right of any other entity to payment under the WC plan; and
- HCFA may recover its payments from any entity that has been paid under WC.

If Medicare and Medicaid both have claims against WC, Medicare's right to recover its benefits from WC or from a beneficiary that has been paid by WC is higher than Medicaid's, notwithstanding the fact that Medicaid is the payer of last resort and, therefore, does not pay its benefits until after Medicare has paid.

Medicare's priority right of recovery from insurance plans that are primary to Medicare, does not violate the concept of Medicaid being payer of last resort. Under §1862(b) of the Social Security Act, Medicare's ultimate statutory authority is not to pay at all (with a concomitant right to recover any conditional benefits paid) where payment can reasonably be expected by a third party which is primary to Medicare. Where WC pays promptly, Medicare makes no payment for any services covered by WC. Delay of the WC payment does not change Medicare's ultimate obligation to pay the correct amount, if any, regardless of any Medicare payments conditionally made. Thus, where WC pays the charges, or if it pays less and the provider is obligated to accept that amount as payment in full, Medicare may not pay at all. Pro-rata or other sharing of recoveries with Medicaid would have the effect of creating a Medicare payment where none is authorized under the law or improperly increasing the amount of any Medicare secondary payment.

Moreover, the right of Medicaid agencies to recover their benefits derives from an assignment by Medicaid beneficiaries to the States of their rights to third party reimbursement. Since the beneficiary can assign to the State a right no higher than his own, and since Medicare's statutory right is higher than the beneficiary's, Medicare's right is higher than that assigned to the State. (See §3414.)

3407.12 Authorities for Agreeing to Compromise or Waive Medicare's Claim.-- A beneficiary may offer to refund to you less than the full amount of Medicare's claim against a WC settlement. HCFA may accept such an offer either as:

A. A compromise under authority in the Federal Claims Collection Act (FCCA).

HCFA may agree to compromise a claim for reimbursement from WC settlements under the FCCA, if:

- The individual does not have the present or prospective ability to pay the full amount of the claim within a reasonable period;
- It is determined that it would be difficult to prevail in this case before a court of law; or
- The cost of collecting the claim is likely to be more than the amount collected. All claims in excess of $20,000 must be referred to the Department of Justice.

The limit of HCFA's authority to compromise claims independently under the FCCA is $20,000.

B. Waiver Authority Under §1870(c) of the Social Security Act.--Medicare claims (see §3407.1F for definition) that do not involve the Federal Claims Collection Act (FCCA) could be considered for waiver based on "economic hardship" or "equity and good conscience."

C. Cases you feel could qualify under A or B above should be sent to:

Health Care Financing Administration
Overpayment Section
P.O. Box 120
Baltimore, Maryland 21203

3408. PROVIDER HANDLING OF CASES INVOLVING WORK-RELATED CONDITIONS

3408.1 Workers' Compensation Has Paid or Is Expected to Pay.—

A. General.—Where there is indication that WC may pay for the services, the provider bills the WC carrier. If WC pays for all of the services (whether at the provider's customary charge rate or at a special WC rate) the provider completes a no-payment bill (see §3624 and §3679B). If WC pays only a portion of the charges, the provider bills Medicare in the manner described in §3679C for providers reimbursed on a cost basis and §3685C for hospitals reimbursed on a prospective payment basis.

B. Possible Coverage Also Under Auto Medical or No Fault Insurance or Employer Group Health Plan.--Where services are covered in part by WC and also under automobile medical or no-fault insurance, or there is primary coverage by an EGHP, Medicare would be the residual payer only. (See §3489ff. 3491ff., 3490ff. and IM 3492 respectively.)

Accordingly, whenever WC pays in part for provider services and the provider does not accept and is not obligated to accept such payment as payment in full, the provider takes steps to assure that a claim is submitted to any other insurer that is primary to Medicare.

If the services are related to an automobile accident, the provider ascertains whether its records show coverage under automobile medical or no-fault insurance. Where the provider's records do not show such coverage, the provider contacts the beneficiary to ascertain whether such coverage exists. If there is coverage under automobile medical or no-fault insurance, the provider submits the unpaid portion of the bill to the automobile insurer and follows the instruction in §3489.3B.

If there is no coverage under automobile medical or no-fault insurance, but another insurer is shown on the bill, and there is indication of primary EGHP coverage under §§3490ff, 3491ff or IM 3492, the provider bills the other insurer for the services not paid for by WC. The provider follows the instructions in §3490ff. or §3491ff., as appropriate, and bills the other insurer because, in the case of a beneficiary who is injured on the job and who is covered by private health insurance, it is assumed that the individual is employed and that the other insurance is an EGHP.

If the services provided to the Medicare beneficiary are not related to an automobile accident (see §§3489ff.) and there is no indication of primary EGHP coverage under §§3490 or 3491, the provider bills Medicare for secondary Medicare payments determined in accordance with §3407.3.

If any instances in which Medicare makes secondary payments the appropriate value code as defined in §3604 (items 46 - 49) is to be shown.

3408.2 Workers' Compensation Denies Payment.--If the provider's WC claim is denied, the provider determines whether any other Medicare Secondary Payer provisions apply and bill as appropriate. If no other primary payers are available, the provider submits (A) a bill in accordance with the regular billing procedures indicating occurrence code 24 (insurance denied) and the date of denial in items 28-32, and (B) a supplementary statement calling attention to the fact that WC has denied payment or annotate item 94 remarks with the reason for the denial.

3408.3 Responsibility of Provider Where Benefits May Be Payable Under the Federal Black Lung Program.--

A. Identification of Cases.--Providers are instructed to identify beneficiaries who may be entitled to benefits under the Federal Black Lung Program.

B. Situations in Which Provider Bills the Department of Labor. (DOL).-- Where it appears that a beneficiary may be entitled to receive medical benefits under the Federal Black Lung Program administered by DOL, the provider will bill DOL in the following situations:

1. Diagnosis Is Black Lung Related.--(See §3409.10 for DOL's Acceptable Diagnosis List.) The provider bills all services to DOL, and includes its DOL assigned provider number on the billing form.

2. Diagnosis Is Not Black Lung Related.--

a. The bill is for an inpatient stay during which some black lung covered procedures were furnished. See §3409.11. for a listing of such procedures and the circumstances under which they are covered by the black lung program. The provider bills all services to DOL.

b. The bill is for outpatient services which include one or more black lung related procedures. The provider bills DOL only for those procedures which are reimbursable under the black lung program. (See §3409.11.)

c. DOL Does Not Pay for All of the Services.--If a provider bills DOL in accordance with a. or b. above, but DOL doesn't pay for the services in full, the provider bills Medicare as provided in §3679 attaching a copy of DOL's denial notice. The denial notice should give the specific reason for nonpayment. If a claim is denied because of the provider's failure to obtain a DOL provider number or to furnish documentation needed by DOL, payment may not be made under Medicare.

3408.4 Responsibility of Provider to Document Cases in Which There Is a Possibility of Workers' Compensation Coverage.--Information supplied by the provider is one of the means of alerting you to actual or potential WC coverage in specific cases involving work-related conditions. A condition is considered to be work-related if it resulted from an accident that occurred on the job or from an occupational disease. The billing form is completed in accordance with §3679 when any of the following conditions apply:

A. The physician or the patient states that the condition is work-related;

B. The condition, or serious aggravation thereof, resulted from an accident which occurred in the course of the individual's employment, e.g., the patient fell from a scaffold while at work;

C. The diagnosis is one which is commonly associated with employment, e.g., pneumoconiosis (including silicosis, asbestosis, and "black lung" disease in the case of a coal miner); radiation sickness, anthrax, undulant fever; dermatitis due to contact with industrial compounds; and lead, arsenic, or mercury poisoning;

D. The beneficiary previously received WC for the same condition;

E. There is indication that a WC claim is pending; or

F. There is other indication that the condition arose on the job.

Providers of services are expected to inquire of the beneficiary or representative at the time hospitalization is ordered or at the time of admission, whether the condition is work-related. When the patient or his physician indicates that the condition is work-related or there is other indication that the condition is work-related (e.g., when any of the conditions in B. through F. above exist), the provider is required to ask the patient or his physician, wherever possible, whether WC is expected to pay for the services. (Generally, where hospital services are covered under a WC program, the services will be authorized in advance by the WC carrier or the employer.)

If the patient denies that WC benefits are payable for a condition which the provider believes may be covered by WC, a supplementary statement will be attached to the billing form containing information about the circumstances of the accident and the reasons it is claimed that WC benefits are not payable.

3409. CONTRACTOR IDENTIFICATION OF CLAIMS WITH POSSIBLE WORKERS' COMPENSATION COVERAGE

3409.1 General.--Identify potential WC cases as well as initiate any ensuing investigation as promptly as possible since a delayed determination that WC payment can reasonably be expected, coupled with failure by the patient to file under that system, may result in delay or even loss of benefits under both WC and Medicare. Where the supplementary information submitted by the provider in accordance with §3408.4 clearly indicates, under the guidelines in §3409.3, that the services are not covered under WC, Medicare benefits are payable without further investigation. However, where it appears that the services may be compensable, undertake an investigation to ascertain the extent to which payment under WC can reasonably be expected.

3409.2 Sources of Information

A. General.--The primary sources indicating WC coverage may be involved are the beneficiary, the provider, his physician, or his employer. When the information obtained from these initial sources indicates that further information is needed, contact the employer's compensation carrier or the State WC agency. (Although in most jurisdictions the WC program is administered by a State Commission or board, there often is no central record of WC cases until a hearing is requested or some action taken to docket a proceeding.) In some cases it is necessary to obtain copies of any decisions made by the WC agency, or settlements approved by the agency.

B. Trailer Code and Automatic Notice Procedure.--When a beneficiary has received WC payments on a prior claim, HCFA generates a Y Trailer containing Code E in response to your query. If the beneficiary had a prior claim paid under the Federal Black Lung Program, a Y Trailer containing Code H is sent in response to your query. When the Master Record indicates that the beneficiary has WC coverage, HCFA generates a Y Trailer, Code 1 in response to your query and a Y trailer containing Code 2 is generated when the HI Master Record indicates that the beneficiary is entitled to Federal black lung benefits (see SS3512.8 and 3535.1 for an explanation of these Trailer Codes.) Also, a Part B automatic notice with a disposition code 36 is sent to all intermediaries of record when a beneficiary for whom an outpatient bill had previously been received becomes entitled to WC. (See S3535.)

C. Data Exchange from Workers' Compensation Agencies.--Transfers of information on claimants for WC benefits, who also may be Medicare beneficiaries, have been negotiated with many State WC agencies. Information from such data transfers provide a valuable source for identifying beneficiaries who may be entitled to WC benefits. If you are not receiving information either directly from the State agency or from the lead contractor contact your RO to determine the possibility of such a data transfer in your State. Also use the MSP Regional Data Exchange as a source of WC coverage information. (See S3696.)

3409.3 Investigation and Evaluation Guides.--The following are general guidelines for investigating and evaluating the likelihood of WC coverage in various situations in which the condition appears to be work-related but the beneficiary has not filed a claim for WC benefits. If the investigation indicates that WC benefits could be paid for the services in question, deny benefits and notify the beneficiary that Medicare benefits are not payable for services covered under WC. Advise the beneficiary to file for WC if he has not already done so and that in the event a WC claim is filed and denied, the Medicare claim may be reopened. Further advise the beneficiary that if the reason for denial of WC benefits is due to the beneficiary's failure to timely file a claim, Medicare payment will not be made. Document your determination with the facts obtained in your investigation.

A. Beneficiary States He Does Not Wish to Report the Condition to His Employer.--Deny benefits when a beneficiary states that he is not requesting payment under WC for expenses incurred in connection with an on-the-job injury because he does not wish to report his illness or injury to his employer.

B. Beneficiary States He Is In Noncovered Employment.--A beneficiary's statement that he is in a category of employment which is clearly not covered under WC can be accepted in the absence of any reason to doubt its accuracy. (See S3407.1A for categories of employees not generally covered under WC.)

C. Beneficiary States Employer or Carrier Denies Condition Is Work-Related or States He Has Exhausted His Workers' Compensation Benefits.--Obtain confirmation of the beneficiary's statement from the employer, the WC carrier, or the State WC agency. If such confirmation is obtained the claim can be paid.

D. Beneficiary States Condition Did Not Arise While Performing His Job Duties.--If a beneficiary states that the injury or illness occurred while engaged in an activity not related to the job, e.g., while on a personal errand or outside of working hours, obtain an explanation as to how the injury or illness occurred and why the injury or illness is not covered under WC. The beneficiary's statement may be accepted in the absence of reasonable doubt as to its accuracy.

3409.4 Action by Intermediary Where Facts Indicate Reasonable Likelihood of Workers' Compensation Coverage (Other Than Federal Black Lung Benefits).--Where the information obtained under the guidelines in §§3409, 3512.8, and 3535.1 indicates that there is a reasonable likelihood that services for which Medicare benefits have been claimed can be paid for under a WC plan other than the Federal black lung program, deny the Medicare claim. The notice to the provider and beneficiary should:

o State that the services are not covered under Medicare because the law prohibits payment for services which are reimbursable under a WC law or plan;

o Advise the provider to submit a claim to the beneficiary's WC carrier (or employer if the employer is self-insured) and;

o Inform the provider that if the WC carrier does not pay for all of the services, he should resubmit the claim to Medicare for further consideration with a copy of any notification received from the WC carrier explaining why the services are not reimbursable under WC.

3409.5 Action by Intermediary Where Facts Indicate Medical Benefits May Be Payable By DOL Under Federal Black Lung Program.--If you learn from the beneficiary, the provider, or by means of the Y-trailer code (per §§3409.2B., 3512.8 and 3535.1, or the automatic notice with disposition code 36 (per §3535), that the beneficiary is entitled to receive medical benefits from the Department of Labor (DOL) under the Federal Black Lung Program, deny the entire bill in any of the following situations:

o The bill is for inpatient services and the diagnosis shown on the billing form (one must be obtained if not shown) is a condition attributable to pneumoconiosis (see the respiratory related conditions listed in §3409.10 below), and there is no indication that the claim has already been considered by DOL. If DOL has already considered the claim and denied some or all of the services for reasons other than lack of a DOL provider number or insufficient documentation (per §3408.3B2.c. DOL's denial notice must give the specific reason for the denial), process the unpaid charges per §3679ff. or §3685.

o The bill is for inpatient services and the bill includes a medical procedure which is covered under the black lung program (see paragraph F below for a listing of such procedures and the circumstances under which they are covered under the black lung program).

o The bill is for outpatient services and the diagnosis and all of the services are black lung related regardless of whether the condition is acute or chronic. (See §§3409.10 and 3409.11 but disregard the category codes as they only apply to inpatients).

3409.6 Special DOL Coverage Rules.--DOL pays for certain ancillary items and services and for specific drugs relating to the treatment of pneumoconiosis (black lung disease) when a beneficiary is in an SNF. However, DOL does not make any reimbursement for room and board charges in SNFs. In some instances, DOL covers certain items and services under limited conditions only. In such cases, a Certificate of Medical Necessity (CMN) is required. This DOL form (CM-893) is completed by the prescribing physician and must be approved by DOL before it reimburses for the services or items. Approvals may be given for a specific time only and in such case it is not necessary to submit a copy of the CMN with each bill during the approved period. A CMN is also required for the payment by DOL for home health services. Such services are reimbursed by DOL when a beneficiary returns home following hospitalization for an acute pulmonary condition and the physician prescribes follow-up care in the home, or the beneficiary is home bound due to his pulmonary condition and require physician-prescribed home care for that condition. Additionally, CMNs are required for pulmonary rehabilitation.

If the CMN is rejected by DOL, then the items or services can be billed to Medicare with a copy of the DOL denial attached. However, if the individual's condition changes and test results confirm this, submit a new CMN to DOL for review. Any items or services billed to DOL are not to be billed to the Medicare program unless a denial has been received from DOL.

3409.7 Medicare Payment.--If the bill is for outpatient services, Medicare may pay for any service that is not related to black lung disease (e.g., treatment of diabetes, fracture). Deny any bill for the coverage of services or drugs needed to treat the black lung conditions. (See §3679 F for billing procedures.)

3409.8 Questionable Cases.--If there is a question regarding whether a procedure is related to black lung disease, develop the issue with the provider.

3409.9 Federal Black Lung Program Address.--Where benefits are being denied because all or part of the services are reimbursable under the black lung program, advise the provider to submit a claim to the following address:

Federal Black Lung Program
P. O. Box 740
Lanham, MD 20706

Section 3722.4, MISC-15 is the applicable standard denial paragraph. Advise the provider that if DOL does not pay for all the services, to resubmit the claim, with a copy of DOL's explanation of its payment.

In a very small number of cases involving beneficiaries entitled to Federal black lung benefits, the coal mine operator rather than DOL is responsible for the miner's medical treatment. In these instances there is no Y-trailer code or disposition code 36. Handle such cases under §3409.4 and advise the provider to submit the claim to the coal mine operator or its WC carrier.

3409.10 DOL's Acceptable Diagnosis List.--The following is DOL's "Acceptable Diagnosis List" (ADL). DOL will pay for an inpatient stay only if the primary diagnosis (the diagnosis that precipitated the inpatient care) is any one of the acute conditions. (Black lung pneumoconiosis, chronic obstructive pulmonary disease (COPD) are not acute conditions. A diagnosis coded "A" is acceptable to DOL as a primary admitting diagnosis for inpatient services or emergency room care only when concurrent diagnoses or the discharge diagnoses/summary indicate pulmonary disease as the primary acute condition.

DOL'S ACCEPTABLE DIAGNOSIS LIST (ADL)

CODE ICD-9-CM	CATEGORY	DISEASE/CONDITION
5130	(A)	Abscess: Lung and Mediastinum
2762	(B)	Acidosis - respiratory (only when due to pulmonary disease)
2763	(B)	Alkalosis - respiratory (only when due to pulmonary disease)
5163	(B)	Alveolocapillary block - pulmonary
4171	(B)	Aneurysm - pulmonary circulation
500	(B)	Anthracosilicosis
500	(B)	Anthracosis
5180	(A)	Atelectasis
0310	(A)	Bacterial disease, pulmonary infection by mycobacterium
4820 thru 4829	(A)	Bacterial pneumonia

DOL'S ACCEPTABLE DIAGNOSIS LIST (ADL) (CONT.)

CODE ICD-9-CM	CATEGORY	DISEASE/CONDITION
1160	(A)	Blastomycosis (pulmonary ONLY)
4939	(B)	Bronchial asthma
494	(B)	Bronchiectasis
4661	(A)	Bronchiolitis acute
4660	(A)	Bronchitis - acute
2312	(A)	Cancer Bronchus and Lung
7991	(A)	Cardio-respiratory failure unless associated with M.I. (Myocardial infarct) or renal failure
7865	(B)	Chest Pain (excludes angina)
7931	(A)	Coin lesion (lung)
4280 4281	(A)	Congestive heart failure - secondary to pulmonary disease - that is with: pulmonary hypertension, 4289 polycythemia or cor pulmonale. EXCLUDED is CHF when associated with: valvular heart disease, ischemic heart disease such as ASCD, ASHD, ASCVD, MI (myocardial infarct) or angina. CHF is not covered when associated with renal failure.
496	(A)	COPD (chronic obstructive pulmonary disease) Acute exacerbation
4150	(A)	Cor pulmonale -acute pulmonary heart disease
483	(A)	Eaton agent - pneumonia
4280 4281 4289	(B)	Edema - pulmonary - CHF
5088 5089	(B)	Edema, pulmonary (other diseases)

DOL'S ACCEPTABLE DIAGNOSIS LIST (ADL) (CONT.)

CODE ICD-9-CM	CATEGORY	DISEASE/CONDITION
4151	(B)	Embolism - pulmonary, covered if associated with polycythemia not covered if post-operative other than lung surgery.
5100 thru 5109	(A)	Empyema
4920	(B)	Emphysema - chronic
4170	(B)	Fistula - pulmonary circulation
487	(A)	FLU (Influenza)
0391	(A)	Fungus - pulmonary infection
7863	(A)	Hemoptysis
11505	(A)	Histoplasmosis, pneumonia
487	(A)	Influenza
7866	(A)	Mass in lung
0310	(A)	Mycobacterium - pulmonary
1622 thru 1629	(A)	Neoplasm - malignant, lung or bronchus
78652	(B)	Painful respiration
5110 thru 5119	(A)	Pleurisy

DOL'S ACCEPTABLE DIAGNOSIS LIST (ADL)(Cont.)

CODE ICD-9-CM	CATEGORY	DISEASE/CONDITION
4810	(A)	Pneumococcal pneumonia
4661	(A)	Pneumonia - capillary
483	(A)	Pneumonia - Eaton agent, Mycoplasma PPLO
4820 thru 4829	(A)	Pneumonia - other bacteria
4840 4860	(A)	Pneumonia - other disease/other organisms
481	(A)	Pneumonia - Pneumococcal
4809	(A)	Pneumonia - viral
5120	(A)	Pneumothorax, non traumatic
483	(A)	PPLO - pneumonia
7931	(A)	Shadow chest x-ray, abnormal
7861	(B)	Stridor
7850	(B)	Tachycardia - unspecified (acceptable when no non-covered conditions are listed)
78609	(B)	Tachypnea, abnormal breathing
0019	(A)	Tuberculosis
4809	(A)	Viral pneumonia

3409.11 DOL's Approved Procedure List.—This list is coded by letter code to assist in identifying the type of service the DOL reimburses. The letters represent the following categories:

CODE A — A major procedure always covered under Black Lung treatment benefits when performed in conjunction with a condition listed on the Acceptable Diagnostic List (ADL).

CODE B	A major procedure covered under the program only when performed for a condition on the Acceptable Diagnostic List (ADL).
CODE C	A routine procedure always covered under Black Lung treatment benefits when performed in conjunction with a condition on the ADL.
CODE D	A routine procedure covered only when performed for a condition on the ADL or considered concomitant care when treating a patient for an ADL condition as an inpatient.

DOL'S APPROVED PROCEDURE LIST

CATEGORY	SURGERY
B	Tracheostomy-incision (only when secondary to pulmonary disease)
B	Tracheostomy-with skin flaps (only when secondary to pulmonary disease)
B	Tracheal puncture for aspiration of mucus
B	Tracheostomy through established incision
B	Thoracentesis
B	Thoracostomy - Tube procedure, pneumothorax, hemothorax
B	Thoracostomy - for empyema with rib resection, open flap drainage
B	Thoracotomy
B	Pleural scarification for repeat pneumothorax
B	Decortication - pulmonary
B	Pleurectomy
B	Decortication and parietal pleurectomy
B	Biopsy pleura
A	Biopsy - Lung
B	Pneumocentesis
A	Pneumonectomy
A	Lobectomy
A	Wedge resection of lung
B	Resection of lung with resection of chest wall

DOL'S APPROVED PROCEDURE LIST (Cont.)

CATEGORY	SURGERY
B	Extra pleural enucleation of empyema
B	Extra pleural enucleation of empyema with lobectomy
B	Thoracostomy exploratory
B	Thoracostomy with biopsy
B	Repair closure of chest wall following open flap drainage for empyema
B	Repair open closure of major bronchial fistula
B	Thoracoplasty
B	Thoracoplasty with closure of broncopleural fistula
B	Exploration for post operative hemorrhage or thrombosis (Sec. to pul. dis. only)
B	Arterial puncture-Withdrawal of blood for diagnosis
A	Mediastinoscopy with or without biopsy
	RADIOLOGY-DIAGNOSTIC
D	Radiologic exam of chest including fluoroscopy
D	Fluoroscopic localization of needle biopsy of intrathorasic lesion
D	Fluoroscopic localization of transbronchial biopsy
D	Bronchography - supervision and interpretation
D	Bronchography - complete
D	Tomography, computerized - thorax
	RADIOLOGY (NUCLEAR MEDICINE)
D	Pulmonary perfusion imaging (particulate gaseous), Pulmonary ventilation imaging (aerosol, gaseous)

CATEGORY	
	RADIOLOGY - RADIOTHERAPY
	PATHOLOGY AND LABORATORY
	(Multichannel tests - automated)
D	SMA: Clinical chemistry tests - various combinations (Diagnosis must justify)
	URINALYSIS
D	Urinalysis - routine
	CHEMISTRY AND TOXICOLOGY
D	Aminophylline
D	Chlorides - blood
D	Dicumarol
D	Digitoxin - blood (digitalis)
D	Fibrinogen - quantitative
C	Blood gases - oxygen saturation, pO_2, pCO_2,pH
D	Glucose, urine
D	Glutamate dehydrogenase, blood
D	Hemoglobin, electrophoresis
D	Hydroxyindolacetic acid, 5-(HIAA), urine
D	Iron, serum
D	Iron binding capacity, serum
D	LDH (lactic dehydrogenase); blood
D	Osmolality; blood
D	Phosphorus (phosphate); blood
D	Potassium; blood
D	Procainamide
D	Protein, total serum
D	Quinidine, blood
D	Serotonin, blood
D	Sodium blood
D	Sulfonamide, blood
D	Theophylline, blood or saliva
D	SGOT (Transaminase, glutamic oxaloacetic blood
D	SGPT (Transaminase, glutamic pyruvic); blood
D	BUN (Blood urea nitrogen)
D	Vitamin K
D	Warfarin
D	Volume, blood - total plasma, total blood cell volume

DOL'S APPROVED PROCEDURE LIST (Cont.)

CATEGORY

IMMUNOLOGY
(Includes serology, immunohematology, blood bank)

D	Antibody, qualitative, quantitative titer not otherwise spec.
D	Drug sensitization, identification (e.g., penicillin) (Antihuman globulin)
D	Antitrypsin, alpha-1 determination
D	Blood cross-match, compete standard technique, includes typing and antibody screening of recipient and donor
D	Blood unit for direct transfusion
D	Complement fixation tests
D	Fibrinogen unit
D	Fluorescent antibody, screen titer
D	Hemagglutination inhibition tests (HAI)
D	Hemolysins and agglutins, auto, screen
D	Immunoelectrophoresis; serum
D	Neutralization test, viral
D	Precipitin determination, gel diffusion (alveolitis cond.)
D	Prothrombin complex
D	Skin test; blastomycosis
D	Skin test; histoplasmosis
D	Skin; psittacosis
C	Skin tests; tuberculosis, patch, intradermal, tine
D	Streptokinase, antibody
D	Tissue culture - typing

MICROBIOLOGY
(Includes bacteriology, mycology, parasitology, virology)

D	Concentration (e.g., tubercle bacillus)
D	Culture - bacterial, aerobic, throat or nose (may include anaerobic screen) identification
D	Culture - bacterial anaerobic - (Acceptable only when from lung)
D	Culture - single organism screening (acceptable only when respiratory)
D	Culture - fungi (Acceptable only when from lung) Identification
D	Culture - myoplasma (acceptable only when from lung)
D	Culture, tubercle or other acid-fast bacilli (Acceptable only when from lung)
D	Culture, typing; fluorescent, gas liquid chromatography, phage method, serology method, precipitin method, other special (acceptable only when applicable to respiratory disease specimen)

DOL'S APPROVED PROCEDURE LIST (Cont.)

CATEGORY	
D	Sensitivity studies; antibiotic tubercle bacillus (TB, AFB)
D	Endotoxin - animal inoculation
D	Endotoxin, chemical analysis
D	Endotoxin - hemogenization, tissue, for culture
D	Sensitivity studies - antibiotic
D	Sensitivity studies - tubercle bacillus (TB, AFB) each drug
D	Smear - primary source, with interpretation; routine stain, for bacteria, fungi; or cell types
D	Smear - special stain for inclusion bodies (parasites not included)
D	Smear - fluorescent and/or acid fast stain for bacteria, fungi, or cell types
D	Wet mount with simple stain and interpretation for bacteria, fungi (parasites not included)
D	Virus, inoculation - embryonated eggs, tissue culture or small animal - observation, etc.
D	Vaccine, autogenous

CYTOPATHOLOGY

D	Cytopathology - fluids, washings or brushings (not cervical or vaginal)
D	Cytopathology - other sources (e.g. sputum)

SURGICAL PATHOLOGY

D	Surgical pathology - gross and microscopic diagnostic
D	Special stains
D	Interpretation, review and consultation on slides and record material
D	Consultation during surgery
D	Immunofluorescent study
D	Electron microscopy - diagnostic, scanning
D	Whole organ sections

MISCELLANEOUS

D	BMR
D	Roll-up codes - These codes include sundry combinations of the following tests/procedures: CBC, urinalysis, serology, blood typing, Rh grouping, cell count (body fluids), CSF
D	Occult blood (not feces)
C	Sputum, obtaining specimen-aeroscol induced

DOL'S APPROVED PROCEDURE LIST (Cont.)

CATEGORY

HOSPITAL MEDICAL SERVICES

D	Inpatient hospital services by physician-examination, diagnosis, treatment, hospital records (ONLY when diagnosis is pulmonary disease.) Physician's services in the emergency room. (Only when primary diagnosis is pulmonary - on the ADL list).

MEDICINE

D	Electrocardiogram, (EKG,ECG) Cardiopulmonary resuscitation (Only when condition due to pulmonary disease)
C	Spirometry - Total and timed vital capacity, flow rate and maximal voluntary ventilation
C	Pulmonary evaluations - specific tests (Must be justified by diagnosis that requires detailed results)
C	Non-pressurized inhalation therapy
C	IPPB treatment, air or oxygen (as an inpatient only)
D	CPAP - (Continuous positive airway pressure ventilation)
D	CNP (Continuous negative pressure ventilation)
C	Aerosal or vapor inhalation therapy for sputum mobilization
C	Percussion, cupping, vibration (Manipulation of chest wall)
C	Arterial Blood Gas study - rest
C	ABG - Rest and exercise (including cannulization)
C	O_2 administration, IPPB, exercise - three or more (IPPB ONLY AS AN INPATIENT)

ANESTHESIA - SPECIAL QUALIFYING CIRCUMSTANCES
(must be for item on APL)

D	Anesthesia for patient - over 70
D	Anesthesia for patient with an incapacitating systemic disease

SPECIAL SERVICES

D	Prolonged physician's services (e.g., operative standby, monitoring blood gases during surgery, etc.)
D	Critical Care - including diagnostic and therapeutic (ONLY FOR PRIMARY LUNG CONDITION - NOT TRAUMA)

NOTE: DOL WILL REIMBURSE FOR A CONSULTATION BY A PULMONARY SPECIALIST EVEN THOUGH A PRIMARY REASON FOR INPATIENT CONFINEMENT IS NOT ON THE ADL (ADDITIONAL CONSULTATIONS MUST BE JUSTIFIED)

3410 PARTY REQUESTS THAT MEDICARE ACCEPT LESS THAN ITS CLAIM

If there is a request that Medicare accept less than the full amount of its claim (see §3407.1F for definition) and less than the full amount of the WC settlement, inform the party that legally Medicare has the right to recover its full claim up to the full amount of the settlement. However, a request for such a reduction will be reviewed provided it is submitted in writing and specifies the reasons why and to what extent the Medicare claim should be reduced.

In addition to the right of direct recovery, §1862(b)(1) of the Social Security Act gives the Medicare program the right of subrogation for any amounts payable to the program under the Medicare Secondary Payer (MSP) provisions. The Federal Claims Collection Act of 1966 (FCCA), as amended by the Debt Collection Act of 1982 and §1870(c) of the Social Security Act give HCFA the right to settle claims for reimbursement.

3410.1 Notification of Other Part A Intermediaries or Part B Carriers.--When investigating the possibility of payment under workers' compensation for items or services for which Medicare benefits are claimed, promptly inform any other carriers or intermediaries concerned with the claim for possible WC involvement. Coordinate your investigation and determination regarding WC coverage with the other carriers or intermediaries for consistency in the determinations concerning the same injury or illness.

3411. MEDICARE MADE PARTY TO WORKERS' COMPENSATION HEARING

If a WC agency has suggested that Medicare be represented at a WC hearing or has named Medicare as a party to a WC claim, or if the government's claim is otherwise in question at a hearing, the lead contractor should represent Medicare's interests at the hearing. In addition, if the lead contractor feels it would be beneficial to the recovery, its attorney can attend a WC hearing at the request of the plaintiff's attorney as long as under the applicable State law such hearing is not considered litigation. However, if the hearing is conducted by a court, whether at the initial or the appellate level (in some States the WC program is administered by a court), consult with the RO as to what action to take. The RO will advise you whether to refer the case to them or whether you should represent the program at the hearing. Take prompt action on such cases to avoid adverse action by the WC agency or court. If the case is referred, include pertinent Medicare claims information.

3412. TIME LIMIT FOR FILING WORKERS' COMPENSATION CLAIM HAS EXPIRED

Most WC plans have time limits within which the employee must notify the employer that he has suffered a work-related injury or illness and file a claim for benefits. If it appears that WC benefits could have been paid for items or services for which benefits have been paid under Medicare, but the time limit for filing a WC claim has expired, refer the case with all pertinent documentation relating to the WC issue to HCFA at the address given in §3417.2 below.

Annotate Item 13 (Remarks) of the Form HCFA-2382 (Intermediary Transmittal of Uncollected Medicare Overpayments) as follows: "Workers' Compensation Case--Referred for Waiver Consideration per §3412 of the Part A Intermediary Manual." Also include in this item the following information: (1) a full explanation of the basis for your determination that WC benefits could have been paid for the items or services and that the time period for filing a WC claim has expired, and (2) the reasons for the beneficiary's delay in filing a WC claim.

3413. BENEFICIARY ACCEPTED COMPROMISE LUMP-SUM SETTLEMENT OF WORKERS' COMPENSATION CLAIM

If you learn that a beneficiary has accepted an award as a compromise settlement of a WC claim, reopen the prior allowance and determine the amount of overpayment in accordance with the instructions in §§3407.7, 3407.8 and 3417. Any Medicare payments made for items or services determined to have also been paid for by the lump-sum settlement should be recovered from the beneficiary in accordance with the instructions in §§3711ff.

3414. INTERMEDIARY ACTIONS WHERE MEDICAID ALSO HAS REQUESTED REFUND

If Medicare and Medicaid have paid for services, and the amount available under a WC plan is not sufficient to satisfy the claims of both programs for reimbursement, notify the WC carrier that Medicare must be reimbursed the full amount of its claim before any other entity, including a State Medicaid agency, may be paid by the WC carrier.

Also where a beneficiary, provider or supplier receives payment from a WC carrier for services which have already been paid by Medicare and Medicaid, and the amount paid by the WC carrier is less than the combined amounts paid by Medicare and Medicaid, inform the beneficiary, provider or supplier that it is obligated to refund the Medicare payment up to the full amount of the WC payment, despite a conflicting claim by a State Medicaid agency. Only after Medicare has recovered the full amount of its claim does the beneficiary, provider or supplier have the right to reimburse Medicaid or any other entity.

If a WC carrier has reimbursed a State Medicaid agency, or if a beneficiary, after receiving a WC settlement, has reimbursed a State Medicaid agency, request the beneficiary that was paid by the WC carrier to reimburse Medicare from the remainder of the settlement. If the remainder of the settlement is insufficient to reimburse Medicare in full, ask the State agency to reimburse Medicare up to the full amount the agency received. Explain the legal basis for Medicare's right to recover in accordance with §3407.11. If the State refuses to reimburse Medicare in full, refer the case to the RO. The RO's recovery actions may include offset of Medicare's claim against any Federal Financial Participation funds otherwise due the State.

3415. CONDITIONAL MEDICARE PAYMENTS

A. Conditional Medicare Payments.--Conditional Medicare benefits may be paid while a WC claim is being contested. There frequently is a long delay between the occurrence of an injury or illness and the decision by the State WC agency. A denial of Medicare benefits pending the outcome of the appeal would mean that individuals might be required to advance their own funds to pay for expenses which will eventually be borne by either Medicare or by WC. To avoid imposing hardship on Medicare beneficiaries while a decision is being made by the WC agency, conditional Medicare payments may be made pending a final decision on the WC claim.

NOTE: If the injury resulted from an automobile accident, and/or there is indication of primary coverage under an EGHP, the provider bills the automobile medical or no-fault insurer and/or employer plan as appropriate, in accordance with the instructions in §§3489ff, §3490ff, or §3491ff, before requesting conditional Medicare payments. (See §3407.5 and §3408.1.B.)

B. Action by Intermediary Subsequent to Conditional Payment.--Contact the WC carrier at least every 4 months (with a copy to the beneficiary's attorney) to ascertain the status of any claim on which conditional payments have been made. If the carrier is not cooperative, contact the attorney instead.

3416. EFFECT OF LUMP-SUM COMPROMISE SETTLEMENT

Negotiated compromise settlements of WC claims, by their very nature, provide less than full benefits for both income replacement and medical expenses. See §3407.7 for Medicare policy dealing with lump sum settlements.

In general, medical expenses incurred after the date of the final release of a lump sum compromise settlement are reimbursed under Medicare; however, if the settlement agreement allocates certain amounts for future medical expenses, Medicare does not pay for those services until such time as the beneficiary presents medical bills related to the injury totalling the amount of the lump sum settlement allocated to medical treatment. If the lump-sum settlement includes payment for future services, then in order to prevent erroneous payments, retain a copy of the lump-sum agreement and flag any new claims for the same condition for which the beneficiary received the lump-sum payment. Also, whenever you are informed of any lump-sum agreement, notify other contractors that process claims in your area. In addition the Regional Data Exchange System will lend itself to notification within the region. Contractors from other regions can obtain this data upon special request.

If it appears that a settlement represents an attempt to shift to Medicare the responsibility for the payment of medical expenses for the treatment of a work-related condition, it will not be recognized. Settlements of this type may occur, for example, when the parties attempt to maximize the amount of disability benefits paid an injured employee under WC by releasing the WC carrier from liability for a particular course of medical treatment, despite the existence of facts showing a relationship between the work injury and the condition which necessitated the treatment. In such cases, determine that the services could have been paid for under WC and are, therefore, not payable under Medicare.

EXAMPLE 1: A Medicare beneficiary was operated on for a hip fracture received in the course of his employment. Following surgery, the individual went into post-operative shock and suffered a cerebrovascular accident which required hospitalization for an additional 3 months. The total hospital bill was $12,000. Despite the fact that, under these circumstances, the State WC plan would have covered the individual's entire hospital bill, his attorney instructed the hospital to bill the WC carrier only for the expenses incurred through the date of the hip surgery, pending the outcome of the disability settlement which was being negotiated.

The State WC agency subsequently approved a compromise settlement of the claim, under the terms of which the WC carrier admitted liability for the hip fracture but not for the stroke. The settlement provided for payment to the beneficiary of $18,000 plus payment to the hospital of $1,200 for his stay through the date of the surgery. Following the settlement, the beneficiary requested the Medicare intermediary to pay for the 3 months of hospitalization following the surgery, since the settlement did not stipulate that treatment of the stroke was work-related. The intermediary determined that payment under WC for treatment of the stroke could reasonably have been expected if the beneficiary had not agreed to give up his right to such compensation. It, therefore denied the claim. The provider has the right to bill the beneficiary since these services would have been covered by WC and, therefore, are not payable by Medicare.

EXAMPLE 2: A Medicare beneficiary settled a WC claim which stipulated, among other things, that the WC carrier would: (1) pay the individual a lump-sum of $50,000 as compensation for permanent and total disability, (2) pay all of the individual's medical expenses related to his work injury until such time as he became entitled to benefits under Medicare or any other government medical benefit program, and (3) continue to pay, without any time limitation, any portion of his medical expenses for the work injury which was not reimbursable under a government program. The award further stipulated that the employee would seek payment for the medical care related to the work injury from State and Federal Government programs to reduce the obligation of the employer and carrier as much as possible.

Although the compensation order in this case was designed to reduce the obligation of the employer and carrier to pay for medical care by shifting medical expenses to Medicare and other government programs where possible, the agreement recognized the WC carrier's continuing responsibility for the individual's medical care. Since Medicare is not bound by such covenants, benefits were denied for all expenses subsequently incurred by this individual for treatment of the work injury. As in Example 1 above, the Medicare beneficiary may be billed for these services.

EXAMPLE 3: In July, 1980 Mr. Y, age 30, was involved in an accident at work sustaining injury to his neck, back, right arm and legs. Beginning with the date of the accident, the WC carrier paid Mr. Y weekly benefits of $182 for temporary disability and also paid all of his medical expenses.

In 1982, Mr. Y became entitled to Medicare based on disability. In July, 1984, the WC insurer decided to terminate Mr. Y's medical and disability payments based on medical advice that his continuing impairments were not attributable to the work injury. By this time, the insurer has paid a total of $90,000 for Mr. Y's medical care.

Mr. Y contested the termination of his WC benefits, and the case was settled by compromise. A lump sum of $46,000 ($6,000 of which was designated as attorneys' fees) was paid to Mr. Y. As part of the settlement agreement, Mr. Y signed a final release which stipulated that future medical expenses were "in dispute" and that they were to be assumed by Mr. Y "as his sole responsibility."

The fact that Mr. Y accepted, and the State WC agency approved, a relatively small lump sum payment, compared with what Mr. Y would have received had his WC claim been approved in full, indicates that there was doubt as to the compensability of the injury. There was no indication that the lump sum was intended to be payment for future medical expenses, nor do these facts in themselves indicate that the settlement represented an attempt to shift the responsibility for future medical expenses from WC to Medicare.

Therefore, Mr. Y's signing of the final release of all rights under WC makes it possible for medical expenses incurred after the date of settlement to be reimbursed under Medicare.

3416.1 Lump-Sum Payment Which Represents Commutation of Future Benefits.—If an individual is paid a lump sum WC benefit which is intended to compensate the individual for all future medical expenses and disability benefits, and the lump-sum amount is reasonable considering the future medical services that can be anticipated for the medical condition, Medicare benefits are not payable for any future expenses directly related to the work injury for which the lump-sum was paid until such time as the beneficiary presents medical bills related to the injury totalling the amount of the lump sum settlement allocated to medical treatment.

3416.2 Apportionment of a Lump-Sum Compromise Settlement of Contested Workers' Compensation Claim.—If the settlement covers both medical care and disability benefits but does not apportion the sum granted between medical and hospital expenses and income replacement, or does not give reasonable recognition to both medical care and disability, calculate the amount of the award deemed to be payment of medical and hospital expenses as follows:

A. Determine the ratio which the amount awarded (less the reasonable and necessary costs incurred in procuring the settlement) bears to the total amount which would have been payable under WC for both medical and hospital expenses (including expenses not covered under Medicare) and income replacement, if the claim had not been settled by compromise.

B. Multiply this ratio by the total medical and hospital expenses incurred as a result of the injury or disease up to the date of the settlement. The product will be deemed to be the amount of WC settlement intended as payment for medical and hospital expenses. The latter amount will be applied to the medical and hospital expenses incurred due to the work-related injury as provided in §3407.7.

In paragraph A. above, the determination of the "total amount that would have been payable under W C had the claim not been settled by compromise" should generally be based on information furnished by the beneficiary's attorney. If you have reason to question the attorney's estimate, base the determination on information from other sources such as the State W C agency.

The first step in making the above determination is to request that the attorney furnish you a statement of the amounts that would have been payable for disability and medical care if the beneficiary were awarded full benefits under the W C law. The attorney's estimate should include an amount for disability based on the anticipated number of months of total disability and an amount for partial disability. Each amount should be based on the specific amounts which the law states are payable for each type of disability. The estimate should also include an amount for medical care based on actual and anticipated medical expenses related to the work injury. The information provided by the attorney should be consistent with the beneficiary's medical condition and the provisions of the applicable W C law. (W C laws require that employers pay all work-related medical expenses, and designate amounts for temporary and permanent disability.)

If you believe there is a discrepancy between the attorney's estimate and what you consider to be the beneficiary's medical situation and the provisions of the law, ask the attorney for additional information and/or an explanation of how the amount was determined. It may also be helpful to consult with the State W C agency to obtain confirmation that the attorney's estimate is consistent with the medical facts and with the law. This agency should also be contacted for the above information if the attorney does not cooperate in furnishing it.

If, after the above development, you are convinced that the attorney has overstated the amount that would have been paid if the claim were not settled by compromise, base your determination of overpayment on a lower amount that you feel is reasonably based on all the facts of the case. In such cases, send the attorney a full explanation of how you determined your estimate with particular attention to those aspects which differ from the attorney's estimate.

EXAMPLE 4: Mr. A suffered a work injury resulting in loss of income and he incurred expenses for hospital and medical services for which the total W C payment would have been $24,000 had the case not been compromised. The expenses totaled $18,000 and included $10,200 in hospital services, which in the absence of W C, would be paid for under Part A; $6,300 in expenses for medical and other health services for which payment would be made under Part B on a reasonable charge basis, and $1,500 in expenses for services not reimbursable under Part A or Part B but reimbursable under W C. The W C carrier made a settlement with the beneficiary under which it paid a total of $8,000. A separate award was made for legal fees.

Since the settlement was for one-third of the amount which would have been payable under W C had the case not been compromised ($8,000/$24,000 = 1/3) the settlement is deemed to have paid for one-third of the total medical and hospital expenses (1/3 x $18,000 = $6,000).

To determine the amount of Medicare benefits payable, the $6,000 of the compromise WC settlement considered as payment for hospital and medical expenses, is applied first to the $1,500 in non-covered expenses. The remaining $4,500 is applied to the $6,300 in Part B covered expenses (without deducting the deductible and coinsurance). The remaining $1,800 of such Part B expenses and all of the $10,200 in expenses for services covered under Part A would be reimbursable under Medicare, subject to the regular deductible and coinsurance requirements. It is assumed in this example that the expenses specified above as incurred by Mr. A are the amounts which would have been paid by the WC for such services. If this is not the case, the services should be charged against the lump-sum payment at the usual WC rate.

EXAMPLE 5: Mr. B worked for a florist. On May 18, 1986, while making a delivery, he fell and broke his hip. He was admitted to the hospital, where it was discovered that, in addition to his fracture, he had a severe infection. He was hospitalized until August 20, 1986. Medicare paid a total of $60,000 toward the medical and hospital expenses.

Mr. B settled his WC claim by accepting a lump sum compromise payment of $50,000, $10,000 of which represented attorney's fees. Medicare submitted a claim to Mr. B's attorney requesting reimbursement for the amount it had paid toward the medical and hospital expenses. The WC lump sum represented a compromise settlement of Mr. B's present and future disability benefits, estimated at $35,000, and past medical expenses (including $48,000 paid under Part A, $12,000 covered under Part B, and $5,000 for expenses not covered under Medicare). Thus, had Mr. B not compromised, the total amount that would have been payable for disability and medical expenses would have been $100,000 ($35,000 for disability and $65,000 for medical). There did not appear to be an attempt to shift the WC liability to Medicare.

The award ($50,000), less attorney fees ($10,000), is 40% of what would have been paid if Mr. B had been awarded full benefits ($100,000). Under the lump sum apportionment formula in subsection A above, it is determined that 40% of $65,000 in total medical expenses, or $26,000, is deemed to have been paid by the WC compromise settlement.

As Mr. B had $5,000 medical expenses for non-covered Medicare services, that amount is deducted from the $26,000, leaving $21,000 to be applied to Mr. B's Medicare covered expenses. The entire $12,000 of Mr. B's Part B expenses (including the deductible and coinsurance) is considered to have been paid for by the WC award and $9,000 of the $48,000 in Part A expenses are considered paid for by the WC award. Medicare's claim is the amount it paid toward the $12,000 in Part B services and $9,000 of the Part A payment. These payments were duplicated by the WC payment.

3417 OVERPAYMENT DUE TO WORKERS' COMPENSATION COVERAGE

You may have paid for services and subsequently learned that the services were job related. However, the mere fact that information is received indicating that a particular injury or illness occurred on the job does not necessarily mean that Medicare payments made for that injury were incorrect. You must consider whether, in view of the factual circumstances, benefits are not payable under the policies in §§3407ff. This generally requires careful development along the lines described in §3409ff. Sometimes, the development will show that there was a legitimate reason for the provider billing the Medicare program. For example, the individual may have exhausted his WC benefits or the particular services may have been for a condition not related for the work injury.

Once it is determined that payment has been made for services covered by WC, initiate efforts to recover the overpayment. Sections 3417.1 and 3417.2 provide guidelines for recovery of Medicare payments in some of the more common situations in which there is an indication that payment was made by Medicare for a work-related injury or illness. However, since the circumstances in which work-related issues arise vary greatly, it is impossible to provide definitive rules which will cover every situation. Therefore, it is essential to use judgment and discretion in applying the guidelines.

3417.1 Duplicate Payment Received by Provider.--If a Medicare payment duplicates a WC payment, recover the Medicare payment from the provider in accordance with the instructions in §§3710ff. Recovery of conditional payments is not subject to the reopening rules nor to the limitation on recovering incorrect Medicare payments discovered later than the third calendar year after the year of payment where a WC plan is primary payer. (See the note in §3708.4.)

3417.2 Medicare Paid for Services Which Should Have Been Paid For by Workers' Compensation.--In any case in which it is clear that Medicare paid for services that should have been paid for by the WC carrier and no payment was made, request that the carrier reimburse the Medicare program for the amounts improperly paid by Medicare.

Include in your notice to the WC carrier, an explanation of the reason you feel that the services should be paid under WC, and the amount that Medicare has paid. In addition, explain that the Medicare law excludes payments for services covered under WC, and requires WC carriers to make direct refund to the Government where Medicare has paid for services that are reimbursable under WC.

If arrangements to refund the amount due are not made by the WC carrier within 30 days after notification, ask the carrier for an explanation for the delay, whether it intends to refund the Medicare overpayment and, if not, why. If the WC carrier's response is negative, and you still feel that the services are clearly covered under WC, refer the case to the RO. If the beneficiary is represented by an attorney, address any correspondence on the WC issue to the attorney. Send copies of all correspondence with the WC carrier and with the beneficiary concerning the WC issue to the State WC agency.

If the carrier either declines to refund the overpayment outright or indicates a long delay will be necessary, refer the file to:

Health Care Financing Administration
Overpayment Section
P. O. Box 120
Baltimore, Maryland 21203

together with a covering letter which fully explains the WC issue and your recommendations for disposition of the case in accordance with the applicable WC and overpayment recovery policies. Include copies of all pertinent documents, including the WC award and your correspondence and reports of contact with the WC carrier, the State WC carrier, the State WC agency, and the beneficiary. HCFA reviews the case and determines what further action should be taken.

Services Reimbursable Under Liability Insurance

3419 GENERAL EFFECT OF LIABILITY INSURANCE ON MEDICARE PAYMENT

A. Statutory Provisions.—Under §1862(b)(1) of the Social Security Act (42 U.S.C. 1395y(b)(1)), payment may not be made under Medicare for covered items or services to the extent that payment has been made, or can reasonably be expected to be made promptly, under a liability insurance policy or plan (including a self-insured plan). All Medicare payments are conditioned on reimbursement to the Medicare program to the extent that payment with respect to the same items or services has been made, or could be made, under a liability insurance policy or plan (including a self-insured plan). Medicare is subrogated to the rights of the beneficiary and may also recover its benefits directly from liability insurance companies and self-insured plans, and from any entity, including the beneficiary, that has been paid by a liability insurer. Medicare's right to recover its benefits from liability insurers and from those who have been paid by liability insurers takes precedence over the claims of any other party, including Medicaid.

"Subrogation" literally means the substitution of one person or entity for another. Under the Medicare subrogation provision, the program is a claimant against the responsible party and the liability insurer, to the extent that Medicare has made payments to or on behalf of the beneficiary. Medicare can be a party to any claim by a beneficiary or other entity against a liability insurer, can participate in negotiations concerning the total liability insurance payment and the amount to be repaid to Medicare, and may seek recovery of conditional payments directly from the liability insurer.

The Omnibus Budget Reconciliation Act of 1986 provides that any claimant has the right to take legal action against a liability insurer that fails to pay primary benefits for services covered by the insurer and to collect double damages.

B. Conflicting Claims by Medicare and Medicaid.—Under the law, Medicare has the right to recover its benefits from a liability insurer before any other entity, including a State Medicaid agency. Also Medicare has the right to recover its benefits from any entity, including a State Medicaid agency, that has been paid by a liability insurer. In other words, Medicare's recovery rights where a liability insurer is primary payer are higher than and take precedence over the rights of any other entity.

The superiority of Medicare's recovery right over that of other entities including Medicaid derives from the Medicare statute, which provides that where Medicare is secondary to another insurer (1) HCFA may recover Medicare benefits from the responsible insurer, (2) HCFA is subrogated to the right of the Medicare beneficiary and the right of any other entity to payment by the responsible insurer, and (3) HCFA may recover its payments from any entity that has been paid by the responsible insurer.

If Medicare and Medicaid both have claims against a liability insurer, Medicare's right to recover its benefits from the liability insurer, or from a beneficiary that has been paid by a liability insurer, is higher than Medicaid's, notwithstanding the fact that Medicaid is the payer of last resort and, therefore, doesn't pay its benefits until after Medicare has paid.

Medicare's priority right of recovery from insurance plans that are primary to Medicare, does not violate the concept of Medicaid's being payer of last resort. Under S1862(b) of the Social Security Act, Medicare's ultimate statutory authority is not to pay at all (with a concomitant right to recover any conditional benefits paid) where payment can reasonably be expected by a third party which is primary to Medicare. Where the third party pays right away, Medicare makes no payment to the extent of the third party payment. Delay of third party payment does not change Medicare's ultimate obligation to pay the correct amount regardless of any Medicare payments conditionally made. Thus, where the third party pays less than the charges, Medicare may be responsible to pay secondary benefits. And where the third party pays the charges, Medicare may not pay at all. Pro-rata or other sharing of recoveries with Medicaid would have the effect of creating a Medicare payment where none is authorized under the law or improperly increasing the amount of the Medicare secondary payment.

Moreover, the right of Medicaid agencies to recover their benefits derives from an assignment by Medicaid beneficiaries to the States of their rights to third party reimbursement. Since the beneficiary can assign to the State a right no higher than his own, and since Medicare's statutory right is higher than the beneficiary's, Medicare's right is higher than that assigned to the State.

Thus, where Medicare and Medicaid have paid for services, and the amount available from a liability insurer is not sufficient to satisfy the claims of both programs for reimbursement, notify the liability insurer and the other parties to the liability claim that Medicare must be reimbursed the full amount of its claim before any other entity, including a State Medicaid agency, may be paid by the liability insurer.

Also, where a beneficiary, attorney, provider or supplier receives payment from a liability insurer for services which have already been paid for by Medicare and by Medicaid, and the amount paid by the liability insurer is less than the combined amounts paid by Medicare and Medicaid, inform the beneficiary, attorney, provider or supplier that it is obligated to refund the Medicare payment up to the full amount of the liability insurance payment, despite a conflicting claim by a State Medicaid agency. Only after Medicare has recovered the full amount of its claim does the beneficiary, attorney, provider or supplier have the right to reimburse Medicaid or any other entity.

If a liability insurer has reimbursed a State Medicaid agency, or if a beneficiary, after receiving a liability settlement, has reimbursed a State Medicaid agency, request the liability insurer or the beneficiary that was paid by the liability insurer to reimburse Medicare from the remainder of the liability settlement. If the remainder of the liability settlement is insufficient to reimburse Medicare in full, ask the State agency to reimburse Medicare up to the full amount the agency received. Explain the legal basis for Medicare's right to recover. If the State refuses to reimburse Medicare in full, refer the case to the HCFA RO. The RO's recovery actions may include offset of Medicare's claim against any Federal Financial Participation funds otherwise due the State. Explain to the liability insurer that in future cases involving claims by Medicare and Medicaid against a liability settlement, Medicare must be reimbursed first.

3419.1 Effect of Payment by Liability Insurer on Deductibles and Utilization.--

A. Deductibles.--Expenses for which Medicare conditional payments are recovered from liability insurance are not counted toward Part A or Part B deductible amounts.

B. Utilization.--Services for which Medicare conditional payments are recovered from liability insurance are not counted against the number of inpatient care days available to the beneficiary. For instance, if an individual is hospitalized twice in the same benefit period and Medicare recovers its payment for the first hospitalization in full from liability insurance, the first hospitalization would not be charged to the beneficiary's utilization.

3419.2 Definitions.--

A. Liability Insurance.--Insurance (including a self-insured plan) that provides payment based on legal liability for injuries or illness or damages to property. It includes, but is not limited to, automobile liability insurance, uninsured and underinsured motorist insurance, homeowners liability insurance, malpractice insurance, product liability insurance and general casualty insurance. It also includes payments under State "wrongful death" statutes that provide payment for medical damages.

B. Self-Insured Plan.--A plan under which an individual or other entity is authorized by State law to carry its own risk instead of taking out insurance with a carrier. "Authorized by State law" means not prohibited by State law. The plan established for the Federal government under the Federal Tort Claims Act is also a self-insured plan.

C. Uninsured Motorist Insurance.--Liability insurance under which the policyholder's insurer pays for damages caused by a motorist who has no automobile liability insurance or who carries less than the amount of insurance required by law.

D. Underinsured Motorist Insurance.--Optional liability insurance available in some jurisdictions under which the policyholder's level of protection against losses caused by another is extended to compensate for inadequate coverage in the other party's policy or plan.

E. Accident.--Any occurrence or activity that the individual believes resulted in injury or illness for which he or she holds another party liable.

3419.3 Provider Billing Rights and Responsibilities.--

A. Difference Between Liability Insurance and Other Primary Insurers.--Liability insurance differs from the other insurance policies or plans that, under §1862(b) of the Social Security Act, are primary to Medicare. In the case of other types of insurance which are primary to Medicare, i.e., automobile medical and no fault insurance, employer group health plans, and workers' compensation, there is a contractual relationship between the injured party and the third party payer. Thus, the provider has the right to bill the third party payer.

In the case of liability insurance, unlike the other policies or plans, there is no direct or indirect contractual or quasi-contractual relationship between the provider of services and the liability insurer of the alleged tortfeasor. A party alleging injury has a relationship to the liability insurer only through the tortfeasor and must try to prove negligence by the tortfeasor. A provider, in contrast, has no standing to sue the tortfeasor; its relationship is solely to the injured party whom it has furnished Medicare covered services.

best copy available

B. Services Payable By Liability Insurance Are Considered Covered.--The rights and responsibilities of providers regarding services for which liability insurance payments have been made, or can reasonably be expected, are governed by the provisions of §1862(b) (the Medicare secondary provision) and section 1866 (the provider agreement) of the Act. Section 1862(b) is a limitation of payment provision rather than a noncoverage provision. Therefore, when Medicare is secondary under this provision, the services do not lose their identity as Medicare covered services. If the services were not covered, Medicare could not pay secondary benefits for them. In the case of liability insurance, primary Medicare benefits are paid conditionally and then recovered. Payment could not be made for services (even on a conditional basis) if they were not considered covered services.

Section 1866 prohibits providers from charging a beneficiary or any other person for covered services except to collect applicable deductibles and coinsurance. While §1862(b) requires billing third parties that are primary to Medicare, §1866 does not permit such billing where that would take money from the beneficiary, since that would be equivalent to billing the beneficiary for Medicare covered services.

Even without reference to §1866, the right of a provider to bill a liability insurer or to file a lien against a beneficiary's liability settlement is quite limited. Section 1862(b)(1) does not allow billing primary payers unless payment can be expected to be made promptly. Since that would rarely occur in liability insurance cases, because liability settlements are usually made only after protracted negotiations between the injured party and insurer, in the vast majority of cases Medicare payment could not be limited, and the provider would be obliged by its Medicare participation agreement to file a Medicare claim on the beneficiary's behalf. In the rare case where payment could be expected to be made promptly under liability insurance, and Medicare payment might justifiably be limited, it is a violation of §1866 for a provider to bill a liability insurer or to file a lien against a beneficiary's liability insurance proceeds, because either action has the effect of charging the beneficiary for more than the permitted deductibles and coinsurance. It would have that effect because (1) the liability insurer owes nothing to the provider, which itself has no rights against the insured (the tortfeasor) or the company from which he has bought insurance — its only obligation is to the beneficiary that has been harmed by the insured -- and (2) payment to the provider directly reduces the amount the beneficiary recovers from the liability insurer. For the same reasons, a provider may not bill a beneficiary who has received a liability insurance payment, except to collect any applicable deductibles and coinsurance. Thus, if a beneficiary has filed or is contemplating a liability claim, it is immaterial to the provider whether payment under liability insurance could or could not be expected to be made promptly. In either event, the provider's only recourse is to bill Medicare.

In summary, since services for which Medicare is secondary are covered services, the beneficiary is protected by the provider agreement, i.e., a provider of services may not bill an insurer or beneficiary for such services, if the effect would be to reduce the amount the beneficiary can recover. That effect could occur when liability insurance is primary. Payment to a provider by the beneficiary or liability insurer would directly reduce the amount the beneficiary recovers from that insurer.

C. Medicare Must Be Billed.—Although services are needed because of an accident (as defined in §3419.2) or a diagnosis/trauma code listed in §3419.5 is shown, a provider must bill Medicare for conditional primary payments even if it believes that there is a reasonable likelihood that a liability insurer will pay promptly. However, before a provider bills Medicare for primary benefits, it must first attempt to determine whether there are potential primary payers other than a liability insurer, e.g., an automobile no fault insurer or an employer group health plan. Such payers must be billed before Medicare.

D. Prohibition Against Billing Liability Insurer.—Providers may not bill liability insurers instead of Medicare. The criteria for extension of the time limit for filing claims in §3307.3 do not apply, if the late filing of a Medicare claim is due to the provider's not following instructions by billing liability insurance instead of Medicare.

E. Prohibition against Billing Beneficiary.—A provider may not bill a beneficiary for covered services even though the beneficiary has received payment from a liability insurer for the injury or illness for which the services were furnished. This rule applies whether or not the provider has claimed or accepted conditional primary Medicare benefits. Since these are covered services, the beneficiary is protected by the provider agreement, i.e., a provider of services may not bill a beneficiary for such services, except for deductible and coinsurance amounts.

F. Prohibition Against Filing a Lien Against Liability Settlements.—Providers may not file a lien against a beneficiary's liability insurance proceeds. To do so is tantamount to billing the beneficiary and is a violation of the provider agreement.

3419.4 Provider Actions.—

A. Information Obtained from Patient or Representative At Time of Admission or Start of Care.—Medicare providers are instructed to ask Medicare patients, or the patient's representative, at the time of admission or start of care, if the services are for treatment of an injury or illness which resulted from an automobile or other accident, including any that occur on the provider's premises, for which he or she holds another party responsible. The provider obtains the name, address and policy number of any automobile medical, no fault or liability insurance company or any other party that may be responsible for payment of medical expenses that resulted from the accident.

B. Provider Billing.—If a provider learns that an automobile medical or no fault insurance company may pay for otherwise covered services, the provider is instructed to bill the insurance company as primary insurer. See §§3489ff. for instructions on handling claims involving automobile medical or no fault insurance.

If payment cannot reasonably be expected from an automobile medical or no fault insurer (and none of the other Medicare secondary provisions applies), the provider must bill Medicare even though the individual has filed or plans to file a liability insurance claim. When billing Medicare, the provider annotates the bill in accordance with §3680.

3419.5 Identification of Liability Situations.—Use the indicators listed below to identify claims in which there is a possibility that payment can be made by a liability insurer. Develop the possibility of payment by a liability insurer in accordance with §3419.6.

1. You receive information from a provider, a beneficiary, your own operations (e.g., medical or utilization review) or those of your non-Medicare counterpart, another Medicare carrier or intermediary, or any other source, indicating Medicare has been billed for services when there is a possibility of payment by a liability insurer.

2. On Form HCFA-1450 another insurer is shown on line A of item 57. On other billing forms a primary insurer is identified in the "Remarks" portion of the bill.

3. On a HCFA-1450, occurrence code 01 or 03 is shown in items 28-32. On other billing forms the annotation "automobile accident" or "nonautomobile accident" is shown in "Remarks."

4. The billing form shows as complementary insurer an insurance organization that does not issue health insurance.

5. You (or the RO) are asked to endorse a check from another insurer payable to Medicare and the beneficiary.

6. You receive or are informed of a request from an insurance company or from an attorney for copies of bills or medical records.

7. There is indication that a liability insurer previously paid benefits related to the same injury or illness or that a claim for such benefits is pending; e.g., a "Y" trailer containing code "C" or "D" on the query reply. (See §3512.8. and §3535.1) There is no need to investigate this lead, however, if your records show that the services were furnished after the date of a final liability insurance award or settlement for the same injury or illness.

8. You receive from a provider a request from an attorney or insurance company for a copy of a medical record or for a bill concerning a Medicare patient. Providers are instructed to notify you promptly of such requests and to send you a copy of the request or, if it is unavailable, full details of the request including the name and Medicare number of the patient, name and address of the insurance company and/or attorney, and date(s) of services for which Medicare has been billed or will be billed.

9. The claim reflects one of the diagnosis/trauma codes shown below. The following list consists of selected ICD-9-CM codes which should be used to identify claims which may involve liability insurance. Whenever one of these codes appears on a claim, process the claim as detailed in §3419.6. (You may add to this list any ICD-CM codes which experience indicates are good leads. Based on contractor input, HCFA may later modify this list to reflect actual experience.)

CODE ICD-9-CM	DIAGNOSIS
800.0 - 800.99	Fracture of vault of skull

801.0 - 801.99	Fracture of base of skull
802.0 - 802.99	Fracture of face bone
803.0 - 803.99	Other and unqualified skull fractures
804.0 - 804.99	Multiple fractures involving skull or face with other bones
805.0 - 805.98	Fracture of vertebral column without mention of spinal cord injury
806.0 - 806.99	Fracture of vertebral column with spinal cord injury
807.0 - 807.69	Fractures of rib(s), sternum, larynx, and trachea
810.0 - 810.13	Fracture of clavicle
811.0 - 811.19	Fracture of scapula
828.0 - 828.1	Multiple fractures involving both lower limbs, lower with upper limb, and lower limb(s) with rib(s) and sternum
839.0 - 839.3, 839.7 - 839.9	Other multiple and ill-defined dislocations
847.0	Sprains and strains of the neck (whiplash)
850.0 - 850.9	Concussion
851.0 - 851.99	Cerebral laceration and contusion
852.0 - 852.59	Subarachnoid, subdural, and extradural hemorrhage, following injury

CODE ICD-9-CM	DIAGNOSIS
853.0 - 853.19	Other and unspecified intracranial hemorrhage following injury
854.0 - 854.19	Intracranial injury of other and unspecified nature
860.0 - 860.5	Traumatic pneumothorax and hemothorax
861.0 - 861.32	Injury to heart and lung
862.8	Injury to multiple and unspecified intrathoracic organs, without mention to open wound into cavity (crushed chest)
863.0 - 863.99	Injury to gastrointestinal tract

864.0 - 864.19	Injury to liver
865.0 - 865.19	Injury to spleen
866.0 - 866.13	Injury to kidney
867.0 - 867.9	Injury to pelvic organs
868.0 - 868.19	Injury to other intra-abdominal organs
869.0 - 869.1	Internal injury to unspecified or ill-defined organs
887.0 - 887.7	Traumatic amputation of arm and hand
896.0 - 896.3	Traumatic amputation of foot
897.0 - 897.7	Traumatic amputation of leg(s)
900.0 - 900.9	Injury to blood vessels of head and neck
925	Crushing injury of face, scalp, and neck
926.8	Crushing injury of trunk (multiple sites)
929.0 - 929.99	Crushing injury of multiple and unspecified sites
958.4	Traumatic shock
958.5	Traumatic anuria
996.0 - 996.5	Complications peculiar to certain specified procedures

3419.6 Development to Ascertain if Liability Claim Has Been or Will Be Filed.--

A. Medicare Benefits Have Not Been Paid.--If there is an indication of possible payment under liability insurance, make a conditional payment and develop with the provider to determine if there was an accident and, if so, if the beneficiary has filed a liability claim or intends to do so. You are not required to develop claims in which the amount payable by Medicare is less than $400. You may set your development tolerance at any dollar level you deem cost effective, but it may not exceed $400.

If the provider indicates that a liability claim is pending, or that the beneficiary intends to file such a claim, or further development is otherwise indicated, develop with the beneficiary and/or his attorney, following the instructions in paragraph B.

B. Medicare Benefits Already Paid.--If a Medicare claim has already been paid and there is an indication of possible payment under liability insurance, develop with the beneficiary and/or his attorney to determine whether a liability claim has been filed or will be filed. You are not required to develop claims in which the amount payable by Medicare is less than $400. You may set your development tolerance at any dollar level you deem cost effective, but it may not exceed $400. The development tolerance applies to development efforts only and does not supersede the overpayment recovery tolerance in §3709.2 if you have enough evidence to determine that an overpayment exists.

Use the Form HCFA-L365, Report to Medicare of Automobile or Liability Insurance Coverage, for this development. Enter necessary identifying information before sending the form. Also ask for the claim number which the insurance company has assigned to the claim. If the beneficiary or attorney does not respond within 30 days, follow up by telephone or letter. If you are unable to obtain the required information from the beneficiary or attorney by letter or by phone, and you determine that further contacts would be unproductive, discontinue further efforts to obtain the information, and institute recovery efforts from the beneficiary in accordance with §§3707ff.

3419.7 Action by Intermediary Where a Liability Claim Is Filed.--

A. Liability Claim Is Pending.—Once you learn that a liability claim is pending, take steps to assure that, in the event a liability insurance payment is made, any conditional primary Medicare payments are refunded for services related to the injury. There should be no recovery of benefits paid for services rendered after the date of a liability insurance settlement. However, the entire amount of a settlement is subject to recovery, whether the liability payment is made at the time of settlement, or over a period of time agreed to by the parties in a structured settlement.

B. Recovery From Liability Insurer.—The statute as amended in 1984 gives the Government the right to recover Medicare payments from liability insurers without regard to whether the insurer has already made a liability insurance payment. Always try to recover any Medicare payments directly from the insurer before the proceeds of an award or settlement are disbursed.

C. Liability Insurer Pays Beneficiary.—If a beneficiary is paid by a liability insurer, recover from the beneficiary the lesser of Medicare's payment or the provider's charges, reduced by a proportionate share of the individual's procurement costs, if any.

If, under PPS, Medicare pays a provider more than its charges, Medicare does not recover more than charges from a beneficiary's liability settlement. (Under Medicare regulations, a beneficiary who must refund a Medicare payment made to a provider is liable only to the extent that he or she benefitted from the payment. Since the beneficiary would have had to pay only the provider's charges in the absence of Medicare, the beneficiary is not liable for refunding more than the charges.) In such cases, the provider is not required to refund the excess of the Medicare payment rate over the provider's charges.

Use the following formula to determine the amount of Medicare's claim when there are procurement costs:

1. Determine the ratio which the procurement costs bear to the total amount of the liability insurance payment.

2. Apply this ratio to the Medicare payments.

3. Subtract the amount determined in step 2 from the lower of the amount of the provider's charges or the Medicare payments. The remainder is the amount to be refunded to the Medicare program. (You may round this amount to the nearest dollar.)

Exception: If the Medicare payments equal or exceed the amount of the liability insurance payment, the amount to be recovered is equal to the liability insurance payment less the entire procurement costs.

It is common for insurance companies to settle claims without admitting liability. Therefore, any payment by a liability insurer, except payments under a no fault clause in a non-automobile policy, constitutes a liability insurance payment whether or not there has been a determination of liability. Also, regardless of how amounts may be designated in a liability award or settlement, e.g., loss of consortium, special damages or pain and suffering, Medicare is entitled to be reimbursed for its payments from the proceeds of the award or settlement.

If a negligent party who carries liability insurance decides to pay a liability claim with his own funds rather than submit the claim to his liability insurer, Medicare recovers its benefits from such a payment, because it is deemed to be a liability insurance payment. Medicare benefits are, of course, also subject to recovery from payments by a self-insured party, as defined in §3419.2B.

3419.8 Liability Claim Is Filed and There Is Also Coverage Under Automobile Medical or No Fault Insurance.--If injuries are covered under automobile medical or no fault insurance, and the individual also files a claim against a third party for injuries suffered in the same accident, a claims determination must first be made by the automobile medical or no fault insurer before a claim for Medicare benefits can be paid. Medicare payment may be made to the extent that payment cannot be made under the automobile medical or no fault insurance, subject to recovery if the individual later receives payment from a liability insurer. For example, an individual incurs $20,000 in hospital expenses due to an automobile accident. The individual receives $5,000 in no fault insurance benefits toward his hospital expenses and also has a liability claim pending against the driver of the other car. Medicare will not pay benefits for the $5,000 in expenses paid for by the no fault insurer but will pay benefits based on the additional $15,000 in expenses, subject to recovery when the liability claim is paid.

3419.9 Coordination with Other Part A Intermediaries or Part B Carriers Where There Is a Possibility of Automobile or Liability Insurance Payment.--For consistency in determinations and actions concerning claims arising from the same injury or illness, an intermediary investigating the possibility of payment under automobile or liability insurance coordinates its determination regarding the insurance coverage and/or its recovery efforts with any other intermediaries or carriers that may receive or have received claims for expenses related to the same injury or illness. The intermediary takes the lead in investigating all cases which involve Part A services. If more than one intermediary has paid for expenses related to the condition, the one that has paid the most in benefits conducts the necessary development and pursues recovery on behalf of the others. That intermediary arranges for the beneficiary or insurance company to reimburse each Medicare contractor that has made an overpayment. If the amount of the recovery is not sufficient to repay all contractors, the money is prorated among contractors, giving priority to refunds that restore available benefits, e.g., inpatient hospital days first, then SNF days. Likewise, an insurer's payment to a provider that has furnished both Part A and Part B services is applied first to Part A expenses.

3419.10 EXHIBITS

Exhibit 1--Form HCFA-L365, Report to Medicare of Automobile or Liability Insurance Coverage.

EXHIBIT 1

FORM APPROVED OMB NO. 0938-0283

REPORT TO MEDICARE OF AUTOMOBILE OR LIABILITY INSURANCE COVERAGE

HEALTH INSURANCE CLAIM NUMBER	DATE	SEND COMPLETED FORM TO:
NAME OF PROVIDER, PHYSICIAN, OR SUPPLIER	DATE OF SERVICES FROM: TO:	

NOTE: SEE REVERSE FOR PRIVACY ACT STATEMENT BEFORE COMPLETING FORM.

This refers to the services you received from the provider, physician or supplier named above.

We have received information indicating that these services may be reimbursable under automobile insurance or under liability insurance (including automobile liability insurance). The law excludes Medicare payment for services which have been paid for by such insurance or for which such insurance payment can reasonably be expected. All Medicare payments are made on the condition that the individual is responsible for refunding the amount paid in the event that an automobile or liability insurer makes payment for the same services.

To help us determine whether Medicare covers the above services, we need your responses to the questions listed below. Please return this letter with your answers to these questions in the enclosed self-addressed, postage paid envelope.

A. CAN PAYMENT BE MADE FOR THE ABOVE SERVICES BY AN AUTOMOBILE MEDICAL OR NO FAULT INSURANCE POLICY OR PLAN? ☐YES ☐NO IF YES, GIVE NAME AND ADDRESS OF INSURANCE COMPANY. IF YOU HAVE RECEIVED A NOTICE OF ITS DECISION FROM THE COMPANY, PLEASE SEND US A COPY.	NAME AND ADDRESS OF INSURANCE COMPANY

B. HAVE YOU FILED, OR DO YOU INTEND TO FILE A LIABILITY CLAIM OR LAWSUIT AGAINST ANY PARTY WHO CAUSED THE INJURY FOR WHICH THESE SERVICES WERE FURNISHED, OR DO YOU FEEL YOU HAVE A RIGHT TO BE COMPENSATED BY A PARTY WHO MAY HAVE CAUSED THE INJURY?

☐YES ☐NO

C. IF YOU ANSWERED YES TO QUESTION B., PLEASE FURNISH THE FOLLOWING INFORMATION:

1. DATE OF ACCIDENT WHICH RESULTED IN INJURY OR ILLNESS	2. BRIEF DESCRIPTION OF ACCIDENT OR OTHER CAUSE OF INJURY OR ILLNESS
3. NAME AND ADDRESS OF ATTORNEY IF YOU HAVE ONE	

(CONTINUED ON REVERSE)

FORM HCFA-L365 (12-82)

4. NAME, ADDRESS AND TELEPHONE NUMBER OF ANY PARTY THAT YOU FEEL WAS RESPONSIBLE FOR INJURY OR ILLNESS	5. NAME, ADDRESS AND TELEPHONE NUMBER OF INSURANCE COMPANY OF PERSON YOU FEEL WAS RESPONSIBLE

6. EXPLAIN WHY YOU DID NOT FILE A CLAIM WITH AN AUTOMOBILE OR LIABILITY INSURER PREVIOUSLY EVEN THOUGH YOU WERE ENTITLED TO DO SO

If you have filed or have a right to file a liability claim or lawsuit against another party who you feel was responsible for this injury or illness, Medicare benefits are still payable for the services, pending a decision on your liability claim. If you receive payment from a liability insurer, you will be responsible for reimbursing the Medicare program or arranging for the insurance company to reimburse the Medicare program, the amount of benefits it paid for this injury or illness up to the amount of the award or settlement, less a proportionate share of the cost of procuring the award or settlement. If Medicare is not reimbursed after you receive a liability insurance payment, the amount may be withheld from any social security benefits to which you are entitled.

If you do not presently intend to file a liability claim or lawsuit against any person or insurance company for this injury or illness but later change your mind, you will be responsible for notifying us promptly of your decision.

CERTIFICATION AND AGREEMENT

To the best of my knowledge and belief, the above answers are true. I hereby authorize the Health Care Financing Administration or any of its insurance carriers or intermediaries to pursue my rights against any automobile medical or no fault insurer or any liability insurer that may be responsible to pay for the services and promise to cooperate with the Health Care Financing Administration in such action.

PRIVACY ACT STATEMENT

We are authorized to collect this information by sections 205(a) and 1862(b) of the Social Security Act (42 USC 405a and 1395y). The information will be used to determine if the services you received are covered by Medicare or whether an automobile, no-fault, or liability insurer or any other person may be responsible for payment. Section 1877(a)(3) of the Social Security Act (42 USC 1395nn) provides criminal penalties for withholding this information.

FORM HCFA-L365 (12-82)

Utilization Review

3420. UTILIZATION REVIEW PLAN

Hospitals (including psychiatric hospitals) and skilled nursing facilities are required to have in effect a plan for utilization review (UR) which applies to the inpatient services furnished to patients entitled to benefits under the program. The plan must provide for review, on a sample or other basis, of admissions, duration of stays, and professional services furnished; and review of each case of continuous extended duration while the patient is in the facility. See the "Conditions of Participation—Hospitals" and "Conditions of Participation—Skilled Nursing Facilities" for detailed requirements for an acceptable UR plan.

If the facility's UR committee has reason to believe that an inpatient admission was not medically necessary, it may review the admission at any time. However, the finding of a UR committee in one facility is not binding upon the UR committee in another facility.

The law requires that effective UR be maintained on a continuing basis to assure the medical necessity of the services for which the program pays and promote the most efficient use of available health facilities and services.

3420.1 Physician Members of UR Committee.—A "physician" member of a UR committee must be a doctor of medicine, or a doctor of osteopathy or a doctor of podiatric medicine. (See §3030.)

A doctor of podiatric medicine is considered a "physician" for the purpose of constituting a member of a UR committee, but only if at least two of the other physicians on the committee are doctors of medicine or osteopathy. In addition, the performance of these UR functions by a doctor of podiatric medicine must be: (1) consistent with the policy of the hospital or skilled nursing facility at which the functions are performed and (2) consistent with the scope of professional services provided by a doctor of podiatric medicine as authorized by applicable State law.

Payments made to physicians serving on SNF utilization review committees are considered an allowable cost without regard to whether the facility's plan is applicable solely to Medicare beneficiaries or to all patients of the SNF. However, in the case of hospitals, payments to physicians for such services are considered an allowable hospital cost only if the services are furnished in connection with a UR plan applicable to all of the hospital's inpatients.

3420.2 Definition of Continued Stay—Beneficiary Admitted Before Entitlement.—Guidelines for the review of continued stay cases are explained in the Conditions of Participation—Hospitals, and Conditions of Participation—SNFs.

If an individual is admitted to a hospital before entitlement to hospital insurance benefits (for example, before he reaches age 65), the following applies when he does become entitled. In identifying cases of extended duration for review by the UR committee in those hospitals which provide for the review of beneficiary cases only, the patient will be considered to have been admitted to the hospital on the day he became entitled to hospital insurance benefits. For example, if a hospital has defined continued stay as being 20 days of hospitalization, a patient who becomes entitled to Part A benefits on May 1, but who is admitted prior to that date, would be considered a continued stay case for UR purposes on May 21.

3421. LIMITATIONS ON PAYMENT FOR INPATIENT SERVICES FOLLOWING ADVERSE FINDING BY UTILIZATION REVIEW COMMITTEE

Under the UR requirement, certain limitations on payment for inpatient hospital services have been established. (For purposes of this section "inpatient hospital services" include inpatient hospital services and inpatient psychiatric hospital services.)

A. Payment Limitation.--Program payment can be made for a grace period of up to 3 days of inpatient hospital or extended care services following the date the institution receives notice from a UR committee that further inpatient hospital or extended care services are not medically necessary. This payment limit also extends to a finding by a UR committee, made during the course of a sample or other review of admissions, that admission to the hospital or SNF was not medically necessary. (See §3635.1(B)(3).)

In hospitals paid for inpatient hospital services under the prospective payment system, the payment limit applies only in cases otherwise eligible for outlier payment if the UR committee determines that:

- o excess days of care furnished in the case of a length of stay outlier are not necessary for services covered under Part A; or
- o additional items or services furnished in the case of a high cost outlier are either not covered or not necessary to services covered under Part/A.

Although you should accord great weight to the finding made by the UR committee, the final determination regarding reimbursement under the program rests with you. Accept an adverse utilization review committee finding for claims payment purposes unless there is a clear deficiency in the committee's finding, or the committee fails to follow the procedures prescribed in the law and regulations. For example, you may acquire additional information which was not available to the committee, which clearly indicates that the services were medically necessary.

B. Notification Requirements.--

1. General.--If, after review of an admission or continued stay case and after an opportunity for consultation is given the attending physician, the physician members of the UR committee make a final finding that an admission or further inpatient stay was not medically necessary, written notice must be given to the attending physician, the hospital and the patient (or where appropriate, his next of kin), no later than 2 working days after the review date.

Where the finding is made before the continued stay review date, the notice must be given no later than 2 days after it is made.

While the attending physician may advise the patient of the URC's finding, it is necessary for the committee to give timely notice of its finding to the patient or, where appropriate, to the next of kin. However, failure or omission by the URC to notify the physician, the patient, or the patient's next of kin timely does not justify payment for services (e.g., custodial care) which are specifically excluded by statute.

In the event of an adverse UR finding, the provider is required to show the date of receipt of notice on the billing form. (See S3604, Item 28-32, Code 21.)

2. SNF Notification.--SNFs must give an advance notice to the patient or his/her family that the URC is going to meet and consider whether he/she continues to need a skilled level of care and that Federal regulations require an opportunity be given for the patient's attending physician to present his/her views. The name of the physician the SNF intends to consult with must be included so that the patient or his/her family can verify that the correct physician will be contacted. In a final URC adverse finding concerning SNF care, the written notice must contain the basis for the adverse finding and a statement advising the patient or his/her family that a URC finding is not a Federal decision about Medicare payment, and that the final claims determination will be made when a claim is submitted to you. (See S3730.1.) The notice must clearly state that the beneficiary or his/her representative has the right to request that the SNF file a claim for Medicare benefits for the period the URC believes to be noncovered. The written notice of the finding must not be given later than 3 working days after the review date. The patient or his/her family receives a separate notice from you, and if there is a denial, notice of appeal rights.

C. Relation of Limitation of Liability Provision to Payment Limitation.--The application of the UR payment limitation provision (see subsection A) may be affected by the limitation of liability provision. (See SS3430ff.) Where it is determined that noncovered care was rendered prior to the URC's finding, determine whether the limitation of liability provision applies before making any grace period payment.

Where the institution is notified of an adverse finding by the URC, it can be found liable under the waiver of liability provision for noncovered services it provided to the beneficiary after the expiration of the grace period and up to the date the beneficiary receives written notice of the noncoverage of the services. (See S3440 D.)

EXAMPLE: The institution receives notice from the URC on March 1 that services were not reasonable and necessary beginning February 27, but does not advise the beneficiary until March 4. The patient is discharged on March 5. Where both the beneficiary and the provider meet the requirements for limitation of liability (see §§3430ff.), program payment can be made under §1879 for the noncovered services on February 27, 28 and March 1. Payment can also be made under the limitation of liability provision for the routinely allowed grace day following March 1, the day the provider was notified of the UR finding. (See §§3441ff.) In addition, if you determine that more than 1 day was needed to arrange for post-discharge care, grace period payment may be made for 1 more day. However, payment for March 4 would not be made, and the beneficiary would not be be responsible for the charges since he did not receive notice until that date.

3421.1 Availability and Appropriateness of Other Facilities and Services.—In determining whether further inpatient hospital stay is medically necessary, UR committees take into account the availability and appropriateness of other facilities and services. The following guidelines are used by URCs.

A. Determining Required Level of Care.—If the URC believes that the patient no longer requires hospital care but could receive proper treatment at the SNF level of care, it determines whether there is a bed available in a participating SNF or swing bed hospital in the area. (See subsections C and E.) If a bed is available, the committee finds that further care at the hospital level of care is not medically necessary.

If the URC determines that an extended care bed is not available in a participating swing bed hospital or SNF, it finds that continued stay in the hospital is medically necessary. The basis for the finding is documented in the committee's record. The committee advises the attending physician that its finding is based on the lack of availability of a bed in a participating SNF or swing bed facility; and that it is his responsibility to attempt on a continuing basis, (with the assistance of the hospital's social worker, etc.) to place the patient in a participating extended care bed as soon as a bed becomes available.

If the URC determines that the patient requires services other than inpatient hospital or extended care services (such as custodial, outpatient, or home health care), it finds, without regard to the availability of such kinds of care, that further inpatient hospital stay is not medically necessary. Covered inpatient hospital or extended care services are not considered alternatives to noncovered or noninstitutional services.

B. Home Health Care as an Alternative to Institutionalization.—A patient who needs either hospital or extended care services continually requires a level of care and a scope of services that can only be provided in an institutional setting. Only those institutions which met the conditions of participation for hospitals and skilled nursing facilities are qualified to provide them.

A patient who needs home health services requires a minimal level of services which does not call for the patient to be institutionalized. For example, an individual may only require a single service, such as physical therapy. A utilization review committee which finds that an individual only requires home health services should not recommend continued inpatient stay, even though the required services are not available to the individual because there is no agency in the community which can provide the services, or there is an agency but the individual has no home to which he can be discharged.

C. Location of Alternative Facilities.-- A utilization review committee will consider what facilities are available in the community or local geographic area in deciding whether the patient can be cared for effectively elsewhere. It is not possible to define community or local geographic area with any precision. However, as a general rule, a community or local geographic area should not be defined in such a way as to require a patient to be taken away from his family and transported over great distances.

D. Patient's Financial Status and Personal Preference.--A utilization review committee should not take into account a patient's ability to pay for services or his coverage or lack of coverage under the health insurance program in deciding whether continued hospital stay is medically necessary.

A patient's preference for one SNF over another (such as a preference for a sectarian facility over a nonsectarian facility) should not be taken into account by the committee. If SNF's are available but the patient's preferred facility is filled, the committee should find that further inpatient stay is not medically necessary.

E. Sources of Information on Available Participating Skilled Nursing Facilities.--Hospitals have been advised that the intermediary or local social security office can supply the names and addresses of participating SNF's in the local area; and that medical social workers, public health nurses, religious counselors, etc., can provide information about bed availability in such facilities.

3421.2 Failure to Make Timely Review of Cases.--If the Health Care Financing Administration determines on the basis of information obtained by a State agency or by an intermediary during the course of its ongoing review of utilization practices, that a hospital or SNF has substantially failed to make timely review of long-stay cases, it may in lieu of terminating the agreement with the provider, decide that no payment may be made on behalf of patients for more than a continuous period of 20 days of inpatient hospital services or a continuous period of 20 days of posthospital extended care services. For cases paid under PPS, the 20-day payment limitation will only affect the outlier portion of any prospective payment.

HCFA will determine the effective date of this limitation, which will be applicable to services rendered to individuals admitted after that date. The decision may be made effective only after notice is given to the hospital or SNF and to the hospital(s) with which the SNF has transfer agreement(s), and to the public.

HCFA will notify the intermediary of the identity of any hospital or SNF subject to this limitation and of the effective date of HCFA's decision. The limitation will be removed when HCFA determines that timely review of long-stay cases has been restored and there is reasonable assurance that the deficiency will not recur.

3422. ASSURING PROPER UTILIZATION IN SHORT STAY CASES

Because so much emphasis has been placed on looking at long stay cases for possible improper utilization, there has been less attention given to short stays which may also reflect improper utilization of inpatient services. The intermediary's claims review system should be capable of identifying provider stays of short duration which may not meet the test of medically necessary inpatient care. Particular attention should be given to the screening and review of one-day stays. Listed below are examples of short stays that may not be medically necessary. (Note: In situations where PSROs are conducting binding review, § 3422.1 is applicable.)

1. Provision of Diagnostic or Therapeutic Services on an Inpatient Basis Which Could Have Been Safely and Effectively Delivered in An Outpatient Setting.--The provision of diagnostic tests or therapies during a short inpatient stay which can normally be performed on an outpatient basis should alert intermediaries to the possibility that the inpatient stay may not be medically necessary. Absent other medical indications which would necessitate the delivery of services on an inpatient basis, intermediaries should consider such hospital stays to be noncovered under Part A. (See § 3422.1 regarding PSRO involvement and § 3605.6 regarding waiver processing.)

2. One-day Preoperative Stay Prior to Performance of Essentially Outpatient Surgical Techniques.--Some providers may admit patients the day before surgery for preoperative services when the actual surgical procedure does not normally require an overnight postoperative stay. Where both the preoperative and surgical procedures could safely and effectively be conducted on an outpatient basis, claims for preoperative overnight stays should be considered noncovered.

3. One-day Stay for Psychiatric and Alcoholism Patients.-- A pattern of improper utilization often exists where providers routinely claim one-day

inpatient stays for patients with a psychiatric and/or alcoholism diagnosis. Intermediaries should carefully evaluate such cases (unless the record indicates that the patient was discharged against medical advice) to insure that there was a medical need for and intention to provide acute, inpatient hospital services. Reimbursement should not be made for care if hospitals are inappropriately providing overnight room and board for these patients.

4. Billing An Inpatient Stay Where The Patient Has Not Been Admitted as An Inpatient.--If a patient does not actually stay overnight in a provider, Medicare does not permit an "admission" to be billed as an inpatient stay, unless the patient was formally admitted as an inpatient with a reasonable expectation that he or she would remain overnight and was unexpectedly discharged earlier (see § 3101 and 3611).

Intermediaries should be particularly alert to situations in which providers submit a significant number of one-day inpatient stay claims. If, upon investigation, it is determined that an inpatient stay has not occurred in a particular instance, instruct the provider to bill the stay correctly, and delete the item from inpatient statistics. The argument that the "reasonable expectation" of overnight stay applies to all patients (in for example, a "walk-in surgery" service), is not acceptable, since each case must be considered individually.

3422.1 RELATIONSHIP OF PSROs TO THE ASSURANCE OF PROPER UTILIZATION IN SHORT STAY CASES

In situations where a PSRO has assumed binding review authority, the PSRO is responsible for certifying the medical necessity of admissions, including short stay cases. Because PSROs have typically concentrated review activity on extended stays, it is particularly important that intermediaries alert the PSRO to questionable utilization patterns in short stay cases even after formal intermediary monitoring of PSRO decisions has ceased. The PSRO, of course, retains binding authority to make medical necessity decisions on such cases but may wish to conduct a special review of short stay cases. Their binding authority extends to the situations described in subsections 1, 2, and 3 of 3422, above. In situations, however, where erroneous or inappropriate billing practices are involved (see subsection 4, above), intermediaries are responsible for taking action. The decision as to whether inpatient or outpatient services were rendered is a factual determination, which does not require the medical judgment of the PSRO.

Limitation on Liability of Beneficiary and Provider Where Medicare Claims Are Disallowed

3430. LIMITATION OF LIABILITY FOR PROVIDER CLAIMS UNDER PARTS A AND B OF MEDICARE PROGRAM.

Section 1879 of the Act provides relief for a beneficiary who acted in good faith in accepting services found to be not reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member, or to constitute custodial care. The provision also applies to denials of home health services beginning July 1, 1987 and ending September 30, 1989, where the beneficiary is not homebound or does not or did not need skilled nursing care on an intermittent basis. In such situations, the beneficiary is not liable for the charges for the services. The provider is liable if it is determined the provider knew, or could reasonably have been expected to know, that the items or services provided were not covered under Medicare. However, the Medicare program accepts liability, i.e., makes payment to a provider even though a noncovered service is involved, if neither the beneficiary nor the provider knew, or could reasonably be expected to have known, that the services were not covered.

This provision does not apply to any services rendered by a provider prior to the date on which its Medicare agreement is accepted by the Secretary, even though the effective date of the agreement may be earlier. This is so because a beneficiary entering a nonparticipating provider could not reasonably have expected Medicare coverage.

Section 1879 permits a provider to appeal a determination that services were not reasonable or necessary or constituted custodial care when it is determined that liability rests entirely with the provider, or when the beneficiary is partially or completely liable for the noncovered items or services and it has been determined that the beneficiary is not exercising his appeal rights. (See §3781.4.) Section 1879 also provides that the Medicare program will indemnify (i.e., make direct payment to) the beneficiary or other person(s), subject to the deductible and coinsurance amounts, for any payments made by the beneficiary or other persons to a liable provider that are not refunded or credited, for items or services which have been determined to be noncovered, as specified in §3431. Any payments made as indemnification are treated as overpayments to such provider and withheld from future Medicare benefits due that provider. (See §3446.8.)

NOTE: Sections 3431 through 3442 discuss specific procedures for implementing this provision with regard to provider claims for inpatient Part A services generally billed on form HCFA-1450, in addition to Part A and Part B HHA claims billed on form HCFA 1450. Section 3444 discusses procedures for processing ancillary and outpatient provider services payable under Part B usually billed on form HCFA-1450.

3431. APPLICABILITY OF LIMITATION OF LIABILITY TO ITEMS OR SERVICES FURNISHED BY PROVIDERS OF SERVICES PAYABLE UNDER PART A.

A. The limitation of liability provision applies to claims denied for the following reasons:

- Items or services that are not reasonable and necessary for the diagnosis or treatment of illness, injury, or to improve the functioning of a malformed body member (excluded by §1862(a)(1)(A); see §3151); or in the case of hospice care, are not reasonable and necessary for the palliation or management of terminal illness (excluded by § 1862(a)(1)(C)).

- Items or services that constitute custodial care (excluded by §1862(a)(9); see §3159), i.e., are not a covered level of care.

- Under OBRA (Pub. L. 99-509) for denials processed on or after July 1, 1987, and through September 30, 1989, those HHA services denied under §1814(a)(2)(C) or §1835(a)(2)(A) because the patient: is not or was not confined to his/her home, or does not or did not need skilled nursing care on intermittent basis, are subject to application of the limitation of liability provisions under §1879 of the Act.

NOTE: Limitation of liability applies to both the services which were denied directly for the reasons shown, and the dependent services which may be denied as an indirect result of denials for the reasons listed. For example, where the services of a home health aide were denied because the beneficiary failed to meet the statutory requirement of needing skilled nursing care on an intermittent basis, limitation of liability also applies to the home health aide services which are denied as an indirect result of the denial of the skilled nursing care.

This limitation of liability provision does not apply to claims denied for any other reason. (See §3707 concerning liability for overpayments arising from other causes.)

B. The following examples illustrate types of denials which cannot involve the limitation of liability provision and for which no payment can be made. (These examples are not all inclusive.):

- Inpatient hospital services for cosmetic surgery, or excluded foot care services.

- Services payable under State or Federal workers' compensation.

- SNF stay not preceded by the required 3-day hospital stay. (See §3431.1A.)

- The beneficiary did not meet the requirement for transfer to an SNF and for receiving covered services within 30 days after discharge from the hospital nor were the special requirements met for extension of the 30 days. (See §§3431.1 and 3431.3.)

- o Denial of payment of charges for private room accommodations. (See § 3101.1ff.)
- o Home health visits denied because they were not ordered on a plan of treatment or subsequent amendment.

3431.1 Prior Hospitalization and Transfer Requirements for SNF Coverage as Related to Limitation of Liability.-- In order to qualify for posthospital extended care services, the individual must meet the prior hospitalization and transfer requirements discussed in §§ 3131-3131.3. The following sections discuss the relationship of these requirements to the limitation of liability provision.

A. Three-Day Prior Hospitalization.-- Before Medicare payment can be made for posthospital extended care services, it is necessary to determine whether the beneficiary had a prior qualifying hospital stay of at least 3 consecutive calendar days. When a beneficiary's liability for a hospital stay is waived, the hospital days to which the limitation of liability applies cannot be used to satisfy the 3-day prior hospitalization requirement, since the services rendered during the days in question were found noncovered because they were not considered reasonable and necessary or because they constituted custodial care. (See § 3131.1 for instructions on determining whether the 3-day prior hospitalization requirement is met.) If a beneficiary's hospital stay was partially covered, consider the covered portion of the stay in determining whether the SNF prior hospitalization requirement is met.

B. Transfer Requirements.--

1. Transfer Period.-- The limitation of liability provision may be applied where you determine that all the SNF care received during the period serving to satisfy the transfer requirements described in §§ 3131.3A and 3131.3B1 either constituted custodial care or was not reasonable and necessary. Where you determine that only the beneficiary's liability can be waived, the limitation of liability applies through the date of the notice to the beneficiary including any inpatient days beyond the transfer period. If the provider is also entitled to limitation of liability and program payment is possible under the limitation of liability provision, such payment is appropriate through the date of the notice and if you determine that additional time is needed to arrange for postdischarge care, for up to 24 hours after the date of notice to the provider or the beneficiary, whichever is earlier. If you determine that even more time is needed to arrange postdischarge care, up to 24 additional hours may be paid for. (See § 3441.)

Where a beneficiary entitled to limitation of liability starts to require and receives reasonable and necessary or noncustodial services only after the expiration of the SNF transfer period, he may nevertheless have his liability waived for days where such services were rendered, in addition to those days waived during the noncovered transfer period but only through the date of notice to the beneficiary. If the provider is also entitled to limitation of liability, program payment may be made under the limitation of liability provision through the date of notice of noncoverage, and if you determine that additional time is needed to arrange for postdischarge care, for a "grace period" of 1 day thereafter. If you determine that even more time is needed to arrange postdischarge care, 1 additional "grace period" day may be paid for. (See § 3441.) This payment is made because it is inequitable to waive liability for noncovered services rendered during the transfer period but not for a period thereafter (prior to notice) during which the beneficiary needed and received an otherwise covered level of care.

2. Delayed Transfer Due to Medical Appropriateness.-- The law also provides for an extension of the usual 30-day time limit for transfer where the patient's condition makes it medically appropriate. (See § 3131.3B2.) However, if you determine that such an extension is not allowable because an interval of more than 30 days for transfer to an SNF was not medically appropriate, the SNF services are to be denied because the transfer requirement was not met. The limitation of liability provision is not applicable in such a case.

3431.3 Application of Limitation of Liability to SNF and Hospital Claims for Services Furnished in Non-Certified or Inappropriately Certified Beds.—

A. General.—Payment for SNF and hospital claims may not be denied solely on the basis of a beneficiary's placement in a non-certified bed of a participating SNF or hospital. When requested to by the beneficiary or his representative, a provider must submit a claim to you for services rendered in a non-certified bed. When you review a claim for services rendered in a non-certified bed, you must first determine whether the beneficiary consented to the placement. (See § 3431.3C.) If you find that the beneficiary consented, the claim must be denied. If you find that the beneficiary did not consent, you must determine whether there are any other reasons for denying the claim. (See § 3431.3D.) If there is another reason for denying the claim, it must be denied. However, if none of the reasons for denial exist, beneficiary liability must be waived as provided under § 1879(e) and a further determination must be made as to whether the provider, rather than the Medicare program, must accept liability for the services in question. (See § 3431.4.)

B. Provider Notice Requirements.—When an SNF or hospital places a patient in a non-certified or inappropriately certified portion of its facility because it believes the patient does not require a covered level of care, or for any other reason, it must notify the patient (or person acting on behalf of the patient) in writing that services in a non-certified or inappropriately certified bed are not covered. The written notices should make it clear that the beneficiary has the right to request that the provider file a claim for Medicare benefits if he/she believes a covered level of services is required, such as:

> "We are placing you in a part of this facility which is not appropriately certified by Medicare because (you do not require a level of care that will qualify as skilled nursing care/or covered hospital services under Medicare)/(or state any other reasons for the non-certified bed placement). Nonqualifying services furnished a patient in a non-certified or inappropriately certified bed are not payable by Medicare. However, you (or someone acting on your behalf) may request us to file a claim for Medicare benefits. Based on this claim, Medicare will make a formal determination and advise whether any benefits are payable to you."

If the beneficiary requests that the provider submit a claim for Medicare payment, the provider must do so. The provider should point out that the claim is being submitted at the beneficiary's request and explain why it considers the care to be noncovered.

C. Determining Beneficiary Consent.—Effective for services provided on or after February 1, 1983, providers may submit evidence to rebut the presumption that the beneficiary did not consent to the placement in a non-certified bed. However, under this policy, beneficiaries will still not be viewed as having given their consent to placement in a non-certified bed if their consent is based on erroneous or incomplete information. In other words, if the beneficiary consents on the basis of an incorrect statement from the provider's admissions office, the Utilization Review Committee, or any other entity on which the beneficary could reasonably be expected to rely, that he does not require a covered level of care, then the consent is determined to have been invalid, and program payment may be made (assuming, of course, that there exists no other basis on which to deny the claim). On the other hand, a beneficiary may knowingly and voluntarily consent to placement in a non-certified bed—because he only requires a short stay, because he wishes to be placed in a facility that is near a close relative, because he believes the care will be paid for by a third party payor (other than Medicare), or for any other reason. In such a situation, program payment is not to be made, even though the beneficiary may have needed and received an otherwise covered level of care.

In order to rebut the presumption of non-consent, the provider must submit to you a valid consent statement attached to any request for payment for care received in non-certified beds. Moreover, in any case in which a Medicare beneficiary gives his or her consent to placement in a non-certified bed, the provider must submit a consent statement to you, and you are to determine its validity. In order to be considered valid, the consent statement must include language to the effect that the beneficiary understands that his or her voluntary placement in a non-certified portion of the facility disqualifies the beneficiary from eligibility for Medicare payments for services received while in the non-certified bed. The statement must assert that the beneficiary's consent to being placed in a non-certified bed is given freely. The consent statement must be signed by the beneficiary (provided he or she is competent to give such consent) or by the beneficiary's legal representative, and must be accompanied by a physician's statement attesting to the beneficiary's competence or incompetence. If any of these requirements is not met, a consent statement is automatically determined to be invalid.

When you receive requests for payment with consent statements attached, determine whether the consent statement is valid, that there is no evidence of coercion, and that it is not based on erroneous information. If the consent is found to be valid, deny the claim and notify the beneficiary (see Sample Letter No. 5) that §1879 limitation of liability cannot be applied because of his or her valid consent to be cared for in a non-certified or inappropriately certified bed. If the consent is found to be invalid process the claim further in accordance with the instructions in §§ 3431.3D and 3431.4.

Review consent statements that do not accompany requests for payment. If you determine that the consent statement is invalid, notify the provider and the beneficiary that payment may be made to the extent that all other requirements are met.

D. Determining Whether Other Requirements for Payment are Met.—Denials still are appropriate for any of the following reasons and you should undertake the development needed to permit a determination as to whether:

o The patient did not receive or require otherwise covered hospital services or a covered level of SNF care;

o The benefits are exhausted;

o The physician's certification requirement is not met;

o There was no qualifying 3-day hospital stay (applicable to SNF's only); or

o Transfer from the hospital to the SNF was not made on a timely basis. (However, if transfer to an institution which contains a participating SNF is made on a timely basis, a claim cannot be denied solely on the grounds that the transfer requirement is not met because the bed in which the beneficiary is placed is not a certified SNF bed.)

Deny cases falling within these categories under existing procedures. Also, if the beneficiary receives care in a totally nonparticipating institution, denial on the grounds that he was not in a participating SNF or hospital is still appropriate.

E. Intermediary Notices to Advise Beneficiary of Claim Development.—Upon receipt of a claim for services furnished in a non-certified or inappropriately certified bed, review it to see if it should be denied for any of the reasons listed in subsections B, C or D. If so, send appropriate denial letters. If not, immediately send the beneficiary an acknowledgement modeled after Sample Letter No. 1. Undertake development as needed and make a determination as to whether the beneficiary required and received otherwise covered hospital or SNF services. (If claims are subject to PRO review, request the PRO to prepare a determination as to whether the patient was furnished otherwise covered SNF or hospital services in the noncertified portion of the facility.) If you determine that the beneficiary did not require and receive otherwise covered services, send a denial letter modeled after Sample Letter No. 2 (for SNF claims) and Sample Letter No. 3 (for hospital claims). If you found that the beneficiary required and received services equivalent to a covered level of SNF or hospital care, send a letter modeled after Sample Letter No. 4.

SAMPLE LETTER NO. 1

ACKNOWLEDGEMENT LETTER TO BENEFICIARY

This is to let you know that we are reviewing the claim that was submitted for you by (name of SNF) for services you received at the nursing home between (dates).

In order for us to make a determination on that claim, we need more information from the nursing home about your medical condition, the services you received, and why you were placed in a part of the nursing home that is not certified to provide Medicare services.

It may take us a few weeks to get the information we need and to make a determination. You may submit medical evidence such as statements from your treating physicians, or treatment records to show that you required and received skilled nursing services at the (name of SNF) between (dates).

We will notify you of our determination on this claim as soon as we can.

SAMPLE LETTER NO. 2

DENIAL LETTER - BENEFICIARY DID NOT RECEIVE REQUIRED SNF LEVEL OF CARE

This is in response to the Medicare claim submitted in your behalf by (name of SNF) for services you received as a patient at the nursing home between (dates). After a careful review of the facts, we have denied the claim.

Normally, Medicare payments can only be made for services furnished in a nursing home, or in a part of a nursing home, that has been certified as qualified to participate in the Medicare program. However, Medicare policy now permits payment for otherwise covered services furnished in noncertified parts of participating nursing homes, under the following circumstances:

Payments may be made for individuals who need and receive skilled nursing care or skilled rehabilitation services on a daily basis for the continued treatment of a condition for which they received inpatient hospital care. Skilled care is the type of care which must be furnished by or under the supervision of skilled personnel to assure the safety of the patient and to achieve the medically desired result.

However, when individuals in a nursing home do not require such skilled services on a daily basis, or do require such care but do not receive it, the services they do receive are not payable under the Medicare law. Since we have determined that your stay in (name of SNF) was not covered because (you did not need or receive skilled nursing care or skilled rehabilitation services on a daily basis,) no Medicare benefits can be paid on your behalf.

If you have any questions about this determination, you should first get an explanation from your local Social Security Office. If you still believe the determination is not correct, you may file a request for reconsideration within 60 days from the date of this notice. You may make the request through your Social Security Office.

SAMPLE LETTER NO. 3

DENIAL LETTER - BENEFICIARY DID NOT RECEIVE OTHERWISE COVERED HOSPITAL SERVICES

This is in response to the Medicare claim submitted in your behalf by (name of hospital) for services you received as a patient at the hospital between (dates). After a careful review of the facts, we have denied the claim.

Normally, Medicare payments can only be made for services furnished in a hospital, or in a part of a hospital that has been certified as qualified to participate in the Medicare program. However, Medicare policy permits payment for otherwise covered services furnished in noncertified or inappropriately certified parts of participating hospitals, under certain circumstances.

Payment for inpatient hospital care may be made if such care is reasonable and necessary for the treatment or diagnosis of the patient's condition and can be furnished only in an inpatient hospital setting.

However, when individuals in a hospital do not require the type of care described above, the services furnished are not covered under the Medicare law. Since we have determined that the services you received were not covered because you did not require or did not receive a level of care that could be furnished only in an inpatient hospital setting, no Medicare benefits can be paid on your behalf.

If you have any questions about this determination, you should first get an explanation from your local Social Security Office. If you still believe the determination is not correct, you may file a request for reconsideration within 60 days from the date of this notice. You may make the request through your Social Security Office.

SAMPLE LETTER NO. 4

NOTICE OF DECISION TO BE ISSUED TO BENEFICIARY WHERE OTHERWISE COVERED SERVICES WERE FURNISHED IN A NONCERTIFIED OR INAPPROPRIATELY CERTIFIED BED

This is in response to the Medicare claim submitted in your behalf by (name of facility) for services you received as a patient at the facility between (dates). These services are not covered under Medicare, because they were furnished in a part of the facility that was not appropriately certified for Medicare purposes. However, since you received needed services that would have been covered under Medicare if furnished in an appropriately certified part of the facility, we have decided that you will not have to pay the facility for anything more than the standard Medicare coinsurance, and charges for certain items Medicare does not pay for, such as telephones and TV rentals. The days you spent in the facility will be counted in figuring the number of Medicare benefit days that you have used, and the number still available to you.

You need not pay any bills you have received or may receive from the facility for these services except for bills covering the standard Medicare coinsurance and noncovered items. If you have already paid a bill, or if you have any questions about whether to pay a bill, please contact this office or your local Social Security Office within 6 months and furnish the following documents: a copy of this notice, the bill(s) received for services, receipts, or other evidence of payments to the provider.

If you have any questions about this determination, you should first get an explanation from your local Social Security Office. If you still believe this determination is not correct, you may request a reconsideration within 60 days from the date of this notice. You may make the request through your Social Security Office.

SAMPLE LETTER NO. 5

DENIAL LETTER - BENEFICIARY CONSENTING TO PLACEMENT IN NONCERTIFIED OR INAPPROPRIATELY CERTIFIED BED LATER FILES CLAIM

This is in response to the Medicare claim submitted in your behalf by (name of facility) for services you received as a patient at the facility between (dates). These services are not covered under Medicare, because they were furnished in a part of the facility that was not appropriately certified for Medicare reimbursement.

There is a provision that permits Medicare payment where a patient who otherwise qualifies for Medicare reimbursement is inadvertently or erroneously placed in a noncertified or inappropriately certified bed. However, this provision does not apply where the beneficiary consents in writing to placement in such a bed and is fully knowledgeable of the consequences.

The attached statement shows that you gave written consent to placement in the inappropriately certified bed at the (name of facility) and that you understood that the charges for the services furnished you would not be reimbursed by Medicare since you did not intend to claim such Medicare reimbursement. Therefore, we have determined that no Medicare benefits can be paid on your behalf.

If you disagree or have any questions about this determination, you should contact this office for an explanation. If you still believe the determination is not correct, you may file a request for reconsideration within 60-days from the date of this notice. You may also make the request through your Social Security Office.

Attachment

3431.4 Determining Liability For Services Furnished in a Non-Certified SNF or Hospital Bed.—

A. Beneficiary Liability.—If you determine that the beneficiary did not consent to placement in the non-certified bed within the participating facility (see § 3431.3C), and that no other basis for denial of the claim exists (see § 3431.3D), find the beneficiary not liable under § 1879 of the Act.

B. Provider Liability.—If the beneficiary is found not liable under § 1879, liability may rest with the provider, or with the program. Liability rests with the Medicare program, unless any of the following conditions exist, in which case the provider is liable for the services.

o The provider did not give timely written notice to the beneficiary of the implications of receiving care in a non-certified or inappropriately certified bed as discussed in § 3431.3B.

o The provider failed to attempt to obtain a valid consent statement from the beneficiary. (See § 3431.3C.)

o You determined from medical records in your claims files that it is clear that the beneficiary required and received services equivalent to a covered level of SNF care, or that constituted covered hospital services, and the provider had no reasonable basis for placing the beneficiary in a non-certified bed. Following are examples of situations in which it would be found that the provider did in fact have a reasonable basis to place a beneficiary in a non-certified bed:

EXAMPLES:

— You, a PRO, or Utilization Review Committee had advised the provider that the beneficiary did not require a covered level of SNF care or covered hospital services;

— The beneficiary's attending physician specifically advised the provider (verified by documentation in the medical record) that the beneficiary no longer required a covered level of care or services;

— A beneficiary not requiring covered services had a change in his condition that later required a covered level of care or services and the provider had no certified bed available (of course, the SNF transfer requirement must be met, see § 3131.3ff.);

— The provider itself decided that the beneficiary did not require a covered level of care, unless you determined that in more than 5 percent of these SNF placements or 2.5 percent of hospital placements in a calendar quarter, the beneficiary required and received services equivalent to a covered level of SNF care or covered hospital services. (The provider may, of course, still attempt to show in any individual case that it had a reasonable basis for deciding that covered care was not required); or

— You have other sufficient evidence to determine that the provider acted in good faith but inadvertently placed the beneficiary in a non-certified bed.

3432. DETERMINING LIABILITY FOR PROVIDER CLAIMS UNDER SECTION 1879—

Ordinarily a finding is made that the beneficiary did not know nor could reasonably have been expected to know that the items or services were not covered by Medicare, unless there is evidence as discussed in § 3432.1. The procedures for determining whether the provider knew or could reasonably have been expected to know of the noncoverage of services are discussed in § 3432.2.

3432.1 Determining Beneficiary's Liability.--For the beneficiary, the presumption is made that he did not know that services are not covered unless the evidence indicates that written notice was given to the beneficiary. In some cases, the beneficiary may have been given notice in a previous claim that a type of care is not covered. More commonly, the provider or its utilization review committee gives notice to the beneficiary that a particular stay or course of treatment is not covered or that coverage ended at a particular time. (See § 3440 regarding when a beneficiary is on notice of noncoverage.)

A. Beneficiary Determined to Be Liable--Right to Appeal.--When you determine that the beneficiary is liable, the beneficiary is held responsible for the payment of expenses incurred for items or services determined to be noncovered under Medicare. However, the beneficiary can appeal both your determination holding him liable for the cost of the noncovered care and the coverage issue. (See § 3781.3.)

B. Beneficiary Determined to Be Without Liability.--Unless evidence indicates that the beneficiary knew or had reason to know that the items or services he received were noncovered because they were not reasonable or necessary or constituted custodial care, presume that the beneficiary did not know that the services are not covered.

When the beneficiary's liability is waived, all days or HHA visits for which he received benefit of limitation of liability (whether Medicare payment is made) are charged to the beneficiary's utilization record of hospice and SNF days and HHA visits, as though covered under Medicare.

Such days and visits are shown as having been used on the utilization notice, form HCFA-1533. This requirement includes days for which the beneficiary's liability has been waived but for which the provider is liable. (See § 3610.9.)

3432.2 Determining Provider Liability.--

A. General.-- Hold the provider liable for noncovered services if it is determined that the provider:

- o had actual knowledge of the noncoverage of services in a particular case, or
- o could reasonably have been expected to have such knowledge.

B. The Favorable Presumption Provision. —Prior to March 24, 1986, a provider that was found to make all reasonable efforts to assure that its Medicare coverage decisions were correct and demonstrated the ability to make accurate Medicare coverage decisions, was presumed not to have had knowledge of noncoverage. As a means of determining whether the provider could be entitled to such a "favorable presumption" under the limitation of liability provision, a denial rate criterion was established which was intended to indicate whether the provider could make accurate judgments concerning the coverage or noncoverage of services in most cases. If the provider did not meet the denial rate criterion, it could not be considered to have taken all reasonable measures to obtain knowledge of noncoverage and therefore could not be granted a favorable presumption.

The application of § 1879 limitation of liability provisions was revised by a final rule published in the Federal Register on February 21, 1986. That final rule had no provision for the use of the favorable presumption for providers (hospitals, SNFs, HHAs, and additional entities included in § 3444) effective for services furnished on or after March 24, 1986. However, use of the favorable presumption was extended for limited periods by subsequent legislation. See subsection C below.

C. Time-Limited Extension of Favorable Presumption by Legislation.—

1. The Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA), enacted April 7, 1986, provided for the use of the favorable presumption for SNFs and HHAs for designated periods:

a. The favorable presumption applies for 30 months after the month of enactment for SNFs who meet a 5 percent denial rate criterion; that is, to denials processed through October 31, 1988.

b. The favorable presumption applies for medically reasonable and necessary denials of HHAs who meet a 2.5 percent denial rate criterion until one year after the date on which the 10 regional home health intermediaries have begun operations to service HHAs. It has been determined that the favorable presumption will apply to such denials of services processed through August 31, 1988.

Extension of the favorable presumption also applies to ancillary and outpatient services furnished by an SNF and to outpatient services (e.g., physical therapy (PT) and speech pathology (SP)) furnished by an HHA in its capacity as a rehabilitation agency, as long as the HHA has only one provider number. The statutory provision for use of the favorable presumption extends to all services provided by SNFs and HHAs, including those which are payable under Part B discussed in §3444ff.

Since a hospital when it provides swing-bed care can be considered to function as an SNF, the favorable presumption does apply in accordance with the aforementioned COBRA provisions, where a hospital files for reimbursement for SNF services furnished in one of its swing beds.

2. The Omnibus Budget Reconciliation Act of 1986 (OBRA), enacted October 21, 1986, provided for the use of the favorable presumption for hospices and for technical denials of HHA claims for designated periods:

a. Hospice.—OBRA provided for the use of the favorable presumption for denials of hospice services furnished on or after May 1, 1987 through October 31, 1988. The favorable presumption applies for hospices with denial rates of 2.5 percent or less for services denied under §1862(a)(1)(C) (i.e., hospice services which are not reasonable and necessary for the palliation or management of terminal illness).

b. Home Health Technical Denials.--For claims processed on or after July 1, 1987 and through September 30, 1989, OBRA provides for application of limitation of liability and use of the favorable presumption for denials of home health services where the beneficiary does not meet the requirements under §1814(a)(2)(C) or under § 1835(a)(2)(A) of being homebound or of needing skilled nursing care on an intermittent basis. A favorable presumption regarding the limitation of liability for such denials is available for HHAs which (1) comply with requirements respecting timely submittal of bills for payment and medical documentation, (2) promptly notify patients, and their physicians, where it is determined that a patient is being or will be furnished items or services which are excluded from coverage, and (3) have not more than 2.5 percent of claims submitted during the previous quarter (based on visits billed) denied on the bases of home bound or intermittent nursing care requirements. Ordinarily (1) and (2) will be deemed to have been met where the HHA meets the 2.5 percent denial rate requirements for such denials. Limitation of liability will not apply to these technical denials after September 30, 1989.

D. Effect of Favorable Presumption. —Where an SNF, HHA or hospice meets the denial rate criteron for any particular category of denials in §3432.2 C, all of its claims for services for the particular category of denials are to be processed under the favorable presumption that the provider of the services has no knowledge of noncoverage, unless the evidence in the particular case shows that, in fact, the provider has or could reasonably have been expected to have had knowledge of noncoverage. (See §3439ff.) When the denial rate criterion is not met for any of the categories of denials in §3432.2 C, a favorable presumption cannot be extended for any of those denials. However, even though a favorable presumption cannot be extended to its claims, the SNF, HHA or hospice may allege that, in an individual claim, it did not know and could not reasonably have been expected to know that the services were not covered. In such situations, you must consider the evidence submitted in support of the provider's allegation. These situations will generally arise during the reconsideration process. In order for a provider to qualify for limitation of liability, the evidence must show that, even though the SNF, HHA or hospice has not qualified for a favorable presumption in the particular denial, it still did not know or could not reasonably have been expected to know that the care was not covered.

Each category of denials discussed under subsection C. will be subject to a favorable presumption. Thus, an SNF in C.1.a. could qualify for a favorable presumption based on its medical necessity denials under §§1862(a)(1) or (9). A hospice under subsection C.2.a. also could qualify for a favorable presumption based on its hospice medical necessity denials under §1862(a)(1)(C). An HHA, however, could qualify for two separate favorable presumptions, one based on its medical necessity denials §1862(a)(1) or (9) as discussed in subsection C.1.b, and another based on its technical denials §§1814(a)(2)(C) and 1835(a)(2)(A) as discussed in subsection C.2.b.

Even though an SNF, HHA or hospice meets the requirements for a favorable presumption, if any such provider has been advised either by your bulletins or by denial of a prior claim that a specific modality of services that it rendered was not covered, claims for that specific modality of services can not be entitled to the favorable presumption for limitation of liability purposes. (See §3439ff.) See §3444ff. for a discussion of limitation of liability for ancillary and outpatient services payable under Part B.

E. Provider Is Determined to Be Liable--Right to Appeal. -- A provider which is determined liable for all or a portion of the charges for noncovered items and services furnished a beneficiary may appeal such a decision by you under certain conditions. If a beneficiary is partially liable for the noncovered items or services, you must first establish that the beneficiary will not exercise his appeal rights. (See §3781.4.) If the beneficiary chooses not to appeal, the provider has the right to appeal both the coverage and limitation of liability decisions. However, a provider does not have a right to appeal when neither the beneficiary nor the provider is liable, e.g., when the entire noncovered portion of the stay is paid under §1879.

NOTE: The limitation of liability provision does not apply to third party payors except liability insurers. Therefore, a provider that you determine liable may seek payment from a third party payor other than a liability insurer without being subject to recovery action that could occur if it sought payment from the beneficiary.

F. Provider and Beneficiary Determined to Be Without Liability.-- If you determine that neither the provider nor the beneficiary knew or had reason to know that the services provided the beneficiary were not covered, the Medicare program will accept liability and make payment. (See §3441.)

3433. CRITERIA FOR PRESUMING THAT SNF, HHA OR HOSPICE MEETS LIMITATION OF LIABILITY REQUIREMENTS.

To determine whether an SNF, HHA or hospice has knowledge of Medicare coverage rules and can apply them, collect statistics to ascertain whether denial rates exceed 5 percent for SNFs and 2.5 percent for hospices and HHAs (the HHAs' 2.5 percent criterion applies to each favorable presumption calculation, that is, separately for medical necessity denials and technical denials). (See § 3434ff. for determining denial rates.)

Because compliance with the denial rate criterion is difficult without an effective URC, timely notification of noncoverage to patients, and timely and meaningful completion of physician certifications, these activities need not be separately evaluated for purposes of determining a provider's qualification for a favorable presumption.

For purposes of determining favorable presumption, compliance with the following criteria are deemed met if the SNF, HHA, or hospice meets its applicable denial rate: (1) all UR standards; (2) the certification/recertification requirements in 90 percent of the cases reviewed; (3) procedures that assure that bills and medical documentation are submitted in a timely manner; and (4) procedures which assure timely notice to beneficiaries.

3433.1 Newly Participating SNF, HHA or Hospice.--When denial rate statistics are not available for a newly participating SNF, HHA, or hospice, it is deemed to meet the requirement for an initial period not to exceed 60 days. During this period, monitor the provider's performance and evaluate the data being accumulated on an ongoing basis. The denial rate for the initial period determines whether the provider qualifies for the favorable presumption for the following quarter.

3433.2 SNF, HHA or Hospice Changing Intermediaries.--An SNF, HHA, or hospice changing intermediaries retains the favorable presumption received from its prior intermediary for a 60-day period from the date of the change, during which the new intermediary accumulates denial rate data. However, if in the judgment of the new intermediary, sufficient data have been accumulated prior to the end of the 60-day period to support a finding that the provider is, or is no longer, complying with this criterion, continue or withdraw favorable presumption accordingly. (See § 3434.9 with regard to low utilization providers.)

3433.3 Reevaluating Favorable Presumption.-- Each SNF, HHA, and hospice must be reevaluated at least every 3 months to determine whether it is entitled to a favorable presumption (or presumptions, in the case of HHAs). (See § 3434.7.) A shorter time span may be set for reevaluation in special situations where there is a drastic fluctuation in denial rates.

Notify the provider in writing when there is a change in its qualification for favorable presumption. Explain not only what this means in terms of limitation of liability determinations as discussed in § 3432.2, but also what a favorable presumption means to the provider in terms of its giving notice of noncoverage to beneficiaries as discussed in § 3440. If the denial rate criterion is not met, the reason must be clearly explained. Work with such providers to assist them in meeting the criterion. Even though a determination that the denial rate criterion is not met is not subject to appeal, document the reason for such decisions and assist the SNF or HHA in meeting the criterion.

3433.4 Notifying ROs of Excessive Denial Rates.--Advise your RO of SNFs, HHAs or hospices that continue to submit bills resulting in an excessive rate of denials. A denial rate for two successive quarters higher than 5 percent for HHAs and hospices and 10 percent for SNFs is excessive, and may indicate potential program abuse.

3433.5 Reevaluating Favorable Presumption for Prior Period.--Occasionally, new information may indicate that an earlier determination that an SNF, HHA or hospice qualified for favorable presumption was erroneous. In such a situation, you may retrospectively reevaluate and redetermine the provider's previous qualification for favorable presumption.

If the reevaluation establishes that the provider did not qualify for the favorable presumption, determine that the provider had, or could reasonably have been expected to have had, knowledge of the noncoverage of the services for claims denied as not being medically reasonable and necessary or for custodial care, or as technical denials, in the case of HHAs, unless the provider can demonstrate through objective evidence that, even if it had had a favorable presumption, it would not have known that the services were noncovered. Such a reevaluation and redetermination is made only after careful and well-documented examination of the facts and issues.

Even though the provider was determined to be in compliance with the appropriate denial rate criterion, upon reevaluation, the favorable presumption may be rebutted in any individual case in which the evidence is clear that the provider should have known at the time that the services furnished were not covered. (See § 3439.)

3434. DETERMINING DENIAL RATE FOR FAVORABLE PRESUMPTION.

Specified data must be recorded for each SNF, HHA or hospice for those cases in which a Medicare beneficiary receives services as an inpatient of a participating SNF or receives services from a participating HHA or hospice prior to an event terminating program coverage. Terminating events include: (1) provider notice; (2) URC notice; (3) intermediary notice; (4) exhaustion of benefits; (5) transfer to a non-certified bed; (6) discharge; and (7) death.

Denial rates are calculated on the basis of the formula B/A, in which "B" - the number of denials (the numerator) is divided by "A" - the number of claims submitted (the denominator). The denominator is always either (1) the entire universe of claims (days or visits) billed as covered and incurred before a terminating event, or (2) all claims (days or visits) included in a statistically valid random sample. The numerator is the number of denials (days or visits) within either the entire universe of claims or the random sample, as appropriate. Due to medical review requirements, the use of the random sampling option for calculating denial rates is inappropriate for all HHA claims, for all hospice claims, and for hospital based SNF claims, and "A" must be the entire universe of claims. Random sampling may be used for freestanding SNF claims. In any case where selection of a statistically valid random sample is not possible, "A" must be the entire universe of claims.

3434.1 SNF Denial Rate Calculation.--The following data must be recorded:

A. All days (excluding "grace" days under §1879) that the SNF billed as covered and which were incurred prior to a terminating event, that is, all such days in the universe of claims or in the random sample. (Random sampling may be used only for freestanding SNFs.)

B. All days that the SNF billed as covered but that you determined to be noncovered because the services provided were not medically necessary and reasonable or constituted custodial care, that is, all such days in the universe of claims or in the random sample.

- Days denied for reasons other than those noted in B above are not to be included in B.

To calculate the denial rate, divide "A" into "B." For the denial rate criterion to be met, the number of days in "B" must not exceed 5 percent of the number of days in "A."

Examples of Denial Rate Calculation for SNFs

EXAMPLE 1: Standard Billing:

> A patient was admitted to an SNF on 1/1 and discharged on 1/31. A claim for payment was submitted to the intermediary for the period 1/1 to 1/31. The intermediary determined that covered care ended on 1/20 and noncovered care began on 1/21. The data collected on this case shows A = 30; B = 10.

EXAMPLE 2: Interim Billing:

> Patient was admitted to an SNF on 1/1 and was still an inpatient on 1/31. An interim bill for the period 1/1 to 1/31 was submitted to the intermediary. The intermediary reviewed the claim on 2/10 (beneficiary was still an inpatient on that date), determined that covered care ended on 1/20 and noncovered care began 1/21. Based only on the days billed in the interim bill, the intermediary compiles the data for the number of days actually billed as covered and the number of days determined to be noncovered (A = 31, B = 11). If the SNF submits a payment bill to Medicare for the subsequent period, the additional data would be compiled (A = 10 (2/1 - 2/10); B = 10 (2/1 - 2/10)).

3434.2 HHA Denial Rate Calculation.--The following data must be recorded:

A. All visits (excluding "grace" visits under §1879) that the HHA billed as covered and which were incurred prior to a terminating event.

B. All visits the HHA billed as covered but that you determined to be noncovered because (1) the services provided were not medically necessary and reasonable or constituted custodial care; or (2) because the beneficiary was not homebound or did not need skilled nursing care on an intermittent basis.

- Visits denied for reasons other than those noted in B above are not to be included in B.

To calculate the denial rates, divide "A" into "B(1)" and "B(2)." For the denial rate criterion to be met in either case, the number of visits in "B(1)" or "B(2)" must not exceed 2.5 percent of the number of visits in "A."

Calculate HHA Denial Rates by Breaking Out Medical Necessity Denials and Technical Denials:

During the statutorily established periods that the favorable presumption may be applied to medical necessity denials (i.e., not medically reasonable and necessary or custodial care, § 1862(a)(1) or (9) exclusions) and technical denials (i.e., not homebound or not needing skilled nursing care on an intermittent basis, §1814(a)(2)(C) or § 1835(a)(2)(A) exclusions), it is necessary to establish that an HHA separately meets the denial rate criterion for each of these two categories of denials. Make two separate denial rate calculations for each HHA. As a result, an HHA potentially could qualify for 2 favorable presumptions, one favorable presumption based on its medical necessity denials and another based on its technical denials. It is also possible that an HHA might qualify for only one favorable presumption, depending on its meeting the denial rate criterion for only one category of denials (either medical necessity denials or technical denials). There is the possibility that an HHA may not qualify for a favorable presumption for any of its denied services because it did not meet the denial rate criterion for either category of denials .

When calculating the two denial rates for an HHA, the same factor A is used when determining the HHA's qualification for a favorable presumption for its: 1) medical necessity denials and 2) technical denials.

Thus, A is divided into B(1), when B(1) represents the total number of visits billed as covered by the HHA which you deny for medical necessity reasons, to determine the HHA's denial rate for medical necessity denials. The same A is divided into B(2), when B(2) represents the total number of visits billed as covered by the HHA which are denied for technical reasons, to determine the HHA's denial rate for technical denials.

The following are examples of how denials are categorized for purposes of their inclusion in the proper denial rate:

Reasonable and Necessary Denials:

o Denials of services which were not needed.

o Denial of services because they were to administer treatments which are not demonstrated to be safe and effective (e.g., experimental drugs).

o Denials of visits because the services could have been provided in the course of fewer visits (e.g., one aide visit in a day to bathe, and a second visit that day to wash hair).

o Denials of dependent services (e.g., home health aide, medical social services, occupational therapists) because the patient ceased to need skilled care. (If the patient continued to need skilled care, but a few skilled visits were denied as not being necessary, there would be no denial of the dependent services since the patient would continue to qualify notwithstanding the denial of some skilled care).

Technical Denials

- Denials of all services after the patient ceased to be (or was never) confined to the home.

- Denials of skilled nursing care because the patient needed skilled nursing care which did not meet the definition of "intermittent."

- Denials of dependent services (e.g., home health aide, medical social worker) because the patient did not need skilled nursing care on "intermittent" basis.

Examples of Denial Rate Calculations for HHAs

- Reasonable and Necessary Denial Rate:

EXAMPLE 1: The HHA billed for 16 skilled nursing visits and 16 home health aide visits a patient for the first month after start of care (no other skilled services were needed). The intermediary determined that no further skilled nursing care was needed after the 8th skilled nursing visit. Therefore the intermediary denied the 8 skilled nursing visits and the 7 home health aide visits which were provided after the date of the last medically necessary skilled nursing visit. In this case A=32, and B(1)=15.

EXAMPLE 2: The HHA billed for 10 skilled nursing visits and 16 home health aide visits for a month. The intermediary determined that 5 of the skilled nursing visits were not reasonable and necessary, but that the patient, nevertheless, continued to need skilled nursing care on an intermittent basis for care of an indwelling catheter. The intermediary denied the 5 skilled nursing visits, but paid the home health aide services since the patient continued to qualify for Medicare coverage of the services. In this case, A=26, and B(1)=5.

- Technical Denial Rate:

EXAMPLE 3: The HHA billed for 31 skilled nursing visits and 31 home health aide visits for a month. The intermediary determined that the patient needed skilled nursing care on other than an intermittent basis, and denied all of the visits. In this case, A=62, and B(2)=62.

EXAMPLE 4: The HHA billed for 12 skilled nursing visits and 16 home health aide visits for a patient for a month. The intermediary determined that the patient ceased to be confined to the home in the middle of the month. The intermediary then denied the 5 skilled nursing visits and the 6 home health aide visits which were provided after the patient ceased to be confined to the home. In this case, A=28, and B(2)=11.

- Interim Billing:

EXAMPLE 5: The patient received home health services beginning 3/1 and remained a patient on 3/31. The intermediary received a bill from the HHA for 20 home health visits rendered during March. On 4/10, the intermediary reviewed the bill and determined that only the first 18 visits were covered. When the intermediary notified the HHA of the noncoverage of the remaining 2 visits, the HHA advised that still another 5 visits had been furnished to the patient during the period 4/1 -4/10.

Based only on the visits billed (during 3/1 - 3/31) in the interim bill, the intermediary compiles the data for the number of visits actually billed as covered and the number of those billed visits determined to be noncovered. In this case, A=20, B(1)=2. If the HHA submits a payment bill to Medicare for the visits furnished in the subsequent period (4/1 - 4/10), the additional data would be compiled. In this case, A=5, B(1)=5.

3434.3 Hospice Denial Rate Calculation.—The following data must be recorded:

A. All days (excluding "grace" days under §1879) that the hospice billed as covered and which were incurred prior to a terminating event, that is, all such days in the universe of claims.

B. All days that the hospice billed as covered but that you determined not to be covered at the billed level of care because the services provided were not reasonable and necessary for the palliation or management of terminal illness, that is, all such days in the universe of claims . Where one or more hours of continuous home care are denied for a day billed as a continuous home care day, that entire day is to be counted as a denied day.

- Days denied for reasons other than the above are not to be included in B.

To calculate the denial rate, divide "A" into "B." For the denial rate criterion to be met, the number of days in "B" must not exceed 2.5 percent of the number of days in "A."

Examples of Denial Rate Calculations for Hospices

EXAMPLE 1: The hospice billed for continuous home care provided to a patient for 12 days of a 30 day month. The other 18 days were billed at the routine home care rate. The intermediary determined that the patient did not need any continuous home care for 5 of the 12 days billed for continuous home care and, hence, denied payment at the continuous home care rate and paid for these days at the routine home care rate. In this case, A=30, and B=5.

EXAMPLE 2: The hospice billed for 5 days general inpatient care, 10 days continuous home care, and 16 days routine home care provided to a patient during a 31 day month. The intermediary denied 2 of the general inpatient care days, and 2 of the continuous home care days and paid for these 4 days at the routine home care rate. In this case, A=31, and B=4.

EXAMPLE 3: During a patient's stay, in a 30 day month, a hospice billed for 18 hours of continuous home care on 1 continuous home care day and billed for routine home care for the other 29 days. The intermediary determined that only 15 hours of the care provided on the continuous home care day was covered as continuous home care, and it denied payment for the 3 remaining hours. In this case, A=30, and B=1 (B=1 whether only 1 hour or all 18 hours on that day are denied).

3434.4 Random Sample Size.--When a random sample review is used to evaluate whether a provider qualifies for a favorable presumption, the sample size must be representative of the provider's universe of claims. The following table identifies the minimum sample size required to calculate a provider's denial rate. In the case of an inadequate sample size, sampling is not used and the entire universe of claims is used for the denominator of the denial rate calculation.

Claims Processed Quarterly	Sample Size
1-14	8
15-20	14
21-30	19
31-40	24
41-50	28
51-70	34
71-100	43
101-200	61
201-400	85
401-600	107
601-1000	136
1001-1500	167
1501-2000	200
2001-3000	243
3001+	370

3434.5 Favorable Presumption Sampling Guidelines.--The objective of sampling is to allow us to economically measure the percentage of denied visits or days of service for a given provider. This measurement then allows for determinations regarding a provider's eligibility to retain its favorable presumption. Sampling, assuming proper design and execution, allows us to measure the tolerance percentages with a known degree of accuracy for a fraction of the cost of a full universe review. The ability to make concise and accurate statements regarding the projection of sample findings assumes the following:

- The sample was randomly selected from the appropriate universe,
- The sample size is large enough to ensure a good representation of the universe, and
- The review findings for the sampled services are appropriate.

The sample size and review quality of limitation of liability sampling are established by existing policy and are assumed to be appropriate. The random selection of a sample from an appropriate universe requires a further understanding of the principles of random sampling.

A. General Principles of Sampling.--In order to ensure that sample findings represent the universe within the laws of probability, it is necessary to ensure that the sample selection process does not introduce any non-random misrepresentation, or bias. The first step in selecting an appropriate sample is to ensure that the list to be sampled (the sampling frame) corresponds to the universe of interest. The sampling frame must contain ALL units appropriately included in the universe of interest and exclude all units not in the universe of interest (sampled units not in the universe of interest can be replaced with appropriate units but this practice is avoided). The sampling frame must be complete and as clean as possible in regard to such determinants as time frames, claim types, etc. It is critical that the definition of the sample unit on the sampling frame be consistent with the desired statistical conclusions. In most situations the sample unit for limitation of liability determinations is the claim. The use of any other sample unit requires an evaluation by a statistician to ensure the acceptability of the resulting statistics.

The application of sampling techniques to the established sampling frame must not introduce any over or underrepresentation of universe subgroups. Simply stated, each unit on the complete sampling frame must have an equal chance of being included in the sample. Targeted sampling on error prone or prescreened units must be avoided at the risk of invalidating sample projections.

The basic methods used in selection of a random sample are simple random sampling and systematic sampling. In simple random sampling, each unit on the sampling frame is assigned a unique number and the sample is identified through random generation of corresponding numbers. This random number generation can be obtained through a computer software package or from a published table of random numbers. Random numbers are generated sequentially until the sample size requirement is satisfied. Systematic sampling involves the computation of a sampling interval which is equal to the sampling frame size divided by the required sample size. The sample is selected by taking a random unit between the first unit and the interval size and then every subsequent unit corresponding to the interval. For example, with an interval of 20 and on initial random selection of unit 12, the sample includes units 12, 32, 52, 72, etc, until the sampling frame is exhausted.

There are a number of more sophisticated variations on either of these methods, including stratifying the sampling frame into subgroups and sampling by groups (or clusters). Although these techniques may allow for somewhat improved cost effectiveness or reliability of the sample findings, use of these techniques is discouraged due to the inherent increase in computational complexity and the likelihood of bias due to misapplication of the techniques.

Regardless of the technique used to identify the sample unit, it is critical that only those units identified by the established methodology be included. Use of human "judgment" to change the selection process or to supplement the sample violates the integrity of the sample. Supplementation of the sample, should it prove necessary, must be accomplished through the reapplication of either simple random or systematic sampling methodologies.

B. Application of Sampling for Favorable Presumption Determination.--The following is a hypothetical example for application of sampling under typical circumstances. Although variations can result in acceptable samples, it is assumed that this example provides an illustration of a sampling application which is feasible for most providers/intermediaries.

EXAMPLE: Provider X typically submits 245 claims for services for the quarter under review. Based on the sample size chart in §3434.2, a universe of 245 claims corresponds to a minimum sample of 85 claims. Select a systematic sample using the following steps:

1. Compute a sampling interval = 245/85 = 2.88 which is truncated (not rounded) to one decimal place (2.8).

2. From a table of random numbers select a random start integer between 1 and the interval size (in this case 2.8 rounded to 3). In our example, the random start selected was 2.

3. Select the second claim in the sampling frame and every 2.8th claim thereafter, as illustrated in the following table

	Interval	Cumulative Interval	Claim Selected
Random start equals	2	2	2
	+2.8	4.8	5(4.8 rounded)
	+2.8	7.6	8
	+2.8	10.4	10
	.	.	.
	.	.	.
	.	.	.
	.	.	.
	.	.	.
	+2.8	240.8	241
	+2.8	243.6	244

Based on the universe of 245, and a sampling interval of 2.8, the resulting sample size was 87. The sample size exceeded the 85 minimum by a small margin due to the truncation of the sampling interval from 2.88 to 2.8. If the sample exceeds the minimum by a substantial margin, the excess claims may be RANDOMLY deleted. The easiest way to accomplish this is to select numbers from a random numbers table and to delete the corresponding claims from the sample. These claims are then deleted from the sample, regardless of review status, until the proper sample size is reached.

Once the sample is established, all claims selected are reviewed to determine the number of denials and the total number of days. The number of total days reviewed exceeds the claim sample size due to the large number of average days per claim. It is these totals for denied days and total days that determine the denial rate used for the favorable presumption determination.

For example, when we randomly reduced our sample from 87 to 85, the following performance was observed.

(a) Number of Sample Claims	(b) Total Number of Sample Days	(c) Number of Days Denied	(c)/(b)x100 Percentage of Denied Days
85	680	16	2.4%

This provider retains a favorable presumption due to the 2.4 percent denial rate. A denial rate above the tolerance level results in loss of the favorable presumption.

3434.6 Precision of Favorable Presumption Determination.—When sampling is used to measure the provider's performance, you must be capable of computing the degree of precision to be applied to the estimate. Make this computation only when all of the following criteria are met:

- o The point estimate of the provider's denial rate exceeds the favorable presumption tolerance;
- o You intend to withdraw the provider's favorable presumption; and
- o The provider specifically requests the contractor to compute the precision level of the sample estimate.

The determination of qualification for a favorable presumption is based on the simple ratio of denials to service units in the sample. However, the universe characteristics and sample sizes correspond to an implied degree of variability of this ratio around the true value. The expected variation of the sample denial rate around the true universe denial rate is referred to as the precision of the sample estimate. The degree of precision resulting from a sample largely determines the amount of risk HCFA assumes that the sample estimate is above or below the favorable presumption tolerance.

In order to evaluate the degree of variation risk due to sampling, the precision limits from a sample may be computed after the sample findings are available. Assuming a standard confidence factor of 95 percent, the limits of a sample estimate may be computed as explained below. Note the lower limit of the estimate, which is the lowest realistic possible value of the true universe denial rate, based on a given sample. While the sample denial rate is the best estimate of the true value, the lower limit provides valuable insight into the degree of sampling risk. The following calculations assume that a random or systematic sample of claims was selected and the denial rate computed as the ratio of sample denials to sample service units. These instructions, when applied to a provider's sample findings, yield the lower limit of this sample denial rate. Keep in mind the distinction between claims and service units (i.e., visits or days).

1. Compute the sample denial rate as the sample number of denied service units (Y) divided by the sample number of total services (X). (DO NOT CONVERT THIS NUMBER TO A PERCENTAGE). R=________________ $\frac{\Sigma Y}{\Sigma X} = \frac{\bar{Y}}{\bar{X}}$

2. Compute the sample fraction as the claim sample size(n) divided by the claim universe size (N) f=________________ $\frac{n}{N}$

3. Compute the average number of service units per claim in the sample as the total sample service units divided by the number of sample claims x=________________ $\bar{X} = \frac{\sum X}{n}$

4. Compute the square root of the sample size NSQR=______________ $\sqrt{n}$

5. Compute factor one as the square root of 1 minus f divided by NSQR times X Fl=________________ $\frac{\sqrt{1-f}}{\sqrt{n}\;\bar{X}}$ Rev.

6. Square the number of denied service units on **EACH CLAIM,** then sum the squared numbers Y2=________________ $\sum Y^2$

7. Square the number of total service units on **EACH CLAIM,** then sum the squared numbers X2=________________ $\sum X^2$

8. Square the denial rate (R) and multiply the result times the **SUM OF SQUARED SERVICES UNITS** (X2) R2X2=______________ $\hat{R}^2\sum X^2$

9. Multiply the number of denials times the total service units on **EACH CLAIM,** then sum these products XY=____________ $\sum XY$

10. Multiply the result (XY) by 2 and multiply this result by the denial rate (R) 2RXY=__________ $2\hat{R}\sum XY$

11. Compute factor two as (Y2) plus (R2X2), minus (2RXY), the result divided by (n-l), where n-l is the number of sample claims minus one. Take the square root of the final result. F2=____________

$$\sqrt{\frac{\sum Y^2+\hat{R}^2\sum X^2-2\hat{R}\sum XY}{n-1}}$$

12. The standard error of the sample denial rate is (Fl) time (F2). SE=____________

$$\frac{\sqrt{1-f}}{\sqrt{n}\;\bar{X}}\sqrt{\frac{\sum Y^2-2\hat{R}\sum XY+R^2\sum X^2}{n-1}}$$

13. The lower confidence limit of the denial rate is computed as (R) minus 2 times (SE) $\hat{R}-2S(R)$

Lower Limits=__________

NOTE: If desired, the denial rate (R) and the Lower Limit may be converted to percentages after all precision calculations are completed by multiplying each number by 100.

If the above lower limit is below the tolerance level and the standard error (Step 12) exceeds the denial rate (Step 1), the precision of the sample denial rate is suspect. In this instance, the contractor, at the provider's request, selects a supplemental sample to augment the initial sample. This supplemental sample is based on the same universe as the original sample and equals to the original sample size up to the review of the entire universe.

3434.7 Time Period for Calculating Denial Rate.--Each calendar quarter, calculate each SNF's, HHA's, or hospice's denial rate based on the data collected for that provider during the preceding calendar quarter. Calculate the denial rate by the end of the month following the end of the quarter.

For example, data compiled during 1/1 through 3/31 is used to calculate the denial rate. This calculation is to be made by 4/30. If shorter times, e.g., 1 or 2 month periods, are used, adapt the instructions above to the shorter times. (HHA technical denials rates are calculated on a quarterly basis only.)

3434.8 Effect of Change in Favorable Presumption.--Advise an SNF, HHA, or hospice of any change in its favorable presumption (i.e., gain or loss of the favorable presumption) by the end of the month following the end of the quarter for which the denial rate was calculated.

For example, if there is a loss of favorable presumption based on data compiled from 1/1 through 3/31, favorable presumption is retained for services rendered from 1/1 through 3/31 and up to the date of your notice of change of favorable presumption, but no later than the last day of the month following the end of the quarter (in this case 4/30).

All claims processed for services furnished on or after the date of notice are processed under the new favorable presumption determination.

3434.9 Low Utilization Providers.--A SNF, HHA, or hospice that submits payment claims for fewer than 10 admissions during a 6-month period generally does not generate sufficient data for a valid analysis of its ability to make coverage determinations. However, if you believe that such a provider should be granted a favorable presumption, discuss the case with the RO which may approve a favorable presumption for a low utilization SNF, HHA, or hospice.

3434.10 Treatment of Day or Visit Determinations Later Reversed.--Where an initial payment or denial of payment determination which was included in the denial rate calculation is reversed as a result of reconsideration, hearing, reopening or other review (e.g., a Coverage Compliance Review), it is necessary to adjust the number of denied Medicare days and visits (no adjustment is necessary to the total number of days or visits). In the case of days or visits initially denied, but later determined to be covered, subtract such days or visits from the denied Medicare days or visits. Days or visits initially found to be covered, but later determined to be noncovered, are to be added to the denied Medicare days or visits. (Where the review merely affirms the initial payment or denial of payment decision, no adjustment action is necessary.) The subtraction or addition of such days or visits is to be applied to the period during which the intermediary took action on the reversal, that is, to the current denial rate calculation.

NOTE: Days and visits payable only under the limitation of liability provision are considered noncovered days and visits and are not counted as covered in the denial rate calculations.

3439. DETERMINING WHETHER PROVIDER HAD KNOWLEDGE OF NONCOVERAGE OF SERVICES

A provider is considered not to have had knowledge of noncoverage of services in a particular claim unless there is evidence to the contrary. Such evidence to the contrary may include the following:

A. Limitation of Liability Criterion.-- In the case of SNFs, HHAs, and hospices, the provider did not meet the criterion for a favorable presumption;

NOTE: Where a provider does not meet the criterion for favorable presumption, it may qualify for payment, under limitation of liability, of the noncovered services in a denial only where it can demonstrate through objective evidence that, even if it had had a favorable presumption, it would not have known that the services were noncovered.

Where a provider meets the criterion for a favorable presumption, it qualifies thereby for payment, under limitation of liability, of the noncovered services in the case of a denial where there is a reasonable doubt as to whether any of the conditions listed in the following subsections B. through G. is met; that is, the provider receives the benefit of the doubt in this regard. However, the favorable presumption is rebutted and no payment is made where it is clear and obvious in a denial that any one of the conditions listed in the following subsections B. through G. is met.

B. Provider Notices.--

o The provider's utilization review committee informed the provider in writing that the services were not covered;

o The provider submitted a no-payment claim, or submitted a claim for payment only at the request of the beneficiary; or

o The provider issued a written notice of noncoverage to the beneficiary.

C. HCFA Notices to Provider.--HCFA has informed the provider in writing of the noncoverage of a particular service or category of services. All participating providers are issued instructions which discuss and define coverage and noncoverage of specified services under Medicare.

For example, instructions in §232ff. of the HHA Manual, §280.9 of the SNF Manual, and §230ff. of the Hospice Manual define covered care and provide examples of unskilled services excluded from Medicare coverage. Where it is clear and obvious from review of a particular medical record that the patient received only excluded services described in the SNF, HHA, or Hospice Manuals and in §§3132.6 and 3159 of this manual, the provider is expected to have knowledge of noncoverage. In such cases, where the provider has a favorable presumption, rebut the provider's favorable presumption. Clear-cut decisions as to noncovered care may not be possible in many cases since patients may require a combination of skilled and unskilled services during a SNF stay or when receiving services at home.

D. Intermediary Notices.--

o A one-time written notice to the provider that a particular item or service is not covered (e.g., acupuncture) is sufficient notice for all subsequent claims involving that service and similar or reasonably comparable services.

o The provider was notified by telephone and/or in writing that the care is not covered or that covered care has ended. If the beneficiary is still an inpatient, give notice by telephone and annotate your record to show that telephone notice was given and the date of the notice. The date of the telephone notice is the effective date of notification to the provider.

o A general bulletin or newsletter was issued to providers advising that a specific item or service is not considered reasonable and necessary.

E. PRO.--A PRO notified the provider that services are not covered. This includes notification of PRO screening criteria specific to the condition of the beneficiary for whom the furnished services are at issue and of medical procedures subject to preadmission review by the PRO. Instructions for application of limitation of liability to PRO determinations are in the PRO Manual.

F. Medical Information.--

1. A physician clearly indicated in the patient's medical record that the patient no longer needed the services or the level of care provided. The provider is accountable for information found in the patient's medical records, such as the patient's medical chart, attending physicians' notes, or similar records, since these are provider records. A provider's favorable presumption may be rebutted on the date the evidence based upon medical records, such as that described below, clearly indicates noncoverage of services:

o A physician indicated the patient could be discharged; or

o The attending physician refused to certify or recertify the patient's need for a level of care covered by Medicare because he determined that the patient does not require a covered level of care.

2. You requested additional medical evidence after a certain number of days to determine whether continued coverage is warranted. However, the provider did not submit the evidence within the stipulated time.

EXAMPLE: Based on an admission notice and medical information, it was conditionally projected that coverage was likely to extend for 12 days. The SNF must submit additional evidence of coverage within the 12 days. If the SNF failed to do so, its liability can be waived only through the 12th day of the stay, if you later determine the services were not covered under §1862(a)(1) or (9).

3. Follow the established procedure for requesting additional evidence needed in a particular case to permit a decision on coverage. Where the beneficiary is still an inpatient at the SNF, advise the SNF that the additional information must be submitted (i.e., postmarked), within 5 work days of a telephone request, or if a telephone request is not feasible, postmarked within 7 work days of the date of a written request.

If this requirement is met, and the SNF has a favorable presumption, it is protected from liability under the limitation of liability provision through the date you made the coverage determination based on the requested additional evidence and notified the SNF. If the evidence is not submitted within the required 5 to 7 days, the SNF is protected from liability only through the date the additional evidence was requested, even though the SNF otherwise has a favorable presumption.

G. Patently Unnecessary Services.-Make an immediate finding of liability in fraud and abuse, as well as in other situations where a provider furnishes and claims payment for services that are so patently unnecessary that all providers could reasonably be expected to know that they are not covered. Generally, this would be the case where abuse has been identified in a particular claim.

As defined in §3454.1B, abuse exists when a provider furnishes services that are inconsistent with accepted sound medical practices, are clearly not within the concept of reasonable and necessary as defined by law or regulations, and, if paid for, would result in an unnecessary financial loss to the program.

3439.1 Notifying Patient of Noncoverage.—Where a provider is aware that the services to be furnished to a patient will not be covered, it advises the patient or his representative in writing (see §§3440ff.) at or before admission/start of care or when the type of care changes during a stay/course of care, that the services are not paid for by Medicare, the basis for this belief, and that no claim for Medicare reimbursement will be submitted or that a claim will be submitted for only the covered portion of the stay. The notice must clearly state that the beneficiary has the right to request the provider to file a claim for a Medicare coverage decision. The SNF provides a copy of the noncovered notice to the beneficiary. If the beneficiary requests it, the SNF submits a noncovered claim and copy of the beneficiary notice to Medicare.

EXAMPLE: If an SNF intends to place a patient in a noncertified portion of its facility because it believes the patient does not require a covered level of care, it must notify the patient in writing. If the beneficiary requests that the SNF submit a claim, the SNF indicates that the bill is being submitted at the beneficiary's request, and why it considers the care to be noncovered. The no-payment billing procedure is used. In such a case, neither the beneficiary nor the SNF (or HHA if appropriate) is entitled to payment under limitation of liability. Do not count such denials in determining denial rates for SNFs, hospices, and HHAs. (See §§3434ff.)

3439.2 Verifying Provider Notification Procedure.—To make sure that nonhospital providers have an established procedure for notifying beneficiaries and physicians promptly when a decision of noncoverage is made, obtain a written description of the procedure from them. The procedure should provide for a written notice of noncoverage to the beneficiary or person acting on his behalf, on the day of admission or start of care, on the day the care is found to be noncovered, or on the same day you advise the provider of noncoverage. SNFs are required to use the appropriate denial notices found in §3730.1.

Verify, at least annually that non-SNF providers follow their notification procedures. For SNFs, refer to §3630.4.

3439.3 Improper Coverage Decisions.--A provider must submit, at the request of the beneficiary or the beneficiary's representative, claims for services the provider believes are not covered because the services are not medically reasonable and necessary, or constitute custodial care or, in the case of HHAs, are technical denials . Review these claims to assure that the provider is not improperly indicating that no Medicare payment should be made where some or all of the services are covered. You may infer that a provider which is submitting an excessive number of such claims does not know the standards for coverage and thus is not in a position to give effective notices of noncoverage. If you find that an HHA or hospice is improperly submitting no-payment claims in excess of 5 percent of its total claims, or that an SNF is improperly submitting no-payment claims in excess of 10 percent, deny the provider a favorable presumption even if it meets the criteria in §§3434ff.

3440. ESTABLISHING WHEN BENEFICIARY IS ON NOTICE OF NONCOVERAGE

A beneficiary informed by written notice that specific services were noncovered, following a prior stay or prior receipt of home health services, is liable for payment for the same or similar services furnished under the same or similar conditions, if it is clear that the beneficiary or the person acting on his behalf should have known that the services were not covered.

The beneficiary is presumed not to have known or not to have been expected to know that care would not be covered, unless or until one of the following occurs:

A. Provider Is Source of Notice.--

- A provider advised the beneficiary or the person acting on his behalf in writing on or before the day of admission that the care is noncovered.

- During the course of the patient's stay, you advised the provider that covered care had ceased and the provider notified the beneficiary or the person acting on his behalf in writing of your determination.

- During the patient's stay, a provider advised the patient or the person acting on his behalf in writing that the patient no longer required covered care.

NOTE: See §§3730ff. for provider notices.

B. PRO Is Source of Notice.--A PRO notified the beneficiary or the person acting on his behalf in writing that covered care is not required or is no longer required.

C. Intermediary Is Source of Notice.--The beneficiary received his first notice of noncoverage from you (e.g., an intermediary denial notice).

D. Utilization Review Entity Is the Source of Notice.—The group or committee responsible for utilization review for the provider that furnished the services advised the patient or the person acting on his behalf in writing that the patient no longer required covered care.

3440.1 Determining Date of Notice.--

A. For Beneficiaries.—In determining when the beneficiary received notice of noncoverage, use the date the written notice was given to the beneficiary when the beneficiary is an inpatient and is capable of handling his own affairs (i.e., is able to sign and negotiate checks).

Providers which must furnish notice to the beneficiary who is incapable of managing his own affairs telephone the person who is acting on the beneficiary's behalf or has assumed financial responsibility for the beneficiary on the same day the provider knows the services are not covered. The provider confirms the telephone contact by written notice mailed on that same date, to protect itself from liability. A written notice is mailed on the same day even if a telephone contact cannot be made. The provider places a dated copy of the notice in the incapable patient's medical file.

HHAs which are unable to deliver notice of noncoverage personally to a beneficiary are instructed to give notice by telephone, and on the same day to mail a written confirmation of the telephone notice. The date of the telephone call is considered the date the beneficiary received notice of noncoverage.

B. For Providers-- When notifying a provider of noncoverage, use the date of notice annotated in your records, in accordance with § 3439D2.

Where a URC notifies a provider of noncoverage, use the date of notice shown by the provider in Item 21 of the billing form HCFA-1450, unless you have evidence of an earlier notification.

Where the provider itself determines that covered care is no longer required, use the date of the provider's written notice of noncoverage to the beneficiary, as indicated in subsection A. Be alert to the possibility that the provider may have had earlier knowledge of noncoverage. (See § 3439).

3440.2 Documentation of Notice.-- Make every effort to assure that providers understand the importance of notice for them and for beneficiaries. (See § 3439.1.)

Providers retain copies of all notices of noncoverage given to beneficiaries because the date of notice to the beneficiary may be important in the event of an appeal on the issue of provider liability.

3441. PAYMENT UNDER LIMITATION OF LIABILITY.

When it is determined during the course of a beneficiary's inpatient stay or during his course of home health visits that the care is not covered but both the beneficiary and the provider of services are entitled to limitation of liability, the Medicare program may make payment for the noncovered services up to the date of notice and, if you determine that additional time is needed to arrange for post-discharge care, also for a "grace period" of 1 day after the date of notice to the provider or to the beneficiary, whichever is earlier. If it is determined that even more time is required in order to arrange post-discharge care, 1 additional "grace period" day may be paid for. (See §§ 3439 and 3440 for definition of notice.)

When the provider is given notice as described in § 3440.1, it is required to advise the beneficiary in writing of the determination on the same date it received your notice. Where the provider fails to give the beneficiary such timely notice, the beneficiary is protected from liability until he receives the notice.

For example, if an SNF received your notice of noncoverage on February 15 but failed to advise the beneficiary until February 19, the beneficiary is protected from liability through February 19--the date on which he first received notice. However, the SNF is entitled to program payment only through the date--February 15--on which it received notice, and for whatever "grace period" is allowed thereafter. In a case in which an SNF received your notice on February 15 but failed to give the beneficiary notice until the next day--February 16--the beneficiary and provider, if you determine that additional time is needed to arrange post-discharge care, would be protected from liability under the "grace period" only for the additional day--February 16-- unless it is determined that even more time is required to arrange postdischarge care, in which case 1 additional "grace period" day may be paid for.

NOTE: The "grace period" is applicable only where circumstances have permitted program payment under § 1879 of the Act, i.e., limitation of liability was applicable both to the beneficiary and the provider of services. Where you concur with a URC's decision that covered care has ended, any payments made during the "grace period" after the URC's notice are made under the authority of that statutory provision (§ 1814 of the Act) rather than under § 1879. (See § 3420ff.)

3442. WHEN TO MAKE LIMITATION OF LIABILITY DECISIONS.

A. Initial Claims.-- In implementing the limitation of liability provision, make a coverage decision before making a limitation of liability decision. It is not intended that you pay all claims submitted by providers which have been granted a favorable presumption on the basis that limitation of liability would allow payment anyway. Such action would be contrary to the requirements of § 1879, which provides that limitation of liability can be allowed only in cases:

"Where -- (1) a determination is made that, by reason of §1862(a)(1) or (9) or by reason of a coverage denial described in subsection (g), payment may not be made under part A or part B of this title for any expenses incurred for items or services furnished an individual by a provider of services...." (Section 1879(a)(1) of the Social Security Act.)

NOTE: Subsection (g) refers to home health service technical denials under §§ 1814(a)(2)(C) and 1835(a)(2)(A).

Only after you make a decision that care is not reasonable or necessary, is custodial, is not reasonable and necessary for the palliation or management of terminal illness in hospice denials, or does not meet the homebound or intermittent nursing care requirements in home health service denials, should a determination be made regarding limitation of liability. In every such case there will be two parts to the limitation of liability determination: (1) whether and when the beneficiary knew or should have known that the services were noncovered, and (2) whether and when the provider knew or should have known that the services were noncovered.

B. Reconsideration.-- At the reconsideration level, again first make a determination on the coverage issue. Consider the question of limitation of liability, if applicable, only if the initial adverse coverage decision is wholly or partially affirmed. (See § 3780ff. for discussion of the appeals process.)

3443. PREPARATION OF DENIAL NOTICES.

The provider and beneficiary notification procedures discussed in § 3439 and § 3440 for determining liability do not change the instructions for the preparation and issuance of denial notices in §§ 3717, 3719, 3721 and 3722ff.

Accordingly, in cases where the services are found to be custodial care or not reasonable and necessary or in the case of HHA services, are denied for technical reasons under § 1814(a)(2)(C) or § 1835(a)(2)(A):

A. A denial notice is sent to the beneficiary in cases where only the beneficiary is entitled to limitation of liability for any part of the noncovered stay. The notice advises the beneficiary of his entitlement to indemnification (see § 3446ff.) in the event the provider seeks payment from him for the noncovered services. (See § 3446.9, Exhibit 1.)

B. All denial notices explain any decision regarding limitation of liability for either the provider or the beneficiary. (See § 3721, Exhibits 2 and 2A and § 3722.5).

C. All denial notices, where either the beneficiary or provider has been found liable, must state that the provider has a right to reconsideration when it has been determined that the beneficiary will not exercise his appeal rights, or when the beneficiary's liability has been entirely waived but the provider is fully or partially liable. A copy of the beneficiary's denial notice is sent to the provider with the covering letter. (See § 3721, Exhibits 2 and 2A and § 3722.5.)

3444. APPLICABILITY OF THE LIMITATION OF LIABILITY PROVISION TO CLAIMS FOR ANCILLARY, OUTPATIENT PROVIDER AND RURAL HEALTH CLINIC SERVICES PAYABLE UNDER PART B.

The following sections discuss how the limitation of liability provision is applied to claims involving ancillary, outpatient and rural health clinic services billed on form HCFA-1450 (Provider Billing for Medical and Other Health Services), where reimbursement is sought under Part B. Determine whether limitation of liability applies to these categories of claims when the basis for the denial is that the services were not reasonable and necessary (under § 1862(a)(1) of the Act).

3444.1 Determining Beneficiary Liability in Claims for Ancillary and Outpatient Services.-- A presumption will be made that the beneficiary did not know that items or services are not covered unless there is evidence to the contrary. Indication in the claims file that the beneficiary received notice before receiving the noncovered ancillary, outpatient, or rural health clinic services is evidence to the contrary which rebuts the presumption in the beneficiary's favor. The definitions of "notice" to the beneficiary are set forth in § 3440.

3444.2 Determining Provider Liability in Claims for Ancillary and Outpatient Services.-- The application of the limitation of liability provision to ancillary and outpatient services depends upon whether a favorable waiver presumption applies .

A. SNF or HHA Entitled to Favorable Presumption.-- Where an SNF or HHA is entitled to a favorable presumption for its inpatient SNF services payable under Part A or for HHA visits (based on its medically unnecessary denial rate), the presumption is extended to its claims for ancillary and outpatient services payable under Part B. Process that SNF's or HHA's claims under the presumption that the SNF or HHA did not know that these services were not covered. If you determine that the SNF or HHA is submitting an excessive number of noncovered claims for its ancillary and outpatient services and the noncovered claims relate to a particular service, such as laboratory tests or physical therapy services, the favorable presumption must be withdrawn for that type of service rather than for all ancillary or outpatient services. The withdrawal of the favorable presumption for ancillary and outpatient services does not affect the SNF's or HHA's favorable presumption with respect to its claims for Part A services.

B. Providers Not Entitled to Favorable Presumption.-- The procedures in §3439 apply for determining liability for providers when they do not or are not able to qualify for a favorable presumption. A provider may have its liability waived in an individual claim if it can establish that it did not know and could not have been expected to know that the items or services would not be covered.

3445. BILL PROCESSING AND WORKLOAD REPORTING.

A. Bill Processing.-- Where payment is made under the limitation of liability provision, the usual deductible and coinsurance amounts apply.

When payment under limitation of liability is made for noncovered services, the bill is to be processed in the same manner as any payment bill for covered services. The number of days or visits paid for under the limitation of liability provision is charged to the beneficiary's utilization record. (See § 3620.)

The no-payment procedures in § 3624 for inpatient stays and in § 3638.2 for home health visits are to be followed in the following cases:

o Either the beneficiary or the provider, or both, knew or should have known that services were not covered.

o The provider knew or should have known that the services were not covered even though the beneficiary did not know. In these cases, the notice to the beneficiary will have informed him that, even though no Medicare payment is being made, he is not liable for the cost of the services and that he may be indemnified if he has made improper payments to the provider.

Where no Medicare payment is being made because limitation of liability does not apply or where payment ceases because of notice in a noncovered case, the normal provisions for no-payment situations apply.

For ancillary and outpatient services billed on form HCFA-1450, the provider follows the instructions in § 3626ff. for hospitals, §3630 for SNFs and §3638 for HHAs to process bills for these types of claims. Further, where ancillary services may not be paid for under Part A because they were rendered in connection with a noncovered inpatient stay, the provider may still bill under Part B for ancillary services that may be covered under § 1861(s)(3)-(9) of the Act.

B. Workload Reporting.-- See § 3862 for information to be included in the remarks section of intermediary workload reports where payment is made under the limitation of liability provision.

Indemnification Procedures under Limitation of Liability

3446. INDEMNIFICATION PROCEDURES FOR CLAIMS FALLING WITHIN THE LIMITATION OF LIABILITY PROVISION.

Section 1879(b) of the Act provides that when a provider is held liable for the payment of expenses incurred by a beneficiary for noncovered items or services and such provider requests and receives payment from the beneficiary or any person(s) who assumed financial responsibility for payment of expenses, the Medicare program indemnifies the beneficiary or other person(s) less the applicable deductible and coinsurance amounts. Further, any such indemnification payments are considered overpayments to the provider.

The limitation of liability provision does not apply to third party payors, such as Medicaid. A provider who is determined liable may, therefore, seek payment from a third party payor if one exists.

3446.1 Intermediary and Social Security Office Responsibility in Indemnification Claims.-- Requests or inquiries concerning indemnification may be received by the intermediary, SSO, RO, or central office. However, a beneficiary or person(s) who made payment on behalf of the beneficiary to a liable provider, in most cases, visits their nearest SSO or deals directly with the intermediary to file a request for indemnification.

Those offices are responsible for assisting beneficiaries or any person(s) in filing claims for indemnification.

3446.2 Conditions for Indemnification.-- A beneficiary or any person(s) who assumed financial responsibility for payment is indemnified for claims filed if all of the following conditions are met:

o You have determined that the beneficiary is without liability under authority of section 1879 of the Act for items and services furnished by a provider; and o You have determined that the provider is liable under section 1879 for the items and services furnished to the beneficiary;

o The requester for indemnification has paid the provider all or some of the charges for items and services for which the beneficiary's liability has been waived under §1879 of the Act; and

o The requester seeks indemnification by filing a written statement prior to the end of the sixth month following:

— The month in which payment was made to the provider; or

— The month in which you advised the beneficiary that he was not liable for the noncovered items or services, whichever is later.

The time limit may be extended if good cause is shown. (In determining good cause, use the principles for reconsideration requests outlined in § 3781.3.)

3446.3 Development and Documentation of Indemnification Requests.-- When you receive a request or inquiry concerning indemnification directly from the beneficiary or other person(s) on his behalf; obtain the following information and documentation:

o Identifying information sufficient for you to locate the claim(s) for noncovered items or services for which payment has been made to the provider by the beneficiary or other person and for which the liability of the beneficiary was limited. Ordinarily, the initial denial letter or reconsideration determination suffices.

o A statement on Form SSA-795, Statement of Claimant or Other Person, (see § 3446.9, Exhibit 4) to the effect that the requester paid the provider all or some of the charges for the noncovered items or services for which the beneficiary's liability was limited. The statement must specify the amount the requester has paid the provider. If the requester submits this information in a letter, the letter serves as the signed statement.

o Proof of payment. The following types of documentation are sufficient to establish that payment was made in the amount alleged:

— An itemized bill from the provider which reflects the items and services for which the provider has been found liable and has received payment along with the payor's cancelled check, or money order receipt, or statement of receipt from the provider;

— A summary bill from the provider which pertains to the items and services for which the provider has been found liable and has collected from the beneficiary or other person along with the payor's cancelled check, or money order receipt, or a statement of receipt from the provider showing the same total amount;

-- The payor's cancelled check, or money order receipt, or the statement of receipt from the provider if your records reflect the provider's charges for the items and services for which the provider has been found liable and these equal the total of the amount paid; or

-- If the requester alleges that the provider did not furnish an itemized bill or a receipted statement and no other proof of payment is available, a statement to this effect is obtained on form SSA-795 from all parties involved, including the provider if possible. The circumstances, such as the manner of payment, are to be described and the reasons for not obtaining a receipt or any proof of payment should be provided. If there were any witnesses to the payment, their statement also is to be obtained on form SSA-795. Any questions as to the acceptability of proof of payment should be referred to the RO.

When the beneficiary or other person on behalf of the beneficiary initially contacts the SSO, send the statements and evidence relevant to the indemnification claim to the appropriate intermediary. If future contact with the beneficiary or other person is necessary, proceed with a direct contact unless the assistance of the SSO is needed.

3446.4 Beneficiary Requests Indemnification, But Had No Financial Interest in the Claim.-- If a request for indemnification is received from the beneficiary but he did not have full financial interest in the claim, then any other person(s) who made full or partial payment to the provider must be contacted to ascertain if he wishes to file for indemnification.

If the individual declines to file for the indemnification payment, the SSO or your staff should assist in preparing a statement to that effect for the individual's signature. No payment is made in this instance, and you are to notify all parties involved.

If more than one person helped pay the bill; e.g., sons and daughters of the beneficiary got together and each paid a portion of the bill, you must determine the indemnification amount for each payor unless they all agree in writing that payment is to be made to one person. The deductible and coinsurance amounts, as appropriate, are deducted from the total indemnification amount and the remaining amount due paid proportionately. Explain this to the requester for indemnification.

3446.5 Questionable Indemnification Requests Procedure.-- If you receive a request for indemnification that does not appear to meet the conditions outlined in § 3446.2, and there is some uncertainty concerning the indemnification claim, undertake development to resolve the issues. If the issues cannot be adequately resolved, obtain the opinion of the RO.

3446.6 Determining the Amount of Indemnification.-- In accordance with § 1879(b) of the Act, the beneficiary or other person(s) is indemnified for actual charges paid to a provider, rather than the usual allowable charges as might be determined by the Medicare program, PPS amounts, or established per diem rates that apply to certain providers. The beneficiary is still responsible for any unmet deductible or coinsurance for the items or services for which the provider has been held liable.

In determining the beneficiary's deductible and coinsurance liability:

o Determine if any deductible is met. If any deductible remains unmet in the particular benefit period, the beneficiary is liable for that amount; and

o Determine the coinsurance amounts for days for which the beneficiary's liability has been limited and the provider has been held liable in the same manner as if the days had been covered days.

When you have determined the deductibles and coinsurance amounts the applicable amounts are deducted from the indemnification amount before payment is made.

3446.7 Notifying the Provider.-- After you have reviewed the claim for indemnification and the indemnification amount has been determined, notify the provider of the proposed indemnification action. (A sample letter for these situations is contained in § 3446.9, Exhibit 1A.) The essential elements of this written notice are:

o An explanation of the items and services for which the provider is liable with reference to the original notice to the provider.

o A statement of the provision of § 1879 which allows the program to indemnify the beneficiary and recover an overpayment from the provider;

o An explanation of the amount determined payable to the requester for indemnification;

o A statement that the amount you have determined to be payable is paid to the requester and that it constitutes an overpayment to the provider which is to be recovered from future Medicare payments made to it;

o A statement encouraging the provider to refund any amount(s) already collected; and o The opportunity for the provider to question the amount you have determined payable, in writing, within 15 days.

If the provider does not respond to this notice within 15 days, make payment to the requester in accordance with § 3446.8. If the provider disputes the indemnification or the amount to be paid, resolve any discrepancies before making payment. The payment process takes place even if the provider might appeal your initial determination which held it liable and that appeal is still pending at the time payment of the indemnification amount is to take place. If the appeal decision reverses the initial determination, then adjustments are to be made at that time in your and the provider's records. In all cases, encourage the provider to refund any and all amounts collected to this point. If the provider chooses to refund any money collected, less deductible and coinsurance amounts, verify that such a refund has actually been made to the requester.

3446.8 Making Payment Under Indemnification.-- If the provider does not make refund, the indemnification payment is made. Take action then to recover this amount as an overpayment from the provider. Also issue a letter of explanation to the requester for indemnification. (See § 3446.9, Exhibits 2 and 3.) Send a copy of this notice to the provider. The fundamental points of the notice include:

o Name of the provider and dates the services in question were rendered; and

o The amount of the indemnification check that the requester is to receive including an explanation of the deductible and coinsurance amounts.

3446.9 Exhibits.--

1. Guide Language to Beneficiary or His Representative Explaining Limitation of Liability and Possible Right to Indemnification

1A. Letter to Provider.

2. Letter to Beneficiary Who Requests Indemnification.

3. Letter to Someone Other Than Beneficiary Who Requests Indemnification.

4. Form SSA-795, Statement of Claimant or Other Person.

EXHIBIT 1

GUIDE LANGUAGE TO BENEFICIARY OR HIS REPRESENTATIVE EXPLAINING LIMITATION OF LIABILITY AND POSSIBLE RIGHT TO INDEMNIFICATION (See 3443A)

A determination has been made that you (the beneficiary) had no knowledge or any way of knowing that the services you (he/she) received during (dates of services for which beneficiary's liability has been waived) would not be covered under the Medicare law.

It has therefore been determined that you (the beneficiary) are (is) not responsible for the charges billed by the (provider's name) for the period (__________) except for deductible and coinsurance amounts that might apply or any charges for services or items not covered by Medicare. If you (the beneficiary) have (has) paid (provider's name) for the services at issue, reimbursement can be made to you (the beneficiary) for the amounts charged, less any applicable deductible or coinsurance amounts. To obtain this reimbursement, please advise this office and enclose the following documents:

1. A copy of this notice;

2. The bill you received for the services; and

3. The payment receipt from the (provider's name), or any other evidence showing that you (the beneficiary) have (has) already paid the (provider's name) for the services at issue.

You should file your written request for reimbursement within 6 months of the date of this notice.

EXHIBIT 1A

LETTER TO PROVIDER

To: Provider

Dear Administrator:

Under section 1879 of the Social Security Act, a Medicare beneficiary is relieved of the liability for certain noncovered services if the beneficiary did not know and could not reasonably have been expected to know that the items or services were not covered. Further, the law provides that the provider is liable if it is found that the provider knew or could reasonably have been expected to know that the items or services were not covered by Medicare.

On (date of limitation of liability notice), your facility was notified that the services provided to (beneficiary's name) during the period _______________ to _______________ were not covered under Medicare and that you were liable for these items and services.

(Requester's name) has submitted evidence which establishes that he paid your facility (amount paid) for the services received by (beneficiary's name). Because your facility has collected payment from (requester's name) after being determined liable for these services, section 1879(b) of the Act requires that the Medicare program make direct payment (indemnification) to him for this amount, less any unmet deductible and coinsurance amounts for which (beneficiary's name) is still responsible.

A check in the amount of (amount of check) is being sent to (requester's name). This indemnification payment represents an overpayment to your facility and it will be withheld from future Medicare payments due you unless you advise this office that refund of the incorrect amount(s) has been made to (requester's name).

If you do not agree with the amount determined to have been paid you, please contact this office in writing within 15 days of the date of this letter.

Sincerely yours,

EXHIBIT 2

LETTER TO BENEFICIARY WHO REQUESTS INDEMNIFICATION

Dear (Beneficiary's Name):

Your request for refund of improper payment under section 1879 of the Social Security Act (the limitation of liability provision) for the noncovered services provided you at (name of provider) from (date to (date) has been received.

The evidence submitted establishes that, even though you were not responsible for the services you received, you paid (provider's name) (amount paid) for the services. Your refund for these payments to (name of provider) has been calculated to be (indemnification amount). This figure represents full repayment for the charges you paid, less the deductible and coinsurance amounts which apply to this claim and for which you are responsible.

Since you are responsible for the deductible and coinsurance amounts, your record will be credited with these payments. In addition, your Medicare utilization record will be charged where noncovered services were provided to you and you were determined not liable.

If you have any questions concerning the matters discussed in this letter or the amount of the check enclosed, please call this office. If you prefer to visit your local social security office, please take this letter with you.

Sincerely yours,

EXHIBIT 3

LETTER TO SOMEONE OTHER THAN BENEFICIARY WHO REQUESTS INDEMNIFICATION

Dear (Person's Name):

Your request for refund of improper payment under Section 1879 of the Social Security Act (limitation of liability provision) for the noncovered services provided (beneficiary's name) at (name of provider) from __(date)__ to __(date)__ has been received.

It was determined that (beneficiary's name) was not liable for the services except for the applicable deductible and coinsurance. The evidence you submitted establishes that you paid (provider) (amount paid) for the services provided (beneficiary's name). Your refund has been calculated to be (indemnification amount). This figure represents full repayment based on the expenses incurred by (beneficiary's name) in the amount of $ _____, less the deductible and coinsurance amounts of $ _____.

If you have any questions concerning the matters discussed in this letter or the amount of the check enclosed, please call this office. If you prefer, you may visit the local social security office. If you do, take this letter with you.

Sincerely yours,

Program Integrity

3450. MEDICARE PROGRAM INTEGRITY--GENERAL

The potential for fraud and abuse in Medicare is heightened by the sheer magnitude of the program, which affects millions of beneficiaries, involves thousands of doctors and health care institutions, and which depends on many private health insurance organizations for proper claims review and payment. Medicare was designed not to impose an onerous Federal superstructure on the nation's existing health care system. Reimbursement principles, both for physicians and institutions, were rather broadly designed to accommodate, to the extent possible, established ways of doing business and to allow reimbursement of actual costs and charges. Every effort was made to respect the traditional doctor-patient relationship and to permit doctors to retain discretion in determining what services are necessary for the care of their patients, and to give patients ready access to the broad array of medical services which are available. Only those quality standards were imposed that were believed necessary to protect the health and safety of beneficiaries.

Medicare, therefore, utilizes established health care systems as the means for providing and paying for the health care services received by program beneficiaries. Within a program of such complexity and magnitude yet which provides flexibility and room for variation, opportunities for fraud and abuse are considerable. The problem is to carry out the legislative intent and at the same time detect and prevent fraud and abuse. To do this successfully requires the cooperation and concerted efforts of different SSA components, and of intermediaries and carriers.

3452. PROGRAM INTEGRITY DEFINED

The Medicare program presents a somewhat different situation in respect to identifying and preventing fraud and other abuses compared to cash benefit programs. This is true in terms of the kinds and scope of the problems encountered as well as some of the methods and procedures used to dispose of individual cases and to correct problems in general.

The suspects in Medicare fraud cases are seldom beneficiaries. Most often the suspects are physicians or suppliers, ambulance companies, proprietary hospitals, SNF's, or HHA's. Beneficiaries are most often the witnesses in Medicare suspected fraud cases and their age and health are important factors in developing cases of fraud. Although claims under Medicare are not for continuing benefits and, therefore, are for lesser amounts when considered individually, Medicare fraud cases in the aggregate involve huge sums of money.

Medicare also introduced a new concept of "program abuse." Not all incidents of abuse are considered violations in a legal sense and are usually disposed of by corrective and preventive actions taken by intermediaries and carriers rather than by SSA.

3454. MEDICARE FRAUD DISTINGUISHED FROM ABUSE

Fraud in Medicare usually takes the form of false claims for payment submitted to carriers and intermediaries for medical or health services which were in fact not rendered. Another form of fraud is the representation on the claim form of more complicated, and hence more costly, procedures than those actually rendered. Still another form of fraud in Medicare results from "kickback" arrangements between providers of services and their suppliers. Briefly, a provider purchases items reimbursable under Medicare for a stated price but the seller "kicksback" a discount amount. If the provider claims the stated price as his reimbursable cost under Medicare knowing it to be false, the act constitutes fraud. Allegations of this kind of fraud are usually made by third parties, possibly employees of either the provider or supplier.

The term "abuse" is used to describe incidents and practices which, although not considered fraudulent acts, may directly or indirectly cause financial losses to the Medicare program or to beneficiaries and their families. The type of abuse to which Medicare is most vulnerable is overutilization of medical and health care services. The Medicare law expressly excludes from coverage any services that are not reasonable and necessary for the diagnosis or treatment of illness or injury. Overutilization can occur when a patient requests and receives services that are medically unnecessary, or when a physician or a provider of services renders services that are medically unnecessary.

The most frequent incident of abuse, however, is breach of the Part B assignment whereby a physician agrees to bill on behalf of a beneficiary and to accept as his full charge the amount determined by a carrier to be the reasonable charge (as defined by law and regulations). Violation of the agreement occurs when the carrier reduces the physician's charge because it exceeds the reasonable charge and the physician, in violation of his agreement, requests the patient to pay the amount of the difference.

3454.1 Definition of Key Terms.—

A. Intent to Defraud.—The terms "with intent to defraud" and "fraudulently" are synonymous. They refer to an intentional deception or misrepresentation which the individual knows to be false and which the individual makes knowing that his deception could result in some unauthorized benefit to himself or some other person. The requisite intent is present if the representation was either knowingly false or fraudulent, or made in reckless disregard of what the facts might be.

Since fraudulent intent, as a subjective element of crime, is difficult to prove by direct evidence, it may be inferred from circumstances and from patterns of actions.

Intent to defraud may be imputed to a corporation if an agent of the corporation who committed the act had such intent. Thus, there is no legal obstacle to successful prosecution of a corporation provided that: (1) the guilt of the individual acting on behalf of the corporation can be established; and, (2) the act of the individual was commited within the scope of his employment by the corporation.

It is important to remember that the question of "criminal intent" is a question of fact and one ultimately decided by a court. The responsibility of those developing cases is to accumulate facts that demonstrate the existence of such intent. However, it is not their responsibility to decide this question, and they should guard against the tendency to prejudge and close cases on the basis of facts accumulated.

B. Abuse: Those practices wherein providers, physicians, or other suppliers of medical services operate in a manner inconsistent with accepted sound fiscal business or medical practices in such a way that these practices result in an unnecessary financial loss to the Medicare or Medicaid programs and are not within the concept of reasonable and necessary services as defined in the Medicare or Medicaid laws.

Examples:
1. Unnecessary services
2. Breach of assignment agreement
3. Gang visits
4. Improper billing practices

C. Integrity Review: The initial screening of complaints, inquiries, incidents, issues, etc., associated with abusive practices perpetrated against the Medicaid/Medicare program. Such review may consist of a limited review of other beneficiaries, assessment of information at hand, etc. The "normal" Medicare/Medicaid claims processing and prepayment operations should not be included as integrity reviews. The integrity review is resolved with one of two decisions:

1. No abuse is demonstrable and the issue is closed; or,

2. Abuse has been demonstrated sufficiently to warrant a full scale investigation.

Postpayment medical review (overutilization, upcoding, etc.) and abuse related complaint activity should be reported as integrity reviews or full scale investigations as appropriate.

D. Material.--The term "material" as applied to a false statement, false representation, or deceitful withholding of information where there is a duty to disclose the truth, means that the deceit must relate to a matter that is of significance and would tend to influence an intermediary to pay benefits not authorized by the Act; permit a beneficiary to keep benefits previously paid to him which were not authorized by the Act; or otherwise influence HCFA in determining rights to payment.

E. Knowingly.--The term "knowingly" as used in a criminal statute generally means that state of mind which exists when the accused person is aware that a particular act would constitute a deception or misrepresentation, but nevertheless proceeds to do it. It is intended to exclude unwitting or unconscious actions contrary to the law, such as mistakes of fact or accidents.

F. Willfully.--The term "willfully" means voluntarily, purposefully, deliberately, and intentionally as opposed to accidently, inadvertently, or carelessly. It involves actual knowledge of and intent to commit a particular act.

For example, to establish a violation under section 1877 (42 USC 1395nn), it is necessary to prove that a person or persons made a false statement by filing false claims or cost reports, for reimbursement, knowingly and willfully. The mere fact that an incorrect claim was filed is not in itself sufficient. It must be shown that the act was done intentionally with knowledge that such an act constituted a deception or misrepresentation to satisfy the knowingly and willfully aspects.

G. Full Scale Investigation.--Once the integrity review has been conducted and a decision is made to expand the investigation due to the belief that abuse exists, a full scale investigation is initiated. This decision will result in the preparation of an abuse form (HCFA-51).

H. Overpayment Established.--An overpayment will be considered as having been determined when the intermediary has completed its review and determined a specific figure. This determination could be based on either a sample or 100 percent review of bills. It should represent the amount the intermediary has presented, or will present, to a provider of services as the amount due in abuse cases.

3455 REPORTING TITLE 18 REQUIREMENTS FOR ABUSE CASES

Intermediaries that perform full scale abuse investigations are required to prepare Medicare, Medicaid Abuse Report forms which are intended to achieve 2 major goals:

(1) Create an integrated Medicare/Medicaid workload report; and

(2) Establish a comprehensive reporting system to provide sufficient information to meet the needs of the Administration, Congress, and the public

All intermediaries will summarize data concerning the number of Integrity Reviews (see § 3455.1) acted upon during the calendar quarter and will enter the required data into the appropriate section of the Postpayment Medical Review (Abuse Cases) Summary Report--Medicare (HCFA-60). The other data requested on this form may be obtained by summarizing the data on the HCFA-51.

Form HCFA-61 (8-78)

3455.1 Medicare/Medicaid Abuse Report Form (HCFA-51).--

A. Submission of Form.--The intermediary will prepare a Medicare, Medicaid Report Form (HCFA-51) in triplicate when a full scale abuse investigation is initiated. Retain one copy (the original) with the case file and forward two (2) copies (batch and mail them each Wednesday and Friday) to their designated OPI regional office. The HCFA-51 will be completed twice: once when the full scale investigation is opened (the heading and categories A through D are completed); and again when the case is closed (categories E through F should be annotated on the original form and copies of this form will then be forwarded to the OPI RO).

B. When to Complete Form.--The Medicaid, Medicare Abuse Report Form will be completed in all instances where the intermediary has determined that a situation warrants a full scale abuse investigation. The opening of a full scale abuse investigation and the initiating of an abuse form is appropriate only when the postpayment medical review of the physician's (provider's) practice pattern is beyond the level of initial screening and development (integrity Review) for possible abuse, and an overpayment recovery and/or other administrative action (e.g., 100 percent prepayment monitoring) should be undertaken. For example, the postpayment edits generate 1,000 cases for screening that result in 50 cases (Integrity Review) which warrant further review. Of these 50 cases, 20 (full scale investigation) must have additional medical review (nurse/physician) or concurrence for recovery and other administrative action.

An abuse form will be prepared if the physician or provider were the subject of a closed criminal investigation where additional administrative recovery or sanction action should be pursued.

C. Instructions for Completion of Form.--

1. Heading:

The intermediary will insert the organization name and number. Ordinarily, the intermediary will complete the Medicare block. However, if appropriate, both the Medicare and Medicaid block should be checked. Finally, the appropriate dates should be entered as follows:

a. Date Received: Is the date the Integrity Review was initiated (e.g., the date the complaint for inquiry was received, the date of the computer run, etc.)

b. Date Investigation Initiated: Is the date the reviewer determined that a full scale abuse investigation was warranted and initiated the abuse report form.

2. Block A - Suspect Individual or Organization:

This block will identify the name and address of the provider of service, physician, or other supplier under suspicion. Enter the full name of the subject in CAPITAL letters. If the subject is an individual, enter the surname first. The case number may be utilized by the intermediary. At this time, it is not intended to be utilized by the OPI central office.

(1) Cross Reference Name: Identify the name and address of the primary case under investigation to which the suspect indicated on this form has been associated or connected.

3. Block B - Classification of Suspect:

Circle only the code number of the appropriate classification. It is imperative that the name of the classifications be indicated, otherwise the tabulation will be distorted. The following is a list of codes and explanations.

Code	Explanation
01	All categories of approved, licensed medical doctors
02	Osteopath
03	Podiatrist, Chiropodist
04	Dentist
05	All types of hospitals
06	All types of skilled nursing facilities and nursing homes
07	All types of home health agencies
08	Facilities or individuals specializing in therapeutic treatment (Includes speech, physical, inhalation, occupational therapy)
09	Clinic, per se, or two or more doctors operating as a group
10	Supplier of equipment
11	Independent laboratory
12	Ambulance facility
13	Supplier of drugs, medications, etc.
14	Chronic renal disease facility
15	Chiropractor
16	Optometrist
17	Intermediate Care Facility
18	Transportation other than an ambulance
99	None of the above, explain

4. Block C - Nature of Potential Abuse Complaint:

This block identifies the potential problem. Area under review: Select the appropriate code 01-05 or 99 that best describes the area under review.

Code	Explanation
02	Excessive Services would be utilized to indicate items such as 10 office visits for a minor illness that would ordinarily require a maximum of only 2 visits
03	Services Not Medically Necessary would be utilized to report items such as EKG's and Chest X-rays reported on a patient treated for a fractured arm.
06	Dollar Volume, refers to the total dollars involved for the services that are under review. Indicate the time period reviewed to determine the amount. For example, if it is suspected that there is a problem in the rendering of laboratory services, the vendor's dollar volume for those services should be shown in this block. It is recognized that all intermediaries may not have the capacity to retrieve this information readily. Where this is the case,"unknown" should be shown in block 06.
07	Total Dollar Volume Paid should be completed where information on the total dollar volume of the suspect vendor for the most recent 12-month period is available.
99	Other. If this code is selected state the appropriate area.

5. Block D - Source of Complaint:

The information in this block will show how potential abuse became unknown.

01	This category encompasses the review of all bills that have been paid (postpayment review). It is anticipated that this code will be the most frequent method by which potential abuse situations are identified.
02	Refers to those situations which were potentially identified as fraud, but could not be litigated. In those instances where files are returned to the RO for administrative action this code should be circled.
03	Refers to cases identified before payment has been made and which indicates a potential for abuse,
04	A Professional Standard Review Organization
05	A Project Integrity case
06	A Payment Review case
07	A case referred from the OPI regional office.
08	Refers to any government source other than Federal and State
09, 10 and 11	Self-explanatory
99	Should be utilized when none of the above apply and an explanation should be provided.

6. Block E - Corrective Action:

This block provides information on the course of action taken to resolve the abuse situation. Quite often, abuse equates with unnecessary services or overutilization and professional medical judgment is needed to finally adjudicate the matter. Therefore, it is anticipated that an abuse case may often have to be referred for medical or peer review. If a course other than medical or peer review is taken, code 99 should be circled and an explanation included. More than one response may be necessary in this section. Also, it is possible that more than one code may be circled in this section, e.g., a case was referred for in-house review and subsequently referred to a PSRO (02) or Medical Society (03).

Code	Explanation
01	In-House Review: For the purposes of initiating an abuse form and for opening a full scale investigation, an "in-house review" is warranted only when the issues require an unusual or extraordinary review by medical or paramedical personnel. For example: a medical issue routinely reviewed by paramedical/medical personnel would not meet the criteria to qualify as an in-house review.

7. Block F - Disposition:

This block provides information concerning the action taken in closing the case. It is especially important for an overpayment established that the dollar amount be identified in block 02 (round figures to the nearest dollar). Code 08 is intended to be used when the State agency imposes a financial penalty. The dollar amount of such penalty should be shown. Code 99 will be used when none of the above are applicable. When this code is used an explanation is required. More than one action may be indicated in this section, e.g., an overpayment (02) may be established as well as pre-or postpayment monitoring (03) initiated. When an action code is shown, the date of the action must be included. Update the form and send two copies to the OPI RO when all actions in Blocks E and F are completed.

Form HCFA-60 (8-78)

3455.2 Postpayment Medical Review (Abuse Cases) Summary Report--Medicare (HCFA-60)

The intermediary will prepare 4 copies of the Postpayment Medical Review (Abuse Cases) Summary Report and submit 2 copies to the OPI regional office within 10 calendar days after the end of each calendar quarter. One copy should be sent to the Medicare Bureau regional office.

This summary will be utilized to capture data concerning integrity reviews, full scale investigations, overpayment, and other administrative actions of the intermediary. The name and number of the intermediary and the reporting period should be identified in the heading.

To avoid duplication of reporting, the component (intermediary or regional office) with primary responsibility for the resolution of the integrity review or full scale abuse investigation case should report the activity, e.g., a complaint received by the RO would be tabulated by the RO as an integrity review. If a full scale abuse investigation is warranted (a HCFA-51 opened) and the case is referred to the intermediary for resolution, the intermediary would report it as a full scale abuse case on the HCFA-60.

A. Integrity Reviews. The total number of integrity reviews, including assignment agreement violations (AAV) and provider agreement violations (PAV), should be reported. A separate count of the reviews which are assignment or provider agreement violations should be annotated on the appropriate line. (See § 3454.1.)

B. Full Scale Investigations. Report the total number of cases (Form HCFA-51) under each of the appropriate column headings. Further, the totals must be shown appropriately as "Institutional" or "Non-Institutional." For the purposes of this report, an institution includes the following: Hospital 05, SNF 06, HHA 07, Renal Facility 14, and ICF 17. (See § 3454.1.)

C. Administrative Action. For each reporting period, information entered in the column titled "Number Placed on Prepayment Monitoring" indicates the number of providers/suppliers warranting such action because of intermediary postpayment review activity resulting from a full scale investigation which has been closed. Information entered in the column titled "Overpayment Established" (see § 3454.1H) indicates the total number of providers/suppliers and their related aggregate total dollars where an overpayment has been identified during this reporting period.

D. Reviews. Data entered should summarize the PARE activity of the intermediary.

E. Signature. Each quarterly report should be signed and dated by the intermediary employee who is regularly responsible for the reports.

3456. STAGES IN THE DEVELOPMENTAL PROCESS

There are four general stages in the development of fraud cases in the Medicare program. These are:

A. Identification.—Potential fraud or potential abuse situations first must be recognized and reported. Identification of these cases can come from a variety of sources such as claims review activities, reports from beneficiaries to carriers or intermediaries, etc. At this stage all allegations should be clear and precise and reported to the RO for control or additional direction. See §§ 3458 and 3464.

B. Development.—Once a potential case or situation has been reported to the RO. case development is usually required to determine if in fact fraud or abuse is a real possibility. During this stage one or more contacts may be needed to ascertain the correctness of the suspect's billings, etc. These contacts would normally be with individual beneficiaries or providers and would not involve contact with any potential suspects. Such contacts should normally only be made at the request of the RO.

C. Interview with Subject.—This is a direct contact with the "suspect" and usually comes only after validation interviews suggest that fraud is a real possibility. These contacts will be with physicians, suppliers, providers, beneficiaries, etc. and normally will be made by or at the request of the RO.

D. Prosecution.—This is the final stage in processing fraud cases. This stage includes the decision on whether to recommend prosecution, preparation of the case for referral ultimately to a U.S. Attorney and any appropriate post referral development required by the U.S. Attorney.

3458. ROLE OF INTERMEDIARIES

The first responsibility of intermediaries is to refer to the RO cases of suspected fraud or abuse that come to their attention as a result of their claims review activities or through any other device. Thereafter, the extent of their involvement in the development and disposition of cases depends on the nature of the cases.

An intermediary will usually become aware of a possible violation through an allegation by the beneficiary (or his representative) or through its review process. When the intermediary is the first to receive the complaint, it follows the procedure outlined in § 3464, without awaiting RO instructions. If the intermediary can resolve the discrepancy through a review of in-house material there is no need to advise the RO. However, if the issue cannot be resolved in this manner, the RO should be advised.

The participation of intermediaries in the development of suspected fraud cases is usually limited to furnishing information about claims and payments. In abuse cases the role of intermediaries is greater because correction and prevention of abuse is basically their responsibility.

It should be noted that intermediaries are prohibited from contracting with third parties to undertake development of potential fraud cases. Program integrity investigations are to be conducted solely by authorized intermediary personnel in concert with the RO. This function may not be delegated to an organization, corporation, or individual not otherwise participating directly in the administration of the Medicare program.

3459. PROGRAM INTEGRITY COMPLAINTS RESOLVED BY INTERMEDIARIES

In some instances an intermediary may become aware of potential fraud or abuse situations which it is able under § 3464A to resolve without referral to the regional office. In the past the intermediary reported to the regional office information on all such cases by preparing and submitting a Part A Quarterly Report of Program Integrity Complaints. As a result of modifications to the reporting requirements for Title XIX abuse cases, this form should not be submitted to the regional office. The intermediary should, however, maintain the same information on such cases in the same manner as they have in the past. This information should be available for regional office review as part of the CIEP review process or upon request of the regional office. This will enable the regional office to compile useful statistical data as to the types and frequency of violations, variances by States within the regions, identification of violators, etc. After analyzing the data, the regional office will be able to discuss trends and remedial actions with each intermediary. At the same time, "repeaters" will be readily identified and aberrant patterns detected at an early stage.

3459.1 Information Required on Program Integrity Complaints.--All information which was previously reported by the intermediary on the Part A Quarterly Report of Program Integrity Complaints should continue to be maintained by intermediaries. In addition, to foster consistency of information and ease of review by regional office personnel, intermediaries should maintain the information in the same manner as it has in the past.

3459.2 Explanation of Information Required on Complaints.--

SOURCE OF COMPLAINT: Show the name of the individual or organization which notified the intermediary of the alleged program fraud or abuse.

PROVIDER NAME, ADDRESS AND I.D. NUMBER: This information is necessary to identify the provider involved in the alleged fraud or abuse.

NATURE OF COMPLAINT: Fully describe the nature of the alleged fraud or abuse, i.e., "provider billed for services not rendered," "beneficiary alleged provider billed for more than deductible and coinsurance," etc.

DATE RECEIVED: Show the date the complaint was received by the intermediary.

ACTION TAKEN: Fully describe the remedial action taken to close out the complaint. For example, "reviewed provider records and substantiated amounts billed beneficiary." It is important that this item provides sufficient information to enable the regional office to understand the reason for the closeout of this item.

DATE CLOSED: Show the date the closeout occurred.

NUMBER OF COMPLAINTS: List the number of complaints received concerning this provider including the present complaint. This information is useful in determining which providers are involved in an unduly frequent number of complaints.

PART A QUARTERLY REPORT OF PROGRAM INTEGRITY COMPLAINTS

Intermediary I.D.

Source of Complaint	Provider's Name, Address and I.D. Number	Nature of Complaint	Date Received	Action Taken	Date Closed	Number of Complaints

3460. FRAUD IN CONNECTION WITH CLAIMS

A. Fraud.—Section 208 of the Social Security Act provides penalties for obtaining or attempting to obtain services or payments by fraudulent means. When Medicare was enacted, Congress specifically extended these penalties to the health insurance program by section 1872 of Title XVIII of the Social Security Act. In addition, portions of the U.S. Criminal Code regarding conspiracy, submittal of false or altered documents, and making false claims against the Government apply to Medicare requests for payments. Upon conviction, penalties can range up to $10,000 or up to 5 years in prison.

With the passage of Public Law 92-603 on October 30, 1972, specific penalty provisions have been added to Title XVIII of the Social Security Act. These penalty provisions are contained in Section 1877 of the Act and apply to any acts, statements or representations under Medicare that occurred on or after October 30, 1972. Therefore, title II penalties set forth in section 208, and made applicable to title XVIII by section 1872, do not apply to Medicare as of October 30, 1972. The applicable section of the United States Code is 42 U.S.C. 1395nn. The following penalties are effective on and after October 30, 1972.

1. Penalty for False Statements, Misuse, Bribes, Kickbacks, or Rebates.—Whoever:

a. knowingly and willfully makes or causes to be made any false statement or representation of a material fact, in an application for a Medicare benefit or payment, or for use in determining the right to any such benefit or payment, or

b. has knowledge of any event affecting his right to receive a benefit or affecting the right of another individual in whose behalf he receives such benefit, and fails to disclose such event with the intent to fraudulently secure either a greater amount or quantity than is due or to receive benefits when none is due, or

c. receives benefits in behalf of another person and knowingly and willfully puts them to a use other than for the benefit or that person, or

d. furnishes items or services and solicits, offers, or receives a kickback, bribe, or rebate of a fee,

shall be guilty of a misdemeanor and upon conviction shall be fined not more than $10,000 or imprisoned for not more than one year, or both.

2. Penalty for False Statement to Qualify as Provider.—Whoever knowingly and willfully makes or causes to be made a false statement

or representation of a material fact in order that an institution or facility may qualify (either upon initial certification or upon recertification) as a hospital, skilled nursing facility, or home health agency shall be guilty of a misdemeanor and upon conviction shall be fined not more than $2,000 or imprisoned for not more than 6 months, or both.

While the number of such cases is expected to be relatively small, bringing them to light and making every possible effort to ascertain whether or not a criminal violation of the Act has occurred is of great importance in maintaining the program's overall integrity and effectiveness. Prompt and decisive action in handling these cases also acts as a deterrent to other potential offenders.

B. Abuse.—In the performance of its contractual duties, Part A intermediaries are in the best position to detect activities which are not criminal offenses but rather represent abuses of the health insurance program. To maintain the Medicare program's fiscal integrity and retain the public's confidence in its administration, the Part A intermediary should establish sufficient controls to promptly detect and act upon these cases.

C. Intermediary Responsibilities.—To fulfill its responsibility to prevent, promptly detect, and act upon Medicare fraud or abuse situations the intermediary should:

1. Carefully evaluate completed provider billing forms;

2. Devote sufficient administrative, fiscal and paramedical personnel and work time to detecting and dealing with fraud or abuse situations;

3. Conduct special reviews to determine the appropriateness of payments. Such reviews should include:

a. Checking a particular organization's bills for accuracy;

b. Making onsite inspections to validate claims by comparing medical records with billing forms;

c. Contacting beneficiaries to verify services; or

d. Initiating other methods that authenticate proper payments.

4. Conduct investigations as requested, of:

a. Complaints or tips received by mail, telephone, or in person;

b. Cases referred by the BHI regional office;

c. Situations brought to light by the intermediary's special reviews, internal controls, or proper audits or inspections;

d. Providers selected by analysis of the provider statistical and reimbursement report; and

e. Referrals from other agencies or sources of information.

5. Promptly report instances of possible fraud or abuse to the HI regional office and supply that office with whatever data or documentation it possesses or obtains concerning the matter;

6. Recognize situations where suspension of payments is in order and discuss such action with the HI regional office;

7. Assist the HI regional office in obtaining additional information and documentation regarding the problem and its demensions. This includes but is not limited to validating the services rendered, checking prior records, and compiling provider payment and statistical data;

8. Maintain controls and records of all potential fraud and abuse situations whether investigated and closed out by the intermediary or whether referred to the HI regional office;

9. Send corrected bills to SSA central office in all cases where a change is made. See § 3816.

10. Take precautions, because of evidentiary requirements, to insure that all documents are kept free of any annotations or underlining, bracketing, or other emphasizing pencil, pen, or similar marks.

3462. IDENTIFYING POTENTIAL FRAUD SITUATIONS

The kind of fraud violation which the intermediary is apt to encounter would arise from a false statement or misrepresentation made, or caused to be made, which is material to entitlement or payment under the program. Such violation may come to the intermediary's attention as a result of a beneficiary complaint, bill processing, provider audit, special review, analysis of the PS&R report, or claims validation. Some violations may be referrals from the BHI regional office, or from other public or private agencies. The perpetrator of the violation may be a participating provider, supplier, nonparticipating emergency hospital, or related organization, as well as an employee of the above. The perpetrator in some situations may be a Medicare beneficiary. See Part A Intermediary Manual, Part 2, § 2060.5, for guidelines where the appearance of fraud or abuse is encountered during an audit.

Situations which could suggest the possible existence of fraud would include:

1. Billings for services, supplies or equipment which were not rendered to, or used for, Medicare beneficiaries;

2. Billings for supplies or equipment which are clearly unsuitable for the patient's needs or are so lacking in quality or sufficiency for the purpose as to be virtually worthless;

3. Flagrant and persistent overutilization of medical or paramedical services with little or no regard for results, the patient's ailments, condition, medical needs or the doctor's orders;

4. Claiming of costs for noncovered or nonchargeable services, supplies or equipment disguised as covered items;

5. Material misrepresentations of dates and descriptions of services rendered, or of the identity of the recipient or the individual who rendered the services;

6. Duplicate billing which appears to be deliberate. This includes billing the Medicare program twice for the same services or billing both Medicare and the beneficiary for the same services;

7. Arrangements by providers with employees, independent contractors, suppliers and others which appear to be designed primarily to overcharge the health insurance program with various devices (commissions, fee splittings) used to siphon off or conceal illegal profits;

8. Charging to the health insurance program, by subterfuge, costs not incurred or which were attributable to nonprogram activities, other enterprises or personal expenses of principals;

9. Deliberately providing, or receiving health insurance benefits on the Medicare account of another individual;

10. Persistently and deliberately billing beneficiaries rather than Medicare for covered services;

11. Providers concealing business activities which would prevent them from complying with the provisions of the Provider Agreement (SSA-1561);-

12. Falsifying provider records in order to meet or continue to meet the Conditions of Participation. The regional office will report this situation to the State agency for an appropriate action regarding the provider's certification;

13. Soliciting, offering, or receiving a kickback, bribe or rebate.

3464. PRELIMINARY INTERMEDIARY ACTION IN POTENTIAL FRAUD OR ABUSE CASES

A. Initial Action.—The intermediary will immediately ascertain whether the cause was a clerical or similar error, a misunderstanding, etc. If an explanation is obtained reflecting that it was a clerical or similar error and the intermediary is satisfied that it has the true explanation it should close out its investigation, take whatever steps are necessary to correct the situation, and send an appropriate explanation to any complainant (subject to the disclosure of information guidelines contained in §§ 3760ff.) with a copy to the health insurance regional office. If the complaint was initially a referral from the health insurance regional office, the intermediary should forward a completed report to that office which then has the responsibility of notifying the complainant.

See § 3472 for a discussion of records to be kept by the intermediary when a case is resolved as a clerical error or misunderstanding, and § 3816 for instructions on submitting corrected bills to SSA.

B. Action in Cases Not Immediately or Satisfactorily Resolved.--Where the situation cannot be resolved as an error or misunderstanding, etc., the intermediary will immediately notify the HI regional office, transmitting all pertinent information and correspondence to that office. The intermediary should also advise the regional office of any prior problems or complaints it has had relating to the provider or other suspect. The intermediary should alert the regional office to any congressional or press interest or of any particular public relations problem which may be associated with the case. All such communications should be directed to the attention of the HI regional office program integrity specialist. Local offices of intermediaries will report potential violations directly to the nearest HI regional office and work directly with them in developing these cases.

The HI regional office has responsibility for directing and coordinating the development of potential fraud and abuse cases. If additional information is needed, the regional office may request assistance from a social security office and from the intermediary. Where potential violations are detected in one facility of a chain operation, all intermediaries dealing with any member of the chain will be alerted to the situation by the regional offices servicing them.

3466. WITHHOLDING PAYMENT WHEN THERE IS A STRONG INDICATION OF FRAUD OR ABUSE

A. Regional Office Direction.--The HI regional office may direct the intermediary to suspend payments in situations discovered by the intermediary as well as in situations uncovered by other sources.

In a situation where the intermediary believes there is a strong indication of fraud or abuse, it will seek the concurrence of the HI regional office to withhold future payment to the suspect until the matter is clarified.

In a case where the suspected fraud or abuse problem is first uncovered by the HI regional office, that office may direct the intermediary to stop payment at the time of the referral.

Note that there can be no suspension of payments without prior approval by the HI regional office.

If the potential fraud or abuse is limited to a particular type of ancillary service (e.g., physical therapy), it may sometimes be considered sufficient by the regional office to withhold payments only for this type of service unless the suspect is a PIP hospital or a provider reimbursed on a per diem basis. In most situations all payments will be suspended.

B. Notification of Suspension Action.--After consultation with the HI regional office, the suspect should be notified by the intermediary that payments will be withheld until the investigation of the matter is completed. The notice should be worded in such a way as not to make any accusation of fraud or misrepresentation since the allegations or suspicions of fraud will at that point be unsubstantiated. A copy of the notice should be sent to the HI regional office.

3468. OVERPAYMENTS IN FRAUD AND ABUSE CASES

3468.1 Fraud.--

A. Likelihood of Fraud Exists.--Where the preliminary investigation described in § 3464 establishes strong likelihood of fraud, the intermediary should not attempt recovery of the overpayment unless requested to do so by the HI regional office in accordance with § 3466. Note that no final cost settlement can be made with a provider suspected of fraud. This is because the case may ultimately be referred to the Department of Justice for possible criminal prosecution and also for consideration of instituting legal proceedings to recover the indebtedness under the provisions of 31 U.S.C. 231-233, 235, the False Claims Act. Any amounts voluntarily and unconditionally remitted should be accepted unconditionally and placed in escrow. Any amounts otherwise due the suspect under the Medicare program should be accounted for to the HI regional office and retained by the intermediary until final disposition of the case. The HI regional office will advise the intermediary of any overpayment information needed to be furnished to the Department of Justice.

B. Active Fraud Investigation.--When the HI regional office begins an active fraud investigation in a particular case, the intermediary should not request a refund and all unsolicited funds remitted to the intermediary before final disposition of the criminal and civil aspects of the case should be placed in escrow. The intermediary should immediately notify the HI regional office by telephone when funds are placed in escrow. The intermediary should then follow the instructions of the regional office on the proper disposition of remitted funds. After notification from the intermediary, the HI regional office will make all necessary contacts and advise the intermediary regarding proper disposition of the funds. Once the case has been forwarded to the United States Attorney for legal action (criminal and civil), that office has complete control over the case and the disposition of the remitted funds. In some instances, the U.S. Attorney may want the monies forwarded to his office. Under no circumstances should the intermediary place such monies into its Medicare trust fund or private medical insurance accounts.

In addition, all contacts with the intermediary by the suspect or his legal representative (personal, letter, or telephone), should be referred to the HI regional office. This applies to all contacts after the intermediary has been advised that the regional office has instituted an active fraud investigation involving a particular provider including when the case has been referred to the Regional Attorney or the U.S. Attorney.

C. Exception Where Provider Furnishes Services "Under Arrangements".--An exception to A and B above may be made where a provider furnishes services "under arrangements" with suppliers of services who are independent practitioners. Such suppliers would include, but not be limited to physical therapists, inhalation therapists, and speech therapists. If the supplier is under investigation for alleged fraudulent practices and it is definitely determined that there is no complicity on the part of the provider, the intermediary may proceed to final settlement on the provider's cost report including recoupment of any overpayments determined by audit. In this situation, the recovery of overpayments involving services rendered by the supplier would not be damaging to the prospects of a successful criminal or civil action against him. (Questions concerning arrangements of this type should be directed to the regional office.)

3468.2 Abuse.--There will be situations investigated by the intermediary under the direction of the HI regional office in which the elements of criminal fraud are not present or, if present, not prosecutable but which nevertheless constitute irregular financial practices or patterns or rendering care which abuse the Medicare program. In those cases no referral to the Department of Justice for possible criminal prosecution is usually made. The intermediary, at the conclusion of the investigation, will determine the amount of the overpayment and recover the overpayment in accordance with §§ 3707ff.

3470. RESUMPTION OF PAYMENT TO A SUPPLIER OR PROVIDER--CONTINUED SURVEILLANCE AFTER DETECTION OF FRAUD OR ABUSE

When payments to a supplier or provider have been suspended due to strong indications of fraud, serious misrepresentation, or abuse, payments may not be resumed until the fraud or abuse investigation has been completed. (See § 3466.) After completion of the investigation and appropriate legal action, all determined overpayments must be recouped by the intermediary either by direct refund or offset against claims being held in suspense.

Once recoupment action has been completed, the RO will advise the intermediary by letter that future claims, bills, and related actions of the supplier or provider are subject to a continuing and careful surveillance for at least 6 months to assure the propriety of future payments. In addition to internal screening of the claims, if previous experience or the future billing volume warrant, the RO will instruct the intermediary to periodically interview a sampling of the supplier's or provider's patients to verify that billed services were actually rendered. Subject to the above, the intermediary may be instructed to resume payment on the claims and to release any monies being withheld which will not be necessary as offset against determined overpayments. Where no overpayment is established, no further surveillance is warranted.

The intermediary should contact the RO at the end of 6 months regarding the current volume of billings, together with any other problems which may have developed. If no indication of a continuing aberrant pattern has been detected at the end of this period, the special controls may be discontinued.

3472. CASE RECORDS AND CONTROLS

The intermediary's program integrity liaison designee should maintain a listing of all pending and closed fraud or abuse situations. This will facilitate the screening of cases, permit the accumulation of statistical data, and provide for periodic intermediary follow-ups on pending cases.

Preferably, the intermediary will maintain individual records of these situations in addition to its regular organization and beneficiary files. This will allow rapid location of cases and all relevant material for use by the intermediary and for review by the Bureau of Health Insurance. The file should consist of the original referral or complaint, investigative reports, reports of telephone contact, correspondence, and any decisions on final disposition.

When cases are closed by the intermediary because they appear to be the result of a clerical error or misunderstanding, it is still important that a record be maintained in the event that the same problem recurs. Recurrences create a need to reevaluate the possibility of fraud or abuse and to determine the extent of the problem.

3474. INTERMEDIARY COORDINATION WITH PART B CARRIERS

It is essential that the intermediary's program integrity liaison designee have an ongoing dialogue with the appropriate carrier's program integrity liaison designee. The carrier's designee should be promptly notified when a specific problem might encompass both Part A and Part B, e.g., problems with a proprietary physician-owned hospital under Part A which might represent Part B physician billing problems. This will insure that a comprehensive investigation is timely initiated to resolve the situation and will prevent possible duplication of investigative efforts.

3476. CASES INVOLVING POSSIBLE FORGERY OF ENDORSEMENT OF HEALTH INSURANCE CHECKS

A. Initial Intermediary Action.--When a payee of a health insurance check alleges that his endorsement on the check was forged, the intermediary will obtain the following items and send them to the HI regional office:

1. A photocopy of the payee's forgery affidavit or statement regarding the circumstances surrounding the alleged forged endorsement;

2. The check;

3. Four photocopies of the front and back of the check; and

4. Any other pertinent information.

B. Investigation by U.S. Secret Service.--The U.S. Secret Service has investigative jurisdiction of alleged Medicare check forgeries since the checks represent Federal funds paid from either the Federal Hospital Insurance Trust Fund or the Federal Supplementary Medical Insurance Fund. Therefore, the BHI regional office will refer cases to the U.S. Secret Service for investigation. The regional office will notify the intermediary of the results of the Secret Service investigation.

C. Final Intermediary Action.--

1. If the Check was Forged.--If the report furnished is that the endorsement was forged, the intermediary will issue a new check to the payee with an explanation stating that the U.S. Secret Service has assumed jurisdiction over the forgery. Reclamation proceedings should also be started to have the intermediary's bank credit the amount of the check to the health insurance account.

If restitution is made during the investigation or as a result of prosecution, the intermediary and its bank will be notified. Likewise, the intermediary should notify the BHI regional office if it should happen to receive restitution after the case is submitted.

2. If the Check was Not Forged.--If the report furnished by the U.S. Secret Service is that the endorsement was not forged, the intermediary will notify the payee of this fact.

If the information furnished raises any unresolved question, return the case to the HI regional office.

3478. THEFT OF MEDICARE CHECKS FROM AN INTERMEDIARY'S OFFICE

If the intermediary discovers that blank checks, unissued checks, or checks which were issued but returned uncashed have been taken from its office, the HI regional office should be notified at once. The regional office will insure that further investigative efforts are coordinated with Federal, State or local authorities. The intermediary should not release or issue a statement to the press about the theft without first consulting the HI regional office.

3479. HANDLING NEGOTIABLE INSTRUMENTS

Should the intermediary inadvertently receive a remittance with an agent/agency of the United States as payee (such as a civil fraud settlement check), the instrument should be forwarded along with any pertinent correspondence to the RO for appropriate disposition.

3480. REFERRAL OF CASES INVOLVING POSSIBLE UNETHICAL OR UNPROFESSIONAL CONDUCT BY A PRACTITIONER

A. General.—Regulation No. 1 of the Social Security Administration specifically authorizes carriers and intermediaries to refer cases of apparent unethical practices to medical or other professional societies and State licensing boards.

Information obtained from a beneficiary is only to be disclosed to medical or other professional societies and State licensing boards if he (or his representative) has given his written authorization, unless it would necessitate the revealing of medical information that may be harmful to him or other considerations would make it inappropriate to do so. The intermediary will also obtain the assurance from the professional society or the licensing board that the information will be protected against unwarranted disclosure.

Once a case has been brought to the attention of the intermediary by means of whatever utilization safeguards it may have (e.g., manual and/or computer screening, routine or special surveys, etc.) or by a complaint received, the intermediary should take the necessary steps to assure itself that what is actually involved is more than a mere suspicion of unprofessional conduct or that merely a clerical error is involved. Also, an isolated instance of questionable professional conduct would not ordinarily be referred.

On the other hand, the intermediary need not compile sufficient weight of evidence so that a conclusive determination of misconduct is made prior to the referral; rather, the intermediary is to ascertain the probability of misconduct, but will leave any further investigation, review and disciplinary action to the appropriate professional society or State board.

Referral of apparent unethical practices or of a course of unprofessional conduct by a physician or other practitioner should only be initiated after proper professional advice has been obtained from the intermediary's physician staff members, medical consultants, or other professional advisors.

Referral should be made to either the professional society to which a physician or other practitioner may belong or to the State licensing board, depending on the nature of the case. In the cases referred to a professional society, the society is to determine whether the practitioner acted in an unethical manner and, if so, whether it will initiate disciplinary action on whether the case is to be referred to the State licensing board.

B. Types of Cases to be Referred.--

1. Overutilization.--This usually refers to a pattern of medical care which consists of providing more services than are medically necessary or which is not in accordance with acceptable medical practice, e.g., an inordinate number of office visits over an extended period of time for a chronic type of illness, a conspicuously high number of injections, the ordering of excessive hospitalization, etc.

2. Misutilization.--This involves the rendering of services that are not medically acceptable according to the standards of the community concerned.

3. Overcharging.--This is to be interpreted as the charging of fees by a physician, or other practitioner, that are not commensurate with the services rendered. Also the billing for amounts in addition to the deductible and coinsurance after an assignment has been accepted falls into this category.

4. Violation of Ethics.--These violations involve conduct of a physician or other practitioner which is contrary to the principles of ethics of the professional society to which he may belong or in such a manner as to make his practice a danger to the health and welfare of his patients or to the public.

5. Violation of the State's Professional Practice Statutes.--This involves the committing of acts which, under the applicable State law, would be grounds for suspension or revocation of his license to practice.

These guidelines are not all inclusive so that any activities by a physician, or other practitioner, in his treatment of program beneficiaries which would warrant concern by professional societies or State licensing boards may be brought to their attention.

3482 ADMINISTRATIVE SANCTIONS - GENERAL

The term "sanctions" as used in this section represents the full range of administrative remedies and actions available to deal with questionable, improper, or abusive practices of providers under the Medicare and Medicaid programs. The purpose of these sanctions is twofold. First, they are designed to be remedial by ensuring that questionable, improper, or abusive practices on the part of providers/suppliers are dealt with appropriately. Providers/suppliers are encouraged to correct their behavior and operate in accordance with program policies and procedures. Second, the sanctions are designed to protect the programs by ensuring that improper payments are identified and recovered and that future improper payments are not made.

NOTE: For purposes of §§ 3482 through 3486, "provider" means a hospital, a skilled nursing facility, a hospice, a comprehensive outpatient rehabilitation facility, or a home health agency that has in effect an agreement to participate in Medicare, or a clinic, a rehabilitation agency, or a public health agency that has a similar agreement, but only to furnish outpatient physical therapy or speech pathology services. "Supplier" or "supplier of services" means an individual or entity, other than a provider or practitioner, that furnishes health care services under medicare and is usually reimbursed on a reasonable charge basis.

Each RO has a contact person in the Office of Inspector General, Office of Health Financing Integrity, (OIG, OHFI), who is responsible for coordinating sanction activities. Direct any sanctions questions to the contact person within the appropriate OIG/RO (see § 3486).

Although the primary focus of this section is on the sanctions authorized in § 1862(d) (exclusions), and 1866 (terminations) of the Social Security Act, the other, less severe administrative remedies are also discussed, since consideration of these less severe measures may precede the more punitive sanctions affecting participation in the programs. The less severs measures do not apply in the case of §§ 1862(d) or 1866 where the exclusion/termination of an entity other than an individual is based on a program-related conviction.

3482.1 Role of Intermediaries--Intermediaries are responsible for:

A. contacting the OIG/RO when it is determined that an administrative sanction against an abusive provider/supplier is warranted;

B. providing the OIG/RO with appropriate documentation in proposed administrative sanction cases;

C. furnishing any available information to the OIG/RO with respect to providers/suppliers requesting reinstatement; and,

D. ensuring that no payments are made for services rendered by a provider/supplier following the effective date of suspension/exclusion/termination (see § 3483.7 for exceptions); and

E. reporting all instances where a suspended/excluded/terminated provider/supplier submits claims for which payment may not be made after the effective date of the suspension/exclusion termination (see § 3484).

This includes ensuring that no payments are made to providers for a salaried individuals who is suspended or excluded from the program. OIG, as it becomes aware of such employment situations, will notify providers that reimbursement for services furnished to Medicare patients by the individual will not be reimbursed. A copy of this notice will be sent to the appropriate HCFA RO as well as the appropriate intermediary, and will serve to alert it to make necessary adjustments to the provider's cost report.

3482.2 Administrative Remedies Considered Initially.—

A. Educational Contact and/or Warning--Contact the provider/supplier and inform them of the questionable or improper practices identified. Instruct the provider/supplier regarding the correct procedure to be followed, and that continuation of the questionable or improper practice may result in more severe administrative sanctions. Properly document all contacts and/or warnings with written reports and correspondence. If the questionable or improper practices continue, consult with the OIG/RO contact person regarding sanction action against the provider.

B. Removal or Reduction of Periodic Interim Payment (PIP)-- (NOTE: The following instructions apply to those providers who have not yet been phased in to the Prospective Payment System of reimbursement.)

The periodic interim payment (PIP) method of reimbursement to providers of services provides for interim payments to them at fixed times (normally biweekly) without regard to individual billings. However, providers are required to complete billings in detail as under other methods of reimbursement. The amount paid to the provider must approximate, on the average, the cost of covered inpatient or home health services renered by the provider during the period for which payment is made.

As stated in 42 CFR 405.454 (j) (3), the "intermediary's approval of a provider's request for reimbursement under the PIP method will be conditioned upon the intermediary's best judgement as to whether payment can be made to the provider under the PIP method without undue risk of its resulting in an overpayment because of greatly varying or substantially declining Medicare utilization, inadequate billing practices, or other circumstances. The intermediary may terminate PIP reimbursement to a provider at any time it determines that . . . the provider's experience under the PIP method shows that proper payment cannot be made under this method." Therefore, if it is determined that a provider is continuing to engage in improper or abusive practices, the right of that provider to receive reimbursement under the PIP method may be revoked, or the amount reimbursed reduced to bring the payment rate in line with actual costs.

C. Withdrawal of Favorable Waiver Presumption--A provider will be held liable for noncovered services if it is determined that it (1) had actual knowledge of the noncoverage of services in a particular case, or (2) could reasonably have been expected to have such knowledge. When a provider has been found to make all reasonable efforts to ensure that its Medicare coverage decisions are correct, and has demonstrated the ability to make accurate Medicare coverage decisions, it may be presumed that the provider did not have knowledge of noncoverage. All of the provider's claims for Part A hospital and SNF services and Part A and B home health agency visits may be processed and payment may be made for services denied because of medical necessity or custodial care under the presumption that it had no knowledge of noncoverage, unless the evidence in a particular case shows that, in fact, it had such knowledge.

If HCFA or the intermediary determines that a provider has submitted an excessive number of claims for a category of noncovered ancillary services or outpatient services, the favorable waiver presumption for the provider for that particular category of service may be withdrawn. A written notice of this withdrawal is sent to the provider by the intermediary. If the favorable waiver presumption is withdrawn, subsequent bills submitted by the provider which are determined to be for noncovered services will not be paid based solely on a presumption that the provider was unaware of the noncoverage.

D. Withholding of Payments/Recovery of Overpayments--Whenever the intermediary determines that an overpayment has occurred, OIG may, in conjunction with HCFA, direct the intermediary to withhold payment to the provider or other supplier of services (42 CFR 405.370). In cases involving abuse, the intermediary shall notify the provider or other supplier of its intention to suspend payment, in whole or in part, and the reasons for making the suspension. The provider or other supplier has 15 days following the date of notification to submit additional evidence, unless an extension is granted (42 CFR 405.371 (a)).

Where the intermediary has reliable evidence to indicate fraud or willful misrepresentation is involved, it may suspend payment prior to notifying the provider or other supplier of the suspension and the reasons for the action (42 CFR 405.371 (b)).

In any cases involving an overpayment where there is a strong likelihood of fraud, do not attempt recovery of the overpayment unless requested to do so, since this may jeopardize the government's entitlement under the False Claims Act.

In these cases, recovery action is normally deferred until the investigation is completed and the Department of Justice determines how the overpayment should be recovered.

If the provider or other supplier continues aberrant billing practices during the period he is being investigated for possible sanction, continue prepayment surveillance and adjust payments accordingly.

E. Referral of Situations to State Licensing Boards or Medical/Professional Societies--When apparent unethical or improper practices or unprofessional conduct are identified, refer them to State Licensing authorities, medical boards, or professional societies for review and possible disciplinary action. Coordinate with the OIG/RO on any referrals. Bring to the attention of the referral entity any activity (overutilization, misutilization, overcharging, etc.) which warrants their involvement. When referring a case to peer review, etc., that meets the criteria described in § 3483.1, notify the OIG/RO.

Additionally, request the peer review body to determine whether or not the items and services being furnished by the subject of the referral are substantially in excess of the needs of the beneficiaries or of a quality which fails to meet professionally reorganized standards of health care, as this is the language used in OIG's sanction authority. The review decision should address the specific problems identified in individual cases, in terms easily understood by the layman, rather than simply issuing a general statement concerning the pattern of practice.

3483 AUTHORITY TO SUSPEND, EXCLUDE, OR TERMINATE PAYMENT TO PRACTITIONERS, PROVIDERS, AND SUPPLIERS OF SERVICES

The Office of Health Care Financing Integrity (OHFI), (OIG) has been delegated the authority, under §1128 (a) of the Social Security Act, to suspend from participation in the title XVIII (Medicare) program, physicians and other individuals who have been convicted of fraudulent activities against the Medicare or Medicaid programs. Suspension from the Medicare program causes an automatic suspension from participation in the title XIX (Medicaid) program. These cases will be handled by the OIG/ROs through central office.

OIG/OHFI has also been delegated the authority provided by §1862 (d) (1) (A), (B) and (C) of the Act to exclude from coverage items and services furnished by practitioners, providers, or other suppliers of health care services who have made false statements in applying for Medicare payment or have engaged in certain forms of program abuse (e.g., unnecessary services, improper billing practices, etc.), and to terminate provider agreements for the same reasons under §1866 (b) (2) (D), (E) and (F). Where Medicare reimbursement is precluded as a result of exclusion/termination, Federal financial participation is not available for title XIX (Medicaid). Submit all §1862 (d) and 1866 sanction cases originating at the intermediary level directly to the OIG/RO.

Further authority under § 1157 of the Social Security Act has been delegated to OIG to exclude items and services furnished by individuals and terminate agreements with providers who have been determined by a PRO to have violated their obligations under § 1156 of the Act. This section also contains the authority to impose a monetary penalty in lieu of exclusion/termination. § 1156 exclusion actions will be submitted by PSROs/PROs to the OIG/RO.

3483.1 Basis for Exclusion Under §1862 or Termination Under § 1866—Exclusions or terminations under §§ 1862 and 1866, respectively, may be effected upon a determination that a provider, has:

A. knowingly and willfully made or caused to be made any false statement or misrepresentation of a material fact in a request for payment under Medicare or for use in determining the right to payment under Medicare;

B. submitted or caused to be submitted, bills or requests for payment containing charges (or costs) that are substantially in excess of its customary charges (or costs) or

C. furnished items or services that are substantially in excess of the beneficiary's needs or of a quality that does not meet professionally recognized standards of health care.

For the purposes of the exclusion /termination procedures, "furnished" refers to items or services provided directly by, or under the direct supervision of, or ordered by, a practitioner or other individual (either as an employee or in his or her own capacity), a provider or other supplier of services. NOTE: A proposal to exclude must be based solely on the provider's title XVIII acts.

3483.2 Identification of Potential Exclusion or Termination Cases

A. Potential Abuse Exclusion or Termination Cases--Cases in the abuse workload should be evaluated to determine if they warrant exclusion or termination action. Examples of abuse cases suitable for exclusion or termination include, but are not limited to:

1. providers who have been the subject of an adverse peer review finding;
2. providers whose bills must be consistently reviewed because of repeated instances of overutilization;
3. providers who furnish items or services that are substantially in excess of the beneficiary's needs or are of a quality that does not meet professionally recognized standards of health care; or
4. providers who are the subject of pre-payment review for an extended period of time (longer than 6 months). Generally, to be considered for exclusion or termination due to abuse, the practices would have to consist of a clear pattern which the provider refuses or fails to remedy in spite of efforts on the part of the RO, contractor, PSRO/PRO or peer review groups. A termination or exclusion recommendation will be implemented only where efforts to get the provider to change the pattern of practice are unsuccessful. The educational or persuasive efforts are not necessary nor desirable when the issues involve life threatening or harmful care or practices.

If a case involves the furnishing of items or services in excess of the needs of the individual or of a quality that does not meet professionally recognized standards of health care, obtain reports documenting the medical determination as appropriate from one or more of the following:

(a) the PSRO/PRO for the area served by the provider;
(b) State of local licensing or certification authorities;
(c) peer review committees;
(d) State or local professional societies;
(e) intermediary medical reviewers; or
(f) other sources deemed appropriate.

B. Cases Where Convictions Have Been Obtained--Any case in which there is a conviction for a program related offense on other than an individual is considered for sanction action. These cases will be handled by OIG/RO and OIG/CO. Convicted institutional providers can be excluded under § 1862 (d) and terminated under § 1866 (see § 3483.1).

3483.3 Development of Potential Exclusion or Termination Cases.—

A. Case considerations—When recommending cases to the OIG/RO for exclusion or termination, consider:

best copy available

1. the nature and seriousness of the acts in question;
2. documentation of corrective actions taken to bring about a willingness to abstain from further questionable acts;
3. the experience gained from monitoring payments to the provider after corrective action was taken;
4. the degree of deterrence which might be brought about by termination or exclusion;
5. the effects of exclusion on the delivery of health care services to the community; and
6. any other factors deemed appropriate.

B. Documentation Needed—In cases being recommended to the OIG/RO for exclusion/termination where there has not been a conviction, a pattern of one of the following must be shown to exist:

1. misrepresentation;
2. excessive charges (costs); or
3. excessive services or services of a quality which fail to meet professionally recognized standards.

In all three instances, the documentation must include the length of time that the problem has existed and the dollars lost by the program as a result. Documentation of excessive services or quality of care issues requires a medical opinion from a qualified physician. All cases involving excessive services or poor quality of care issues must also contain documentation of prior unsuccessful efforts to correct the problem through the use of less serious administrative remedies as described in § 3482.2.

C. Intermediary Notification to a Provider—If a situation is identified as a result of development of potential fraud or abuse which meet one or more of the § 3483.1 criteria, consult the OIG/RO sanctions contact person. With approval, send the provider a written notice containing the following information:

1. identification of the provider;
2. the nature of the problem;
3. the health care services involved;
4. the basis or evidence for the determination that a violation has occured. In cases concerning medical services, the evidence must include reports and opinions from a PSRO/PRO or a peer review committee, or a State/local professional society;
5. the sanction to be recommended;
6. an invitation to discuss the problem with contractor and OIG/RO staff or to submit written information regarding the problem; and
7. that a recommendation for consideration of sanctions will be made to the RO within 30 days if the problems are not satisfactorily resolved.

If the provider/supplier accepts the invitation to discuss the issues, a report of the meeting must be made for the record. This does not have to be a professionally transcribed report.

Copies of the letter to the provider/supplier and his/her response or the summary of the meeting must be in the file.

Refer cases which demonstrate a strong fraud potential to the OIG/RO for investigation.

Refer any case which reaches the level where a provider is notified of a problem in accordance with this section to the OIG/RO even if the provider is convincing in an allegation that there was a legitimate reason for the problem or that the problem has been corrected.

Document and refer cases involving harmful care as rapidly as possible. Handle requests received from the OIG/RO for additional information as a priority item.

D. Additional Information—Additional information which may be of value in supporting a proposal to exclude/terminate includes such factors as: 1) any other related offenses; 2) any adverse impact on beneficiaries; 3) the amount of damages incurred by the programs; and 4) potential program savings.

E. Mitigating Circumstances—Any significant factors which do not support a recommendation for exclusion/termination or which tend to reduce the seriousness of the problem will also be considered. One of the primary factors here is the impact of the sanction action on the availability of health care services in the community. This is important in considering actions against hospitals and nursing homes and must be addressed in the proposal. Bring mitigating circumstances of which you are aware to the attention of the OIG/RO when forwarding your sanction recommendation.

3483.4 Contents of Sanction Recommendation.—The sanction recommendation forwarded to the OIG/RO should contain (to the extent appropriate) the following information:

A. Identification of the Subject—The identification contains the subject's name and address and a brief description of the subject's special field of medicine. If the subject is an institution or corporation, include a brief description of the type of services it provides and the names of officers and directors of the corporation.

B. Origin of the Case—Include a brief description of how the violation was discovered.

C. Nature of the Violation—Include a description of the subject's fraudulent or abusive practices, and the type of health service(s) involved.

D. Statement of Facts—A statement of the facts in chronological order describing each failure to comply with an obligation with specific dates, places, circumstances, and any other relevant information. (NOTE: Do not use patient names; replace with identification codes.)

E. Pertinent documentary evidence available to support the case determination. Include records reviewed, norms, criteria and standards of care, profiles of the provider recommended for sanction, and relevant information provided by other program administrative entities.

F. Copies of written correspondence and written summaries of the meetings held with the provider regarding the violation;

G. Copies of all notices to the party;

H. Other Significant Issues—Include any additional information that may be of value in supporting the proposal to exclude or which would support the action in the event of a hearing before the Office of Hearings and Appeals.

I. Program Earnings—Include data for program monies paid by program (XVIII, XIX, XX) and on assigned/non-assigned basis, for the last 3 years, if available.

3483.5 Notice of Administrative Sanction Action—A determination to suspend, terminate or exclude is made by the Office of Health Financing Integrity (OHFI), Office of Inspector General (OIG). When there is a determination to suspend, exclude or terminate, OIG sends a written notice to the provider at least 15 days prior to the effective date of the action. The notice includes:

A. the basis for the exclusion, termination or suspension;
B. the duration of the sanction and the factors that were considered,
C. the requirements for reinstatement;
D. the appeal rights;
E. the fact that Federal matching funds for title XIX (Medicaid) are curtailed in exclusion or termination cases and that the Medicaid agency is required to stop all payments in suspension cases for the determined period; and
F. the fact that should claims continue to be submitted during the period of sanction for which payment may not be made, the provider/supplier may be subject to a civil monetary penalties action.

3483.6 Notification to Other Agencies.—Concurrent with the mailing of the notice to the provider, OIG sends a copy of the notice with a cover letter (memorandum) which references the entities to be notified to the HCFA Regional Administrator. The HCFA/RO is responsible for notifying intermediaries, Medicaid State agencies, PSROs/PROs and the Railroad Retirement Board of the sanction action. HCFA is also responsible for ensuring that the sanction actions are properly effectuated.

The OIG notifies the appropriate licensing agency, the public, generally through a newspaper notice, and all known employers of the sanctioned provider where Medicare or Medicaid is involved.

3483.7 Effective Date of Suspensions/Exclusions/Terminations.--

A. Exclusion and Suspensions.--The effective date of an exclusion under section 1862(d) or suspension under section 1128(a) is 15 days from the date of the notice to the provider. Section 1160 exclusion actions are effective 30 days from the date of the notice to the provider. Section 1156 exclusions will be effective 15 days from the date the provider receives the notice of exclusion.

Payment is not made to a provider for items and services furnished on or after the effective date of exclusion/suspension specified above, except in the following cases:

1. in the case of inpatient hospital services or post-hospital skilled nursing facility care furnished to a beneficiary who was admitted to a hospital or skilled nursing facility before the effective date of the exclusion/suspension, payment for services furnished is available for up to 30 days after that date; and

2. in the case of home health services furnished under a plan established before the effective date of exclusion/suspension, payment is available for 30 days after the date on the notice.

B. Terminations.--To give the provider and the public sufficient advance notice of the termination of a facility's agreement, the effective date of the termination is determined in the following manner:

1. Two or three days are allowed for delivery of the notice to the institution, depending on its location;

2. To this is added the time needed for actual publication of the public notice in the local newspaper (which, in turn, depends on the newspaper deadline); and

3. The date of termination is the sum of the above two factors, plus 15 days. Thus the facility will receive notice sometime before the publishing of the public notice and the public will receive 15 days notice before the effective date of termination. For example, if a notice is released October 1, and 3 days are allowed for mailing, and 5 days are needed by the local newspaper for publishing the notice, termination of the agreement would be effective on October 23. However, to allow for any unexpected delays in mailing or publication, up to 30 days from the date of the notice to the effective date of the termination may be allowed.

Payments may be made after the effective termination date for:

a. inpatient hospital services, and post-hospital extended care services furnished to any eligible individual who was admitted to the institution prior to the effective date of such termination for up to 30 additional days; or

b. home health services furnished to an individual under a plan established before such effective date, if the services are furnished within 30 days of the date of the notice.

3483.8 Denial of Payment to Beneficiaries—

A. Suspensions.—If a benficiary submits claims for items or services furnished by a suspended party or by a supplier which is wholly owned by a suspended party, on or after the effective date of the suspension:

1. HCFA pays the first claim submitted by the beneficiary and immediately gives the beneficiary notice of the suspension.
2. HCFA does not pay the beneficiary for items or services furnished more than 15 days after the date on the notice to the beneficiary.

B. Exclusions.—If a beneficiary submits claims for items or services furnished by an excluded practitioner, provider, or other supplier of services after the effective date of the exclusion:

1. HCFA pays the first claim submitted by the beneficiary and immediately gives notice of the exclusion.

2. HCFA does not pay the beneficiary for items or services furnished more than 15 days after the date on the notice to the beneficiary or after the effective date of the exclusion, whichever is later.

C. Terminations.—The denial of payment to beneficiaries as described in B. above also apply to those claims submitted by beneficiaries for items and services furnished by a provider whose agreement has been terminated under § 1866(b) (2) (D), (E), or (F).

3483.9 Appeals Process.—An excluded provider may try to have the suspension, exclusion or termination decision reversed or modified, through the appeals process. The OIG is responsible for processing hearing requests from sanctioned providers.

3483.10 Reinstatements.—A suspended, excluded, or terminated party may apply for reinstatement at the expiration of the suspension, exclusion or termination period or any time thereafter. Reinstatements are not granted automatically. All requests for reinstatement are referred to the OIG/RO. The OIG then initiates an inquiry designed to determine whether the cause(s) of the sanction has been eliminated and is not likely to recur. The intermediary will be is asked to furnish information regarding the subject requesting reinstatement.

3483.11 Monthly Notification of Sanction Actions.—A listing containing suspension, exclusion, termination, and reinstatement/withdrawal actions taken by the Office of Inspectior General is distributed to the intermediary on a monthly basis.

Use the information contained in this listing to:

1. determine whether a physician/practitioner, provider or other health care supplier who seeks certification as a provider of services in the Medicare/Medicaid programs is eligible to receive reimbursement; and

2. insure that physicians/practitioners, providers or other health care suppliers currently sanctioned are not being inappropriately reimbursed.

The dates reflected on the listing are the dates the notices were released to the sanctioned party. Section 1128(a) suspension actions and §1862(d) exclusion actions are effective 15 days from the date of the notice. Section 1160 exclusion actions and § 1866 termination actions are effective 30 days from the date of the notice. Section 1156 exclusion actions will be effective 15 days from the date the provider receives the notice of exclusion. Reinstatements/withdrawals are effective as of the date indicated.

Upon receipt of this listing, check your systems to determine whether any physician/practitioner, provider or other health care supplier is being reimbursed for items or services provided subsequent to the date they were suspended, excluded or terminated from participation in the Medicare program. In the event a situation is identified where inappropriate payment is being made, notify the Regional Office of Health Financing Integrity, Office of Inspector General, and take appropriate action to correct the situation. Also consider the instructions contained in § 3484 with respect to civil monetary penalties.

3484. CIVIL MONETARY PENALTIES LAW

Intermediaries are notified on a case by case basis when practitioners, providers or other health care suppliers are suspended, excluded or terminated from the Medicare program. In addition each intermediary receives a monthly report of sanctioned individuals or entities.

Intermediaries are responsible for ensuring that no payments are made after the effective date of a sanction except as provided for in regulations at 42 CFR 420.126, 420.155, and 489.55.

Under the Omnibus Budget Reconciliation Act of 1981, Congress enacted a Civil Monetary Penalties Law, § 1128(A) of the Social Security Act (the Act) (42 USC 1320a-7a).

This statute gives the Secretary the authority to impose a monetary penalty upon any person who presents or causes to be presented a claim that the Secretary determines...

(1) is for a medical or other item for service...

(A) that the person knows or has reason to know was not provided as claimed, or

(B) for payment which may not be made under the program under which such claim was made, pursuant to a determination by the Secretary under § 1128, 1160(b), 1862(d) or 1866(b)(2) . . .

Check payment systems periodically to determine whether any provider, practitioner, or other health care supplier, who has been suspended, excluded or terminated since January 1982, is submitting claims for which payment is prohibited. If any such claims are submitted by practitioners, providers or other health care suppliers who have been sanctioned under § 1128(a)(1), 1862(d)(1), 1160(b) or 1866(b)(2) forward them to the Office of Health Financing Integrity (OHFI), Office of the Inspector General, at the regional office that services the intermediary.

Limitation on Assignment of Claims

3488 ASSIGNMENT OF A PROVIDER'S RIGHT TO PAYMENT

A. Basic Prohibition.--Except as provided in B. below, the intermediary may pay benefits due a provider only to the provider and may not pay the provider's benefits to any other person or organization under an assignment or reassignment or power of attorney or under any other arrangement where the other person or organization receives the payment directly. A "power of attorney" means any written authorization by a principal to an agent:

1. To receive in the agent's own name amounts due the principal;

2. To negotiate checks payable to the principal;

3. To receive in any other manner direct payment of amounts due the principal.

This prohibition against assignment of a provider's benefits applies not only to payments due the provider in its own right but also to payment of benefits due a provider as a reassignee of the physician under §3604.1ff.

Payment is considered to be made directly to an ineligible person or organization if that person or organization can convert the payment to its own use and control without the payment first passing through the control of the provider or other party eligible to receive the payment under the exceptions in subsection B. below. (For payment to a bank, see §3488.2.)

The forwarding of amounts due a provider to the location of its home office under the procedures described in §3703.1 is not affected by the prohibition described in this section. Payment under those procedures is considered payment to the provider.

B. Exceptions

1. Payment to a Governmental Agency.--The law does not preclude the Medicare program from paying benefits due a provider to a governmental agency or entity under an assignment by the provider. We are making no administrative provision currently, however, for such payment. (This has no bearing, of course, on the situation where the provider is owned by the governmental agency or entity; in that case payment to the agency or entity is considered payment to the provider.)

2. Payment Pursuant to a Court Order.--The Medicare program may make payment in accordance with an assignment established by, or pursuant to the order of, a court of competent jurisdiction. The assignment must satisfy the conditions set forth in Part A Intermediary Manual Part II, §2755.

3. Payment to an Agent.--The Medicare program may make payment, in the name of the provider, to an agent who furnishes billing or collection services. The payment arrangement must satisfy the conditions set forth in §3488.1.

C. Background and Purpose.--In 1972, the Congress acted to stop a practice under which some physicians and other suppliers providing services covered under Medicare and Medicaid reassigned their Medicare and Medicaid receivables to other organizations and groups, which then claimed and received payment. Often the organizations purchased the claims at a percentage of face value. By 1972, it had become apparent that such reassignments were a source of incorrect, inflated, and even fraudulent Medicare and Medicaid claims. The Social Security Amendments of 1972, Public Law 92-603, therefore, included a prohibition against payment on a charge basis for covered services to anyone other than the patient, his physician or other person who provided the service, with limited exceptions.

Despite these efforts to stop the factoring of Medicare and Medicaid receivables, some physicians and other suppliers circumvented the intent of the law by granting a power of attorney. This allowed the factoring company or other person to receive the Medicare or Medicaid payments in the name of the physician or other supplier, thus permitting continuation of program abuses that were shown to be associated with payment to such persons in the past.

Section 2(a) of Public Law 95-142, effective with respect to care and services furnished on or after October 25, 1977, modified existing law to preclude the use of power of attorney as a device for reassignment of benefits under Medicare subject to limited exceptions. It also provided for a similar prohibition with respect to payment for care furnished by providers of services.

While those provisions are primarily designed to preclude providers from selling their Medicare claims to factors, they also preclude providers from pledging their claims to lenders and include restrictions precluding payment to many other persons.

D. Effect of Payment to an Ineligible Recipient.--An otherwise correct Medicare payment made to an ineligible recipient under an assignment or other authorization by the provider does not constitute a program overpayment. Sanctions may be invoked against a provider under §3488.4 to prevent it from executing or continuing in effect such an authorization in the future but neither the provider nor the ineligible recipient will be required to repay the Medicare payment.

3488.1 Payment to an Agent

A. Conditions.--The intermediary may make payment in the name of the provider to an agent who furnishes billing or collection services if:

1. The agent receives the payment under an agency agreement with the provider;

2. The agent's compensation is not related in any way to the dollar amount billed or collected;

3. The agent's compensation is not dependent on the actual collection of payment;

4. The agent acts under payment disposition instructions which the provider may modify or revoke at any time, and

5. In receiving the payment, the agent acts only on behalf of the provider.

B. Background.--The primary purpose of the exceptions to the prohibition in §3488A is to permit computer and other billing services to claim and receive Medicare payment on behalf of and in the name of the provider. The conditions for payment are designed to insure that the billing agent has no financial interest in how much is billed or collected and is not acting on behalf of someone who has such an interest, other than the provider itself.

The conditions specified in subsection A do not apply if the agent merely prepares bills for the provider and will not receive and negotiate the checks payable to the provider.

C. Documentation.--If payment is being made or is requested to be made in the name of a provider to an agent, the intermediary may assume that the conditions for such payment are met in the absence of evidence to the contrary. If there is evidence to the contrary, the agent must document the agency agreement by submitting to the intermediary a copy of the written agreement between it and the provider, if such a written agreement exists. The written agreement may be a formal legal document or merely an exchange of correspondence between the parties. If there is no written agreement of either a formal or informal nature or all the required conditions for payment are not clear in the agreement, the intermediary shall obtain a statement from the agent describing the pertinent terms of the agreement or of those specified provisions which need to be clarified. The intermediary shall then verify the agent's allegations by obtaining statements from one or more providers that have agreements with the agent. See §3488.3E. for reviewing endorsements on benefit checks.

3488.2 Payment to a Bank.--If payment due a provider is being sent or is requested to be sent to a bank (or other financial institution), the intermediary may assume that this procedure is consistent with the requirements of §3488 in the absence of evidence to the contrary. If there is evidence to the contrary, the intermediary should develop the circumstances.

There are a number of reasons why a provider may want the intermediary to send its Medicare check to a bank: (1) to make payments of interest and principal on a loan from the bank, (2) for deposit in the provider's business account, or (3) because the bank is the provider's billing and collection agent. Where the bank deposits the provider's check in an account from which the provider is free to withdraw any deposited funds, the intermediary, in sending the provider's check to the bank, is considered to be making payment to the provider. This is true even though the bank also has the right to remove funds from that account to satisfy the provider's obligation to the bank for payment of interest and principal under a loan agreement or for agents' fees under an agency agreement.

On the other hand, the intermediary is considered to be making direct payment to the bank contrary to the prohibition in §3888A if it mails the provider's check to the bank and the bank deposits the check in a special account (e.g., a loan or agency account) from which the bank may deduct interest and loan repayments or agent's fees as they become due but from which the provider may not freely withdraw funds. This is true whether the special account is established in the name of the provider or otherwise. The intermediary may not honor such a payment arrangement in connection with a loan agreement and may honor such an arrangement in connection with an agency agreement only if the requirements in §3488.1A are met.

It is common practice for a bank to receive direct payment as described in the preceding paragraph where the provider has pledged its Medicare and other receivables as security on a loan. The Medicare law does not, however, preclude the provider from giving the bank a security interest in its Medicare payments as long as that interest is nonpossessory; i.e., is merely an enforceable right to the providers' Medicare payments once they have reached the hands of the provider and does not call for the Medicare program to pay the lender directly.

If the intermediary finds that the provider has two accounts in a bank--one which qualifies to receive his Medicare checks under the above guidelines and the other which does not--any Medicare check sent to the bank on behalf of the provider must include in the designation of the payee on the check, the identification number of the qualified account.

Section 3488.3 Correcting Unacceptable Payment Arrangements

A. Disseminating Information.--Soon after the effective date of these instructions (August 1980), and from time to time thereafter, the intermediary shall disseminate through professional relations media information regarding the prohibition in §3488. The following language may be used or adapted for this purpose:

> "The Medicare law prohibits us from paying benefits, due a provider of services, to another person or organization under an assignment, power of attorney or any other arrangement whereby that other person or organization receives those payments directly. There are the following exceptions to this rule:
>
> (1) We may pay a provider's benefits (in the provider's name) to a billing or collection agent, if
>
> (a) The agent receives the payment under an agency agreement with the provider;
>
> (b) The agent's compensation is not related in any way to the dollar amounts billed or collected; and
>
> (c) The agent's compensation is not dependent upon the actual collection of payment; and

(d) The agent acts under instructions which the provider may modify or revoke at any time, and

(e) The agent, in receiving the payment, acts only on the provider's behalf.

(2) We may pay the provider's benefits (in the provider's name) to a bank or other financial institution for deposit in an account from which the provider may freely withdraw any deposited funds

(3) We may pay the provider's benefits in accordance with an assignment established by, or pursuant to the order of, a court of competent jurisdiction.

"A provider should notify us immediately if:

(1) We have been mailing its benefits to the address of another person or organization; and

(2) The provider has given that other person or organization power of attorney or other advance authority to negotiate its benefit checks; and

(3) None of the above exceptions which would permit payment to another person or organization apply in the provider's case.

"A provider which hereafter enters into or continues such a prohibited payment arrangement may have its participation in the program terminated and its right to receive assigned payment for physician services revoked."

B. When to Develop Questionable Payment Arrangements.--The intermediary may assume that an arrangement in which Medicare payment is being sent or is to be sent to an address other than the physical location of the provider is consistent with the requirements of §3488 in the absence of evidence to the contrary. The intermediary shall develop the facts of any case in which:

1. It becomes aware that it is mailing or is being asked to mail the provider's payments to the address of another person or organization; and

2. It is likely the other person or organization is not qualified to receive the payments under one of the exceptions in §3488B or is a financial institution receiving the funds for deposit in an account from which the provider may not freely withdraw deposited funds. (See §3488.2.)

The intermediary shall develop the facts of the case, for example, where it appears that it is mailing the provider's payments to the address of a known factor.

C. How to Develop Questionable Payment Arrangements.--The exact procedure to follow in developing questionable payment arrangements is subject to intermediary discretion. The first step is usually to ascertain the reason for the special address. Once the intermediary has determined that payments due the provider are being made to another party (although in the name of the provider), it will be necessary to ascertain whether any of the exceptions in §3488B that could permit payment apply. After initial contact with the provider, the intermediary may find the other party to be the best source of information about the arrangement. The intermediary shall establish the crucial elements of the arrangement by obtaining a copy of the formal agreement, if any, between the parties, copies of pertinent correspondence, or signed statements of the parties. As indicated in §3488.4B and C, the failure of the provider to cooperate in furnishing the necessary information (or in giving any necessary authorization for others to furnish information) is grounds for terminating the provider's participation in the program and revoking its right to receive assigned payment.

D. Change of Address.--If the intermediary determines that a person or organization is ineligible under §3488-3488.2 to receive payments due a provider, it shall not ordinarily mail the provider's payments to that person or organization's address. However, such a mailing address is acceptable if:

1. The parties to the arrangement have given written assurances that the person or organization to whose address the check is mailed will not convert the check to its own use and control; and

2. The purpose of the arrangement makes those assurances credible.

An acceptable mailing arrangement could exist, for example, where the provider wants its checks mailed for bookkeeping purposes to a business agent who is ineligible to receive the payment, and both the agent and the provider state in writing that the agent will forward the checks to the provider's bank for deposit in a business account from which it is free to withdraw any deposited funds.

E. Reviewing Endorsements on Checks.--In any case where the intermediary, after developing the facts, continues to mail the provider's payments to an address which may be that of another person, but still has a doubt that the arrangement is inconsistent with these instructions, it shall after a reasonable interval review endorsements on the returned checks for indications that the checks are being negotiated under a power of attorney. Where someone negotiates a provider's checks under a power of attorney, he typically prints the provider's name on the back of the checks and enters his signature below, followed by "p.p." "p.p.a." (for per procuration or per power of attorney).

3488.4 Sanctions for Prohibited Payment Arrangement.--

A. Advice to a Provider.--If the intermediary finds that a provider has entered into or is considering entering into a payment arrangement prohibited by section 3488, the intermediary will advise that provider in writing that the arrangement violates the Medicare law and regulations and subjects the provider to the penalties described in B and C below. Where the improper payment arrangement is already in effect, the intermediary will normally require a change in the address to which the provider's checks are to be sent. For an exception see §3488.3D.

B. Bases for Termination of a Provider's Medicare Participation Agreement.--HCFA may terminate a provider's Medicare participation agreement if the provider:

1. Executes or continues an assignment or a power of attorney, or enters into or continues any other arrangement, that authorizes or permits Medicare cost-basis payments to be made contrary to §3488 (contrary to 42 CFR 405.1668 and section 1815(c) of the Social Security Act) after having been advised under A above; or

2. Fails to furnish upon request by HCFA or the intermediary such information as HCFA or the intermediary finds necessary to establish compliance with the requirements of this section.

The provider has the usual appeal rights applicable to agreement termination determinations.

C. Bases for Revocation of Assignment Privilege.--HCFA may revoke the right of a provider to receive assigned payment for physician services if the provider:

1. Executes or continues a reassignment or power of attorney, or enters into or continues any other arrangement, that authorizes or permits Medicare charge basis payments to be made contrary to §3488 (contrary to 42 CFR 405.1680 and §1842(b)(5) of the Social Security Act), after HCFA, or after the carrier or intermediary (whichever has jurisdiction of the claims), gives the provider advice about such violation;

2. Fails to furnish upon request by HCFA, or by the carrier or intermediary (whichever has jurisdiction of the claims), evidence needed to establish compliance with the requirements of §3488 (42 CFR 405.1680 and section 1842(b)(5) of the Social Security Act);

3. Violates the terms of assigned payment; e.g., by collecting or attempting to collect more than the reasonable charge, after HCFA, or after the carrier or intermediary (whichever has jurisdiction of the claim), gives the provider advice about such violations; or

4. Fails to desist from collection efforts already begun, or to refund monies incorrectly collected, in violation of the terms of assigned payment, after HCFA, or after the carrier or intermediary (whichever has jurisdiction of the claim), gives the provider instructions to cease to take such action.

A special appeals procedure is provided within HCFA when action is taken to revoke a provider's right to accept assignment.

The fact that a provider's right to accept assignment is revoked does not preclude it from billing the beneficiary for the services or changing its arrangement with the physician to permit him to bill for his own services, either on an assigned or unassigned basis. By the same token, a provider is not ordinarily precluded from accepting assignment from a beneficiary for the services of a physician whose assignment privilege has been revoked if he has entered or enters into an agreement with the provider giving it the right to bill for his services. There is, however, an exception to this rule: The revocation of a physician's assignment privilege automatically revokes the assignment privilege of any corporation, partnership, or other entity in which he directly or indirectly has or obtains all or all but a nominal part of the financial interest. Such entity may not accept assignment for the services of the physician or anyone else. What is a nominal interest depends on the circumstances. The carrier may assume that an interest by other persons totalling at least 5 percent of the financial interest of the entity is more than nominal. The term "indirect interest" refers to the situation where the entity billing for the physician's services is owned by another entity in which the physician has most of the financial interest.

D. Action By the Intermediary When It Finds Violations.--When the intermediary finds that the provider has, after warning to the contrary, entered into or continued a prohibited payment arrangement, failed to cooperate in furnishing the information necessary to resolve the issue, violated its assignment agreement or failed to correct a violation of its assignment agreement, it shall forward a copy of the file to the program integrity staff in the regional office. The RO will consider whether further development of the facts or admonition of the provider will be useful before taking steps to terminate its participation agreement and/or to revoke its right to accept assignment.

In imposing the administrative sanction of revocation of the assignment privilege the RO will notify the provider of the proposed revocation of its right to receive assigned benefits and give it 15 days in which to submit a statement, including any pertinent evidence, explaining why its right to payment should not be revoked. After the statement has been submitted or the 15-day period has expired without the filing of the statement, the RO will determine whether to revoke the provider's right to receive assigned payment. If its determination is to revoke, the RO will notify the carrier and intermediary to suspend payment on all assigned claims submitted by the provider and received after the effective date of the revocation and will notify the provider of the revocation and of its right to request a hearing on the revocation within 60 days. (The RO may extend the period for requesting a hearing.)

If the provider requests a formal hearing (to be conducted by a member of the Hearings Staff of the Office of Eligibility Policy, Bureau of Program Policy, HCFA) and the hearing officer reverses the revocation determination, the RO will instruct the carrier and the intermediary to pay the provider's assigned claims (the physician component). If the hearing officer upholds the revocation determination or if no request for a hearing is filed during the period allowed for this, the RO will instruct the carrier and the intermediary to make any assigned payments otherwise due the provider to the beneficiary who received the services, or another person or agency authorized under the law and regulations to receive the payments (e.g., the beneficiary's legal guardian or representative payee or, if he is deceased, the person who paid the bill). The revocation will remain in effect until the RO finds that the reason for the revocation has been removed and that there is reasonable assurance that it will not recur. The RO decision to continue the revocation in effect is not appealable.

The law provides that any person who accepts assignment of benefits under Medicare and who "knowingly, willfully, and repeatedly" violates the assignment agreement shall be guilty of a misdemeanor and subject to a fine of not more than $2000 or imprisonment of not more than 6 months or both. The RO may invoke the administrative sanction in appropriate cases to deny payment while criminal prosecution is being considered or in process, or, as an alternative, when prosecution is inappropriate or not feasible. Since this sanction may in some cases interfere with effective prosecution, imposition of the sanction is discretionary rather than mandatory.

3488.5 Prohibition of Assignments by Beneficiaries.-

A. Basic Prohibition.—Except as provided in B below, an intermediary may pay only the beneficiary (or his legal representative or representative payee) benefits payable directly to the beneficiary (e.g., payment for certain services furnished by nonparticipating hospitals, indemnification under waiver of liability, and direct refunds by the intermediary of provider overcollections from the beneficiary of deductible and coinsurance amounts). (This prohibition does not, of course, apply to payment under an assignment of benefits by the beneficiary to the physician or other supplier who furnished the services or to his qualified reassignee, e.g., a hospital.)

B. Exceptions.—

1. Payment to a Government Agency.—The law does not preclude the Medicare program from paying the benefits due a beneficiary to a governmental agency or entity. In practice, no administrative provision has been made for such payment by an intermediary.

2. Payment Pursuant to Court Order.—The Medicare program may make payment of amounts due a beneficiary, in accordance with an assignment established by, or pursuant to the order of, a court of competent jurisdiction. The assignment must satisfy the conditions set forth in §2755 of the Intermediary Manual, Part 2.

Automobile Medical and No Fault Insurance

3489. SERVICES REIMBURSABLE UNDER AUTOMOBILE MEDICAL OR NO FAULT INSURANCE

3489.1 General.—Payment may not be made under Medicare for otherwise covered items or services to the extent that payment has been made, or can reasonably be expected to be made, for the items or services, under automobile medical or no fault insurance (including a self-insured plan). Medicare is secondary to automobile medical or no fault insurance even if State law or a private contract of insurance stipulates that Medicare is primary. If Medicare payments have been made but should not have been because they are excluded under this provision, or if the payments were made on a conditional basis in accordance with §3489.4E and F, they are subject to recovery.

If services are covered under automobile medical or no fault insurance, the automobile insurer must be billed first. If the automobile insurer does not pay all of the charges, a claim for secondary Medicare benefits can be submitted in accordance with S3489.4D3 to supplement the amount paid by the automobile insurer. Medicare can pay for services related to an automobile accident, if benefits are not currently available under the individual's automobile medical or no fault insurance coverage because that insurance has paid maximum benefits for the accident on items or services not covered by Medicare or on nonmedical items such as lost wages. Efforts to ascertain coverage under automobile medical or no fault insurance are subject to the tolerance in S3489.4B.

The question to be asked in each case involving automobile related medical expenses is whether automobile medical or no fault benefits can be paid for these particular services. If so, the automobile insurance is primary. If not, Medicare may be primary. Primary Medicare benefits cannot be paid merely because the beneficiary wants to save his/her automobile insurance benefits to pay for future services. Since automobile insurance benefits would be currently available in that situation, they must be used before Medicare can be billed.

In accordance with a "grace period" granted in the regulations, make no attempt to recover Medicare payments if an automobile insurance payment was received by the beneficiary before June 6, 1983. The "grace period" does not apply to insurance payments to providers of services. However, no effort will be made to recover if the provider turned the insurance payment over to the beneficiary before that date.

If there is an indication that the individual has filed, or intends to file, a liability claim against a party that allegedly caused an injury, follow instructions in SS3419ff.

A. Effective Dates.—The general rule is that these provisions are effective with respect to services related to injuries which occurred on or after December 5, 1980. If benefits might be payable under automobile medical or no fault insurance but, for whatever reason, such benefits have not been paid, the provisions are effective with respect to services furnished on or after June 6, 1983.

Thus, for example, where an automobile insurer refuses to pay primary benefits for services furnished before June 6, 1983, because a State law or private contract of insurance stipulated that Medicare is primary, Medicare primary benefits may be paid. In the case of services furnished on or after June 6, 1983, Medicare pays only secondary benefits notwithstanding such a provision in the State law or private contract.

The specific application of the general rule follows:

1. Automobile Payment Made

   a. Deny Medicare payment; or

   b. Recover Medicare payment, but not if the beneficiary received the automobile payment before June 6, 1983.

2. Automobile Payment Not Made — Automobile Medical or No Fault Insurance Coverage Exists

a. Make Medicare primary payment for services furnished before June 6, 1983.

b. Deny or recover Medicare primary payment for services furnished on or after June 6, 1983. (Conditional primary Medicare payments permissible if automobile insurer contests liability.)

B. Effect on Deductibles and Utilization.—Expenses for services for which Medicare payment may not be made because payment has been made or can reasonably be expected to be made under automobile medical or no fault insurance are not counted toward Part A or Part B deductible amounts or against the number of inpatient care days available to the beneficiary. For instance, if an individual is hospitalized twice in the same benefit period and the first hospitalization is paid in full under automobile insurance, the inpatient hospital deductible would apply to the second hospitalization and the first hospitalization would not affect the beneficiary's utilization.

3489.2 Definitions.—

A. Automobile.—Any self-propelled land vehicle of a type that must be registered and licensed in the State where it is owned.

B. Automobile Medical or No Fault Insurance.—Insurance coverage (including a self-insured plan) that pays for all or part of the medical expenses for injuries sustained in the use of, or occupancy of, an automobile, regardless of who may have been responsible for causing the accident. (This insurance is sometimes called "personal injury protection," "medical payments coverage" or "medical expense coverage.")

C. Liability Insurance.—Insurance (including a self-insured plan) that provides payment based on legal liability for injuries or illness or damages to property. It includes, but is not limited to, automobile liability insurance, uninsured motorist insurance, homeowners liability insurance, malpractice insurance, product liability insurance, and general casualty insurance. This exclusion does not apply where the homeowner receives payment under his or her own homeowners insurance policy since such a payment does not constitute a liability insurance payment.

D. Self-Insured Plan.—A plan under which an entity (or an individual) is authorized by State law to carry its own risk instead of insuring itself with a carrier.

E. Uninsured Motorist Insurance.—Liability insurance under which the policyholder's insurer will pay for damages caused by a motorist who has no automobile liability insurance or who carries less than the amount of insurance required by law or is underinsured.

3489.3 Provider Actions.—

A. Information Obtained from Patient or Representative At Time of Admission or Start of Care.—Medicare providers are instructed to ask Medicare patients, or the patient's representative, at the time of admission or start of care, if the services are for the treatment of an injury or illness which resulted from an automobile or other accident or for which he or she holds another party responsible. For automobile accidents, the provider obtains the name, address and policy number of any automobile medical, no fault or liability insurance company which may be responsible for payment of medical expenses that resulted from the accident.

B. Provider Billing Where Services Are Related to an Automobile Accident.—

1. If a provider learns that an automobile medical or no fault insurance company may pay for otherwise covered services, the provider is instructed to bill the automobile insurance company as primary insurer. It may bill Medicare for secondary benefits per §3489.4D3 if the automobile insurer does not pay in full for the services. If the insurer pays for all Medicare covered services, the provider is instructed to submit a no payment bill.

2. If the services are related to an automobile accident and an automobile insurer has been billed but does not make payment because, for example, the individual's automobile coverage expired, or the automobile medical or no fault claim is contested by the insurer, or for any other reason there will be substantial delay in resolving the claim, the provider is instructed to bill Medicare and to annotate the bill in accordance with §3680K. If the provider later receives payment from the automobile medical or no fault insurer, the provider is instructed to refund the Medicare payment by submitting an adjustment bill.

3. If the individual files a claim against a third party for injuries suffered in an automobile accident, the provider may bill Medicare for otherwise covered expenses to the extent that payment has not or cannot be made by an automobile or no fault insurer or has not been made by a liability insurer. For example, an individual incurs $20,000 in medical expenses due to an automobile accident. The individual receives $5,000 in no fault insurance benefits and also has a liability claim pending against the driver of the other car. Medicare will not pay benefits for the $5,000 in expenses paid for by the no fault insurer but will pay benefits based on the additional $15,000 in expenses, subject to recovery when the liability claim is paid.

C. Provider Receives Request From Insurance Company or Attorney.—The provider is instructed to notify you promptly if it receives from an attorney or insurance company a request for a copy of a medical record or a request for a bill concerning a Medicare patient. You are to be given a copy of the request or, if it is unavailable, full details of the request including the name and Medicare number of the patient, name and address of the insurance company and/or attorney, and date(s) of services for which Medicare has been billed or will be billed.

D. Provider Receives Duplicate Payments.—The provider will refund the Medicare payment by submitting an adjustment bill, if it receives duplicate payments from an automobile insurer and from Medicare, regardless of which payment it received first and even if it refunded the insurance payment to the beneficiary or the insurer. See §3489.4C2.

3489.4 Processing of Claims Indicating Possibility of Payments Under Automobile Medical or No Fault Insurance.—

A. Identification of Claims.--Use the guides listed below to identify claims for otherwise covered services in which there is a possibility that payment has been, or can be, made by automobile medical or no fault insurance.

1. You receive information from a provider (see §3489.3), a beneficiary, your own operations (e.g., medical or utilization review) or those of your non-Medicare counterpart, another Medicare carrier or intermediary or any other source, indicating Medicare has been billed for services when there is a possibility of payment by an automobile insurer.

2. On Form HCFA-1450, another insurer is shown on line A of item 57. On other billing forms a primary insurer is identified in the "Remarks" portion of the bill.

3. On a HCFA-1450, occurrence code 01 or 02 is shown in items 28-32. On other billing forms the annotation "automobile accident" is shown in "Remarks."

4. The billing form shows as complementary insurer an insurance organization that does not issue health insurance.

5. You (or the RO) are asked to endorse a check from an automobile insurer payable to Medicare and the beneficiary. Return the check to the insurance carrier and request the insurer to reimburse Medicare the amount of benefits paid to the full extent of the third party's payment for medical expenses. (Follow the recovery instructions in paragraph B2 below.) As necessary, follow up with the beneficiary and/or attorney to ascertain if the beneficiary receives payment from the insurer.

6. You receive or are informed of a request from an insurance company or from an attorney for copies of bills or medical records (see §3489.3C).

7. There is indication that the beneficiary previously received benefits under automobile insurance or that a claim for such benefits is pending; e.g., a "Y" trailer containing code "C" or "D" on the query reply. (See §3512.8 and §3535.1.) There is no need to investigate this lead, however, if your records show that automobile medical or no fault insurance benefits for the same injury or illness have been exhausted. (Automobile medical or no fault insurance policies generally pay benefits up to specific dollar limits as long as the individual requires medical care for the covered injury or illness.)

8. The claim reflects one of the diagnosis/trauma codes shown below. The following list consists of selected ICD-9-CM codes which should be used to identify claims which may involve coverage under automobile medical or no fault insurance. Whenever one of these codes appears on a claim, process the claim as detailed in paragraph B, below. (You may add to this list any ICD-CM codes which experience indicates are good leads. Based on contractor input, HCFA may later modify this list to reflect actual experience.)

CODE ICD-9-CM	DIAGNOSIS
800.0 - 800.99	Fracture of vault of skull
801.0 - 801.99	Fracture of base of skull
802.0 - 802.99	Fracture of face bone
803.0 - 803.99	Other and unqualified skull fractures
804.0 - 804.99	Multiple fractures involving skull or face with other bones
805.0 - 805.98	Fracture of vertebral column without mention of spinal cord injury
806.0 - 806.99	Fracture of vertebral column with spinal cord injury
807.0 - 807.69	Fractures of rib(s), sternum, larynx, and trachea
810.0 - 810.13	Fracture of clavicle
811.0 - 811.19	Fracture of scapula
828.0 - 828.1	Multiple fractures involving both lower limbs, lower with upper limb, and lower limb(s) with rib(s) and sternum
839.0 - 839.3, 839.7 - 839.9	Other multiple and ill-defined dislocations
847.0	Sprains and strains of the neck (whiplash)
850.0 - 850.9	Concussion
851.0 - 851.99	Cerebral laceration and contusion
852.0 - 852.59	Subarachnoid, subdural, and extradural hemorrhage, following injury
853.0 - 853.19	Other and unspecified intracranial hemorrhage following injury

CODE ICD-9-CM	DIAGNOSIS
854.0 - 854.19	Intracranial injury of other and unspecified nature
860.0 - 860.5	Traumatic pneumothorax and hemothorax
861.0 - 861.32	Injury to heart and lung
862.8	Injury to multiple and unspecified intrathoracic organs, without mention to open wound into cavity (crushed chest)
863.0 - 863.99	Injury to gastrointestinal tract
864.0 - 864.19	Injury to liver
865.0 - 865.19	Injury to spleen
866.0 - 866.13	Injury to kidney
867.0 - 867.9	Injury to pelvic organs
868.0 - 868.19	Injury to other intra-abdominal organs
869.0 - 869.1	Internal injury to unspecified or ill-defined organs
887.0 - 887.7	Traumatic amputation of arm and hand
896.0 - 896.3	Traumatic amputation of foot
897.0 - 897.7	Traumatic amputation of leg(s)
900.0 - 900.9	Injury to blood vessels of head and neck
925	Crushing injury of face, scalp, and neck
926.8	Crushing injury of trunk (multiple sites)
929.0 - 929.99	Crushing injury of multiple and unspecified sites
958.4	Traumatic shock
958.5	Traumatic anuria
996.0 - 996.5	Complications peculiar to certain specified procedures

B. Action if There Is Possibility of Payments Under Automobile Medical or No Fault Insurance.--

1. Medicare Benefits Have Not Been Paid.--If Medicare is being billed as primary payer but there is an indication of possible coverage under automobile medical or no fault insurance, ask the provider to explain why the claim was filed with Medicare rather than an automobile insurer. Unless the provider submits a satisfactory explanation, preferably a copy of the auto insurer's notice, that full or partial payment under an automobile insurance policy cannot be made (for example, auto insurance deductible applies--see §3489.5) or a decision on the automobile claim will be substantially delayed (see paragraph E below), return the claim for primary Medicare benefits and tell the provider to bill the automobile insurer as primary payer, since Medicare is primary payer for automobile injuries only if payment cannot be made under automobile medical or no fault insurance. You need not develop claims in which the amount payable by Medicare is less than a designated amount. You may set your development tolerance at any dollar level you deem cost effective, but no higher than $200. The development tolerance applies to development efforts only and does not supersede the overpayment recovery tolerance in §3709.2 if you have enough evidence to determine that an overpayment exists.

2. Medicare Benefits Already Paid.--If a Medicare claim for charges totalling $200 or more has been paid and there is indication of coverage under automobile medical or no fault insurance, develop with the beneficiary and/or his attorney to determine whether payment has been made by an automobile insurer or whether an automobile insurance claim has been or can be filed. Use the Form HCFA-L365, Report to Medicare of Automobile or Liability Insurance Coverage (see §3419.10, Exhibit 1), for this development. Enter necessary identifying information before sending the form. Also, ask for the claim number which the insurance company has assigned to the claim. The tolerance provision in paragraph 1 also applies where Medicare has already paid.

If the beneficiary or attorney does not respond within 30 days, follow up by telephone or letter. If you are unable to obtain the required information from the beneficiary or attorney by letter or by phone, and you determine that further contacts would be unproductive, attempt to recover from the beneficiary in accordance with §§3707ff.

If a beneficiary states that an automobile accident was the fault of an uninsured motorist, find out if the beneficiary has uninsured motorist coverage on his own policy. This is a type of liability insurance, so follow §3419.5 if a liability claim has been or may be filed. If it appears that payment may be made under both automobile medical or no fault insurance and under liability insurance, follow the instructions in §3489.6.

If the development indicates that the services are covered by automobile medical or no fault insurance, ask the insurer to pay you an amount equal to Medicare's payments (up to the policy limits). If the insurer refuses to reimburse you even though its contract covers the services, inform the insurer (1) that it is obligated to do so under the Medicare law and (2) that Medicare has the right to recover the benefits it paid from any insurer responsible for paying benefits for the injury. (Section 1862(b) of the law, as amended by Section 2344 of the Deficit Reduction Act of 1984 (Pub. L. 98-369) gives the Government, through filing a court action, if necessary, the right to recover conditional Medicare payments from private insurers that are primary insurers for Medicare beneficiaries.) If the insurer still refuses to reimburse Medicare, refer the case to the RO.

3. Recovery When a State Medicaid Agency Has Also Requested a Refund from the EGHP.--Situations may arise in which both Medicare and another insurer or a State Medicaid agency have conditionally or erroneously paid for services and the amount payable by an automobile medical or no fault insurer is insufficient to reimburse both programs. Under the law, Medicare has the right to recover its benefits from an automobile medical or no fault insurer before any other entity, including a State Medicaid agency. Also Medicare has the right to recover its benefits from any entity, including a State Medicaid agency, that has been paid by an automobile medical or no fault insurer.

The superiority of Medicare's recovery right over those of other entities including Medicaid derives from the Medicare statute, which states that where Medicare is secondary to another insurer (1) HCFA may recover Medicare benefits from the responsible insurer, (2) HCFA is subrogated to the right of the Medicare beneficiary and the right of any other entity to payment by the responsible insurer, and (3) HCFA may recover its payments from any entity that has been paid by the responsible insurer.

Medicare's right to recover its benefits from an automobile medical or no fault insurer or from a beneficiary that has been paid by an automobile medical or no fault insurer is higher than Medicaid's, notwithstanding the fact that Medicaid is the payer of last resort, and therefore doesn't pay its benefits until after Medicare has paid. Medicare's priority right of recovery from insurance plans that are primary to Medicare, does not violate the concept of Medicaid's being payer of last resort. Under §1862(b)(1) of the Social Security Act, Medicare's ultimate statutory authority is not to pay at all (with a concomitant right to recover any conditional benefits paid) where payment can reasonably be expected by a third party that is primary to Medicare. Where the third party pays right away, Medicare makes no payment to the extent of the third party payment. Delay of the third party payment does not change Medicare's ultimate obligation to pay the correct amount, if any, regardless of any Medicare payments conditionally made. Thus, if the third party pays less than the charges, Medicare may be responsible to pay secondary benefits. And if the third party pays the charges, Medicare may not pay at all. Pro-rata or other sharing of recoveries with Medicaid would have the effect of creating a Medicare payment where none is authorized under the law or improperly increasing the amount of any Medicare secondary payment.

Moreover, the right of Medicaid agencies to recover their benefits derives from an assignment by Medicaid beneficiaries to the States of their rights to third party reimbursement. Since the beneficiary can assign to the State a right no higher than his own, and since Medicare's statutory right is higher than the beneficiary's, Medicare's right is higher than that assigned to the State.

Thus, where both Medicare and Medicaid are seeking reimbursement from an insurer, inform the insurer that it must first reimburse Medicare before it can pay any other entity, including a State Medicaid agency. Also, where a beneficiary, provider or supplier receives payment from an insurer, inform the beneficiary, provider or supplier that it is obligated to refund the Medicare payment up to the full amount of the insurer's payment before payment can be made to the State Medicaid agency. Only after Medicare has recovered the full amount of its claim does the beneficiary, provider or supplier have the right to reimburse Medicaid or any other entity.

If a State Medicaid agency is reimbursed from an insurer's payment before Medicare, ask the State agency to reimburse Medicare up to the full amount the agency received. Explain the legal basis for Medicare's right to recover. If the State refuses to reimburse Medicare in full, refer the case to the HCFA RO. The RO's recovery actions may include offset of Medicare's claim against any Federal Financial Participation funds otherwise due the State. Explain to the insurer that in future cases involving claims by Medicare and Medicaid, Medicare must be reimbursed first.

4. Coordination with Other Intermediaries or Carriers.—Coordinate your determination regarding insurance coverage and/or your recovery efforts with other contractors. If you have information that other contractors may have received claims for expenses related to the same injury, notify them of any development or recovery action you undertake regarding Medicare claims for that injury. See §3419.9.

C. Action if Payment Has Been Made Under Automobile Medical or No Fault Insurance.—

1. General.--If you are aware at the time you are processing a Medicare claim that payment has been made either to the provider or to the beneficiary under automobile medical or no fault insurance, deny the claim unless secondary Medicare payments can be made under D3 below. If you learn, after you have paid Medicare benefits, that payment has also been made by an automobile insurer, the excess Medicare benefits determined in accordance with paragraph (2) below are subject to recovery in accordance with §§3708ff. Section 3708.2 indicates when a provider is liable for refunding the primary Medicare payments. The beneficiary is liable in all other situations.

2. Amount of Medicare Benefits to be Refunded Where Payment Has Been Made by Automobile Medical or No Fault Insurance.—

(a) Other Insurer Paid Provider.—Upon receipt of information that an automobile insurer paid a provider for services previously paid for by Medicare, determine the amount of Medicare secondary benefits payable on the claim, if any, and recoup from the provider any portion of the amount Medicare paid in excess of the amount of Medicare secondary benefits payable, subject to the overpayment recovery tolerance specified in §3709.2. In any case where no Medicare secondary benefits are payable, the amount to be recovered will be the Medicare payment.

(b) Other Insurer Paid Beneficiary.—If an automobile medical or no fault insurance payment is made to the beneficiary, recover the amount of primary benefits you paid in excess of any secondary Medicare benefits payable. (Regulations do not permit reducing that amount to allow for the beneficiary's costs in procuring automobile medical or no fault benefits. If the beneficiary claims such procurement costs combined with procurement costs to obtain liability insurance payments, request a breakdown of the costs between the two.)

D. Automobile Medical or No Fault Insurance Does Not Pay in Full.—

1. Insurance Pays Service Benefits.—If the amount of payment for particular services under automobile medical or no fault insurance is less than the provider's charges but is deemed payment in full under State law, Medicare benefits are not payable. The insurance payment constitutes a service benefit; i.e., the payment constitutes full discharge of the patient's liability to the provider.

2. Other Situations.--In other cases, automobile medical or no fault insurance may not pay the provider's charges because the beneficiary's total medical expenses exceed the dollar limit of the coverage, or because of some other coverage limit, deductible or coinsurance applicable to all policyholders. (See §3489.5.)

A provider of services or any other facility may not charge a beneficiary or any other party for Medicare covered services, if the provider or facility has been paid by an automobile insurer an amount that equals or exceeds the gross amount payable by Medicare, as defined in subparagraph 3 below. This prohibition is based on the terms of providers' Medicare participation agreements, under which a provider may bill a Medicare beneficiary only for deductible and coinsurance amounts and for noncovered services. (See §§3005, 3005.1 and 3313.)

If you have reason to question the correctness of the amount shown on the Medicare claim as having been paid by automobile insurance, confirm the amount with the insurer or beneficiary. A copy of an automobile insurer's explanation of benefits is the best evidence of what payments have been made. If the beneficiary does not submit this or other satisfactory evidence, contact the insurer by phone to find out what payments have been made.

3. Secondary Medicare Payments.--If an automobile insurer pays for Medicare covered services an amount which is less than the provider's charges and the gross amount payable by Medicare (without considering the effect of the Medicare deductible or coinsurance or the payment by the automobile insurer), and the provider is not obligated to accept the insurance payment as payment in full, Medicare secondary payments can be made. In general, the Medicare secondary payment will be the gross amount payable by Medicare minus the amount paid by the automobile insurer for Medicare covered services, minus any applicable deductible or coinsurance amount.

The gross amount payable by Medicare is (1) the current Medicare interim reimbursement amount (as defined in §3683) for providers reimbursed on a reasonable cost basis; or (2) the Medicare payment rate (which consists of the total prospective payment amount for the discharge and interim payments for those items that will be reimbursed retroactively and is determined without regard to deductible and coinsurance), for hospitals reimbursed on a prospective payment basis.

For detailed billing and reimbursement instructions, and the utilization to be charged to the beneficiary refer to §3680C (for providers on cost reimbursement) and to §3685 (for hospitals on prospective payment).

E. Contested and Delayed Automobile Medical or No Fault Claims.--If an individual submits conclusive documentary evidence (e.g., a denial notice) establishing that a claim has been contested by an automobile medical or no fault insurer, or if for any other reason there will be substantial delay (i.e., 60 days or more) in resolving the claim, Medicare payments may be made on condition that the beneficiary will reimburse the program to the extent that payment is subsequently made by the automobile medical or no fault insurer. When making such payments, notify the beneficiary and the insurer of the requirement for repayment. (However, your failure to do so will not relieve them of the obligation to refund the payments.) Ask the insurer to notify you when it is prepared to pay the claim, so that direct refund can be arranged, in accordance with §3489.4B2.

Flag all cases for possible follow-up action to recover the conditional payments.

Refusal by an individual to file a claim with an automobile medical or no fault insurer or to cooperate with a provider in filing such a claim is not a basis for making a conditional Medicare payment.

F. Automobile Insurer Denies that It Is Primary Payer.--Denial by an insurer on the ground that Medicare is primary payer may be a forerunner of similar action on multiple claims. Try to correct the problem by contacting the insurer and explaining that under Federal law automobile insurance is primary payer and Medicare is secondary regardless of the provisions of the automobile insurance policy or the provisions of the State insurance law. If that does not help, refer the case to the RO for contact with the insurer or to consider legal action.

3489.5 Automobile Medical or No Fault Insurance Does Not Pay All Charges Because of Deductible or Coinsurance Provision in Policy.-- In a number of States automobile insurers may reduce automobile medical or no fault insurance benefits by deductible or coinsurance amounts. If such contract provisions apply to all policyholders, Medicare pays benefits with respect to otherwise Medicare-covered expenses that are not reimbursable under such an automobile insurance contract. The usual Medicare deductibles and coinsurance are applied in calculating the Medicare secondary payment. Therefore, if an automobile medical or no fault insurer has been billed and has made no payment or only a partial payment (e.g., the automobile insurance deductible has been bridged) because of a deductible or coinsurance, the provider may bill Medicare and should complete the billing form in accordance with §3680.

Example 1: Beneficiary receives outpatient hospital services covered by no fault automobile insurance. Total charges are $200. The automobile insurer is billed but makes no payment because of $1000 deductible in policy. Hospital bills Medicare for $200 in accordance with §3680K.

Example 2: Beneficiary's hospitalization is covered by no fault automobile insurance, which allows hospital's full charges but reduces payment by $800 remaining unmet in $1000 deductible provision in policy. Hospital requests payment from Medicare for $800 in accordance with §3680C.

Example 3: Beneficiary's hospitalization paid for by no fault automobile insurance except for $1000 deductible, for which hospital requests payment from Medicare in accordance with §3680C. Beneficiary also receives home health services which are covered by automobile insurance, but insurance payments are reduced by $200 because of coinsurance provision in policy. Home health agency requests payment from Medicare for $200 in accordance with §3680J.

3489.6 Services Covered Under Automobile Medical or No Fault Insurance and Liability Claim Also Filed.--If injuries are covered under automobile medical or no fault insurance, and the individual also files a claim against a third party for injuries suffered in the same accident, a claims determination must first be made by the automobile medical or no fault insurer before a claim for Medicare benefits can be paid. Medicare payment may be made to the extent that payment is not made under the automobile medical or no fault insurance, subject to recovery under the procedures described in §3419.8, if the individual later receives payment from a liability insurer.

3489.7 Allocation of Recovered Medicare Payments.--If the amount recovered is less than the amount claimed, apply the refund so that available Part A benefits are restored, in the following order: inpatient hospital days first, SNF days second, and other Part A benefits third. Likewise, if you have paid for both Part A and Part B services, apply the refund first to Part A expenses in the same order.

3489.8 Claimant's Right to Take Legal Action Against an Automobile Medicare or No Fault Insurer.--The Omnibus Budget Reconciliation Act of 1986 provides that any claimant has the right to take legal action against, and to collect double damages from, an automobile medical or no fault insurer that fails to pay primary benefits for services covered by the automobile medical or no fault insurer where required to do so under §1862(b) of the Act.

3490 LIMITATION ON PAYMENT FOR SERVICES TO INDIVIDUALS ENTITLED TO BENEFITS SOLELY ON THE BASIS OF END STAGE RENAL DISEASE WHO ARE COVERED BY EMPLOYER GROUP HEALTH PLANS

3490.1 General.--Medicare benefits are secondary to benefits payable under an employer group health plan (EGHP) in the case of individuals entitled to benefits solely on the basis of end stage renal disease (ESRD) (see §3001.3), during a period of up to 12 months, which is defined in §§3490.5 and 3490.6. Medicare is secondary during this period even though the employer policy or plan contains a provision stating that its benefits are secondary to Medicare's, or otherwise excludes or limits its payments to Medicare beneficiaries.

Under this provision, providers and facilities must bill the EGHP first for services rendered on or after January 21, 1988. Pay secondary benefits in accordance with §3490.8 if:

o the plan payment is less than the provider's charges for Medicare covered services,

o the plan payment is less than the gross amount payable by Medicare, and

o the provider does not accept, and is not obligated to accept, the EGHP payment as payment in full.

This provision applies to all Medicare covered items and services furnished to beneficiaries who are in a 12-month period, including services for non-ESRD treatment and services required by kidney donors in cases of transplantation. (See §3178.5.) Consider the possible application of this limitation when processing claims for items or services furnished to ESRD beneficiaries who are in their first year of entitlement.

In these instructions, the term provider includes dialysis facilities and other facilities which provide Medicare covered services.

In the case of services rendered before January 21, 1988, providers have the option of billing either Medicare or the EGHP first. If you receive a claim for primary benefits for services rendered before January 21, 1988, pay conditional primary benefits. After you have paid the claim, determine whether Medicare is secondary payer for the particular services in accordance with the instructions in §3490.4A and if so, take recovery action in accordance with §3490.4G.

NOTE: These instructions do not apply to beneficiaries entitled to Medicare because of age 65 or disability.

3490.2 Definitions.--

A. Employer--The term "employer" means, not only individuals and organizations engaged in a trade or business, but organizations exempt from income tax, such as religious, charitable, and educational institutions as well as the governments of the United States, the States, Puerto Rico, Guam, the Virgin Islands, American Samoa, the Northern Mariana Islands and the District of Columbia, including their agencies, instrumentalities and political subdivisions. For purposes of the ESRD secondary payer provision the term "employer" is defined without regard to the number of employees.

B. Employer Group Health Plan or Employer Plan (EGHP)—These terms mean any health plan that is of, or contributed to by, an employer; and that provides medical care, directly or through other methods such as insurance or reimbursement to current or former employees, and/or their families. It includes the Federal Employees Health Benefits program but not the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS). "Employee pay all" plans, i.e., group health plans under the auspices of an employer which do not receive any contributions from the employer, also meet the definition of EGHP.

Assume in the absence of evidence to the contrary, that any health plan (including a union plan) in which a beneficiary is enrolled because of the current or former employment of the beneficiary or of a member of the beneficiary's family meets this definition.

C. Secondary— The term "secondary," when used with respect to Medicare payment, means that Medicare is the residual payer to all employer group health plans under which the Medicare beneficiary is covered and will not pay for any expenses that are reimbursable by any such plan or plans. Consider the workers' compensation exclusion (§3407) and no fault and liability insurance provisions (§3419 and §3489) in determining the extent of Medicare's liability as a residual payer since in some cases there may be a primary insurer in addition to the EGHP. (See §3490.4H.)

D. Coordination Period—The term "coordination period" means a period of up to 12 months determined in accordance with §§3490.5 and 3490.6 during which Medicare benefits are secondary to benefits payable under employer group health plans.

3490.3 Retroactive Implementation.—If cases come to your attention in which you paid primary benefits for services rendered during a coordination period and EGHP benefits may be payable, e.g., the provider indicated there is EGHP coverage or did not indicate EGHP status, notify the provider or facility to take the following actions on each claim:

o to ascertain whether there is EGHP coverage (if the provider has not indicated on the bill that it exists) and if so, the name and address of the EGHP, if that information is not annotated on the claim,

o to check its records and ascertain whether Medicare paid primary benefits for other services rendered during a coordination period in which there was EGHP coverage,

o to notify you of the results of its development efforts.

Inform the provider that the requested information is necessary for Medicare to determine its proper payment. Follow up after a reasonable period on any of these claims on which you receive no response from the provider. If the provider does not furnish the requested information, recover the entire conditional primary payment from the provider.

Also notify the provider that if the EGHP pays or has paid the provider for all or part of the services, to submit a corrected bill and to refund any excess Medicare benefits paid to it.

3490.4 Processing Claims.--

A. Provider Bills Medicare for Primary Benefits.--Where the provider has indicated Medicare as the primary payer in accordance with §3681A, assume in the absence of evidence to the contrary, that it has correctly determined that there is no primary EGHP coverage and process the claim in the usual manner. Primary Medicare benefits may be paid only if the services were not rendered during a coordination period, or if the EGHP denies a claim because the beneficiary is not entitled to any benefits under the plan, or benefits under the plan are exhausted for the particular services, or the services are not covered by the EGHP, and the beneficiary is not appealing the EGHP denial. But primary Medicare benefits may not be paid if you have reason to believe that the EGHP covers the services. (See subsection F.) If you pay primary Medicare benefits and later learn that the beneficiary is appealing the EGHP denial, treat the payment as a conditional primary payment and take action in accordance with subsection E.

If you believe that an EGHP may be primary payer, e.g., based on information in your records, an outside source or a "Y" trailer containing code "B" or "C" on the query reply, return the bill or contact the provider with the information you have and ask the provider to ascertain whether primary EGHP benefits are payable, and if so, to bill the employer plan for primary benefits. Also instruct the provider that if an EGHP has denied its claim for primary benefits, the provider must annotate item 94 "Remarks" of the Medicare claim form with the reason for the denial of EGHP primary benefits and enter occurrence code 24 and date of denial in items 29 - 32. No attachment is needed. Annotate your records with the reason for the denial of EGHP primary benefits to avoid needless recoupment efforts under paragraph G.

An employer plan's decision to pay or deny a claim because it determines that the services are or are not medically necessary is not binding on you. Continue to evaluate claims under existing guidelines to assure that the services are in fact covered by the program regardless of EGHP involvement.

Refer to subsections E and F if the claim is for conditional primary Medicare benefits. When processing the first claim in which an EGHP is primary payer, consider the possibility of prior Medicare primary payments. See §3490.3 for retroactive implementation.

B. Medicare Claim is for Secondary Benefits.--Where an EGHP has paid primary benefits, and Medicare is being billed for secondary benefits, calculate the amount of secondary benefits payable in accordance with §3490.8.

If an EGHP payment for Medicare covered services is less than the provider's charges for those services and less than the gross amount payable by Medicare (as defined in §3490.8A) in the absence of EGHP payment, and the provider does not accept and is not obligated to accept the plan's payment as payment in full, determine the amount of secondary Medicare benefits due in accordance with §3490.8 and reimburse the provider that amount. In this situation and where the employer plan paid an amount which equals or exceeds the amount that Medicare would have paid in the absence of EGHP payment, follow the bill review instructions in §3681 for processing claims from providers on cost reimbursement, and §3685 for providers on prospective payment.

C. Intermediary File On Cases in Which Medicare May Be Secondary.--Based on the information that you obtain from providers and renal dialysis facilities in accordance with §3490.15A, from other intermediaries and carriers, or from your own development, maintain a file containing information concerning ESRD beneficiaries on whose behalf claims have been filed. Include the first and last months of the 12-month period, whether the individual is covered by an EGHP during that period, and, if so, the name and address of the plan. If this information is not available , request the provider to obtain it.

D. EGHP Claims That Its Benefits Are Secondary to Medicare's.--If a provider bills an EGHP and the plan refuses to pay primary benefits to the provider because it claims that its benefits are secondary to Medicare's, do not pay conditional benefits. Refer the case to the RO in accordance with paragraph G6. If you have already paid conditional benefits in such a case, seek recovery in accordance with paragraph G.

E. Conditional Primary Medicare Benefits.--Conditional primary Medicare benefits may be paid if (1) the beneficiary has appealed or is protesting the EGHP denial of the claim for any reason other than that the EGHP offers only secondary coverage of services covered by Medicare, or (2) the EGHP denied the claim because the time limit for filing the claim with the EGHP has expired (whether appealed or not). Before making a conditional primary payment in cases involving appealed or protested claims, notify the EGHP and the beneficiary that the payment is being made on condition that both the insurer and the beneficiary are responsible for reimbursing the program up to the amount it has paid, if the EGHP subsequently approves the claim. Also notify the EGHP that if it pays the beneficiary, it is still liable to reimburse Medicare for the amount of the conditional benefits (up to the EGHP primary payment). (However, your failure to so notify the parties does not relieve them of the obligation to refund the payment.) Follow up periodically with the insurer to determine the outcome of the disputed claim. If the EGHP allows the claim, recover the Medicare payment directly from the EGHP. (See subsection G.) Where an EGHP has denied payment because its claim filing deadline has expired, promptly notify the EGHP that it must reimburse Medicare the amount of conditional benefits Medicare paid. Follow the recovery instructions in subsection G.

F. When Primary Benefits and Conditional Primary Medicare Benefits Are Not Payable.--Neither primary benefits nor conditional primary Medicare payments may be made where an EGHP denies payment for particular services on the grounds they are not covered by the plan, and you have reason to believe the plan does cover the services. Also do not pay conditional benefits if a plan offers only secondary coverage of services covered by Medicare. Conditional primary benefits may not be paid in this situation even if the EGHP has only collected premiums for secondary rather than primary coverage. Where an EGHP has denied the claim because the plan provides only secondary coverage, deny the claim for Medicare primary benefits. Contact the EGHP to explain that:

o it is obligated to pay primary benefits under §1862(b)(2) of the Social Security Act,

o Medicare payment cannot be made for services that are covered by the plan until the plan has paid primary benefits in accordance with its policy, and

- o if the employer plan primary payment does not pay the full charge, then a claim for secondary benefits can be submitted to Medicare.

Send a denial letter to the beneficiary including similar information and a statement that the beneficiary may not be charged more than the deductible and coinsurance amounts and charges for noncovered services. (Services that are or could have been paid for by the EGHP are not considered "noncovered.") Also, include an appeals paragraph in the letter to the beneficiary. Advise the beneficiary to consult his employer and the State Insurance Commissioner or other official having jurisdiction if necessary. Also advise him of the private right of legal action to collect double damages. (See §3490.19.) See subsection G6 for further action to take after you have denied the claim and notified the EGHP of its obligation to pay primary benefits. Also, notify the provider of your actions.

G. Recovery of Conditional Primary Benefits.--

1. General.--If, after you have paid primary benefits in a particular case which exceed the overpayment recovery tolerance in §3709.2, you receive information indicating that an EGHP is primary payer, recover the overpayment. The Medicare overpayment is the difference between the conditional primary payment and the amount Medicare should have paid as secondary payer. Recover from the EGHP or from the provider. When recovering from an EGHP, the amount requested may be more than the overpayment amount. (See paragraph 2.) If you believe that an EGHP, which has refunded benefits to you or to a provider, has paid less than the amount required under its contract, attempt to resolve the question with the EGHP, provider, and beneficiary. If unsuccessful, refer the case to the RO.

2. Recovery from the EGHP.--Request the EGHP to refund, within 90 days, the gross amount payable by Medicare as defined in §3490.8 or the amount the plan pays as primary payer, whichever is less. If the EGHP informs you that it has already made payment for the items and services, e.g., it has paid secondary benefits to the provider or beneficiary, request the EGHP to refund the gross amount payable by Medicare or the plan's primary payment amount less any amount the EGHP has already paid for the items and services. Include in the recovery letter to the EGHP a full explanation of the reasons you believe the EGHP is primary payer, a copy of the Medicare claim and/or the beneficiary's name, his Medicare claim number, his EGHP identification number, the provider or facility's name, services rendered and charges, and the dates services were rendered. Also, request the EGHP to include a copy of the plan's EOB along with its refund.

When requesting an EGHP to refund a payment, inform the EGHP that any deductible and coinsurance amounts that had been subtracted from the Medicare payment to the provider or facility will be sent to the provider or facility with instructions to refund them to the beneficiary if the beneficiary has paid them.

When you receive an EGHP refund, send the provider or facility any deductible and coinsurance, and retain the remainder of the EGHP payment up to the amount you paid. When refunding deductible and coinsurance amounts to a provider, instruct the provider or facility to either credit amounts paid toward the deductible and coinsurance to the beneficiary's account, or to refund such amounts to the beneficiary if the beneficiary has already paid them. Send a copy of the letter sent to the provider or facility to the beneficiary. If the EGHP voluntarily reimburses Medicare an amount in excess of the gross amount payable by Medicare, return the excess. Advise the EGHP to send the excess payment to the provider with an appropriate explanation or directly to the Medicare beneficiary depending upon the terms of the EGHP contract. The provider or you prepare an adjustment bill showing the revised Medicare liability and utilization.

In summary, when you receive an EGHP refund,

- o set aside any deductible and coinsurance,
- o calculate and recover the Medicare overpayment,
- o return the excess to the EGHP.

EXAMPLE: A beneficiary was hospitalized for 8 days in 1987. The covered charges were $4,000. The gross amount payable by Medicare was $3,600. A primary Medicare payment of $3,080 ($3,600 - $520 deductible) was made to the provider. Subsequently, an EGHP reimbursed you $4,000 for the Medicare covered services. The entire Medicare payment of $3,080 is recovered because the EGHP payment of $4,000 exceeded the gross amount payable by Medicare of $3,600. Therefore no secondary Medicare benefits are payable.

Set aside the $520 deductible from the EGHP payment, and deduct the Medicare overpayment of $3,080 to determine the "excess" EGHP refund: $4,000 - $520 = $3,480 - $3,080 = $400.

Send $520 of the EGHP payment to the provider with instructions to refund the $520 to the beneficiary if the beneficiary has already paid the hospital that amount. Return the $400 "excess" to the EGHP.

If you are also the responsible EGHP, a transfer of funds is the most convenient method of recovery. Return the deductible and coinsurance to the provider, recover the Medicare overpayment and distribute any "excess" to the provider or the beneficiary in accordance with your EGHP guidelines.

If an EGHP sends you a refund on its own initiative, allocate the payment in accord with the above rules. (Refund any "excess" to the EGHP. Do not return the full payment to the EGHP with instructions for it to pay the provider rather than make payment directly to you.)

If an EGHP has not responded to your request for repayment within 90 days, refer the case to the RO. If progress is being made toward recovery but full recovery has not been made within 90 days, continue to work with the EGHP to recover the Medicare payments. When progress is not deemed reasonable, refer the case to the RO.

If an EGHP which is primary to Medicare refuses to reimburse you for conditional primary benefits, it must submit an EOB or letter explaining its reason. If the explanation is that plan benefits are not payable to any party because, for example, the services are not covered under any circumstances, or benefits are exhausted, or the beneficiary is not entitled to benefits, accept the explanation in the absence of evidence to the contrary. If some other reason is given, such as: the plan has not received a claim from the beneficiary, its claim filing deadline has expired, the insurance policy does not provide for payments to third parties, the plan maintains it is secondary payer for individuals who are in a 12-month period as defined in §3490.5 (see subparagraph D), or if the plan does not respond, follow-up by informing the plan that it is obligated to refund such payments to you under the Medicare statute.

Section 1862(b)(2)(B) of the statute, as amended by §2344(b) of the Deficit Reduction Act of 1984 (Pub. L. 98-369), gives the Government the right to recover conditional Medicare payments from private insurers that are the primary insurers for Medicare beneficiaries. Therefore, such insurers must reimburse Medicare where it paid conditional primary benefits. Also, advise the plan and the beneficiary of the private right of legal action to collect double damages. (See §3490.19.) If the plan still refuses to reimburse Medicare or does not respond to your requests, refer the case to the RO. Also if you believe that, under the EGHP's contract, it should have paid more than it did, contact the plan and explain that under the statute it must make full payment in accordance with its contract. If the plan still refuses to cooperate, refer the case to the RO if the amount in question exceeds the recovery tolerance in §3709.2. The regional office will determine the need for further action.

General guidelines for recouping Medicare payments from other carriers are in §3711.1.

If the EGHP refuses to refund a payment to you because it has made payment to the provider, facility or to the beneficiary, obtain a copy of the EOB from the EGHP or the party that received the EGHP payment. Request the party that received the EGHP payment to refund the excess Medicare payment. The excess Medicare payment is the difference between the Medicare conditional primary payment and the amount Medicare is obligated to pay as secondary payer.

3. Recovery from the Provider.—If duplicate payment was made to the provider, i.e., the provider received both primary EGHP payments and primary Medicare benefits, recover from the provider the excess Medicare payment, subject to the overpayment recovery tolerance in §3709.2. If Medicare paid the provider and the EGHP paid the beneficiary, the beneficiary is liable. (See §3708.3A.)

If an EGHP payment has been made to a provider, the provider or you should prepare an adjustment bill showing the revised Medicare liability and utilization. When the provider receives an EGHP payment equal to or greater than the Medicare deductible and coinsurance amounts, instruct the provider to either credit the beneficiary's account for unpaid Medicare deductible and coinsurance amounts or to refund these amounts to the party that paid them. The provider may retain any excess EGHP payment over the gross amount payable by Medicare. (See §3490.9.)

4. Recovery from the Beneficiary.—If Medicare paid the provider and the EGHP paid the beneficiary, recoup from the beneficiary subject to the tolerance in §3709.2, that portion of the Medicare payment that exceeds Medicare's obligation as secondary payer, or an amount up to the provider's customary charges, whichever is less. (See §§3711.4A3 and B2.) Obtain a copy of the plan's EOB from either the beneficiary or the EGHP in order to determine the excess Medicare payment amount.

5. Recovery When a State Medicaid Agency Has Also Requested a Refund from the EGHP.—Medicare and a State Medicaid agency may conditionally or erroneously pay for services, and the amount payable by an EGHP is insufficient to reimburse both programs. Under the law, Medicare has the right to recover its benefits from an EGHP before any other entity, including a State Medicaid agency. Also Medicare has the right to recover its benefits from any entity, including a State Medicaid agency, that has been paid by an EGHP.

The superiority of Medicare's recovery right over other entities, including Medicaid, derives from the Medicare statute, which states that where Medicare is secondary to another insurer

o HCFA may recover Medicare benefits from the responsible insurer,

o HCFA is subrogated to the right of the Medicare beneficiary and the right of any other entity to payment by the responsible insurer, and

o HCFA may recover its payments from any entity that has been paid by the responsible insurer.

Medicare's right to recover its benefits from an EGHP or from a beneficiary that has been paid by an EGHP is higher than Medicaid's, notwithstanding the fact that Medicaid is the payer of last resort, and therefore doesn't pay its benefits until after Medicare has paid. Medicare's priority right of recovery from insurance plans that are primary to Medicare, does not violate the concept of Medicaid's being payer of last resort. Under §1862(b)(2) of the Social Security Act, Medicare's ultimate statutory authority is not to pay at all (with a concomitant right to recover any conditional benefits paid) where payment can be expected to be made by an EGHP which is primary to Medicare as promptly as would otherwise be the case if payment were made by Medicare. Where the EGHP pays right away, Medicare makes no payment to the extent of the EGHP payment. Delay of the EGHP payment does not change Medicare's ultimate obligation to pay the correct amount, if any, regardless of any Medicare payments conditionally made. Thus, if the EGHP pays less than the charges, Medicare may be responsible to pay secondary benefits. And if the third party pays the charges, Medicare may not pay at all. Pro-rata or other sharing of recoveries with Medicaid would have the effect of creating a Medicare payment where none is authorized under the law or improperly increasing the amount of any Medicare secondary payment.

Moreover, the right of Medicaid agencies to recover benefits derives from an assignment by Medicaid beneficiaries to the States of their rights to third party reimbursement. Since the beneficiary can assign to the State a right no higher than his own, and since Medicare's statutory right is higher than the beneficiary's, Medicare's right is higher than that assigned to the State.

Thus, where both Medicare and Medicaid are seeking reimbursement from the EGHP, inform the EGHP that it must reimburse Medicare before it can pay any other entity, including a State Medicaid agency. Also, where a beneficiary, provider or supplier receives payment from an EGHP, inform the beneficiary, provider or supplier that it is obligated to refund the Medicare payment up to the full amount of the EGHP payment before payment can be made to the State Medicaid agency. Only after Medicare has recovered the full amount of its claim does the beneficiary, provider or supplier have the right to reimburse Medicaid or any other entity.

If a State Medicaid agency is reimbursed from an EGHP payment before Medicare, ask the State agency to reimburse Medicare up to the full amount the agency received. State the legal basis for Medicare's right to recover. If the State refuses to reimburse you in full, refer the case to the HCFA RO. The RO's recovery actions may include offset of Medicare's claim against any Federal Financial Participation funds otherwise due the State. Tell the EGHP that in future cases involving claims by Medicare and Medicaid, it must reimburse Medicare first.

6. Referral of Cases to Regional Office.--Refer to the RO all cases where recovery is not made. Also, refer all cases where an EGHP claims that it is secondary to Medicare (irrespective of whether or not any Medicare benefits were paid). When referring a case subsequent to the first case involving a particular EGHP, advise the RO of the total number of cases which have been referred to them involving this EGHP, and the total dollar amount of Medicare overpayments. Whenever you paid primary benefits that should have been paid by an EGHP and the EGHP refuses to reimburse you, refer the case to the RO. The RO will notify the State Insurance Commissioner, or other official having jurisdiction over the EGHP, that evidence suggests that the EGHP has violated Federal law and will request that the EGHP's actions be investigated, and that it be ordered to comply with Federal law and to make appropriate refund to Medicare. The RO also advises the Insurance Commissioner, or other responsible official, that the Medicare beneficiary is placed at risk by the EGHP's actions and that Medicare will not make future primary payments for items and services covered by the EGHP for this individual. Further, the official should be advised of Medicare's right to recover from any parties to whom it has made improper payments. The RO will also consider possible legal action against the EGHP or employer.

H. Multiple Insurers.--There may be instances where Medicare is secondary payer to more than one primary insurer, e.g., an individual covered under his own EGHP as well as under the EGHP of his spouse or under automobile insurance. In such cases, the other primary payers will customarily coordinate benefits. If a portion of the Medicare gross amount payable remains unpaid after the other insurers have paid primary payments, pay appropriate secondary benefits.

3490.5 Determining the 12-Month Period During Which Medicare May Be Secondary Payer.--Medicare is secondary payer to EGHPs for items and services furnished during a period of up to 12 consecutive months which begins with the earlier of:

- the month in which a regular course of renal dialysis is initiated, or
- in the case of an individual who receives a kidney transplant, the first month in which the individual became entitled to Medicare.

NOTE: In the extremely rare case of an untimely application by an individual who receives a transplant, the 12-month period could begin with the first month in which the individual would have been entitled to Medicare benefits if a timely application had been filed. (See §3001.3A for the earliest possible month of entitlement in transplant cases.) It is not necessary to consider this possibility absent a specific indication, e.g., information in file that the transplant occurred before the first actual month of entitlement. If further development is required contact the SSO.

When the 12-month period begins before the month the individual becomes entitled to Medicare, Medicare pays secondary benefits for the portion of the period during which the individual is entitled to Medicare benefits. The latter is the coordination period (see §3490.2D). Since Medicare entitlement usually begins with the third month after the month in which the individual starts a regular course of dialysis, Medicare is usually the secondary payer for the first 9 months of an individual's entitlement. However, for individuals who undertake a course in self-dialysis training or who receive a kidney transplant during the 3-month waiting period, Medicare may be the secondary payer for up to the first 12 months of the individual's entitlement.

The following examples illustrate how to determine the number of months in which Medicare pays secondary benefits for various situations in which benefits are payable by an employer group health plan:

(1) Individual became entitled to Medicare after a waiting period

(i) Janice started a regular course of dialysis in October 1981. The 12-month period begins in October 1981 (the month in which Janice started a regular course of dialysis) and the waiting period consists of October, November and December 1981. Medicare is secondary payor from January through September 1982.

(ii) Peter started a regular course of dialysis in January 1982 and was hospitalized and received a kidney transplant in March 1982. The 12-month period begins with January 1982. The kidney transplant cuts short the dialysis waiting period so that Peter becomes entitled in March 1982. Medicare is secondary payor from March through December 1982.

(2) Individual became entitled to Medicare without a waiting period.--In October 1982 John began a regular course of dialysis. In December 1982 John began a course of self-dialysis training. Since the self-dialysis training course was initiated during the first 3 months of dialysis, he is exempt from the waiting period and becomes entitled as of October 1982, the first month of dialysis. In this situation the first month of entitlement coincides with the beginning of the 12-month period. Thus, the coordination period extends from October 1982 through September 1983. Medicare is secondary payor during this period.

3490.6 Effect of the Changed Basis for Medicare Entitlement.--If the basis for an individual's entitlement to Medicare changes from ESRD to age 65 or disability, the coordination period terminates with the month before the month in which the change is effective. See §3687 for intermediary development when the basis for entitlement changes from ESRD to ESRD and disability (S3 trailer code).

3490.7 Subsequent Periods of ESRD Entitlement.--If an individual has more than one period of entitlement based solely on ESRD, a coordination period will be determined for each period of entitlement in accordance with §§3490.5 and 3490.6.

3490.8 Amount of Secondary Medicare Payments Where Employer Group Health Plan Pays In Part for Items and Services

A. General.--If an EGHP payment for Medicare covered services is less than a provider's charges for those services and less than the gross amount payable by Medicare (as defined below), and the provider does not accept and is not obligated to accept the payment as payment in full, Medicare secondary payment can be made. The Medicare secondary payment will be the lower of:

- the gross amount payable by Medicare minus the amount paid by the EGHP for Medicare covered services, or

- the gross amount payable by Medicare minus any applicable deductible or coinsurance amount.

The gross amount payable by Medicare is:

o the current Medicare interim reimbursement amount (as defined in §3683) for providers reimbursed on a reasonable cost basis;

o the Medicare payment rate (as defined in §3685) for providers reimbursed on a prospective payment basis;

o the composite rate for maintenance dialysis services;

o the reasonable charge for separately billable items furnished by independent renal dialysis facilities (see §3644.1).

The gross amount payable by Medicare includes applicable Medicare deductible and coinsurance amounts. If a provider furnishes services that are reimbursable under more than one payment method (e.g., composite rate for dialysis treatments and reasonable cost for separately billable items associated with dialysis) the gross amount payable by Medicare is the combined amount of Medicare reimbursement for the services (without regard to the effect of the Medicare deductible or coinsurance or the payment by the EGHP).

For detailed billing and reimbursement instructions, refer to §3681 (for reasonable cost reimbursement) and to §3685 (for prospective payment).

B. Special Rules for Dialysis Equipment for Which Medicare Paid the Full Reasonable Cost.—Where a provider or renal dialysis facility is paid its full reasonable costs for the purchase of dialysis equipment pursuant to an agreement with HCFA (see 42 C.F.R. 405.690) the provider or facility should be instructed to bill the employer plan based on the usual rates in the area for the same or similar equipment. Any amounts received from the employer plan should be refunded to the intermediary or used to adjust future payment as the intermediary determines to be appropriate. There is no secondary Medicare payment in this situation because Medicare has already paid the provider or facility 100 percent of its reasonable costs for the equipment. (The 100 percent reimbursement option for dialysis equipment is discontinued effective August 1, 1983. However, any equipment already purchased under a full reasonable cost reimbursement agreement will be handled under the pertinent regulations and terms of the agreement.)

3490.9 Employer Group Health Plan Pays in Full.—If an employer plan payment for Medicare covered services equals or exceeds the provider's charges for those services or the gross amount payable by Medicare (as defined in §3490.8A), or if the provider accepts or is obligated to accept the plan payment as payment in full, no Medicare payment is due. Any excess of the employer plan payment over the gross amount payable by Medicare will not be subtracted from the provider's Medicare reimbursement. The provider will submit a no payment bill in accordance with §3681 or §3685 as appropriate.

3490.12 Effect of Secondary Payments on Part A Utilization.--Where no Medicare secondary benefit is payable, no utilization is charged the beneficiary. Where a Medicare secondary payment is made, the beneficiary will be charged with utilization in accordance with §3681C3 for providers reimbursed on a reasonable cost basis or §3685A3 for providers reimbursed on a prospective payment basis. These procedures also are applicable for calculating utilization for stays for which Medicare is secondary only for a portion of the stay.

3490.13 Effect of EGHP Payments On Deductible and Coinsurance.--EGHP payments are credited to the Part A and Part B deductible amounts. Thus, expenses that would be credited to a beneficiary's Part A or Part B cash or blood deductibles if Medicare were primary payer, are credited to the deductibles even if the expenses are reimbursed by an EGHP. This is true even if the EGHP paid the entire bill and there is no Medicare benefit payable. Also, EGHP payments to a provider are applied to satisfy a beneficiary's obligation to pay a Part A or Part B coinsurance amount. However, EGHP payments are credited to deductibles before being used to satisfy the coinsurance. (See §3681.)

3490.14 Limitation on Right of Provider or Facility to Charge a Beneficiary.--A provider of services, renal dialysis facility or other facility that receives direct payment from the Medicare program may not charge a beneficary or any other party, other than an insurer that is primary under §1862(b) of the Act, for Medicare covered services, if it has been or could be paid by an EGHP at least an amount equal to any applicable deductible or coinsurance amount. This limitation applies to situations where an insurer is primary under §1862(b) but offers only secondary benefits.

EXAMPLE: A Medicare beneficiary with EGHP coverage was a hospital inpatient for 20 days in 1987. The hospital's charges for Medicare covered services were $5,000. The inpatient deductible had not been met. The gross amount payable by Medicare for the stay in the absence of EGHP coverage is $4,000. The employer plan paid $4,500, $520 of which was credited to the inpatient deductible. Medicare will make no payment, since the plan's payment was greater than the gross amount payable by Medicare of $4,000. No part of the $500 difference between the hospital's charges and the employer plan's payment can be billed to the beneficiary since the beneficiary's obligation, the deductible, was met by the employer plan's payment. The provider files a no-payment bill reflecting a fully satisfied deductible.

3490.15 Responsiblity of Providers of Services and Renal Dialysis Facilities

A. Identification of Cases in which Medicare may be Secondary to EGHPs .--Providers of services investigate cases in which information available to them (e.g., the beneficiary's Medicare card) indicates that the beneficiary is entitled to Medicare based on ESRD for 1 year or less at the time the services were rendered to ascertain whether the services were rendered during the 12-month period described in §§3490.5 and 3490.6. Providers determine whether the services were rendered in the 12-month period by checking their own records; e.g., information contained on Form HCFA-2728 or, if the potential Medicare payment is $50 or more, with other providers or facilities, or the beneficiary's physician, if necessary, to determine the date the individual started a regular course of dialysis or the date the individual received a kidney transplant (or entered a hospital to receive a transplant). If the individual is in the 12-month period, the provider asks the beneficiary if he/she is insured under any health insurance plan which provides coverage through the employer or through a union. If the response is yes, the provider asks for the name and address of the plan and the beneficiary's identification number.

If the information obtained does not indicate EGHP coverage, the provider annotates the bill to that effect (e.g., EGHP coverage lapsed, benefits exhausted). If the information indicates that EGHP coverage exists, the provider obtains the information indicated above from the beneficiary or the beneficiary's representative.

B. Action by Provider Where Medicare May be Secondary to EGHP.--

(1) Submittal of Bill for Primary Benefits to EGHP . If Providers determine, based on their development, conducted in accordance with subparagraph A , that Medicare may be secondary to an EGHP, they must bill the employer plan for primary benefits. When a provider bills an EGHP as primary payer, the bill to the employer plan should itemize the services rendered even though they are services for which Medicare reimburses on a composite rate basis.

(2) Submittal of Bill to Medicare After EGHP Has Processed Claim.--After an EGHP has processed a claim for primary benefits, the provider submits a bill for secondary payment or a no payment bill as appropriate, in accordance with §3681 for providers reimbursed on a reasonable cost basis, or §3685 for providers reimbursed on a prospective payment basis. If an EGHP denies a claim for primary benefits, the provider submits a bill for conditional primary benefits with an explanation of any reason given by the plan for its denial, in accordance with §3681A.

3490.17 Action by Intermediary When EGHP Erroneously Pays Primary Benefits.—Cases may come to your attention where an EGHP has inappropriately paid primary benefits. In such cases, instruct the provider to bill Medicare as primary payer and to refund to the EGHP the amount it paid, except for an amount equivalent to the Medicare deductible and coinsurance amounts, and charges for noncovered services.

3490.18 Referral to RO of Cases Involving Discrimination Against ESRD Patients.—

A. Health Benefits Discrimination.—Section 162(i)(1) of the Internal Revenue Code stipulates that expenses incurred by an employer for contributions to an EGHP are not allowed as a tax deduction if the plan differentiates in the benefits it provides between individuals having ESRD and other individuals covered by the plan.

Refer any cases of potential discrimination by employers which come to your attention to the RO, which decides whether the case warrants referral to the IRS. The decision as to whether a plan differentiates between individuals having ESRD and other individuals covered under the plan and as to any action to be taken is made by the IRS.

The following are examples of potential health benefits discrimination cases:

o the plan does not cover routine maintenance dialysis services or kidney transplants;

o the plan excludes benefits, makes itself secondary to government benefits, or charges a higher premium for individuals with ESRD;

o the plan imposes limitations on benefits for persons with ESRD which are not applicable to others , e.g., a higher deductible or coinsurance, a longer waiting period or a lower annual or lifetime benefit limit.

B. Job Discrimination.--HCFA is responsible for investigating complaints of potential job discrimination against ESRD beneficiaries which may occur as a result of the law making Medicare secondary payer to employer group health plans. HCFA must report its findings to Congress periodically.

If you become aware of any employer or plan which in any way denies employment, or conditions or restricts employment or promotional opportunities, because a job applicant or employee or a dependent of a job applicant or employee has ESRD, refer the case to the regional office. The RO will investigate the complaint and send a report of the facts to HCFA's Central Office.

3490.19 Claimant's Right to Take Legal Action Against an EGHP.--The Omnibus Budget Reconciliation Act of 1986 provides that any claimant has the right to take legal action against, and to collect double damages from, an EGHP that fails to pay primary benefits for services covered by the EGHP where required to do so under §1862(b) of the Act.

3490.20 Medical Services Furnished to ESRD Beneficiaries by Source Outside EGHP Prepaid Health Plan.--

A. Services By Outside Sources Not Covered.--If an ESRD beneficiary is in a 12-month period as defined in §3490.5 and is enrolled in an employer sponsored prepaid health plan (e.g., Health Maintenance Organization (HMO)/Competitive Medical Plan (CMP)), Medicare does not pay for services obtained from a source outside the prepaid employer health plan if:

- The same type of services could have been obtained as covered services through the prepaid employer health plan, or
- The particular services can be paid for by the plan (e.g., emergency or urgently needed services).

Medicare benefits are precluded under these circumstances even if the individual receives services outside of the prepaid health plan's service area, e.g., while the individual is away from home.

At the time of admission, providers are to ask beneficiaries that are enrolled in EGHPs whether the plan is a prepaid health plan. If the individual is enrolled in such a plan, Medicare is not billed. (However, a no-payment bill is required per §§3624 and 3679B.) Any request for payment is made to the EGHP.

NOTE: This restriction only affects Medicare beneficiaries enrolled in employer sponsored prepaid health plans which either do not have a Medicare contract or have a Medicare cost contract. Beneficiaries in HMO/CMPs that have Medicare risk contracts are not affected because beneficiaries enrolled in a risk-basis HMO/CMP are locked into the plan in all instances except for emergency or urgently needed services.

B. Exception.--If a beneficiary obtains services from a source outside the prepaid employer health plan, and has not yet been notified in writing of this special rule, Medicare pays for the services, provided the plan will not pay for the services for legitimate reasons. In general, it is assumed that written notification has not been given in the absence of evidence to the contrary, e.g., where the remarks portion of the MSP Regional Data Exchange System indicates that the beneficiary has been notified. (See subsection C.) Where payment is made for services from a source outside the prepaid health plan, the Medicare Benefits Notice (HCFA-1533), or the EOMB, where applicable, states the following:

"Our records show that you are a member of an employer sponsored prepaid health plan. Since Medicare is secondary payer for you, services from sources outside your health plan are not covered. However, since you were not previously notified of this, we will pay this time. In the future, payment will not be made for nonplan services which could have been obtained from or through the prepaid health plan."

C. Notice to Beneficiary.--Any bills received for Medicare payment from, or on behalf of a beneficiary enrolled in an EGHP Prepaid Health Plan who has previously been notified in writing, are denied and the Medicare Benefit Notice or the EOMB includes the following:

"Our records show that you are a member of an employer sponsored prepaid health plan. Since Medicare is secondary payer for you, services from sources outside your health plan that could have been obtained from or through the prepaid health plan are not covered. Our records show that you were previously informed of this rule. Therefore, payment cannot be made for the nonplan services you received."

D. Update MSP Regional Data Exchange System.--When you have identified a beneficiary under subsection A and, either you have notified him in writing that Medicare does not pay for services obtained outside of the plan or you have information that he was previously notified of this, update the MSP Regional Data Exchange System. (See §3696.) This is accomplished by entering the following information in remarks line 1: "MSP-Code 13, ESRD beneficiary belongs to prepaid EGHP. Notified that Medicare will not pay."

Limitation on Payment for Services to Employed Aged Beneficiaries and Spouses

3491. LIMITATIONS ON PAYMENT FOR SERVICES TO THE EMPLOYED AGED AND THE AGED SPOUSES OF EMPLOYEES WHO ARE COVERED BY EMPLOYER GROUP HEALTH PLANS

3491.1 General.--Medicare benefits are secondary to benefits payable under employer group health plans (EGHPs) for employed individuals age 65 or over and the spouses age 65 or over of employed individuals of any age. Section 3491.3 further defines individuals subject to this limitation on payment.

If primary Medicare benefits have been paid for services furnished on or after January 1, 1983 to an individual who meets the criteria in §3491.3, recover the excess Medicare payment in accordance with §3491.15. Billing instructions are in §3682 for providers reimbursed on a cost reimbursement basis and §3685 for hospitals reimbursed on a prospective payment basis.

In general, providers are instructed that, where an individual meets the criteria in §3491.3, they should bill the EGHP first and, if (1) the plan payment is less than the provider's charges for Medicare covered services, (2) the plan payment is less than the gross amount payable by Medicare, and (3) the provider does not accept and is not obligated to accept the EGHP payment as payment in full, Medicare secondary benefits may be payable in accordance with §3491.13.

The Age Discrimination in Employment Act (ADEA) which is administered by the Equal Employment Opportunity Commission requires employers (as defined below) to offer to their employees age 65 or over and to the age 65 or over spouses of employees of any age the same coverage as they offer to employees and employees' spouses under age 65, i.e., coverage that is primary to Medicare. This equal benefit rule applies to coverage offered to full-time and part-time employees. From January 1, 1985 through April 30, 1986, employers were required to furnish such coverage to their age 65 - 69 employees and to the age 65 - 69 spouses of employees of any age through age 69. From January 1, 1983 through December 31, 1984 employers were required to offer primary EGHP coverage to their employees age 65 - 69 and to the spouses age 65 - 69 of such employees.

Medicare beneficiaries are free to reject employer plan coverage, in which case they retain Medicare as the primary coverage. When Medicare is primary payer, employers cannot offer such employees or their spouses secondary coverage of items and services covered by Medicare. The requirements for employer compliance with the Medicare secondary payer provisions may differ in some respects from the requirements for compliance with the ADEA. Thus, for example, the ADEA law applies only to employees while the Medicare provision applies also to self-employed individuals. (See §3491.2B.)

Where an EGHP is primary payer, but does not pay in full for the services, secondary Medicare benefits may be paid as prescribed in §3491.13, to supplement the amount paid by the EGHP for Medicare covered services. If an EGHP denies payment for particular services because they are not covered by the plan, primary Medicare benefits may be paid for them if covered by Medicare.

An EGHP's decision to pay or deny a claim because it determines that the services are or are not medically necessary is not binding on the Medicare intermediary. Medicare will continue to evaluate claims under existing guidelines derived from the law and regulations to assure that services are in fact covered by the program regardless of employer plan involvement.

3491.2 Definitions--

A. Employer.--The term "employer" as used in these instructions means not only individuals and organizations engaged in a trade or business, but also includes organizations exempt from income tax, such as religious, charitable, and educational institutions. Included are the governments of the United States, the States, the Virgin Islands, Guam, American Samoa, the Northern Mariana Islands, Puerto Rico and the District of Columbia.

Only employers with 20 or more employees are required to offer the same (primary) coverage to their age 65 or over employees and the age 65 or over spouses of employees of any age that they offer to younger employees and spouses. This requirement is met if an employer has 20 or more full-time and/or part time employees for each working day in each of 20 or more calendar weeks in the current or preceding year. Self-employed individuals who participate in an employer plan are not counted as employees for purposes of determining if the 20 or more employees requirement is met. Where an employer does not have 20 or more employees in the preceding year, he is required to offer his employees and spouses age 65 or over, primary coverage beginning with the point in time at which the employer has had 20 or more employees on each working day of 20 calendar weeks of the current year. The employer is then required to offer primary coverage for the remainder of that year and throughout the following year, even if the number of employees drops below 20 after the employer has met the requirement.

The "20 or more employees" requirement must be met at the time the individual receives the services for which Medicare benefits are claimed. If at that time, the employer has met the "20 or more employees" requirement in the current year or in the preceding calendar year, the EGHP is primary payer. An employer that meets this requirement must provide primary coverage even if less than 20 employees participate in the employer plan.

Employers are not required to provide any coverage to self-employed individuals. However, any coverage provided to self-employed persons age 65 or older and age 65 or older spouses of self-employed persons of any age by an employer of 20 or more employees must be the same as coverage provided to younger self-employed persons, that is, coverage primary to Medicare. The employer must also provide primary coverage to older self-employed individuals even if there are no younger self-employed individuals enrolled in the plan.

Assume for purposes of developing claims and the requirement that EGHPs be billed before Medicare that, in the absence of evidence to the contrary, an employer in whose health plan a beneficiary is enrolled because of employment meets the definition of employer and employs at least 20 people. An employer allegation that the 20-employee requirement is not met or a multiemployer plan's statement identifying specific members as employees of employers of fewer than 20 employees, can be accepted as a basis for making Medicare primary payer. Refer questionable cases to the RO.

B. Employed Individual.--

1. General.--The term "employed individual" as used in these instructions refers not only to employees but also self-employed persons such as directors of corporations, and owners of businesses. If a self-employed individual enrolls in an EGHP which meets the definition in subsection C, the employer plan may be primary for that individual and the individual's spouse. The term "employed individual" also includes members of the clergy and members of religious orders who are reimbursed for their services by a church, religious order, or other employing entity.

2. Members of the Clergy and Religious Orders.--The following guidelines apply in determining the employment or retirement status of members of the clergy and members of religious orders, where an EGHP alleges that such an individual is retired.

(a) A member of the clergy or a member of a religious order who has not taken a vow of poverty is

o considered employed if he or she is receiving from a church, religious order or other employing entity cash remuneration for services rendered whether or not the individual's earnings are exempt from social security coverage, and

o considered retired if the church, religious order or other employing entity states that the individual is retired and that he or she receives only retirement pay from the entity rather than remuneration for services rendered.

(b) A member of a religious order who has taken a vow of poverty is considered retired if the order submits a written statement that

o an election of coverage under §3121(r) of the Internal Revenue Code of 1954 is in effect for the order of the subdivision to which the member belongs, i.e., the order has agreed to waive its exemption from payment of Federal Insurance Contributions Act (FICA) taxes on behalf of members of the order, and

o the individual has retired including the date of retirement; and

o it has or will report the retirement on its tax return. (The noncash compensation of members of religious orders who have taken a vow of poverty is "deemed earnings" for social security and tax purposes depending on the level of services they render. Religious orders are required to report retirement of members on their tax returns.)

3. Individuals Age 65 and Older Who Receive Disability Payments.--A person who is age 65 or older and is receiving disability payments from an employer is considered employed if such payments are subject to taxes under FICA. Employer disability payments are subject to FICA tax for the first 6 months of disability after the last calendar month in which the employee worked for that employer.

EXAMPLE: Adam Green stopped working because of disability in December 1985 at age 66. His employer began paying him disability payments as of January 1986. Since sick pay is taxed under FICA for 6 months after the last month in which the employee worked, Medicare is the secondary payer through June 1986. Beginning with July 1986, Medicare becomes the primary payer as the sick payments are no longer considered wages under FICA.

4. Insurance Agents.--The following guidelines apply in determining the status of insurance agents. (See subsection D to determine when an insurance company's plan meets the definition of an EGHP.)

o A self-employed insurance agent is considered employed if he actually conducts business on behalf of the company. The fact that a self-employed insurance agent is authorized to represent the company; e.g., to write policies on behalf of the company, does not itself confer the status of "employed individual.

NOTE: An insurance company that offers EGHP coverage to any self-employed insurance agent who writes policies on behalf on the company, must offer the same coverage under the same circumstances to older and younger agents. For example, a company that provides EGHP coverage for younger insurance agents who sell at least $10,000 of insurance during a calendar year is required to furnish the same coverage under the same conditions to agents age 65 and over, including "retirees" who sell at least $10,000 of insurance during the same time period.

o Since a full-time life insurance agent is considered an employee for social security purposes, such an individual is also considered an employee for purposes of the working aged provision. (See subsection D for the effect of this rule in determining whether a plan is an EGHP.)

5. Senior Federal Judges.--Senior Federal judges are retired judges of the U.S. court system and the Tax Court. They may continue to adjudicate cases, but they are entitled to full salary as a retirement benefit whether or not they perform judicial services for the Government. By law, the "remuneration" they receive as senior judges is not considered wages for social security retirement test purposes. Since they are considered retired for social security purposes, they are also considered retired for purposes of the working aged provision.

6. Volunteers.--Volunteers are not considered employed unless they perform services or are available to perform services for an employer and receive remuneration for their services. For example, for purposes of §1862(b) VISTA volunteers are considered employed by the Federal Government since they receive remuneration.

7. Directors of Corporations.--Directors of corporations, i.e., persons serving on a Board of Directors of a corporation, who are not officers of the corporation, are self-employed. (Officers of a corporation are employees.) Directors who receive no remuneration for serving on the Board ("unpaid directors") are not considered employed.

However, remuneration may consist of "deferred compensation;" i.e., amounts earned but not payable until some future date, usually when the individual reaches age 70 and is no longer subject to the social security retirement test. A director receiving deferred compensation is an employed individual.

C. Plan.--The term "plan" means any arrangement by an employer or by more than one employer, or by an employee organization to provide health benefits or medical care to employees. An arrangement by more than one employer is considered to be a single plan if the arrangement provides for common administration of the health benefits, for example, by the employers directly, or by a benefit administrator, or by a multiemployer trust, or by an insuring organization under a contract or contracts which stipulate that the organizations provide all employees enrolled in the plan the same benefits or the same benefit options.

D. Employer Group Health Plan or Employer Plan (EGHP).--These terms mean any health plan that is of, or contributed to by, an employer of 20 or more employees and which provides medical care, directly or through other methods such as insurance or reimbursement to current or former employees, or to current or former employees and their families. This includes a multiemployer group health plan that has at least one employer with 20 or more employees. These plans may identify members who are employees of employers with fewer than 20 employees. Such members and their spouses are considered not to meet the conditions in §3491.3. Similarly, if an employer of fewer than 20 employees enrolls in the EGHP that is offered to employees, that employer is not considered to meet the conditions in §3491.3.

A plan that does not have any employees as enrollees, e.g., a plan for self-employed persons only, does not meet the definition of EGHP and Medicare is not secondary to it. Thus, if an insurance company establishes a plan solely for its self-employed insurance agents, other than full-time life insurance agents, the plan would not be considered an EGHP. But if the plan includes full-time life insurance agents or other employees or former employees, it would be considered an EGHP. (Subsection B.4 states that full-time life insurance agents are considered employees.)

The Federal Employees Health Benefits program meets the definition of an EGHP. Employee-pay-all plans, i.e., group health plans which are under the auspices of an employer and which do not receive any contribution from the employer, also meet the definition of EGHP. Coverage by the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS) is secondary to Medicare, since it is not considered to meet the definition of an EGHP.

Assume in the absence of evidence to the contrary, that any health plan (including a union plan) in which a beneficiary is enrolled because of the beneficiary's or the beneficiary's spouse's employment meets this definition.

NOTE: Medicare is secondary to EGHP coverage only if the EGHP coverage is by reason of the employed person's current employment. Health insurance plans for retirees or the spouses of retirees do not meet this condition and are not primary to Medicare. (See §3336.4.)

E. Secondary.-The term "secondary", when used with respect to Medicare payment, means that Medicare is the residual payer to all EGHPs under which the Medicare beneficiary is covered by reason of current employment and will not pay for any expenses that are reimbursable by any such plan or plans. Consider the workers' compensation and automobile and liability insurance exclusions (§§3407-3416, 3419, and 3489) in appropriate cases in determining the extent of Medicare's liability.

(Also refer to §3491.7C regarding claims in which there is an EGHP and another primary and/or secondary payer involved, e.g., an EGHP, an automobile insurer and a retirement plan.)

F. Age 65 through 69.--Means a period beginning with the first day of the month in which an individual attains age 65 and ending with:

- For services furnished on or after July 18, 1984, the last day of the month before the month the individual attains age 70.
- For services furnished before July 18, 1984, the last day of the month in which the individual attains age 70.

An individual attains a particular age on the day preceding his or her birthday.

G. Spouse.--Means any individual who has spousal coverage under the employer plan.

3491.3 Individuals Subject to Limitation on Payment.--

A. General.--Medicare is secondary payer for Part A and Part B benefits under this provision for an individual who:

1. Is age 65 or over for services on or after May 1, 1986; is age 65 through 69 for services before May 1, 1986, and

2. Is entitled to Part A (hospital insurance) of Medicare on the basis of the individual's own social security or railroad retirement earnings record, or Federal quarters of coverage, or the earnings record or the Federal quarters of coverage of another person, and

3. Is either

   - Employed and covered by reason of that employment by an EGHP; or
   - The spouse of an employed person, covered by an EGHP by reason of that person's employment, and the employed person is:

- Any age - for services on or after May 1, 1986; or

- Any age through 69 - for services on or after January 1, 1985, through April 30, 1986, or

- Age 65 through 69 - for services on or after January 1, 1983, through December 31, 1984.

B. Re-employed Retirees and Annuitants.--If a retiree or annuitant returns to work even for temporary periods, the employer is required to provide the same coverage under the same conditions that he furnishes to other employees (i.e., non-retirees). Medicare is secondary payer to the EGHP that the employer provides to the re-employed retiree even if the premiums for coverage in the plan are paid from a retirement pension or fund. Medicare is also secondary payer for self-employed individuals such as consultants who are former employees if the employer provides coverage for other such individuals.

3491.4 Individuals Not Subject to the Limitation on Payment.--This Medicare secondary provision does not apply to:

o Individuals entitled, or who could upon application become entitled, to Medicare under the ESRD provisions, i.e., individuals who meet the requirements for ESRD entitlement even though their current Medicare entitlement may be on the basis of age 65.

o Individuals who are enrolled in Part B only.

o Individuals enrolled in Part A on the basis of a monthly premium.

o Anyone who is under age 65. (Effective for items and services rendered on or after January 1, 1987 through December 31, 1991, §9319 of OBRA provides that Medicare is secondary to large group health plans that cover at least one employer of 100 or more employees for certain disabled individuals under age 65.

o With respect to services rendered before May 1, 1986, anyone who is over age 69 and age 65-69 spouses of employees over age 69.

o Individuals covered by a health plan other than an EGHP as defined above, e.g., one that is purchased by the individual privately, and not as a member of a group.

o Employees of employers of fewer than 20 employees.

o Members of multiemployer plans whom the plan identified as employees of employers with fewer than 20 employees.

o Retired beneficiaries (other than spouses of employed individuals) who are covered by EGHPs as a result of past employment and who do not have EGHP coverage as the result of current employment.

3491.5 Identification of Cases by Providers of Services.—To obtain the information needed to ascertain whether to bill an EGHP as primary payer, providers ask Medicare Part A beneficiaries age 65 or over (other than beneficiaries with ESRD) admitted for inpatient care or receiving outpatient care, or their representatives, selected questions. These include the age of the beneficiary, the employment status of the beneficiary and the spouse, whether the beneficiary is covered under an EGHP because of the beneficiary's or the spouses's current employment, the patient's identification number and the name and address of the EGHP.

3491.6 Identification of Cases and Action Where There Is Indication of Possible EGHP Coverage.—Consider the possible application of this limitation on benefits when processing claims for items or services furnished to beneficiaries who meet the criteria in §3491.3. Develop with the provider and the beneficiary to determine if primary benefits may be paid by another insurer. See §3686 for development of claims where there may be other payer involvement.

When processing a claim for secondary benefits for services furnished an individual who meets the criteria in §3491.3, search your records for any claims on which you paid primary benefits for services provided within the time limit stipulated in the following sentence, and which have not been annotated in accordance with §3491.11 to indicate a valid prior EGHP denial which would apply to subsequent claims.

In each instance, you must search your records for all claims for services provided within the current and preceeding 27 months. If you believe it would be cost-effective in a particular situation, you may search your records for a longer prior period (not to extend prior to January 1, 1983). There may be instances when beneficiaries who meet §3491.3 are identified through special projects in connection with which you will be directed to search your records for a prior period exceeding 27 months.

Where such a prior claim(s) is identified, contact the provider to ascertain from its records whether there is any indication that there is EGHP coverage, e.g., a statement that the individual was employed, and if so, instruct the provider to bill the EGHP identified in the current or prior claim for the prior stay (unless the information available to you on the prior claim clearly shows why the employer plan should not be billed as primary). The provider submits an adjustment bill when the EGHP payment is received. Follow the instructions in §3491.15 on any claim on which you paid primary benefits and the available information indicates that an EGHP may pay primary benefits if billed. See §3899.9 for criteria which must be met in order to count any amounts from such claims as Medicare secondary payer savings on the Form HCFA-1653.

3491.7 Action by Providers Where Medicare Is Secondary to EGHP.—

A. General.—Providers seek reimbursement from the EGHP before billing Medicare when there is indication that an EGHP is primary payer, i.e., where the services were rendered to an individual who meets the criteria in §3491.3, and there is no evidence that the definitions in §3491.2 are not met. Bill the EGHP as primary payer even where there may be EGHP coverage for only part of the stay (e.g., split stays where the beneficiary terminates employment during the stay and EGHP coverage terminated concurrently).

B. Submittal of Bill to Medicare after Employer Plan Has Made Payment.--If an EGHP pays primary benefits to a provider, secondary Medicare benefits may be payable in accordance with §3491.13 to supplement the amount paid by the EGHP. If the EGHP primary payment for a particular stay or particular services is less than the provider's charges for Medicare covered services, and is less than the gross amount payable by Medicare (as defined in §3491.13) and the provider does not accept and is not obligated to accept the EGHP payment as payment in full, the provider submits a bill for secondary benefits in accordance with §3682 or §3685 as appropriate. If the EGHP payment equals or exceeds the gross amount payable by Medicare (as defined in §3491.13), or equals or exceeds the provider's charges for Medicare covered services or the provider accepts or is obligated to accept the EGHP payment as payment in full, it will submit a no payment bill in accordance with §3682 or §3685 as appropriate. Any excess of the EGHP payment over the gross amount payable by Medicare is not subtracted from the provider's Medicare reimbursement at final cost settlement. If the EGHP denies a provider's claim for primary benefits, the provider submits a claim for primary Medicare benefits or conditional primary benefits as provided for in §3491.11.

C. Multiple Insurers.--There may be instances where Medicare is secondary payer to more than one primary insurer, e.g., an individual who meets the criteria in §3491.3 is also covered under his own EGHP, and under the EGHP of an employed spouse who meets the criteria in §3491.3 or under automobile insurance. In such cases, the other primary payers will customarily coordinate benefits. If a portion of the charges remains unpaid after the other insurers have paid primary payments, a secondary Medicare payment may be made.

Coordination of benefits arrangements between private plans, whether based on State law or private agreements, cannot supersede Federal law that makes Medicare secondary payer to certain EGHPs for individuals and spouses age 65 or over. Therefore, where the individual has EGHP coverage based on current employment in addition to EGHP coverage as a retiree, Medicare is secondary to the EGHP coverage based on current employment and primary to the EGHP coverage based on retirement regardless of the coordination of benefits arrangements between the plans.

Where a plan's payment would normally be secondary to Medicare, but under coordination of benefit provisions, the payment is primary to a primary payer under §1862(b), the combined payment of both plans constitutes the primary payment to which Medicare is secondary.

EXAMPLE: John Jones, age 67, is a Medicare beneficiary with coverage under Part A and Part B. He retired from the Acme Tool Company in 1986 and received retirement health insurance coverage which is secondary to Medicare. His wife Mary, age 62, has been employed continuously with the local police department since 1960 and since that time has received coverage for herself and her husband under the department's EGHP. The priority of payment for John's medical expenses is as follows:

1) The employed spouse's EGHP is primary payer.
2) Medicare is secondary payer.
3) The retirement plan is either tertiary payer or the retirement plan may choose to coordinate benefits with the employed spouse's EGHP so that the combined benefit of the two plans is primary to Medicare.

3491.8 Limitation on Right of Provider or Facility to Charge a Beneficiary.--A participating provider of services or any other facility that receives direct payment from the Medicare program may not charge a beneficiary or any other party other than an insurer which is primary under §1862(b) of the Act for Medicare covered services if the provider or facility has been paid or could have been paid by an EGHP an amount which equals or exceeds any applicable deductible or coinsurance amount. This applies to situations where an insurer is made primary under §1862(b) but offers only secondary benefits.

EXAMPLE: A Medicare beneficiary who had EGHP coverage was hospitalized for 20 days in 1987. The hospital's charges for covered services were $5000. The inpatient deductible had not been met. The gross amount payable by Medicare (as defined in §3419.13) would have been $4000 for the stay if there had been no EGHP coverage. The EGHP paid $4500 (of which $520 was credited to the Medicare deductible). Medicare will make no payment, since the plan's payment was greater than Medicare's gross amount payable of $4000 would have been. No part of the $500 difference between the hospital's charges and the EGHP's payment can be billed to the beneficiary since the beneficiary's obligation, the deductible, was met by the EGHP payment. The provider files a no-payment bill reflecting the $520 credited to the deductible.

3491.9 Effect of EGHP Payments on Deductible and Coinsurance.--Expenses that serve to meet the beneficiary's Part A or Part B cash and blood deductibles, if Medicare were primary payer, are credited to those deductibles even if the expenses are reimbursed by an EGHP. This is true even if the EGHP paid the entire bill and there is no Medicare benefit payable. Also, EGHP payments to a provider are applied to satisfy a beneficiary's obligation to pay a Part A or Part B coinsurance amount. However, EGHP payments are credited to deductibles before being used to satisfy the coinsurance.

3491.11 Employer Plan Denies Claim for Primary Benefits.--

A. Primary Medicare Benefits.--Primary Medicare benefits may be paid if an EGHP denies a claim for primary benefits because the employer does not employ 20 or more employees; or the beneficiary is not entitled to benefits under the plan; or benefits under the EGHP are exhausted for the services involved; or the services are not covered by the EGHP, and the beneficiary is not appealing the EGHP denial. (But primary Medicare benefits may not be paid if you believe that the EGHP covers the particular services. See subsection C.) If you pay primary Medicare benefits and later learn that the beneficiary is appealing the EGHP denial, treat the payment as a conditional primary payment and take action in accordance with subsection B.

B. Conditional Primary Medicare Benefits.--Conditional primary Medicare benefits may be paid if (1) the beneficiary has appealed or is protesting the EGHP denial of the claim for any reason other than that the EGHP offers only secondary coverage of services covered by Medicare, or (2) the EGHP denied the claim because the time limit for filing the claim with the EGHP has expired (whether appealed or not). Before making a conditional primary payment in cases involving appealed or protested claims, notify the EGHP and the beneficiary that the payment is being made on condition that both the insurer and the beneficiary are responsible for reimbursing the program up to the amount it has paid, if the EGHP subsequently approves the claim. Also notify the EGHP that if it pays the beneficiary, it is still liable to reimburse Medicare for the amount of the conditional benefits (up to the EGHP primary payment). (However, your failure to so notify the parties does not relieve them of the obligation to refund the payment.) Follow-up periodically with the insurer to determine the outcome of the disputed claim.

Where an EGHP has denied payment because its claim filing deadline has expired, promptly notify the EGHP that it must reimburse Medicare the amount of conditional benefits Medicare paid. Follow the recovery instructions in §3491.15.

C. When Primary Benefits and Conditional Primary Medicare Benefits Not Payable.--Neither primary benefits nor conditional primary Medicare payments may be made where an EGHP denies payment for particular services on the grounds they are not covered by the plan, and you have reason to believe the plan does cover the services. Also do not pay conditional benefits if a plan offers only secondary coverage of services covered by Medicare, and the EGHP does not allege that the employer has fewer than 20 employees. Conditional primary benefits may not be paid in this situation even if the EGHP has only collected premiums for secondary rather than primary coverage. Where an EGHP has denied the claim because the plan provides only secondary coverage, deny the claim for Medicare primary benefits unless the EGHP alleges that the employer has fewer than 20 employees. Contact the EGHP to explain that:

o it is obligated to pay primary benefits under §1862(b)(3) of the Social Security Act,

o Medicare payment cannot be made for services that are covered by the plan until the plan has paid primary benefits in accordance with its policy, and

o if the employer plan primary payment does not pay the full charge, then a claim for secondary benefits can be submitted to Medicare.

Send a denial letter to the beneficiary including similar information and a statement that the beneficiary may not be charged more than the deductible and coinsurance amounts and charges for noncovered services. (Services that are or could have been paid for by the EGHP are not considered "noncovered.") Also, include an appeals paragraph in the letter to the beneficiary. Advise the beneficiary to consult his employer and the State Insurance Commissioner or other official having jurisdiction if necessary. Also advise him of the private right of legal action to collect double damages. (See §3491.18.) See §3491.12 for further action to take after you have denied the claim and notified the EGHP of its obligation to pay primary benefits. Also, notify the provider of your actions.

D. Annotation of Claims Denied by EGHP's.--Whenever an EGHP denies a claim for primary benefits, the provider should annotate in item 94 "Remarks" of Medicare claim with the reason for the denial of EGHP primary benefits and enter occurrence code 24 and date of denial in items 29 - 32. No attachment is needed to the Medicare claim. The annotation is needed to avoid needless recoupment efforts under §3491.15.

3491.12 Referral of Cases to Regional Office.--Refer all cases where recovery is not made to the RO. When referring a case subsequent to the first case involving a particular EGHP, advise the RO of the total number of cases which have been referred to them involving this EGHP, and the total dollar amount of Medicare overpayments involved. Whenever you paid primary benefits that should have been paid by an EGHP and the EGHP refuses to reimburse you, or it comes to your attention that a beneficiary (who meets the criteria in 3491.3) is covered on a secondary basis by an EGHP for Medicare covered services (see §3491.1), refer the case to the RO. Include all of the documentation of the recovery attempt specified in § 3491.15 F.

The RO notifies the State Insurance Commissioner, or other official having jurisdiction over the EGHP, that evidence suggests that the EGHP has violated Federal law and requests that the EGHP's actions be investigated, and that it be ordered to comply with Federal law and to make appropriate refund to Medicare. The RO also advises the Insurance Commissioner, or other responsible official, that the Medicare beneficiary is placed at risk by the EGHP's actions and that Medicare will not make future primary payments for items and services covered by the EGHP for this individual.

Further, advise officials contacted of Medicare's rights to recover from any parties to whom it has made improper payments. The RO also considers possible legal action against the EGHP or employer and/or referral of the case to the Equal Employment Opportunity Commission.

3491.13 Amount of Secondary Medicare Payments Where EGHP Pays in Part for Items and Services.--If an EGHP payment for Medicare covered services is less than the provider's charges for those services and less than the gross amount payable by Medicare (as defined below), and the provider does not accept and is not obligated to accept the payment as payment in full, Medicare secondary payment can be made. The Medicare secondary payment is the lower of:

- The gross amount payable by Medicare minus the amount paid by the EGHP for Medicare covered services; or

- The gross amount payable by Medicare minus any applicable deductible or coinsurance amount.

NOTE: The gross amount payable by Medicare is (1) the current Medicare interim reimbursement amount (as defined in §3683) for services reimbursed on a reasonable cost basis without considering the effect of the Medicare deductible or coinsurance or the payment by the EGHP, or (2) the Medicare payment rate (as defined in §3685) for hospitals reimbursed on a prospective payment basis without considering the effect of the Medicare deductible or coinsurance or the payment by the EGHP.

Detailed reimbursement and billing instructions are in §3682C, F, H and J for providers reimbursed on a cost reimbursement basis and §3685 for hospitals reimbursed on a prospective payment basis.

3491.14 Effect of Secondary Payments on Part A Utilization.--Where the conditions in §3491.13 are met and a Medicare secondary benefit is payable, utilization is charged the beneficiary. The beneficiary will be charged with utilization as specified in §3682C3 for providers reimbursed on a cost reimbursement basis and §3685A3 for hospitals reimbursed on a prospective payment basis. These procedures are applicable for calculating utilization for stays for which Medicare is secondary only for a portion of the stay.

3491.15 Recovery of Incorrect Primary Medicare Payments.--

A. General.--If, after you have paid primary benefits in a particular case which exceed the overpayment recovery tolerance in §3709.2, and you receive information indicating that an EGHP is primary payer, recover the Medicare overpayment. (See the next to last paragraph in §3491.6 for the applicable recovery periods.) The Medicare overpayment is the difference between the Medicare conditional primary payment and the amount Medicare should have paid as secondary payer. Recover directly from the EGHP or from the provider. If the provider is unable to recover, you may need to attempt to recover directly. Request the name and address of the EGHP and the beneficiary's EGHP identification number from the beneficiary if you do not have this information. If the beneficiary does not cooperate, take steps to recover the Medicare payment from the beneficiary. (When the beneficiary fails to cooperate, the beneficiary is liable.) (See subsection C.) Note that when recovering from an EGHP, the amount requested may be more than the overpayment amount. (See subsection B.) If you have reason to believe that an EGHP, which has refunded benefits to you or to a provider, has paid less than the amount required under its contract, attempt to resolve the question with the EGHP, provider, and beneficiary. If unsuccessful, refer the case to the RO.

B. Recovery from the EGHP.--Request the EGHP (insurer, third party administrator, or the employer if the plan is self-insured and self-administered) to refund within 90 days the gross amount payable by Medicare as defined in §3491.13. Include a full explanation of the reasons you feel the EGHP is primary payer and request a copy of the plan's EOB. When you receive an EGHP refund, allocate the amount refunded as follows: first send any deductible or coinsurance amounts to the provider; second, recover the Medicare overpayment. Instruct the provider to credit insurance amounts paid toward the deductible and coinsurance to the beneficiary's account, or to refund such amounts to the beneficiary, if the beneficiary has paid them. The provider or the intermediary must prepare an adjustment bill showing the revised Medicare liability and utilization.

If the EGHP informs you that it has already made primary payment, request the EGHP to send you an explanation of the benefits paid. Recover any duplicate payment from the provider.

If the EGHP informs you that it made a secondary payment to the physician, supplier, or the beneficiary, this will not reduce the amount you recover from the EGHP. Recover the entire amount of the incorrect Medicare payment from the EGHP. It is the EGHP's responsibility to recover any overpayment it made.

Whenever requesting the EGHP to make a refund to you, inform the EGHP that any deductible and coinsurance amounts that had been subtracted from the Medicare payment to the provider will be sent to the provider by the intermediary with instructions to refund such amounts to the beneficiary if the beneficiary has already paid them. If an EGHP sends a refund to you in response to your request or if an EGHP sends you a refund at its own initiative, and the amount refunded is more than the gross amount payable by Medicare, return the "excess" EGHP payment to the EGHP. Advise the EGHP that it should send the excess payment directly to the provider with an appropriate explanation or directly to the Medicare beneficiary depending on the terms of the EGHP contract.

In summary, when you receive an EGHP refund, whether as a result of your request or at the EGHP's initiative, (1) set aside any deductible and coinsurance, and (2) calculate and recover the Medicare overpayment. The remainder is the "excess" EGHP refund and is to be returned to the EGHP.

EXAMPLE: A beneficiary was hospitalized for 8 days. The covered charges were $4,000. The gross amount payable by Medicare was $3,600. A primary Medicare payment of $3,080 ($3,600 - $520 deductible) was made to the provider. Subsequently, an EGHP reimbursed the Medicare intermediary $4,000 for the Medicare covered services. The entire Medicare payment of $3,080 is considered an overpayment because the EGHP payment of $4,000 exceeded the gross amount payable by Medicare of $3,600. Therefore no secondary Medicare benefits are payable.

Set aside the $520 deductible from the EGHP payment, then deduct the Medicare overpayment of $3,080 to determine the "excess" EGHP refund: $4,000 - $520 = $3,480 - $3,080 = $400.

Inform the EGHP that $520 of the EGHP refund will be sent to the provider with instructions to refund the $520 to the beneficiary if the beneficiary has paid the hospital that amount. Return the $400 to the EGHP. Advise the EGHP to send the excess payment directly to the provider with an appropriate explanation or directly to the Medicare beneficiary depending on the terms of the EGHP contract.

If an EGHP sends you a refund of a Medicare overpayment at its own initiative, allocate the payment in accord with the rules discussed above. (Refund any "excess" to the EGHP. Do not return the full payment to the EGHP with instructions that the EGHP should pay the provider rather than make payment directly to you.)

If an EGHP has not responded to your request for repayment within 90 days, send a formal demand letter to the plan administrator or general counsel. If you do not receive an acceptable response to the formal letter in 60 days, refer the case to the RO. If progress is being made toward recovery but full recovery has not been made within 90 days, continue to work with the EGHP to recover the Medicare payments. When progress is not deemed reasonable, refer the case to the RO.

If an EGHP which is primary to Medicare refuses to reimburse you for primary conditional benefits, it must submit an Explanation of Benefits (EOB) or letter explaining its reason. If the explanation is that benefits are not payable to any party under the plan because, e.g., the services are not covered under the plan under any circumstances, or plan benefits are exhausted, the explanation can be accepted in the absence of evidence to the contrary. If some other reason is given, such as the plan has not received a claim from the beneficiary, the plan provides benefits secondary to Medicare regardless of the employment status of individual or the individual's spouse, the claim for benefits was not filed in a timely manner as required by the plan, or the insurance policy does not provide for payments to third parties, inform the plan that it is obligated to refund such payments to you under the Medicare law. Section 1862(b) of the law, as amended by §2344 of the Deficit Reduction Act of 1984 (Pub. L. 98-369) gives the Government the right to recover conditional Medicare payments from private insurers which are the primary insurers for Medicare beneficiaries. If the plan still refuses to reimburse Medicare, refer the case to the RO.

General guidelines for recouping Medicare payments from other carriers may be found in §3711.1.

C. Recovery from the Provider.--When recovering from a provider, furnish the provider with the name and address of the EGHP which you believe should have been the primary payer and instruct the provider to file a claim with the EGHP for primary benefits and, upon receipt of the EGHP payment, to refund to Medicare, the amount Medicare paid less the amount received from the EGHP. After you instruct a provider to file a claim for primary benefits with an EGHP, follow up in 45 days with the provider to ascertain whether a claim has been filed and whether payment has been made by the EGHP. If the provider had not filed a claim for primary benefits within 30 days after you have instructed it to do so, recover the Medicare primary payment from the provider, except where the reason the provider does not file a claim with the employer plan is because the beneficiary declines to sign the claims forms and such a signature is required by the EGHP. In that case, recover the overpayment directly from the EGHP. (See §3491.15B.)

Upon receipt of the EGHP payment, the provider submits an adjustment bill showing the revised Medicare liability and utilization. When the provider receives an EGHP refund, instruct it to return to the beneficiary the amounts of the Medicare deductible and coinsurance already paid. The provider may retain any excess EGHP payment over the gross amount payable by Medicare. (See §3491.7B.)

If duplicate payment was or will be made to the provider, i.e., the provider received or expects to receive both primary EGHP payments and primary Medicare benefits, recover from the provider, the Medicare overpayment (as defined in subsection A) subject to the overpayment recovery tolerance in §3709.2. If Medicare paid the provider and the EGHP paid the beneficiary, the beneficiary is liable. (See §3708.3A.)

If you have not received an adjustment bill from the provider within 120 days of notifying the provider to file a claim with the EGHP, follow up with the provider to determine the status of the claim with the EGHP. If the EGHP has denied the claim for a reason you would find acceptable if you requested payment from the EGHP directly, the recovery action may be cancelled. If the EGHP has denied the claim for any other reason, or has not responded to the provider's claim, advise the provider that you will attempt to recover from the EGHP. Advise the provider to notify you immediately if it receives payment from the EGHP.

Seek to recover the Medicare overpayment directly from the EGHP in accordance with procedures discussed in this section. (See §3491.15A and §3491.15B.)

D. Recovery from the Beneficiary.--If Medicare paid the provider and the EGHP paid the beneficiary, recoup from the beneficiary subject to the tolerance in §3709.2, that portion of the Medicare payment that exceeds Medicare's obligation as secondary payer, or an amount up to the provider's customary charges, whichever is less. (See §§3711.4A3 and B2.) It is necessary to obtain a copy of the plan's EOB from either the beneficiary or the EGHP to determine the excess Medicare payment amount.

E. Recovery When a State Medicaid Agency Has Also Requested a Refund From the EGHP.--Situations may arise in which both Medicare and another insurer or a State Medicaid agency have conditionally or erroneously paid for services and the amount payable by an EGHP is insufficient to reimburse both programs. Under the law, Medicare has the right to recover its benefits from an EGHP before any other entity, including a State Medicaid agency. Also Medicare has the right to recover its benefits from any entity, including a State Medicaid agency, that has been paid by an EGHP.

The superiority of Medicare's recovery right over those of other entities including Medicaid derives from the Medicare statute, which states that where Medicare is secondary to another insurer (1) HCFA may recover Medicare benefits from the responsible insurer, (2) HCFA is subrogated to the right of the Medicare beneficiary and the right of any other entity to payment by the responsible insurer, and (3) HCFA may recover its payments from any entity that has been paid by the responsible insurer.

Medicare's right to recover its benefits from an EGHP or from a beneficiary that has been paid by an EGHP is higher than Medicaid's, notwithstanding the fact that Medicaid is the payer of last resort, and therefore doesn't pay its benefits until after Medicare has paid. Medicare's priority right of recovery from insurance plans that are primary to Medicare, does not violate the concept of Medicaid's being payer of last resort. Under §1862(b)(3) of the Social Security Act, Medicare's ultimate statutory authority is not to pay at all (with a concomitant right to recover any conditional benefits paid) where payment can reasonably be expected by an EGHP which is primary to Medicare. Where the EGHP pays right away, Medicare makes no payment to the extent of the EGHP payment. Delay of EGHP payment does not change Medicare's ultimate obligation to pay the correct amount, if any, regardless of any Medicare payments conditionally made. Thus, if the EGHP pays less than the charges, Medicare may be responsible to pay secondary benefits. And if the third party pays the charges, Medicare may not pay at all. Pro-rata or other sharing of recoveries with Medicaid would have the effect of creating a Medicare payment where none is authorized under the law or improperly increasing the amount of any Medicare secondary payment.

Moreover, the right of Medicaid agencies to recover their benefits derives from an assignment by Medicaid beneficiaries to the States of their rights to third party reimbursement. Since the beneficiary can assign to the State a right no higher than his own, and since Medicare's statutory right is higher than the beneficiary's, Medicare's right is higher than that assigned to the State.

Thus, where both Medicare and Medicaid are seeking reimbursement from the EGHP, inform the EGHP that it must first reimburse Medicare before it can pay any other entity, including a State Medicaid agency. Also, where a beneficiary, provider or supplier receives payment from an EGHP, inform the beneficiary, provider or supplier that it is obligated to refund the Medicare payment up to the full amount of the EGHP payment before payment can be made to the State Medicaid agency. Only after Medicare has recovered the full amount of its claim does the beneficiary, provider or supplier have the right to reimburse Medicaid or any other entity.

If a State Medicaid agency is reimbursed from an EGHP payment before Medicare, ask the State agency to reimburse Medicare up to the full amount the agency received. Explain the legal basis for Medicare's right to recover. If the State refuses to reimburse Medicare in full, refer the case to the HCFA RO. The RO's recovery actions may include offset of Medicare's claim against any Federal Financial Participation funds otherwise due the State. Explain to the EGHP that in future cases involving claims by Medicare and Medicaid, Medicare must be reimbursed first.

F. Recovery Attempt Audit Trails.--You must maintain audit trails for all recovery attempts. These audit trails must link the following items: (1) specific services provided on specific dates to Medicare working aged beneficiaries; (2) the amount which Medicare paid for each service; (3) the specific recovery request to each provider, insurer, or third party administrator; (4) the recovery received with explanation of benefits; and (5) analysis of the difference between the Medicare payment and the recovered amount.

3491.16 Advice to Providers, Physicians and Beneficiaries.--In your professional and public relations activities, inform providers, physicians, and beneficiaries that claims should be directed first to the EGHP where there is EGHP coverage for the services involved.

3491.17 Incorrect EGHP Primary Payments.--Cases may come to your attention in which an EGHP has incorrectly paid a provider primary benefits, e.g., primary payments made by the EGHP of an employer of less than 20 employees. In such cases, instruct the provider to bill Medicare as primary payer and to refund to the EGHP any amount it paid in excess of the Medicare deductible and coinsurance amounts and charges for noncovered services, provided the time limits prescribed in §3799 for reopening and revising Medicare claims has not elapsed. If the beneficiary has not already filed an authorization with the provider to file a Medicare claim, the provider may request, but cannot require, the beneficiary to do so.

If no Medicare claim was filed, e.g., because the insurer paid the expense in full and the claims filing time limit has elapsed for the services, consider the date of receipt of the first written inquiry by either the beneficiary or the insurer to the Medicare contractor concerning the improperly paid EGHP claims as a "protective filing date" on the claims for expenses that were not filed previously with Medicare.

3491.18 Claimant's Right to Take Legal Action Against an EGHP.--The Omnibus Budget Reconciliation Act of 1986 provides that any claimant has the right (1) to take legal action against an EGHP that fails to pay primary benefits for services covered by the EGHP and (2) to collect double damages.

3491.19 Special Rules For Services Furnished By Source Outside EGHP Prepaid Health Plan.--

A. Services By Outside Sources Not Covered.--Where Medicare is secondary payer for a person enrolled in an employer sponsored prepaid health plan (e.g., Health Maintenance Organization (HMO)/Competitive Medicare Plan (CMP)), Medicare does not pay for services obtained from a source outside the prepaid employer health plan if:

o The same type of services could have been obtained as covered services through the prepaid employer health plan, or

o The particular services can be paid for by the plan (e.g., emergency or urgently needed services).

Medicare benefits are precluded under these circumstances even if the individual receives services outside of the prepaid health plan's service area, e.g., while the individual is away from home.

At the time of admission, providers ask beneficiaries that are enrolled in EGHPs whether the plan is a prepaid health plan. If the individual is enrolled in such a plan, Medicare is not billed. (However, a no-payment bill is required per §§3624 and 3679B.) Any request for payment is made to the EGHP.

This rule also applies to ESRD beneficiaries during the period of up to 12 months in which Medicare is secondary payer.

NOTE: This restriction only affects Medicare beneficiaries enrolled in employer sponsored prepaid health plans which either do not have a Medicare contract or have a Medicare cost contract. Beneficiaries in HMO/CMPs that have Medicare risk contracts are not affected because beneficiaries enrolled in a risk-basis HMO/CMP are locked into the plan in all instances except for emergency or urgently needed services.

B. Exception.—If a beneficiary obtains services from a source outside the prepaid employer health plan, and has not yet been notified in writing of this special rule, Medicare pays for the services, provided the plan will not pay for the services for legitimate reasons. In general, it is assumed that written notification has not been given in the absence of evidence to the contrary, e.g., where the remarks portion of the MSP Regional Data Exchange System indicates that the beneficiary has been notified. (See subsection D.) Where payment is made for services from a source outside the prepaid health plan, the Medicare Benefits Notice (HCFA-1533), or the EOMB, where applicable, states the following:

"Our records show that you are a member of an employer sponsored prepaid health plan. Since Medicare is secondary payer for you, services from sources outside your health plan are not covered. However, since you were not previously notified of this, we will pay this time. In the future, payment will not be made for nonplan services which could have been obtained from or through the prepaid health plan."

C. Notice to Beneficiary.—Any bills received for Medicare payment from, or on behalf of a beneficiary enrolled in an EGHP Prepaid Health Plan who has previously been notified in writing, are denied and the Medicare Benefit Notice or the EOMB includes the following:

"Our records show that you are a member of an employer sponsored prepaid health plan. Since Medicare is secondary payer for you, services from sources outside your health plan that could have been obtained from or through the prepaid health plan are not covered. Our records show that you were previously informed of this rule. Therefore, payment cannot be made for the nonplan services you received."

D. When you have identified a beneficiary under subsection A and either you have notified him in writing that Medicare does not pay for services obtained outside of the plan or you have information that he was previously notified of this, update the MSP Regional Data Exchange System. (See §3696.) This is accomplished by entering the following information in remarks line 1: "MSP-Code 12, Working Aged beneficiary belongs to prepaid EGHP. Notified that Medicare will not pay."

3492 MEDICARE AS SECONDARY PAYER FOR DISABLED INDIVIDUALS

A. General.—Under §1862(b)(4) of the Social Security Act, Medicare is secondary payer to "large group health plans" for "active individuals" (as defined in subsection C3) under age 65 entitled to Medicare on the basis of disability. Under the law a large group health plan (LGHP) may not "take into account" that an "active individual" is eligible for or receives benefits based on disability. The individual's coverage under the LGHP must be based on the individual's employment or the employment of a family member, as explained in subsection C.3. Apply the instructions in §§3491.7 - 3491.11 and §§3491.13 - 3491.17 in processing claims where Medicare is secondary payer for disabled individuals. Where those sections refer to an EGHP of 20 or more employees, substitute the term "large group health plan" as defined in subsection C1, for the purpose of applying them to disabled individuals.

B. Effective Date.—This provision is effective for items and services furnished on or after January 1, 1987 and before January 1, 1992. The effective dates are fixed by law.

C. Definitions.—

1. Large Group Health Plan.—A "large group health plan" means any health plan of, or contributed to by an employer or by an employee organization (including a self-insured plan) that provides health care directly or through other methods such as insurance or reimbursement, to employees or former employees, the employer, others associated, or formerly associated with the employer in a business relationship, or their families. The plan covers employees of at least one employer that normally employed at least 100 full or part-time employees on a typical business day during the previous calendar year. The term employer for purpose of this provision has the same meaning as the term has for purpose of the working aged provision. That definition is in §3491.2A. It includes the Federal government and other governmental entities. The tax penalty for nonconforming LGHPs does not apply to Federal and other governmental entities. (See subsection I.)

A group health plan that covers employees of at least one employer that had 100 or more employees on 50% or more of its business days during the preceeding calendar year is considered to meet the above definition of LGHP. If the plan is a multiemployer plan, such as a union plan, which covers employees of some small employers and also employees of at least one employer that meets the 100 or more employees requirement, Medicare is secondary for all employees enrolled in the plan including those that work for small employers. This differs from the rule for multiemployer plans under the working aged. (See §3491.2C.)

2. Nonconforming Large Group Health Plan.—A "nonconforming large group health plan" means an LGHP that at any time during the calendar year takes into account that an active individual is eligible for or receives benefits based on disability, e.g., an LGHP fails to pay primary benefits for disabled individuals under age 65 for whom Medicare is secondary payer in accordance with subsection C.3.

NOTE: Although the term "large group health plan" includes a plan for former employees or persons formerly associated with the employer in a business relationship, or their families, these individuals are not included within the definition of "active individual" in subsection 3, i.e., Medicare is not secondary for them. These individuals are included within the definition of LGHP for tax purposes. (See the tax penalty described in subsection I.)

3. Active Individuals Subject to This Limitation on Payment.--An "active individual" is an employee, an employer (e.g., proprietor or partner), an individual associated with the employer in a business relationship (e.g., suppliers and contractors who do business with the employer and their employees) or a member of the family of any of these persons such as the spouse, parent or child of such an individual. Medicare is secondary payer under this provision for active individuals entitled to Medicare based on disability who have coverage under an LGHP.

In some cases, the disabled individual may be the employee, employer, or individual associated with the employer in a business relationship. In other cases, the disabled person may be the "family member" of the employee, employer, or individual associated with the employer in a business relationship. This means that a disabled person who is not an employee as defined in subsection 4, but who is covered under an LGHP of a spouse, parent, or any other family member, is considered to be an "active individual."

4. Employee.--An employee is (1) an individual who is actively working for an employer or (2), since disabled persons are not usually working, a person whose relationship to an employer is indicative of employee status. Whether or not such a person is an employee is established by the unique facts applicable to the person's relationship to the employer. The question to be decided is whether the employer treats a disabled individual who is not working as an employee, in light of commonly accepted indicators of employee status rather than whether the person is categorized in any particular way by the employer. In general, an individual who is not actively working may be considered to have employee status if the relationship is such that:

o The individual is receiving payments from an employer which are subject to taxes under the Federal Insurance Contributions Act (FICA) or would be subject to such taxes except that the employer is one that is not required to pay such taxes under the Internal Revenue Code.

o The individual is termed an employee under State or Federal law or in accordance with a court decision.

o The employer pays the same taxes for the individual as he pays for actively working employees.

o The individual continues to accrue vacation time or receives vacation pay.

- The individual participates in an employer's benefit plan in which only employees may participate.

- The individual has rights to return to duty if his/her condition improves.

- The individual continues to accrue sick leave.

D. Individuals Not Subject to this Limitation on Payment.--Medicare is not secondary for:

- Individuals entitled, or who would upon application be entitled, to Medicare under the ESRD provision, i.e., individuals who have ESRD even though their current Medicare entitlement is on the basis of disability. However, in accordance with §3490, Medicare is secondary payer for persons under age 65 with ESRD during a period of up to 12 months regardless of the number of employees.

You can identify ESRD beneficiaries by the "S" trailer codes when you query inpatient claims (§3512.8) and outpatient claims (§3535.1).

- Individuals who are covered by an EGHP of employer(s) of less than 100 employees, unless the EGHP is a multiemployer plan in which there is at least one employer of 100 or more employees (see subsection C.1.).

- Individuals whose coverage by an LGHP is not based on either employment or a relationship to an employee, employer, or an individual associated with an employer in a business relationship. For example, Medicare is primary for a disabled individual who is covered under an LGHP as a retired former employee (and who does not meet any of the criteria in subsection C.4,) or the spouse of a retired former employee.

E. Action by Providers to Identify Individuals Subject to This Limitation on Payment.--Providers are instructed to identify individuals who meet the conditions in subsection C.3. by asking every Medicare beneficiary under age 65 (1) if the individual is an employee, a self-employed individual, or a member of the family of an employee or self-employed individual and, (2) if so, whether the individual has group health coverage through an employer. If the individual responds affirmatively to both questions, the provider requests the name and address of the employer plan and the individual's identification number and bills the plan for primary benefits, except where the provider has information that clearly shows that the employer plan is not primary payer. If the individual responds that he or she does not meet either (1) or (2) above, or the provider has otherwise determined that the employer plan is not primary payer, the provider bills Medicare for primary benefits and annotates item 57A on Form HCFA-1450, "Medicare."

For audit purposes and to ensure that the provider has developed for other primary payer coverage, the provider retains a record of the development or other information on which it based its determination that Medicare is primary payer. See §3686 for action to take where a claim is received for primary benefits and you have reason to believe that Medicare may be secondary payer.

F. When Medicare Can Pay Secondary Benefits.--If the provider bills the employer plan first, Medicare may pay secondary benefits in accordance with §3491.13, to supplement the employer plan payment, only if all of the following conditions are met:

o the plan payment is less than the provider's charges for Medicare covered services,

o the plan payment is less than the gross amount payable by Medicare (as defined in §3491.13), and

o the provider does not accept and is not obligated to accept the plan's payment as payment in full. Refer to the billing instructions in §3682 (cost reimbursement) and §3685 (PPS reimbursement) as appropriate.

G. Recovery of Primary Medicare Payments.--Under the law, the government may recover incorrect primary Medicare benefits from any LGHP which is primary payer. To recover Medicare payments the government:

o may bring legal action against the LGHP and may collect double damages,

o may take legal action to recover its benefits from any entity that has been paid by the LGHP for items and services furnished an individual who meets the conditions in subsection C.3,

o may join or intervene in any legal action against the LGHP related to the events that gave rise to the need for the items or services, and

o is subrogated to the extent it paid for items or services to the rights of any individual who is entitled to receive primary payment from an LGHP.

H. Claimants' Right to Take Legal Action Against Large Group Health Plan.--Any claimant including an individual who received services, and the provider or supplier, has the right to take legal action against an LGHP that fails to pay primary benefits for services covered by both the LGHP and Medicare and to collect double damages.

I. Tax Penalty for Noncompliance.--An excise tax is imposed by §5000 of the Internal Revenue Code (IRC) on any employer or employee organization that contributes to a nonconforming LGHP (see subsection C2 for definition) during a calendar year. The amount of tax is 25 percent of the total amount that the employer or employee organization contributed to LGHPs during that year. This tax penalty does not apply to Federal and other governmental entities.

J. Recovery Notice to Nonconforming Large Group Health Plan.--When recovering incorrect primary payments from a nonconforming LGHP, include in your letter to the plan, a statement that it is obligated to pay primary benefits in this case, in accordance with §1862(b)(4) of the Medicare law, as amended by §9319 of the Omnibus Budget Reconciliation Act of 1986 (P.L. 99-509). Explain that State laws and contract provisions are not applicable if they conflict with the Federal requirement even if they were in effect prior to January 1, 1987. Also inform the plan that, under this provision of the law, an LGHP which fails to pay primary benefits for disabled individuals under age 65 for whom Medicare is secondary payer is subject to legal actions described in subsections G and H , and to the tax penalty described in subsection I.

K. Identification of Cases and Action Where There Is Indication of LGHP Coverage In Prior Claims.--Consider the possible application of this limitation on benefits when processing all claims for items or services furnished on or after January 1, 1987 to beneficiaries for whom Medicare is secondary in accordance with subsection C.3. When processing a claim for secondary benefits for services furnished such an individual, search your records for any prior claims on which you paid primary benefits for services rendered that individual on or after January 1, 1987, and which have not been annotated in accordance with §3491.11 to indicate a valid prior LGHP denial which would apply to subsequent claims. When you identify such claims, notify the provider and request the provider to bill the plan for the prior stays unless its records show clearly that the employer plan should not be billed as primary. The provider submits an adjustment bill when LGHP payment is received. Refer to §3491.15 for further guidance regarding recovery of incorrect Medicare benefits where an employer plan may pay primary benefits if billed.

L. Referral of Cases to Regional Office.--Refer to the RO, any cases of a nonconforming LGHP which come to your attention which either offers secondary coverage for individuals for whom Medicare is secondary under subsection C.3., or which refuses to reimburse you for any primary benefits you have paid to or on behalf of such individuals. Include, in addition to the individual's name and Medicare number, the name and address of the employer and the LGHP, the individual's group health plan identification number, and a full explanation of the reasons for the referral. The RO considers possible legal action to collect double damages from the nonconforming LGHP. The RO also refers such cases to the Internal Revenue Service for imposition of the tax penalty described in subsection I on the contributing employer or employee organization. If the LGHP or employer has agreed to discontinue offering secondary coverage to disabled individuals for whom it is primary payer, or has agreed to reimburse Medicare the amount of incorrect Medicare primary benefits that should have been paid by the plan, the RO includes this information in its referral.

Once the RO refers a nonconforming LGHP to the IRS, the RO does not withdraw the referral solely because the plan has discontinued offering improper secondary coverage or has reimbursed Medicare the amount of incorrect primary benefits Medicare paid.

Replaced by Rev 137

~~IM3419.11 Government Subrogation Rights in Liability Insurance Claims.—Under §1862(b)(1) of the Social Security Act, all Medicare payments are conditioned on reimbursement to the Medicare program when notice or other information is received that payment with respect to the same items or services has been made, or could be made, under a liability insurance policy or plan (including a self-insured plan). Except where incorporated by reference, these instructions replace existing instructions in §§3419.1 - 3419.9 on Medicare claims involving liability insurance claims.~~

~~The term "liability insurance" means: Insurance (including a self-insured plan) that provides payment based on legal liability for injuries or illness or damages to property. It includes, but is not limited to, automobile liability insurance, uninsured motorist insurance, homeowners liability insurance, malpractice insurance, product liability insurance, and general casualty insurance.~~

~~Section 2344 of the Deficit Reduction Act of 1984 (Public Law 98-369) amended §1862(b)(1) to make explicit the Federal Government's subrogation rights to recover Medicare benefits where liability insurance benefits are payable. The amendment stipulates that the Government may recover its benefits directly from liability insurance companies and self-insured plans, and from any entity, including the beneficiary, that has been paid by a liability insurer. "Subrogation" literally means the substitution of one person or entity for another. Under the Medicare subrogation provision, the Government has the same rights as the beneficiary as a claimant against the responsible party and the liability insurer, but only to the extent that Medicare has made payments to or on behalf of the beneficiary. Under this amendment, the Government can be a party to any claim by a beneficiary or other entity against a liability insurer, can participate in negotiations concerning the total liability insurance payment and the amount to be repaid to Medicare, and may seek recovery of conditional payments directly from the liability insurer.~~

IM3419.12 Role of Contractor in Implementing Subrogation Provision.—Under the previous instructions, where Medicare made conditional payments because there was a possibility of payment by a liability insurer, you would recover your payments from the beneficiary after he or she received payment from the liability insurer of the responsible party. Under the law as amended, the Government can be a party to the beneficiary's claim against the liability insurer. When you identify a case in which a liability claim has been or will be filed, ask the liability insurer to refund, at the time of settlement, the amount Medicare has paid in connection with the particular injury (less a proportionate share of the beneficiary's procurement costs). The liability insurer may not be willing to make a full refund because, for example, it contests liability, or the beneficiary may not agree to a settlement which provides full reimbursement to Medicare because the beneficiary feels that this would unduly reduce his or her share of the settlement. If either party suggests that you accept an amount which is less than the full amount claimed, or if you or Medicare is named in any legal proceeding seeking to establish Medicare's right to recovery, refer the case to the HCFA regional office. These contractor responsibilities are explained in §§IM3419.13 through IM3419.23.

You will not participate in negotiations with liability insurers, beneficiaries or other parties regarding the total amount to be recovered from a liability insurer or regarding the amount to be refunded to Medicare, nor will you participate in litigation concerning such matters.

developing Medicare's total claim and in seeking recovery from the liability insurer. If more than one intermediary has paid for expenses related to the injury, the one that has paid the most in benefits should take the lead. If no intermediary paid benefits on the basis of a claim for charges totalling $400 or more (§IM3419.15), but more than one Part B carrier paid benefits, the carrier that paid the most in benefits should take the lead. The lead contractor should review all available information including claims it has received in connection with the accident, contact other contractors that may have paid benefits for that accident and obtain from them information about the payments they made, including dates and place of services, nature of services, and names and addresses of providers and suppliers.

IM3419.17 Notification of Parties.—If development indicates that the beneficiary has filed or intends to file a liability claim, the contractor that is responsible for the development and recovery should notify the beneficiary and the beneficiary's attorney, if there is one, of the total amount Medicare has paid and its right to be reimbursed for the entire amount it has paid for services furnished in connection with the injury or illness, less a proportionate share of the beneficiary's procurement costs determined in accordance with §3419.4G2(b). (This is in addition to any Medicare secondary payer notice included in the notice of utilization issued by HCFA or EOB issued by carriers.) Once you learn that the beneficiary has an attorney, all future contacts should be through the attorney.

Also notify the alleged wrongdoer, and that party's attorney and liability insurer of Medicare's claim. The notice should state (1) the total amount of Medicare's claim; (2) that Medicare has subrogation rights against any party responsible for the particular injury; (3) that Medicare has the right to recover the benefits it paid for that injury from any liability insurer that is responsible for paying benefits for that injury; (4) that the parties may not settle the claim without satisfying Medicare's interests; and (5) that, if the claim is settled without satisfying Medicare's interest, both the liability insurer and the beneficiary will be liable for refunding the amount owed Medicare. If the alleged wrongdoer, or his/her attorney or insurer inquires about the details of Medicare's claim, such as asking for an itemization of the services paid for, refer them to the beneficiary or his/her attorney.

After sending notice to the parties, follow up with the beneficiary or attorney at intervals you deem appropriate to keep abreast of the claim, considering such factors as the amount involved, the status of the claim, and the degree of cooperation shown by the beneficiary and/or his attorney. Once you learn that a settlement is being considered, remind the parties that Medicare's claim must be satisfied.

IM3419.18 Parties Offer to Refund Less Than Medicare's Total Claim.—The liability insurer or beneficiary may not agree to a settlement that provides full reimbursement to Medicare and may, instead, ask that Medicare agree to reduce its claim. If you receive such a request based on the assertion that other third party payers besides Medicare have a claim against any proceeds from the settlement, you should respond that, under the law, Medicare's right to recover its benefits takes precedence over other claimants. Should it appear, however, that the proposed settlement would be jeopardized by Medicare's position or if the other claimant is Medicaid, refer the case to the regional office in accordance with §IM3419.22.

NOTE: Instructions regarding conflicting claims to the settlement by Medicare and Medicaid are under development and will be issued separately.

If you receive a request that Medicare reduce its claim for any reason other than the claim of another payer, request that such a compromise offer be in writing, specify the amount offered, and include the reasons why the parties believe Medicare should be satisfied with less than its total claim. When the offer is received, refer it to the HCFA regional office in accordance with §IM 3419.22.

IM3419.19 Check Made Out To Multiple Payees Received From Liability Insurer.—If you receive from a liability insurer a check intended to repay Medicare benefits paid on the beneficiary's behalf, but made out jointly to you (or Medicare) and to other parties such as the beneficiary or his/her attorney, ask the other payee(s) to endorse the check and return it to you. If you are the contractor with lead responsibility for recovering Medicare benefits paid in connection with the injury and the check is for an amount equal to Medicare's total claim, endorse and deposit the check when it is returned to you. If you are not the lead contractor, refer it to the contractor that has lead responsibility. If you are the lead contractor and the amount is not for the full amount claimed or the other payee(s) refuse to endorse the check and return it to you, refer the check to the regional office in accordance with §IM3419.22.

IM3419.20 Distribution of Recovered Medicare Payments—If the liability insurer or the beneficiary refunds all of the amount Medicare has claimed, the lead contractor should arrange for all contractors to be reimbursed. Since the amount requested is the amount paid less the beneficiary's procurement costs, the amount refunded will not be enough to reimburse all contractors in full. Allocate the money among contractors so that refunds restore available Part A benefits, in the following order: inpatient hospital days first, SNF days second, and other Part A benefits third. Prorate the remainder among carriers according to amount of Part B benefits paid. Likewise an insurer's payment to a contractor that has paid for both Part A and Part B services should be applied first to Part A expenses in the same order.

IM3419.21 Liability Insurer Settles Claim Without Satisfying Medicare's Interests—If a liability insurer settles a liability claim without satisfying Medicare's interests, ask the beneficiary to refund Medicare's payments, less the usual allowance for procurement costs in accordance with the instructions in §§3419ff. If the beneficiary does not refund that amount, refer the case to the regional office in accordance with §IM3419.22 for consideration of negotiations with, or legal action against, the insurer. If it is decided not to act against the insurer, the case will be returned for recovery action against the beneficiary in accordance with §§3700ff.

IM3419.22 Referral of Cases to Regional Office for Possible Government Intervention and/or Legal Action.—If a liability insurer does not refund the full amount of Medicare's claim after receiving a notice sent in accordance with §IM3419.17, the case should be referred to the regional office with (1) full documentation and itemization concerning the amounts paid by all contractors for treatment related to the injury, (2) a report on the status of the liability claim including the names and addresses of the responsible party, the liability insurer and the beneficiary's attorney, and information concerning the liability claim including the amount being claimed, and any limits contained in the insurance coverage and (3) the documentation required in §IM3419.17 or §IM3419.18 concerning any settlement that neglected Medicare's interests or any compromise offer.

Also refer to the regional office (1) any notice from a court that the Government has been made a party to a lawsuit involving a liability claim, or (2) any case involving a lawsuit in which HCFA's claim is at issue. Include pertinent Medicare claims information if not previously forwarded. Do not make referrals simply because a lawsuit has been filed between the beneficiary and the liable third party. However, monitor such lawsuits so that you may make a timely referral if HCFA's claim becomes an issue in the lawsuit.

IM3419.23 Consequences of Acceptance of Check from Liability Insurer.—If you cash a check from a liability insurer, this may commit the Medicare program as a whole to accept that amount as payment in full for payments it has made toward injury-related expenses. Therefore, do not sign such a check unless you are the lead contractor and are certain that you have presented a consolidated Medicare claim based on payments that all Medicare contractors have made for services related to the injury.

If asked to, the lead contractor may also sign a release of further claims for repayment from the proceeds of a particular settlement, since liability settlements generally stipulate that the defendant is not responsible for future medical expenses. If the settlement provides that the proceeds will be paid out over a period of time rather than in a one-time lump sum, Medicare will still be primary payer for medical expenses related to the same injury but incurred after the date of settlement. However, refer to the regional office any offers of payment of the debt to Medicare in installments.

IM 3446.6 Determining the Amount of Indemnification.—Section 4096 of P.L. 100-203 (The Omnibus Budget Reconciliation Act of 1987) revises certain of the limitation of liability requirements for indemnification under §1879(b) of the Act. Under this provision, a beneficiary qualifying for indemnification for denied items and services, furnished on or after January 1, 1988, is no longer responsible for paying deductible and coinsurance charges related to the denied claim. Additionally, where such indemnification is made, the beneficiary's Medicare utilization record is not charged for the denied items and services furnished .

IM3490 Conditional Payments for Services to Individuals Entitled to Benefits Solely on the Basis of End Stage Renal Disease and who are Covered by Employer Group Health Plans

Section 4036(a) of the Omnibus Budget Reconciliation Act of 1987 (Pub. L. 100-203), enacted December 22, 1987, conforms the rules for making conditional payments under the ESRD Medicare secondary provision with the conditional payment rules for the working aged provision. Previously, in the case of ESRD beneficiaries, HCFA paid conditional primary benefits except when the employer group health plan (EGHP) had already paid or a determination was made that an EGHP would pay as promptly as Medicare. Since there is no practical way for HCFA or the contractors to make uniform determinations as to what constitutes payment as promptly as Medicare, for all practical purposes, HCFA's payment policy was to pay conditional benefits if Medicare was billed first.

Providers no longer have the option to bill Medicare first. Where EGHP coverage exists, they must bill the EGHP for primary benefits during the period of up to 12 months (defined in SS3490.5 and 3490.6) in which Medicare is secondary for ESRD beneficiaries. If the plan payment is less than the charges for Medicare covered services and less than the gross amount payable by Medicare, and the provider does not accept and is not obligated to accept the EGHP payment as payment in full, Medicare may pay secondary benefits in accordance with 3490.8. If Medicare is inappropriately billed first, return the claim and instruct the provider to bill the EGHP for primary benefits.

IM 3491 LIMITATIONS ON PAYMENT FOR SERVICES TO EMPLOYED AGED AND AGED SPOUSES OF EMPLOYEES WHO ARE COVERED BY EMPLOYER GROUP HEALTH PLANS

B. Private Cause of Action.—Effective for items and services rendered on or after January 1, 1987, if an EGHP which is primary payer for an employed beneficiary or spouse age 65 or over described in §3491.3, fails to pay primary benefits or fails to make appropriate reimbursement to Medicare when it has paid for covered services, the beneficiary, the provider, physician, and supplier have a right to take legal action against the EGHP and to collect double damages. This is in accordance with section 1862(b)(5) of the Act as amended by section 9319 of the Omnibus Budget Reconciliation Act of 1986.

THIS PAGE REPLACE BY REV. 1338

IM 3492 MEDICARE AS SECONDARY PAYER FOR DISABLED INDIVIDUALS

A. General.—Section 9319 of the Omnibus Budget Reconciliation Act of 1986 made Medicare secondary payer to "large group health plans" for "active individuals" (as defined in C3 below) under age 65 entitled to Medicare on the basis of disability. Under the law a large group health plan (LGHP) may not "take into account" that an "active individual" is eligible for or receives benefits based on disability. The individual's coverage under the large group health plan (LGHP) must be based on the individual's employment or the employment of a family member, as explained in paragraph C.3. below. The following provides interim instructions dealing with implementation of this provision. In addition, the instructions in §§3491.7 - 3491.11 and §§3491.13 - 3491.17 should be applied in processing claims where Medicare is secondary payer for disabled individuals. Where those sections refer to an EGHP of 20 or more employees, substitute the term "large group health plan" as defined in paragraph C1 below, for the purpose of applying them to disabled individuals.

B. Effective Date.—This provision is effective for items and services furnished on or after January 1, 1987 and before January 1, 1992. The effective dates are fixed by law.

C. Definitions.—

1. Large Group Health Plan.—A "large group health plan" means any health plan of, or contributed to by an employer or by an employee organization (including a self-insured plan) that provides health care directly or through other methods such as insurance or reimbursement, to employees or former employees, the employer, others associated, or formerly associated with the employer in a business relationship, or their families, that covers employees of at least one employer that normally employed at least 100 full or part-time employees on a typical business day during the previous calendar year. The term employer for purpose of this provision has the same meaning as the term has for purpose of the working aged provision. That definition is in §3491.2A. It includes the Federal government and other governmental entities. Note, however, that the tax penalty for nonconforming large group health plans does not apply to Federal and other governmental entities. (See paragraph I below.)

A group health plan that covers employees of at least one employer that had 100 or more employees on 50% or more of its business days during the preceeding calendar year is considered to meet the above definition of LGHP. If the plan is a multiemployer plan, such as a union plan, which covers employees of some small employers and also employees of at least one employer that meets the 100 or more employees requirement, Medicare is secondary for all employees enrolled in the plan including those that work for small employers. Note that this differs from the rule for multiemployer plans under the working aged. (See §3491.4F.)

2. Nonconforming Large Group Health Plan.—A "nonconforming large group health plan" means an LGHP that at any time during the calendar year takes into account that an active individual is eligible for or receives benefits based on disability e.g., an LGHP fails to pay primary benefits for disabled individuals under age 65 for whom Medicare is secondary payer in accordance with paragraph C.3. below.

NOTE: Although the term "large group health plan" includes a plan for former employees or persons formerly associated with the employer in a business relationship, or their families, these individuals are not included within the definition of "active individual" in 3 below, i.e., Medicare is not secondary for them. These individuals are included within the definition of LGHP for tax purposes (see the tax penalty described in paragraph I below).

3. Active Individuals Subject to This Limitation on Payment.—An "active individual" is an employee, an employer (e.g., proprietor or partner), an individual associated with the employer in a business relationship (e.g., suppliers and contractors who do business with the employer and their employees) or a member of the family of any of these persons such as the spouse, parent or child of such an individual. Medicare is secondary payer under this provision for active individuals entitled to Medicare based on disability who have coverage under an LGHP.

In general, an individual who is receiving any payments from an employer which are subject to taxes under the Federal Insurance Contributions Act (FICA), will be considered an employee. This includes individuals receiving sick pay or disability benefits on which FICA taxes are payable.

In some cases, the disabled individual may be the employee, employer, or individual associated with the employer in a business relationship. This occurs, for example, in cases where the individual's disabling condition continues but the individual is permitted to test his/her ability to work under the "trial work period" provisions of the law, or where the disabled individual returns to work and qualifies for continuation of Medicare coverage for 2 years after disability cash benefit entitlement ends.

Usually, however, the disabled person is the "family member" of the employee, employer, or individual associated with the employer in a business relationship. This means that a disabled person who is not working, but who is covered under an LGHP of a spouse, parent, or any other family member is considered to be an "active individual."

D. Individuals Not Subject to This Limitation on Payment.—Medicare is not secondary for:

1. Individuals entitled, or who would upon application be entitled, to Medicare under the ESRD provision, i.e., individuals who have ESRD even though their current Medicare entitlement is on the basis of disability. However, in accordance with §3490, Medicare is secondary payer for persons under age 65 with ESRD during a period of up to 12 months regardless of the number of employees.

You can identify ESRD beneficiaries by the "S" trailer codes when you query inpatient claims (§3512.8) and outpatient claims (§3535.1).

2. Individuals who are covered by an EGHP of employer(s) of less than 100 employees, unless the EGHP is a multiemployer plan in which there is at least one employer of 100 or more employees (see paragraph C.1. above).

3. Individuals whose coverage by an LGHP is not based on either employment or a relationship to an employee, employer, or an individual associated with an employer in a business relationship. For example, Medicare is primary for a disabled individual who is covered under an LGHP as a retired former employee or the spouse of a retired former employee.

E. Action by Providers to Identify Individuals Subject to This Limitation on Payment.--Providers are instructed to identify individuals who meet the conditions in Paragraph C.3. by asking every Medicare beneficiary under age 65 (1) if the individual is an employee, a self-employed individual, or a member of the family of an employee or self-employed individual and, (2) if so, whether the individual has group health coverage through an employer. If the individual responds affirmatively to both questions, the provider will request the name and address of the employer plan and the individual's identification number and will bill the plan for primary benefits, except where the provider has information that clearly shows that the employer plan is not primary payer. If the individual responds that he or she does not meet either (1) or (2) above, or the provider has otherwise determined that the employer plan is not primary payer, the provider will bill Medicare for primary benefits and annotate item 57A on Form HCFA-1450, "Medicare."

For audit purposes and to ensure that the provider has developed for other primary payer coverage, the provider will retain a record of the development or other information on which it based its determination that Medicare is primary payer. See Section 3686 for action to take where a claim is received for primary benefits and you have reason to believe that Medicare may be secondary payer.

F. When Medicare Can Pay Secondary Benefits.—If the provider bills the employer plan first, Medicare may pay secondary benefits in accordance with §3491.13, to supplement the employer plan payment, only if all of the following conditions are met:

1. the plan payment is less than the provider's charges for Medicare covered services, and

2. the plan payment is less than the gross amount payable by Medicare (as defined in §3491.13), and

3. the provider does not accept and is not obligated to accept the plan's payment as payment in full. Refer to the billing instructions in §3682 (cost reimbursement) and §3685 (PPS reimbursement) as appropriate.

G. Recovery of Primary Medicare Payments.—Under the law, the government may recover incorrect primary Medicare benefits from any LGHP which is primary payer. To recover Medicare payments the government:

1. may bring legal action against the LGHP and may collect double damages.

2. may take legal action to recover its benefits from any entity that has been paid by the LGHP for items and services furnished an individual who meets the conditions in paragraph C.3.

3. may join or intervene in any legal action against the LGHP related to the events that gave rise to the need for the items or services.

4. is subrogated to the extent it paid for items or services to the rights of any individual who is entitled to receive primary payment from an LGHP.

H. Claimants' Right to Take Legal Action Against Large Group Health Plan.—Any claimant including an individual who received services, and the provider or supplier, has the right to take legal action against an LGHP that fails to pay primary benefits for services covered by both the LGHP and Medicare and to collect double damages.

I. Tax Penalty for Noncompliance.—An excise tax is imposed by Section 5000 of the Internal Revenue Code (IRC) on any employer or employee organization that contributes to a nonconforming LGHP (see paragraph C2 for definition) during a calendar year. The amount of tax is 25 percent of the total amount that the employer or employee organization contributed to LGHPs during that year. This tax penalty does not apply to Federal and other governmental entities.

J. Recovery Notice to Nonconforming Large Group Health Plan.—When recovering incorrect primary payments from a nonconforming LGHP, include in your letter to the plan, a statement that it is obligated to pay primary benefits in this case, in accordance with Section 1862(b)(4) of the law, as amended by Section 9319 of the Omnibus Budget Reconciliation Act of 1986 (P.L. 99-509). Explain that State laws and contract provisions are not applicable if they conflict with the Federal requirement even if they were in effect prior to January 1, 1987. Also inform the plan that, under this provision of the law, an LGHP which fails to pay primary benefits for disabled individuals under age 65 for whom Medicare is secondary payer is subject to legal actions described in paragraphs G and H above, and to the tax penalty described in paragraph I above.

K. Identification of Cases and Action Where There is Indication of LGHP Coverage In Prior Claims.—Consider the possible application of this limitation on benefits when processing all claims for items or services furnished on or after January 1, 1987 to beneficiaries for whom Medicare is secondary in accordance with paragraph C.3. When processing a claim for secondary benefits for services furnished such an individual, search your records for any prior claims on which you paid primary benefits for services rendered that individual on or after January 1, 1987, and which have not been annotated in accordance with §3491.11 to indicate a valid prior LGHP denial which would apply to subsequent claims. When you identify such claims, notify the provider and request the provider to bill the plan for the prior stays unless its records show clearly that the employer plan should not be billed as primary. The provider will submit an adjustment bill when LGHP payment is received. Refer to §3491.15 for further guidance regarding recovery of incorrect Medicare benefits where an employer plan may pay primary benefits if billed.

L. Referral of Cases to Regional Office.—Refer to the RO, any cases of a nonconforming LGHP which come to your attention which either offers secondary coverage for individuals for whom Medicare is secondary under paragraph C.3. above, or which refuses to reimburse you for any primary benefits you have paid to or on behalf of such individuals. Include, in addition to the individual's name and Medicare number, the name and address of the employer and the LGHP, the individual's group health plan identification number, and a full explanation of the reasons for the referral. The RO will consider possible legal action to collect double damages from the nonconforming LGHP. The RO will also refer such cases to the Internal Revenue Service for imposition of the tax penalty described in paragraph I on the contributing employer or employee organization. If the LGHP or employer has agreed to discontinue offering secondary coverage to disabled individuals for whom it is primary payer, or has agreed to reimburse Medicare the amount of incorrect Medicare primary benefits that should have been paid by the plan, the RO will include this information in its referral.

Once the RO refers a nonconforming LGHP to the IRS, the RO will not withdraw the referral solely because the plan has discontinued offering improper secondary coverage or has reimbursed Medicare the amount of incorrect primary benefits Medicare paid.

3501. ADMISSION AND START OF CARE DATA

When a patient 65 or over, or younger if entitled to Medicare as a disability beneficiary (see §3001.2), or under the provisions for coverage of persons needing kidney transplantations or dialysis (see §3001.3) is admitted as an inpatient to a hospital or SNF, information is obtained to find out if hospital insurance entitlement exists. The provider notifies you of the admission at the time it submits a bill. Send the admission data to HCFA upon receipt of the bill. (Continue to accept the admission notice from a Hospice (election of Hospice benefits)). Do not send home health start of care data to HCFA. If home health entitlement is needed, use a status query.

To expedite your bill processing, use the following guidelines upon receipt of an inpatient hospital or SNF bill to determine entitlement and benefits available:

o Key all billing data (include prior stay dates), perform consistency edits, and place bills that pass your edits on your pending file.

o If the bill fails your consistency edits, develop or reject the bill in accordance with your procedures. When the bill does pass, query the admission date and place the bill on your pending file. Match your query reply to the bill.

o Requery if a reply is not received within 7 days. Upon receipt of the query reply, utilize the data in conjunction with your records.

o In home health billing, status query only if entitlement data is needed.

Apply the inpatient deductible to a hospital bill if:

o Medicare entitlement exists,

o No prior stay is indicated on the billing,

o Your history is at least 60 days, and

o The query reply indicates a new benefit period may be in order (disposition code 01 or 25).

Check that the days used do not exceed available days in the benefit period.

o If Medicare entitlement exists, a prior stay (may be the qualifying stay for a SNF billing) is indicated on the billing, and/or you receive an 02 disposition code (see §3512.7), presume that the prior stay entry is valid and for a covered billing period unless your records indicate otherwise. You may receive an 01 or 25 disposition code if the bill for the prior stay has not been posted. Verify the prior stay entry only if your records indicate that it may be invalid.

Count the days from the prior stay (unless it is a qualifying stay on a SNF billing). Add them to the days shown for the current stay, and compare the result to days shown as available in the query reply and/or your records to determine if days have been overutilized. If days are underutilized and/or the inpatient deductible is present and noncovered days for the current stay do not account for the difference, presume that the prior stay is noncovered. Forward prior stay dates to HCFA via the UNIBILL whether or not the stay is noncovered.

Submit a status query on home health billing only if entitlement data is needed.

The admission data is recorded on HCFA's HI master record and remains as an open admission until closed by:

- o An accepted bill;
- o A delete query; or
- o An RTI VOID bill.

HCFA uses admission data, if queried and still present when a bill is received, to determine to which spell of illness to allocate the billing. (See §3835.) No admission data (open items) trailers are provided when responding to a query.

Providers try to ascertain entitlement from the patient, relatives, their records, etc. If they cannot ascertain entitlement, they may contact you.

Situations which may require your assistance are:

o When the patient dies following admission. It may be necessary to file a claim timely with an estate;

o When the patient is not in a physical or mental condition to discuss his entitlement, and no other person with knowledge of his affairs is available;

o When the provider has reason to believe the beneficiary may need his lifetime reserve days and his signature must be obtained if the available lifetime reserve days are not to be used;

o When the provider suspects that the beneficiary may have exhausted his Medicare benefits and timely confirmation is needed in order to file for possible supplemental benefits; and

o When the patient has had repeated admissions during the same spell of illness and the provider is unable to explain the available benefits to the beneficiary.

Identifying the Patient's Health Insurance Record

3502. HEALTH INSURANCE CARD.

As part of the health insurance electronic data processing, HI cards are prepared and mailed by HCFA (or in some instances by the Railroad Retirement Board where railroad retirement beneficiaries are involved) to individuals who have established entitlement to health insurance. (See § 3550, Exhibit 1A, Health Insurance Cards.) The HI card is used to identify the individual as being entitled and also serves as a readily available source of essential information to facilitate processing of payment under the program. It shows the beneficiary's name and sex, health insurance claim number, and effective date of entitlement to hospital insurance and/or medical insurance.

If you receive an inquiry about replacing a lost or destroyed HI card, inform the inquirer to get in touch with the SSA office nearest his address for assistance.

3502.1 Temporary Eligibility Notice.-- Where there is a need for immediate medical services, the social security office may issue a temporary health insurance eligibility notice. (See § 3550, Exhibit 1B.)

3503. HEALTH INSURANCE CLAIM NUMBERS.

Most HI claim numbers are 9-digit numbers with letter suffixes, e.g., 000-00-0000-A. However, it might also be a 6 or 9-digit number with letter prefixes, e.g., A-000000, A-000-00-0000; or WD-000000, WD-000-00-0000. When the status of a beneficiary changes, it is possible for the prefix/suffix of his claim number to change.

The numeric portion of the health insurance claim number frequently includes a social security number. A description of that number follows:

> The individual social security number always consists of nine digits, all of which are numeric. This 9-digit number is divided into 3 parts and separated by hyphens as follows: 000-00-0000. From left to right, the 3 parts are referred to as the "area," the "group," and the "serial," respectively.
>
> The areas range from 001 through 626 and from 697 through 729. All groups except group 00 are possible. The last 4 digits of the social security number, the serial portion, are a straight numerical series from 0001 through 9999 within each group.

The HI claim number is obtained by the provider from the patient's HI card, temporary eligibility notice, or utilization notice, or by contact with the social security office for assistance. Where the patient cannot furnish a claim number, it may be an indication that he has not filed an application with SSA to establish his entitlement to health insurance benefits, or that SSA action on a pending application has not been completed. In the latter case, there may be a delay in forwarding the admission notice while the provider awaits the SSA determination on the patient's entitlement.

The potentially valid health insurance claim numbers are as follows:

1. HCFA Claim Numbers.--

000-00-0000-	A
000-00-0000-	B, B1, B2, B3, B4, B5, B6, B7, B8, B9, BA, BD, BG, BH, BJ, BK, BL, BN, BP, BQ, BR, BT, BW, BY
000-00-0000-	C1, C2, C3, C4, C5, C6, C7, C8, C9, CA, CB, CC, etc.
000-00-0000-	D, D1, D2, D3, D4, D5, D6, D7, D8, D9, DA, DC, DD, DG, DH, DJ, DK, DL, DM, DN, DP, DQ, DR, DS, DT, DV, DW, DX, DY, DZ
000-00-0000-	E, E1, E2, E3, E4, E5, E6, E7, E8, E9, EA, EB, EC, ED, EF, EG, EH, EJ, EK, EM
000-00-0000-	F1, F2, F3, F4, F5, F6, F7, F8
000-00-0000-	J1, J2, J3,J4, (See NOTE)
000-00-0000-	K1, K2, K3, K4, K5, K6, K7, K8, K9, KA, KB, KC, KD, KE, KF, KG, KH, KJ, KL, KM (See NOTE)
000-00-0000-	W, W1, W2, W3, W4, W5, W6, W7, W8, W9, WB, WC, WF, WG, WJ, WR, WT

Note: Supplementary medical insurance entitlement may exist for all J and K suffixes. However, for subscripts J3, J4, K3, K4, K7, K8, KB, KC, KF, KG, KL, KM, entitlement to hospital insurance benefits is possible only when the beneficiary is a qualified uninsured individual who secures coverage on a voluntary basis.

2. Health Insurance Claim Numbers Assigned by the Railroad Retirement Board.--
The RRB began using the social security number in their numbering system during 1964. The numbers assigned prior to that time are 6-digit numbers assigned in numerical sequence and have no special characteristics. However, both the 6-digit numbers and the 9-digit social security numbers when used as claim numbers by the RRB always have letter prefixes. (In rare cases, a qualified railroad retirement beneficiary may have a claim number with less than 6-digits; add sufficient zeros between the prefix and other digits to make a 6-digit number, e.g., WD-001234.)

A. Six-Digit Numbers.-- The basic railroad claim numbers assigned to each group of prefixes are shown below. Under the railroad retirement system monthly payment program, it is permissible for two beneficiaries to have identical claim numbers; e.g., when a widower remarries, the second wife is assigned the same claim number that was assigned to the first wife. Under the Medicare program, however, every individual has a distinctive claim number. Therefore, for Medicare purposes, the numbers in the series from 995000 through 999999 are assigned in sequence to railroad retirement beneficiaries who otherwise would have a claim number that has already been assigned to someone else.

Valid RRB claim number prefixes and numbers are:

A, MA, WA, CA, WCA, PA, JA	000001 - 991273	995000 - 999999
WD, WCD, PD	000001 - 415935	995000 - 999999
H, MH, WH, WCH, PH	000001 - 049159	995000 - 999999

B. Valid RRB Health Insurance Claim Numbers.--

A-000000, or
A-000-00-0000

MA-000000, or
MA-000-00-0000

WA-000000, or
WA-000-00-0000

WD-000000, or
WD-000-00-0000

CA-000000, or
CA-000-00-0000

WCA-000000, or
WCA-000-00-0000

WCD-000000, or
WCD-000-00-0000

PA-000000, or
PA-000-00-0000

PD-000000, or
PD-000-00-0000

H-000000

MH-000000

WH-000000

WCH-000000

PH-000000

JA-000000

The highest number assigned is known and is different for each group of prefixes as follows:

Prefixes	Numbers Assigned
A, MA WA, CA, WCA, PA, JA	000001-991273
WD, WCD, PD	000001-415935
H, MH, WH, WCH, PH	000001-049159

best copy available

3. Special Health Insurance Only Claim Numbers.--

000-00-0000- T, TA, TB, TC, TD, TE, TF, TG, TH,
TJ, TK, TL, TM, TN, TP, TQ, TR,
TS, TT, TU, TV, TW, TX, TY, TZ, and
T2, T3, T4, T5, T6, T7, T8, T9

000-00-0000 M
000-00-0000 M1

Suffix letter T indicates the individual is entitled to hospital or hospital and medical insurance and is not entitled to monthly Social Security benefits.

Suffix M indicates that the individual is entitled to supplementary medical insurance benefits. The individual may also be entitled to hospital insurance benefits but only as an uninsured individual who has voluntarily secured coverage under the 1972 amendments.

Suffix M1 indicates the individual is entitled to supplementary medical insurance benefits and has not elected hospital insurance benefits.

3503.1 Changes in Health Insurance Claim Numbers.--Changes in an individual's entitlement to Social Security or railroad retirement benefits may result in an individual being assigned a completely different HI claim number; e.g., an individual not entitled to monthly benefits (000-00-0000T) marries and becomes entitled to wife's benefits on her husband's account (111-11-1111B). If an admission notice or Part B query is submitted under the old number, trailer record code K will be used to notify you of the cross-referred HI claim number. Annotate your record accordingly, and submit all future claims under the cross-referred number.

3504. PROCEDURES FOR OBTAINING MISSING OR INCORRECT HI CLAIM NUMBERS AND OTHER DATA.

Upon receipt of an institutional provider bill (i.e., admission, start of care notice, or an outpatient bill) on which the health insurance claim number or other data is incomplete, inconsistent, missing, or obviously incorrect, no individual control or development is necessary. Return these bills to the provider with some indication of the incomplete, inconsistent, missing or incorrect item(s). This indication need not be elaborate, merely circling the incomplete, inconsistent or incorrect item would meet this requirement. The missing or incorrect data should be identified early in the process, usually in the mailroom, so that the bills can be returned to the provider quickly. Do not count returned bills as receipts.

Apply the following procedures when a query reply disposition code 52 is received or when resolving rejected bills for name and claim number discrepancies.

If the Health Insurance Beneficiary State Tape (BEST) is used, with surname/claim number matching logic routines (see§ 3506), process all bills and claims which contain an HI claim number through the automated claims processing system first. Then, clerically review and develop the pre-query rejects (i.e., partial matches for name and claim number) and post- query rejects (i.e., code 52 replies) as follows:

1. Seek the correct claim number on the Carrier Alphabetic State File (CASF) microfiche (see§ 3505.)

2. Review the source document with the data input to the automated claims processing system for errors.

3. Review the claims history file, if one is maintained and it is readily accessible. NOTE: #1, #2, and #3 may be accomplished in any order.

4. Return the bill or claim to the hospital or provider with some indication of the incorrect or inconsistent data, if the correct data cannot be determined by the preceding three instructions. Do not continue to control the bill or claim, and do not make any further attempts to obtain the correct data.

Following the regional guidelines for methods of requesting the correct name and claim number from claimants on any unassigned claims and to obtain any necessary correction of the beneficiary's health insurance record. Refer any questions to the RO concerning use of the appropriate method.

Apply the procedures in§§ 3502 and 3503 to help reduce the number of claims received with incorrect or missing claim numbers.

The CASF microfiche may be used to resolve address discrepancies resulting in undeliverable EOMB notices (see $ 3728).

3505. GUIDELINES FOR USE OF CARRIER ALPHABETIC STATE FILE (CASF)—GENERAL

The CASF is a microfilm listing of all Medicare beneficiaries residing in a geographic entity (i.e., each State, the District of Columbia, Puerto Rico, Guam, Virgin Islands, and American Samoa). Each State listing is sequenced alphabetically by name and contains basic beneficiary identification data which has been extracted from the HI master file records. The updated CASF is usually distributed in May and November each year. The CASF (and BEST, see§ 3506) data are selected from the same HI master file.

3505.1 Confidentiality.—The CASF is governed by the same confidentiality restrictions as other information obtained in the administration of the program. (See §§ 3760ff.) Under no circumstances should it be used for any purpose other than for title XVIII claims processing. It is not to be reproduced for any purpose. Request additional copies in accordance with § 3505.2C.

Develop controls to ensure that CASF data is used only for program purposes and is not disclosed to an unauthorized party. Such controls should include limiting access to the CASF to those employees applying title XVIII beneficiary identification procedures, and the establishment of strict security procedures to guard against access to the CASF when it is not in use.

The location of the CASF copies must be accounted for at all times.

Section 1106(a) of the Social Security Act imposes criminal penalities for unauthorized disclosure of information.

The HCFA regional office (RO) will periodically review the use and destruction of the CASF.

3505.2 Receipt and Disposition Procedures.—

A. Imperfect or Missing Microfiche.—Upon receipt of new microfiche, check to insure that it is for the correct State, that all portions are printed clearly, and that all alphabetical segments are shown. If a microfiche sheet is missing or a replacement is necessary, send a letter explaining the problem to:

Health Care Financing Administration
Office of Methods and Systems, BPO
G-E-7 Meadows East
6325 Security Boulevard
Baltimore, Maryland 21207

(If a replacement is requested, include the defective microfiche with the letter.)

B. Destruction of Microfiche.—Updated microfiche will be received every 6 months and should be checked as described in A. If no problems are detected with the new microfiche, destroy the outdated CASF by shredding. The outdated CASF must not be given to any third party for use. Part 2, § 2985.3C provides instructions for destroying microfilm, which are also applicable for microfiche.

If segments of the updated microfiche are missing or unreadable, do not destroy any portion of the old microfiche until the replacement segments are received.

C. Requesting Additional Microfiche.—If additional State listings are needed, send a letter to the RO identifying the State, the number of additional listings requested, and a brief explanation justifying their need. The RO will approve or deny the request and notify you of its decision.

3505.3 Explanation of CASF Data.--The heading of each microfiche includes data to identify the contents; e.g., the State, the surname of the first beneficiary listed on the microfiche sheet, date of creation, and microfiche number. The entry for each HI beneficiary is limited to one line of data from left to right in the following order (for an example of the format, see § 3599, Exhibit 3):

A. NAME

Surname (up to 12 characters). Given name (up to 10 characters). Middle initial (1 character).	SMITH, JOHN A

B. SOCIAL SECURITY OR RAILROAD NUMBER

The nine digit Social Security number or the railroad board prefix followed by the six or nine digit number. (The prefix indicates the type of railroad benefits to which the beneficiary is entitled.)	000-00-0000 or WA-000000

C. CURRENT SUBSCRIPT

A one or two position subscript identifying the type of Social Security benefits to which the beneficiary is entitled.	A J1

D. PREVIOUS SUBSCRIPT

A one or two position subscript identifying the type of Social Security or railroad benefits to which the beneficiary was previously entitled.	B J1

E. DATE OF BIRTH

The established six digit date of birth.	12-06-03

F. STATE BUY-IN INDICATOR

If an "S" immediately follows the year of birth, the beneficiary's Part B premium was being paid by a State Medicaid agency at the time the CASF data was selected from the HI Master File.	S

G. SEX CODE

A one character code identifies the beneficiary's sex. The codes are: 1

CODE	SEX
1	Male
2	Female
0	Unknown

H. RAILROAD INDICATOR

If an "R" follows the sex code, the beneficiary was under the Railroad Retirement Board jurisdiction at the time the CASF data was selected. R

I. ZIP CODE AND ADDRESS

The zip code is 5 digits followed by as many as 64 characters of the address.

3505.4 Using the CASF.—Beneficiary data on the CASF reflects the status at the time the data was selected from the HI master file. Treat data that are subject to change (e.g., address, State buy-in indicator, and RRB jurisdiction) as indicators, it may not be current.

The CASF cannot be used to determine eligibility to either Part A or Part B benefits. Use it to obtain or verify missing, incorrect, or incomplete data such as the beneficiary's name, health insurance claim number, or address.

Use these guidelines to determine whether the beneficiary identification data on a document (e.g., HCFA-1453, HCFA-1483, undeliverable EOMB, or correspondence) matches a beneficiary on the CASF. If an item cannot be matched, follow procedures in § 3504.

Take special care when using the microfiche to insure that the correct individual is identified and that data taken from the CASF are transcribed accurately.

3505.5 Guidelines for Beneficiary Identification.—For positive identification of the beneficiary, the source document and the CASF must agree on at least one of the categories in A or B.

A. When looking for an HI claim number because it is missing, incomplete or incorrect, use the claim number on the CASF microfiche if both the source document and the CASF agree on:

1. Surname and address; and

2. (a) Given name or
   (b) First initial and sex

Individuals may be listed twice on the CASF, meeting the above criteria with the same date of birth. It is quite likely that both HI claim numbers were assigned to the beneficiary. One is the active HI claim number, the other is an inactive number which was being cross referred to the active claim number when the CASF data was selected from the HI master file. Use either HI claim number on the admission, bill or claim. If the inactive HI claim number is used, the HI computer system will post the query transaction to the active claim number HI master record and return a cross reference (K) trailer with the query reply. (See § 3512.8 and § 3535.1.)

Status query both HI claim numbers listed on the CASF, to assure that the cross reference action has been completed. If it has not, refer the item to the SSO to avoid Part A overpayments and overapplication of the Part B deductible.

B. When looking for either the given name, the address, or the sex code, and the source document contains the surname and the full HI claim number (see § 3505.3A and B), use the CASF data if both the source document and the CASF agree on the appropriate category:

1. Given Name Missing.—Use the given name on the CASF unless there is an inconsistency in the sex code.

2. Address Missing.—Use the address on the CASF unless there is an inconsistency with the name and sex code information.

3. Sex Code Missing.—Use the sex indicated on the CASF unless there is an inconsistency in the given name information.

Refer any item which cannot be matched using these guidelines, the tolerances in § 3505.6, and the procedures in § 3504, to the SSO.

3505.6 Tolerances for Use With the Guidelines.-- Use the following tolerances to determine whether an item on the source document agrees with an item on the CASF. If these tolerances are met and there is agreement on at least one of the categories listed in § 3505.5, assume that the beneficiary has been positively identified and use the name/HI claim number as it appears on the CASF.

A. Surname.-- Consider the surnames shown on the source document and the CASF to agree if: (Disregard Jr. or Sr.)

1. The spelling is exactly the same; or
2. There is only a one-letter difference in the spelling; or
3. Adjacent letters are transposed; or
4. There is a variation in one vowel or single double consonants; or
5. A "c" is included with an "sh" sound; or
6. The surname is a shortened version (clipped), e.g., Fish and Fisher.

EXAMPLES:

Surname on Source Document	Surname on CASF	Match
FISHER	FISHLER	YES
FISH	FISHER	YES
FISCHER	FISHER	YES
STEIGER	STIEGER	YES
STEINER	STIEGERS	NO

B. Given Name or Initial.-- Consider the given name or initial shown on the source document and the CASF to agree if:

1. They agree exactly; or

2. There is a variation in the spelling or an abbreviation, e.g., Dwayne for Duane, or Wm. for William; or

3. A common byname has been used, e.g., Bill for William, or Betty for Elizabeth; or

4. The initials on one document are consistent with the given name on the other. For example, the initial "J" is consistent with the name John, or any other given name beginning with the letter "J."

C. Social Security or Railroad Number.-- Consider the Social Security numbers shown on the source document and the CASF to be in agreement only if there is an exact match (including subscripts) between the two.

If the beneficiary is entitled on an RRB claim number, there must be exact agreement between the source document and the CASF on the entire claim number (RRB prefix followed by the 6-digit or 9-digit numeric number).

D. Sex.-- The sex shown on the source document and on the CASF must agree.

E. Address.-- Consider the address shown on the source document and on the CASF to be in agreement only if there is a match on house number and street, or RFD number, and zip code. Accept reasonable variations in spelling or in formatting of street or rural route designations.

Part of the address may be omitted as the entry is limited to 64 characters. Use the zip code to determine the proper town or city if it is omitted from the address data.

If the beneficiary omitted his address from the claims form or the correspondence, it may be taken from the CASF.

3505.7 Special Conditions in the CASF.-- In addition to the problems with the quality and readability, there may be other conditions on the microfiche. Some of these problems are listed below. HCFA knows about these conditions and corrective actions are being taken. Therefore, if one of the conditions listed below is shown on the CASF, do not report it to HCFA. However report conditions such as garbled surnames (e.g., O18&AB) to the address shown in § 3505.2A.

A. Names Which Appear to be Out of Sequence.-- A name such as OBRIEN may be shown in the HI computer system as OBRIEN or O BRIEN. A space or blank is a recognizable character for the computer and is treated as preceding the letter "A." Thus, OBRIEN follows OBERON , while O BRIEN might precede OATS on the same file. Names such as McPHERSON as opposed to MACHPHERSON , may also cause some problems as these names would be placed in different segments of the CASF depending upon the spelling used. This spelling is often due to beneficiary preference.

Recognize the names with spelling variations and check the different microfiche segments for them.

B. Out-of-State Railroad Beneficiaries.-- Accretion records to the HI system from the RRB contain a State code which differs from the HCFA State code. Most RRB State codes are converted to the appropriate HCFA State code before the CASF is updated. Those records which have not been converted will be shown in an incorrect State file.

C. Repetition of Names.-- A beneficiary listed twice on the CASF indicates that cross referencing of the two HI master records for the beneficiary was not completed when the microfiche data was selected from the HI master file. Follow the instructions in§ 3505.5A.

D. Missing Zip Codes.-- If the zip code is missing, every attempt will be made to include it on the next update of the CASF. If the zip code is needed, check the National Zip Code Directory.

E. No Address Shown.-- If a temporary HI record is established before receipt of the master accretion record, the address portion of the CASF will show the legend "UNK" followed by the code identifying the source of the temporary record. If the address is needed, request it from the SSO, the hospital, the physician, or supplier.

3506. GUIDELINES FOR USE OF THE HEALTH INSURANCE BENEFICIARY STATE TAPE (BEST)--GENERAL.

The BEST is a magnetic tape file containing records for beneficiaries residing in a geographic entity (i.e., each State, the District of Columbia, Puerto Rico, Guam, Virgin Islands, and American Samoa) when the file is created. The records on each file are sequenced alphabetically by name and contain basic identification data for the beneficiaries. The BEST data is obtained from the same HI master beneficiary file as the Carrier Alphabetic State File (CASF), see§ 3505. Thus, the BEST contains the same data as the corresponding CASF update.

Updates of the BEST files are distributed every 6 months, usually April and October.

3506.1 Confidentiality.-- The BEST is governed by the same confidentiality restrictions as other information obtained in the administration of the program (see§ 3760ff). Since the BEST file contains identification data for HI beneficiaries, under no circumstances should it be used for any purpose other than for title XVIII claims processing. It is not to be reproduced for any purpose, except as specified in§ 3506.5.

Develop controls to ensure that BEST data are used only for program purposes and are not disclosed to an unauthorized party. Such controls should include limiting access to the BEST data to employees for title XVIII claims processing and should establish strict security procedures to guard access to the BEST when it is not in use. Section 1106(a) of the Social Security Act imposes criminal penalties for unauthorized disclosure of information.

The RO will periodically review the use of the BEST.

3506.2 Receipt and Disposition Procedures.-- Upon receipt of a new or updated BEST file, list and review a significant portion of each reel to ensure that it is for the correct State and that all alphabetical segments are included.

If two contractors using the BEST occupy the same premises (e.g., a Blue Cross Plan and a Blue Shield Plan) only one BEST file will be provided.

A. Requesting Initial Tapes.-- To initially receive the BEST, send a letter including the following to the RO:

1. the State tape(s) requested;

2. the specific mailing address to which the file should be forwarded;

3. an explanation of how the BEST will be used; and

4. a brief explanation of how use of the BEST will improve the claims processing operations and not impact unfavorably upon the average cost per claim.

If multiple copies of the CASF microfiche are received for your service area State(s), review their uses and include in the BEST request any reductions in the number of copies required in future CASF distributions.

The RO will approve or deny the request and notify you of its decision.

Do not request the BEST file for a State outside your service area. The claims volume for such a State will usually not justify use of the BEST. Follow the procedures in§ 3504 for resolving name and claim number problems where the beneficiary resides outside your service area.

B. Imperfect (Unreadable) or Incomplete Magnetic Tapes.-- If a volume (reel) or segment of the BEST is missing or cannot be read by the computer, and a replacement is requested, return the file with a brief letter explaining the problem to:

Health Care Financing Administration
Office of Methods and Systems, BPO
G-E-7 Meadows East
6325 Security Boulevard
Baltimore, Maryland 21207

A replacement will be forwarded.

C. Acceptable Magnetic Tapes.-- If the new tapes are complete and readable, establish control of the tape file and use the file for its intended purpose. Decontrol the old tape file and return it to your blank tape stock.

3506.3 Description of BEST.-- The external tape label identifies the file as "HABEST" followed by four alpha/numeric characters.

A. Tape Characteristics.--

1. The tape is 9 track, 6250 BPI density with odd parity.
2. The tape header label is IBM OS Standard.
3. Data records are a fixed length of 125 characters.
4. The blocking factor is 50.
5. A tape mark precedes the trailer label on each reel.
6. The trailer labels are IBM OS Standard.

B. Data Record Description.--

Data Record Position	Data Definition
1 - 12	Surname (up to 12 characters)
13 - 22	First Name (up to 10 characters)
23	Middle Initial (if none, this portion is blank)
*24 - 32	Social Security Number (9 digits)

Data Record Position	Data Definition
*33 - 34	Current Subscript (1 or 2 alpha/numeric characters identifying the type of Social Security benefits to which the beneficiary is entitled).
* - 35	Blank
36 - 37	Previous Subscript (1 or 2 alpha/numeric characters identifying the type of Social Security or railroad benefits to which the beneficiary was entitled. If none, these positions are blank.) If both positions are numeric, ignore them as they are an internal HCFA code.
38 - 43	Date of Birth (the established 6 digit date of birth - MMDDYY).
- 44	State Buy-In Indicator: If an "S" exists in this field, the beneficiary's Part B premium was being paid by a State Medicaid Agency at the time the file was created.
- 45	Sex Code:

Code	Sex
1	Male
2	Female
0	Unknown

- 46	Railroad Indicator. If an "R" exists in this field, the beneficiary was under RRB jurisdiction at the time the file was created.
47 - 51	ZIP Code (5 digits)
52 - 53	Blank
54 - 119	Address (up to 66 characters)
120 - 124	The individual's own Social Security Number in IBM packed decimal format. If it is not available, the field will be zero filled.
- 125	Record Mark (≠)

*For a railroad retirement beneficiary, positions 24 - 35 indicate:

, A Railroad Claim Number. The 1 - 3 character RRB prefix followed by the 6 or 9 digit number. The prefix indicates the type of railroad benefits to which the beneficiary is entitled. The Railroad Number is left justified in all cases, regardless of length.

EXAMPLE: A000000bbbbb or A000000000bb
MA000000bbbb or MA000000000b
WCA000000bbb or WCA000000000

3506.4 Special Conditions in the BEST.—In addition to problems of quality and completeness of the magnetic tape, there may be other conditions to be aware of on the BEST. The contents of both the CASF and the BEST are identical; therefore, the conditions and guidelines in § 3505.7 also apply to the BEST.

3506.5 Using the BEST.—

A. General.—The BEST data reflects the status of master HI records for the beneficiaries at the time the file was created. Treat data that are subject to change (e.g., welfare and railroad indicators, address) as indicators rather than as being current.

NOTE: Current Part A or Part B entitlement cannot be determined, nor should be determined, from the BEST file data.

Use the BEST in the automated claims processing system prior to querying, if its use improves claims processing operations and does not impact unfavorably on the cost per claim. The BEST may be most efficiently used to:

o expand an existing early identification type file with the BEST data to obtain on-line data entry savings of beneficiary names and addresses; and/or

o expand existing early identification or history files (but not both) with the BEST data for matching beneficiary surnames and HICNs on Medicare claims prior to query, using the surname and claim number matching logic routines which HCFA uses to process queries.

Do not use the BEST to update existing records on history or early identification files for names, addresses, etc. This use may actually "downdate" the file(s) since the data is subject to change and may not be current.

It is not recommended that the BEST be used as a screening or early identification type file without using at least one of the HCFA matching logic routines. Seeking an exact match of name, claim number, sex code, address, etc., could cause an increase in the number of prequery partial match exceptions requiring clerical review and development, thereby impacting unfavorably upon claims processing time and cost per claim.

The matching logic routines resolve problems of:

1. surnames - blank spaces, one letter differences, transposition of adjacent letters, extra or missing letters, and Soundex coded equivalent surnames; and

2. claim numbers - one number differences, transposition of adjacent numbers, and where the suffixes are equatable.

The expansion of early identification or history files and the use of the matching logic routines should substantially reduce the pre-query partial match exceptions requiring review and development for the correct names and claim numbers. The number of interim query responses (e.g., code 00) that you receive should be reduced.

Process all claims through the matching logic routines. If the name and claim number pass the routines, query HCFA or pay the claim, depending on the Part B deductible status. Clerically review claims rejected by the routines (see SS 3504 and 3505) and develop for the correct name and claim number prior to query as they will probably result in a query reject and further processing delay. All claims with names and claim numbers not in file (first claim for a newly entitled beneficiary) should not be clerically reviewed and developed before querying HCFA.

The BEST file or data may also be used in intermediary and hospital/provider "on-line" computer networks (e.g., Electronic Media Claims systems) to verify names and HI claim numbers. This use should be cost justified and should not be just a systems "enhancement" or "sophisticated" systems application. The HI card should continue to be the primary source of a beneficiary's name and HI claim number. Obtain the current entitlement status by querying HCFA.

Access to an "on-line" BEST file or data by the hospital/provider, or its billing agent must be through your software program routines. Such access should use the same data as required by the HCFA query/query reply system (i.e., surname, first initial, HI claim number, date of birth/sex code). Establish procedures and criteria, to be approved by the RO, for the hospital/provider to follow in accessing the "on-line" file/data.

Responses to a hospital/provider request for a name or HI claim number verification can be a "yes" or "no", a not-in-file, or to provide the claimant's (patient's) correct name and HI claim number. Do not disclose a list of "possible" names and/or HI claim numbers to any hospital/provider or its billing agent.

Do not disclose beneficiary names and HI claim numbers to a billing agency or company that is not a contractural agent of the hospital or provider of Medicare services.

Other uses of the BEST may be identified or developed. Obtain in writing the RO's approval of such uses, after an evaluation has assured that they are cost effective and will improve the claims processing operations.

B. Documentation of Surname and Claim Number Matching Logic Routines--Copies of flow charts with a narrative of the logic rationale and program line coding (i.e., ANSI-COBOL) for the matching logic routines can be obtained from the RO.

Admission Data Transmitted

3507. ADMISSION DATA.

Upon receipt of an inpatient hospital or SNF bill, make certain all data below is complete and consistent prior to transmitting admission data to HCFA.

3507.1 Intermediary Number.—The number is used in lieu of a name and address and identifies the intermediary processing the claim.

3507.2 Provider Number.--This 6-digit number identifies the provider.

The first 2 digits represent the State or foreign country in which the provider is located. The third, or third and fourth digits indicate the type of institution (e.g., Hospital, SNF, HHA, or Psychiatric Hospital). The remaining digits are assigned sequentially.

Example where the third digit indicates type and the last three digits identify the provider:

21 0 003
State (21) Maryland)
Type (0) (Short stay - general hospital)
Serial (003) (identifies provider)

The following shows the significance of the last 4 numbers:

0001-0899	Short-term (General and Specialty) Hospitals
0900-0999	Multiple Hospital Component in a Medical Complex
1000-1099	Independent Ambulatory Surgical Centers
1100-1199	Hospital-Affiliated Ambulatory Surgical Centers
1200-1299	Alcohol/Drug Hospitals
1300-1499	Physical Therapists in Independent Practice
1500-1799	Hospices
1800-1899	Federally-Funded Comprehensive Health Centers
1900-1989	Reserved for future use
1990-1999	Christian Science Sanatoria (Hospital Services)
2000-2299	Long-Term Hospitals
2300-2499	Chronic Renal Disease Facilities (Hospital Based)
2500-2899	Non-Hospital Renal Disease Treatment Centers
2900-2999	Independent Special Purpose Renal Dialysis Facility
3000-3024	Formerly Tuberculosis Hospitals (Numbers Retired)
3025-3099	Rehabilitation Hospitals (Excluded from PPS)
3100-3299	Reserved for Future Use
3300-3399	Children's Hospitals (Excluded from PPS)
3400-3499	Reserved for Future Use
3500-3699	Renal Disease Treatment Centers (Hospital Satellites)
3700-3799	Hospital Based Special Purpose Renal Dialysis Facility
3800-3974	Rural Health Clinics (Free-Standing)

3975-3999	Rural Health Clinics (Provider Based)
4000-4499	Psychiatric Hospitals
4500-4599	Comprehensive Outpatient Rehabilitation Facilities
4600-4999	Reserved for Future Use
5000-5999	Skilled Nursing Facilities
6000-6499	Reserved for Future Use
6500-6899	Outpatient Physical Therapy Services
6900-6989	Reserved for Future Use
6990-6999	Christian Science Sanatoria (Skilled Nursing Services)
*7000-7299	Home Health Agencies
7300-7399	Subunits of "Nonprofit" and "Proprietary" Home Health Agencies
7400-7799	Continuation of 7000-7299 Series
7800-7999	Subunits of State and Local Governmental Home Health Agencies
8000-8999	Independent Laboratories
9000-9799	Reserved for Future Use
9800-9999-	Portable x-ray suppliers. (For identification only. Portable x-ray suppliers do not submit admission notices.)
S000-S999-	Psychiatric Components
T000-T999-	Rehabilitation Components
U000-U999-	Swing Bed Components
V000-V999-	Alcohol-Drug Units

*In Virginia (State 49) the series 7100-7299 has been reserved for State-wide components of the Virginia Home Health Agencies.

The largest short-term hospital, the "parent" organization of a multiple provider complex, (§3008), retains the original provider number. The component hospital is assigned a number in the 0900 series following the 2-digit State code.

Hospitals certified for emergency services only, but not certified for full participation, are assigned a special number with a letter suffix, i.e., 2100E or 2100F. The first two digits are the State code. The third, fourth, and fifth digits are assigned in sequence beginning with 001 and are not related to the above 4-digit numbers.

3507.3 Query Code.—This is a 1-digit code indicating the type of action required for handling the claim. It identifies the type of query as follows:

PART A QUERY CODES

1	Original Query	Request for benefit eligibility information. When a match of the HICN is made, an admission is established and a response will be received from HCFA.
2	Delete Query	If incorrect data was transmitted in a query code 1, send query code 2 to delete it and a query code 4 with the correct data. Both queries may be transmitted on the same day. HCFA transmits disposition code 03 when the admission has been deleted; code 00 when the beneficiary cannot be identified, and code 49 whenever (1) there is no matching admission, or (2) you attempt to delete an admission created by an interim bill.
4	Requery	When an original query (Code 1) has not been answered within 7 days (see §3501 for counting days) resend it using this code. An admission will be created in HCFA's files if none exists, and a response will be sent. Use a code 4 after you have cancelled an admission with a code 2 query and are replacing the cancelled admission with a new query. This assures that the reply received reflects that HCFA has processed the code 2 deletion.
5	Status Query	Use this query to request: o Status information if the admission on the billing has not been transmitted and entitlement status is in question; o The admission has been queried and information is needed to resolve an inquiry; or o Identification of the appropriate HMO and/or its payment option is needed. Enter "000000" as the provider number if you desire hospital or SNF status information. To obtain HHA information, enter "007000." If both types of information are desired, both Type "5" queries are necessary.

6	Bill History Query	Use this query to request an HI Bill Retrieval Listing (Bill History) from HCFA to resolve a beneficiary's utilization status. The record formats for the Bill History query are in §3550, EXHIBIT 7. See also §§3830.1 and 3840.2 for location of the queried Bill History on the Batch Clearance Tape and the conditions which preclude its release.

7 **Hospice Query**

Use this query to add, terminate, change, or delete a period of Hospice election on a beneficiary's Master record. Use the information contained on the Hospice Election Form (see § 3672) when completing it. HCFA matches this query to the beneficiary's record and updates the record accordingly, or rejects the query. The reply indicates HCFA's action(s). (See §§3100ff. and 3672.) The formats for the Hospice query are in §3550, Exhibit 12. Replies are in §3513.

Each beneficiary has available 3 periods of Hospice care which must be 'elected' by the beneficiary. The start of 'election' of Hospice care must be posted to the HCFA beneficiary record. Once posted, it is not necessary to terminate a period of Hospice election unless the benficiary so chooses. Once a period is begun, HCFA automatically terminates the period; if it is the first or second period it is terminated at the end of 90 days; if it is the third period, it terminates at the end of 30 days.

A beneficiary is allowed to change to a different Hospice once during each period of Hospice care. The receiving Hospice sends you a copy of the Hospice election form, annotated with the appropriate change data. Send a query to post the change to the benficiary record. Show the date of the beneficiary's involvement with the new Hospice in the start date field. If the beneficiary elects early termination of a period of Hospice care, submit a query to record it. Use the original start date of the applicable Hospice period. A query is not necessary to record a date of death.

HCFA does not automatically start a second or third period of Hospice care. Therefore, at the end of the first and second periods of Hospice care, verify that the beneficiary is still being serviced by the Hospice. Verification may consist of a telephone contact. Upon verification, send a query to post the second and/or third period of Hospice care.

3507.4 Name.—Furnish on each query. Transmit only 11 characters of an individual's last name and one or two initials. If known, space after the surname and show: Jr, Sr, III, etc.; do not use any punctuation. Show two-word surnames as one word. HCFA uses the name information and the HICN furnished to identify the individual's utilization record.

3507.5 Claim Number.—The HICN is required for processing an admission query. This number is variable. The number can contain up to 12 characters or as few as 7. (See §3504.)

3507.6 Date of Admission.—Take this six digit number from the provider's entry on its bill. Show the month, day and year.

Show the actual date of admission even where the effective date of entitlement is later. For example, where a patient entered a general or psychiatric hospital on March 25, 1985, and became entitled to hospital insurance on April 1, 1985, show 032585.

For psychiatric hospitals with qualifying distinct parts, show the date of admission to the qualifying distinct part, even where the treatment or diagnostic procedures did not begin until a later date.

Where a patient is admitted prior to the date that the provider agreement became effective, show the effective date of the provider agreement.

In cases involving change of ownership, where participation of the facility is continuous, show only one admission, the actual date.

3507.7 Date of Birth.--Furnish the month, day and year of birth if it is available. Do not delay the query if it is not known. While the date of birth is useful as identification and should be shown when available, the admission query will be processed without it.

An individual is considered to attain age 65 the day before his birth date. For example, if his 65th birthday is November 1, 1985, he "attained" age 65 October 31, 1985, and is entitled to hospital insurance benefits October 1, 1985.

3510. HCFA REPLY TO ADMISSION QUERY.

3510.1 Timeliness of HCFA Reply and Requery Guidelines.--HCFA prepares a reply for each admission query received. Any query received by HCFA prior to 7 PM is processed that night. Where more than one admission query for the same individual is processed on the same day, HCFA sorts first by dates of admission and then by query code.

When HCFA is unable to send a definitive reply immediately, it sends a message acknowledging receipt. Consequently, you always receive a reply within one or two days, even if the reply is merely an acknowledgment.

Requery when no reply has been received after 7 working days have elapsed (allowing for scheduled down-time). This should be necessary only occasionally since only a "read" or "write" error within the HCFA EDP system or a malfunction of the communications system can cause this.

NOTE: HCFA's policy of scheduled down-time for Federal holidays is as follows: The central computer and related facilities close at midnight (Eastern Time) on the last workday (Monday through Friday) prior to the holiday and open at 12:01 AM (Eastern Time) on the first regular workday (Monday through Friday) following. The holidays are: New Year's Day, Washington's Birthday, Memorial Day, Independence Day, Labor Day, Columbus Day, Veteran's Day, Thanksgiving, Christmas, and as of 1986, Martin Luther King Jr., Birthday.

Upon receipt of Part A reply disposition codes 00, 52, 60, 65, 90, you may requery if and when, corrected or additional data is available. (See S3512.7.) Obtain corrected data by checking the HICN against CAST, or by contacting the provider, and if necessary, the beneficiary.

After any query has been pending HCFA investigation for 75 days, a reject disposition code 54 is returned unless an earlier reply showed disposition code 09 as the status. If reply code 90 preceded the reply code 54 reject, the case may have been referred to the appropriate program service center, but was rejected by HCFA due to the 75 day limitation on retaining queries. (The 75 day time frame for a definitive reply by HCFA does not apply to disposition code 09.) See S 3536 concerning requery guidelines for Part B queries.

3510.2 Updating Eligibility Information Furnished in HCFA Reply.--The HCFA reply to an admission query shows benefit days remaining and deductibles to be met as of:

- The last recorded date of discharge, or

- The date of the last action, in the event an admission exists for which a partial billing has been processed.

The HCFA reply shows benefit days and deductibles remaining after adjustments based upon the last interim or discharge bill. If it was an interim bill, the reply to the next query shows benefit days and deductibles remaining after the record is updated. The date of discharge field shows if that date is more recent than the last discharge date.

Since HCFA has no knowledge of days used or deductibles met on any unreported items, it is important to determine from your' records the remaining eligibility. To determine available days, consider the information obtained by the provider from the beneficiary regarding any prior stays.

When development establishes that the beneficiary has not been an inpatient for 60 consecutive days, begin a new spell of illness and apply the proper inpatient deductible amount.

The examples below illustrate methods of updating eligibility.

Example 1 - Current Admission Begins a New Spell of Illness

A type 1 hospital query is sent to HCFA showing a January 1, 1984 admission. HCFA replies that the last discharge date of record is May 1, 1983, 15 full and 30 coinsurance benefit days remain, and inpatient and blood deductibles met. The 2-digit field showing the year the benefit period began contains "83."

Since more than 60 days have elapsed from the last discharge of record, begin a new spell of illness unless the hospital; or your records show a prior stay within the past 60 days. Make certain that the inpatient deductible is applied and that program payment is not made for days beyond those allowed.

Example 2 - Open Admission Begins a New Spell of Illness

A type 1 hospital query is sent to HCFA showing a March 2, 1984 admission. HCFA replies that the last discharge date is July 1, 1983, 30 full and 30 coinsurance days remain, the inpatient deductible is met, two pints towards the three blood pints remain to be met, and "83" as the year the benefit period began. A hospital open admission exists (no bill accepted) for a December 1, 1983, admission. Apply days and deductibles based upon query response unless your files show information regarding the December 1, 1983 admission. If beginning a benefit period as of March 2, 1984, make certain that the $356.00 inpatient deductible is applied to the bill and that program payment is not made for days beyond those allowed.

Example 3 - Current Admission Continues Spell of Illness

A type 1 hospital query is sent to HCFA showing a January 11, 1984 admission. HCFA replies that the last discharge date of record is October 15, 1983, 10 full and 30 coinsurance days remain, inpatient deductible met, 2 pints needed to satisfy blood deductible, and "83" as the year the benefit period began. A hospital open admission exists for December 1, 1983.

Although no open admission data is given by HCFA, you find that the discharge for the December 1, 1983, admission occurred on December 15, 1983, and that one pint of blood was furnished. Since fewer than 60 days elapsed between the discharge date shown by HCFA and the December admission date and between the December earlier stay discharge date and the current admission date, the patient is in the same benefit period. Reduce the number of days remaining and blood deductible to be met shown in the HCFA reply, by the amounts in the earlier stay which have not been reported to HCFA.

Example 4 - Interim Bill Posted for an Admission

A type 1 hospital query is sent to HCFA showing January 20, 1984. HCFA replies that the last discharge date of record is November 30, 1983, 15 full and 30 coinsurance days remain, inpatient deductible met, 2 pints needed to satisfy blood deductible, and "83" as the year the benefit period began. A partial, non-PPS (interim) bill is posted for a November 15, 1983, admission with a last interim date of November 30, 1983.

You find that the discharge for the November 15, 1983, admission occurred on December 16, 1983, (total stay of 31 inpatient days including 16 days already posted by HCFA, and that 2 pints of blood had been furnished (1 pint posted from interim bill).

The inpatient deductible is zero. Make certain no full days, no more than 30 coinsurance and 60 lifetime reserve days have been applied, and no more than 1 blood pint is applied for the January 20, 1984, admission.

3510.3 Updating Eligibility When Psychiatric Inpatient Services are Involved.--An inpatient of a psychiatric hospital on the first day of entitlement to hospital benefits is subject to a reduction of inpatient days available in the first spell of illness. Any inpatient days in a psychiatric hospital (participating as of the beneficiary's first day of entitlement) in the 150-day period preceding entitlement reduce the 150 days available in the first spell of illness. The reduction of days could also apply to a subsequent general hospital stay, but only if that admission is primarily for the treatment or diagnosis of mental illness.

Determine if a reduction applies as well as the amount of the reduction. Investigate only if the current admission is to a psychiatric hospital or to a general hospital primarily for the treatment or diagnosis of mental illness.

When it is the first admission, investigate the amount of any utilization in the 150-day period before entitlement. To alert you to this need on subsequent admissions, the query reply includes disposition code 28. This code is furnished where HCFA's records indicate that the patient may still be in the first spell of illness, the first stay admission was to a psychiatric hospital, and because of an inpatient stay in a psychiatric hospital prior to entitlement, benefit days had been reduced.

See §3104 for determining days available when the reduction applies.

3511. PART A AND PART B AUTOMATIC NOTICES FROM HCFA

HCFA automatically reports certain events that affect the beneficiary's current and/or future status and the processing of claims. They are sent under Part A to intermediaries who have open admissions, and under Part B to intermediaries which have submitted Part B queries.

The automatic notices are Type 7 replies. Each reported event has an assigned disposition code which is given in the notice. For Part A, the assigned disposition codes are 39, 78, and 79. (See §3512.7.) For Part B outpatient claims, the disposition codes are 36, 39, 70, 71, 72, 77, and 79. (See §3535.)

Upon receipt of an automatic notice, take the action indicated by the disposition code given.

3512. CONTENTS OF THE HCFA REPLY TO THE ADMISSION QUERY.

The first character in the reply to is the reply code. It is either a 1, 3, 4, or 7.

Type 1 - Is a reply to an admission from a hospital or SNF and furnishes eligibility data.

Type 3 - Is an acknowledgment, it furnishes no eligibility data. (Where type 3 contains disposition code 49, the data submitted is shown.)

Type 4 - Is a rejection and signifies that the admission could not be processed because it failed the initial EDP edit.

Type 7 - Is an automatic notice to let you know, if your open admission is on record at the time of a change in the beneficiary's status. It has a special disposition code identifying the event. (See §3512.7.)

3512.1 Beneficiary Identification.--The HICN sent with the claim always appears. Where either the name or HICN for the admission is different from that in HCFA's records, a corrected name or number appears in a special field. Change the information on the billing form to reflect the information furnished in the reply.

3512.2 Date of Admission.--The date of admission appears as that on the bill unless it is an impossible date, in which case, HCFA's processing date appears.

3512.3 Part A Data.--

A. The Effective Date.--This shows the first month of entitlement to benefits. No payment can be made for Part A services furnished before the first day of that month. If the patient is not entitled, either no entry (blanks) or zeros (BCA system involved) appear.

B. Date of Last Discharge.--If HCFA processed a final bill for a prior inpatient hospital or SNF stay, the date of last discharge is shown or, if HCFA processed an interim bill covering a period later than the discharge, the last covered date of the interim billing period is shown. (For code 25 replies, the date of discharge can be from an unposted bill.)

3512.4 Part A Benefits Available.--This shows inpatient benefit days remaining and deductible to be met as of the date of last discharge, or billing through date, of an interim bill. It also shows the amount of the blood deductible and inpatient deductible yet to be satisfied, as well as inpatient full payment days, coinsurance days and psychiatric days remaining. Up to 90 inpatient benefit days are shown. HCFA maintains a record of the additional 60 days of lifetime reserve of inpatient hospitals days for each individual. The reply to the admission includes the number of lifetime reserve days only if there are fewer than 60 remaining. (See Addendum A, §7 (ARS).)

A. Selecting Correct Part A Deductible and Coinsurance Rates.--The applicable coinsurance and deductible rates depend upon when the benefit period began. Use the chart in §3211 to determine them. A 2-digit field indicating the year the benefit period began is in the query reply following the Part B effective date and preceding any trailer codes. The year is in the fixed part of the HCFA query reply. Where there has been no reduction in benefits on HCFA's records, i.e., no prior utilization has been recorded, the year shown is a presumed year.

B. Determining Blood Deductible.—The blood deductible to be satisfied is indicated by numeric code. The following identifies each code:

CODE	EXPLANATION
0	Blood deductible satisfied (on code 42, 49, 50, 51, and 52 replies, 0 does not mean the deductible has been satisfied).
1	Blood deductible to be satisfied is 1 pint.
2	Blood deductible to be satisfied is 2 pints.
3	Blood deductible to be satisfied is 3 pints.

3512.5 Part A Intermediary Number.—Your identification number assigned by HCFA.

3512.6 Part B Data.—

A. Part B Cash Deductible.—A "1" or "2" means that the deductible is, or is not met, respectively. An "0" means there is no Part B entitlement.

B. Part B effective Date.—If the individual had Part B coverage as of the date of admission, the month and year of Part B coverage are furnished. TERM appears in the Part B Effective Date field to reflect a termination of Part B benefits. If the beneficiary has never been entitled to Part B benefits, the Part B Effective Date field is blank.

Reimbursement for services of radiologists and pathologists to hospital inpatients is made under Part B for 80 percent of the reasonable charge and can be billed on HCFA-1450. (See §3604.) When the reply to the admission indicates that the individual had Part B coverage at admission, assume Part B coverage through the end of the hospital stay or until Part A benefits are exhausted, whichever is earlier.

3512.7 Disposition Code.--This describes the reply. It may encompass caution signals, no record indications, questionable items, errors, etc.

Listed below are the identifications and explanation:

DISPOSITION CODES - PART A

Disposition Code	Admission Established	Condition
00	No	HCFA acknowledges receipt of the query, but a reply is delayed. The name and/or HICN does not match a record on the HI master file. HCFA will send a definitive reply within 75 days if the individual is identified, or a code 52 if not. If you determine that the original admission contained an incorrect HICN or surname, requery immediately using the corrected data and delete the original. If a definitive or disposition code 90 reply is not received within 30 days, requery using the same information submitted in the original. Do not refer 00 replies to the Social Security Office. Approximately 55 percent of these cases are resolved by HCFA within 5 days.
01	Yes	Approval. The beneficiary has never used Part A services. This is an initial admission for this beneficiary.
02	Yes	Approval. Some prior Part A utilization. Last recorded date of discharge is within 60 days of this date of admission and there are no query-related open items on HCFA's records.
03	No	Acknowledgment. HCFA has processed a query code 2 (cancel) and deleted the admission.
09	No	Acknowledgment. This acknowledges receipt of the query. However, a definitive reply cannot be furnished at this time due to adjustment, cross-referencing, or clerical correction actions currently being taken. If a definitive reply is not received within 60 days, forward a letter including the HICN and name of the beneficiary to: Health Care Financing Administration Correspondence Services Branch, OMB 6325 Security Blvd. Baltimore, MD 21207

Disposition Code	Admission Established	Condition
		If a final reply is not received from HCFA within 45 additional days, refer the case to the RO under the critical case procedure in §3538.1. NOTE: The 75 day time limit for a definitive reply by HCFA does not apply to disposition code 09.
22	Yes	Qualified Approval. Admission date precedes date of entitlement to Part A. A trailer code of T and/or P may be appended. The T trailer gives the date of termination. A P trailer gives the dates of an earlier period of entitlement if the date of admission in the query is before the earlier period of entitlement.
23	Yes	Qualified Approval. Previously reported deceased. The admission date is in, or prior to, the month of death.
25	Yes	Qualified Approval. An admission date was received for this beneficiary prior to the current query, and the date of the current admission is 60 days or more after the last discharge date from a posted bill. According to HCFA's records, the current admission starts a new benefit period. The remaining Part A benefits given in the code 25 are always as of the last bill posted. There may be an earlier or later stay(s) for which no bill has been accepted. Make any needed development of nonrenewable days (lifetime reserve or psychiatric) remaining and determine if any noncovered stays continue a benefit period through the current admission.
26	Yes	Qualified Approval.—Alien nonpayment provision may apply. No payment may be made until HCFA reports in writing that payment is not barred. (See §3716 for explanation of this provision and development of these cases.)

Disposition Code	Admission Established	
27	Yes	Qualified Approval. The admission date on the current query precedes the last recorded discharge date or the date on the last processed interim bill shown on HCFA's records. This reply shows the utilization remaining as of the date of last billing action. Determine if your admission falls within the current benefit period, a prior benefit period, or links two benefit periods. This may require a code 6 query (§3507.3) to obtain a Bill Retrieval Listing (Bill History). Apply the utilization remaining within the applicable benefit period to your current admission.
28	Yes	Qualified Approval. The beneficiary appears to be in an initial spell of illness, first admission was to a psychiatric hospital, and a reduction in days was applied. Investigate the 150 day preentitlement period if the current admission is to a psychiatric hospital or to a general hospital primarily for the treatment or diagnosis of mental illness and the beneficiary is still in his first spell of illness. Code 28 does not apply to SNFs. (See §§ 3510.3 and 3104.)
38	No	Rejected. An admission query has been received which: 1. Contains the HICN and surname of a deceased beneficiary whose record has been placed on the inactive file, i.e., the beneficiary has been deceased more than 1 year without any query or billing activity. The query, however, failed to match on all personal characteristics, i.e., initial and date of birth. OR

Disposition Code	Open Item Established	
38(Cont.)		2. Perfectly matched an inactive record of a deceased beneficiary.

Information furnished in this reply includes:

- o HICN
- o Surname (6 positions)
- o Initials
- o Date of birth (month and year)
- o Date of death (month, day, and year)
- o Sex code (1=male; 2=female)
- o Admission date (month, day, and year) as shown in the admission query
- o Provider number as shown in the admission query.

Review the data in your admission query and, if the admission was for a different beneficiary, develop the appropriate data and resubmit a type 1 query. If the original admission was for the beneficiary identified in the reply and the date of death is correct on the HI record, use the data to submit a corrected query. A code 09 reply will be generated immediately and within 30 days a definitive reply will follow once the inactive record has been retrieved.

If the admission was for the beneficiary identified in this reply and the date of death is incorrect, refer the case to the SSO via form HCFA-1980, Carrier or Intermediary Request for SSA Assistance, (or a locally agreed upon form).

Include the following information:

Disposition Code	Admission Established	
38(Cont.)		o HICN; o Name and full address on the claim form; o Part A disposition code 38; o Date of death as shown on the admission reply; o Date of death, (if any) indicated on billing form; o A statement that the case is forwarded for date of death investigation and/or correction; o Signature and title of person completing the request form; o Your return address; and o Copies of any documentation pertaining to the case at your disposal. The SSO investigates the date of death issue and when necessary, initiates corrective action. The SSO notifies you of any action taken by HCFA by completing and returning part II of form HCFA-1980 or the reply portion of a locally agreed upon form. (If the SSO reply is delayed, use regional guidelines for followups. If there is no reply after 90 days, refer the case to the RO.)

Disposition Code	Admission Established	
39		(See page 112.1, disposition codes for automatic notices.)
41	Yes	Qualified Approval. Query-related benefit including 60-day lifetime reserve for inpatient hospital stays is exhausted. No benefits are available unless this stay begins a new spell of illness or home health service are involved.
42	No	Disallowed. No entitlement to Part A, but entitled to Part B. Submit a Part B bill.
43	Yes	Qualified Approval. The beneficiary was previously reported deceased on a billing form or similar document and the date of this admission is after the month of death indicated on the HI Master Record. The date of death is indicated in a six-digit month-day-year format after trailer record Code "U" (see §3512.8). If the actual day is not available "OO" appears in the day field (e.g., 010085). When you receive a disposition code 43: Verify whether the patient is the same individual previously reported deceased, and check the accuracy of the HICN and service dates. For example: review the original bill for consistency of identification data (name, sex, date of birth); check the beneficiary's full name, address, sex, and HICN (including suffix) against the CAST; compare the admission dates with those contained in the query. If the review shows the date of death is correct, send a code 2 query to delete the admission.

Disposition Code	Admission Established	
43(Cont.)		If the review shows the date of death must be investigated by HCFA, inform the provider that bill processing will be delayed pending HCFA's resolution of the date of death discrepancy. (You need only insure that the correct data has been queried. No additional date of death investigation is necessary before referring the case to the SSO.)

To have the date of death verified or corrected on HCFA's records, refer the case to the SSO via Form HCFA-1980 (Carrier or Intermediary Request for Assistance, see §3706) or other locally agreed upon form.

Include the following information:

- o HICN;
- o Name and full address on the claim form;
- o Part A dispositon code (43) (show 52II for RTIs);
- o Date of death (if any) indicated on bill;
- o Provider's name;
- o A statement that the case is forwarded for date of death investigation and/or correction;
- o Signature and title of person completing Form HCFA-1980;
- o Your return address; and
- o Copies of any documentation pertaining to the case that is at your immediate disposal.

The SSO investigates the date of death issue, and where necesssary, initiates corrective action. The SSO notifies you of the action taken by completing and returning part II of Form HCFA-1980 or the reply portion of a locally agreed upon form. (If the SSO reply is delayed, use regional guidelines for followups. However, if there is no reply after 90 days, refer the case to the RO.)

Disposition Code	Admission Established	
43(Cont.)		Upon receipt of the SSO findings process the bill accordingly. Keep the SSO reply on hand until the bill is processed. If the bill becomes a 5211 RTI (see §3828.1), use the SSO reply for immediate resolution. Do not refer date of death discrepancies involving railroad beneficiaries to the SSO. Instead, send completed HCFA-1980s to: Railroad Retirement Board Health Insurance Operations 844 Rush St. Chicago, Il 60611 The RRB will investigate, initiate corrective action, and provide notification in the same manner as the SSO.

Disposition Code	Admission Established	
44	No	Rejected.--Entitlement to Part A benefits has terminated and the date of admission is subsequent to that date. Reasons for termination: o The beneficiary is no longer considered disabled; o Twelve months have passed since renal transplant; o Twelve months have passed since course of dialysis was terminated; o Withdrawal (by desire) of premium paying beneficiary; o Nonpayment of Part A premium for a premium paying beneficiary; o Entitlement as a Part A qualified uninsured beneficiary is terminated because Part B entitlement terminated; or o An insured beneficiary is no longer entitled to monthly benefits.
46	Yes	Qualified Approval.--A reply with code 46 means that the individual had a prior admission to a Christian Science SNF and the current admission is to a regular SNF, or he had a prior admission to a regular SNF and the current admission is to a Christian Science SNF, and both admissions may be in the same spell of illness. After an individual has received covered extended care services in a Christian Science sanatorium, he cannot, during the same spell of illness, receive covered extended care services in a regular SNF. Also, after he has received covered extended care services in a regular SNF, he cannot, during the same spell of illness, receive covered extended care services in a Christian Science sanatorium.

Disposition Code	Admission Established	
		Upon receipt of a code 46 reply, investigate any prior stay SNF and determine whether the current admission continues the benefit period or whether a new benefit period has begun. If a new benefit period has begun or the prior SNF stay was noncovered, pay for the current stay. If the current stay is noncovered, submit a no-payment bill. (See §3610.)
47	No	Reply to Duplicate Admission Query. HCFA replied based upon a prior query. There is only one admission on HCFA's records. Treat as any other approval. An "L" trailer code containing the original disposition code is furnished.
48	No	Rejection. Not entitled to Part A or Part B benefits.
49	No	Rejection. HCFA cannot delete the admission because there is no matching admission on the file and an interim bill has been posted. The data submitted are shown on the reply.
50	No	Rejection. The name, HICN, and personal characteristics furnished in the query match the non-HI records. However, HCFA determined that the individual has not filed for HI entitlement. This is authorization to deny the claim. Referral of the claim to the SSO is not required, but the denial must refer the individual to the local SSO if the individual disagrees with the denial.
51	No	Rejection. The name, HICN, and personal characteristics furnished in the query match the non-HI records. However, HCFA determined the individual is not eligible for HI benefits. This applies also to individuals receiving SSI benefits, but under

Disposition Code	Admission Established	Explanation
		the age of 65 and not eligible for HI benefits. Since most of these cases are disallowed for failure to establish proof of age or residence requirements, the individual may become eligible at a later date.
52	No	Rejection. The claim number furnished is not assigned to the surname furnished in the query. This code indicates the surname and/or HICN given in the query is incorrect or, in some cases, that the HI master record is incorrect. Check the surname and number against the claim. If they agree, check the CAST/CASF (§3505) for another spelling of the surname or a difference in the claim number. If this does not resolve the issue, follow §3504. Requery when you obtain the correct name and HICN.

Dispostion Code	Admission Established	Explanation
54	No	Reject. The surname, HICN, and initial or date of birth furnished in the query match HCFA's non-HI records, but HCFA is unable to resolve the exception item within a 75 day time limit. Initiate the following actions: o Seek the correct HICN on the Carrier Alphabetic State File (CASF microfiche). (See §§3505ff.) An appreciable number of Code 54s involve individuals entitled under another claim number. o Ascertain whether another claim for the same individual has been cleared on receipt of corrected claim data. o Review the source document with the data input to the automatic claims processing system for errors. o Review the claims history file, if maintained and readily accessible. o If the claim number is obtained, requery as appropriate. If the data cannot be resolved deny the claim. Referral of the claim to the SSO is not required but the denial must refer the individual to the local SSO if the individual disagrees with the denial.

Disposition Code	Admission Established	
57	No	Individual Is Eligible for HI Benefits But Has Not Filed a Claim Refer to SSO. The name, HICN, and personal characteristics furnished in the query match HCFA's non-HI records and indicate that the individual is eligible for HI benefits but has not filed a claim. Check the name against the Carrier Alphabetic State File (CASF) microfiche before proceeding with regional instructions for referring the claim to the parallel SSO for resolution. The parallel SSO will undertake the necessary development and advise you when to requery.

NOTE: "Status" indicated in the following Disposition Codes is related to replies to queries transmitted under Query Code "5."

Disposition Code	Admission Established	
60	No	Status. Investigation action is being taken to check the name and/or HICN. If HCFA is unble to locate the record or reconcile the name differences, a reply with a disposition code "65" will be sent within 75 days. Requery, if and when, corrected or additional data is obtained.
61	No	Status. No Prior Part A utilization.
62	No	Status. Eligibility has been reduced by prior utilization.
63	No	Status. Previously reported deceased on a billing form.
64	No	Status.—Entitlement to Part A benefits has terminated and the date of admission is subsequent to that date.

Disposition Code	Admission Established	
65	No	Status.--Unable to identify the beneficiary under HICN furnished in the query. Recheck the HICN and name. If necessary, contact the SSO. (A previous reply was sent under code "60.") Requery if, and when, corrected or additional data is available.
66	No	Status.--No entitlement to Part A, but entitled to Part B.
67	No	Status.--No entitlement to Part A or Part B.
68	No	Status.--The beneficiary appears to be in his initial spell of illness, the first admission was to a psychiatric hospital, and a reduction in days was applied. This code does not apply to SNFs or HHAs.
69	No	Acknowledgment.--This acknowledges receipt of the query. However, a definitive reply cannot be furnished due to adjustment, cross-referencing, or clerical correction actions being taken. If a definitive reply is not received within 60 days, forward a letter, including the HICN and name of the beneficiary to: Health Care Financing Administration Correspondence Services Branch, OMB 6325 Security Blvd. Baltimore, MD 21207 The 75 day time frame for a definitive reply from HCFA does not apply to disposition code 69.

Disposition Code	Admission Established	
90	No	Acknowledgment.--The name, HICN, and personal characteristics furnished in the query matched a non-HI record. The individual has filed a claim, but the entitlement is not presently reflected in the HI Master. Development has been initiated to resolve the situation. If the HI record can be established within the 75 day time limit, an appropriate response will be provided. If the 75 day time limit expires, a code 54 is generated. Requery if and when additional or corrected data is available before the 75 days expire.

Disposition Codes for Automatic Notices

NOTE: Part A automatic notices consist of the following disposition codes:

39	Notice of Chronic Renal Disease.--This indicates the beneficiary has ESRD. The specific reason for coverage is appended in an S trailer. The notice is sent to all intermediaries who have current admissions (open) on the HI Master for this individual.
78	A Change in Part A Entitlement.--This notice is sent to all intermediaries who have current admissions (open) on the HI Master for this person. The entitlement of the beneficiary to Part A benefits has changed (i.e., entitlement is terminated or is reinstated after termination). The notice alerts you to a possible change in utilization which may be required for billings occurring during a period of termination or reinstatement. Where entitlement terminated, the notice gives the month and year. Payment cannot be made for services provided after the last day of the month indicated. Where entitlement is reinstated, the termination date field is blank.

Disposition Code	Admission Established	
		Review all pertinent bills in process or submitted to HCFA for processing, and notify the appropriate provider(s) of the notice. If coverage was denied for the period of nonentitlement and is now permitted because of reinstatement, new bills may be required. If the bills have not been submitted to HCFA submit them. If the bills have been submitted to HCFA and accepted, debit/credit adjustments may be required to show the data changed. (See disposition code 44 for reasons for termination.)
79		Enrollment in or Disenrollment from an HMO, or Change in HMO Option.--This notice is given when the beneficiary enrolls, disenrolls from, or his option in an HMO is changed. Annotate your records and process claims in accordance with the information in the notice. See §§3512.8 and 3512.9 for information about queries regarding HMO members. The data content given in an R trailer (see §3535.1) is also given.

3512.8 Explanation of Part A Trailer Codes.--The trailer code is a 1-position alpha code which identifies the contents of the following data. HCFA may include one or more trailers in a reply. A trailer supplies information not contained in the main body of the reply. Descriptions of the Part A trailer codes follow: (See Addendum A, §7, for ARS formats.)

Trailer Code	Data Furnished
B	Corrected Surname.--This field is used only if the name in the query is not consistent with HCFA's records. If your investigation indicates HCFA has an incorrect name, process the claim and supply all pertinent documentation including the data contained in the B trailer as well as the correct data via a HCFA-1980 to the SSO for correction.
NOTE:	The B record code will not be generated if there is only a one position error in other than the first letter of the first six positions of the surname.

Trailer Code	Data Furnished
C	Corrected HICN.--The corrected number is included only if the HICN submitted is incorrect.
G	Lifetime Reserve Benefit Days.--This trailer is furnished when the number of lifetime reserve benefit days remaining are fewer than 60 as of the last recorded date of discharge or interim bill. It is given only when one or more lifetime reserve days have been used.
K	Cross-Referred HICN.--HCFA transmits this information whenever a beneficiary's HICN is cross-referred to another. Process the beneficiary's current claim(s) using the new number, and cross-refer any beneficiary files you maintain. On subsequent claims use the claim number given on the K trailer.
L	Original Disposition Code.—This trailer is furnished with a disposition code 47 reply (which is a reply to a duplicate admission). The purpose of the L trailer is to give the disposition code that was furnished in the original response.
M	State Buy-In.—HCFA transmits this information whenever the HI records indicate current involvement with State buy-in. This individual

Trailer Code		Data Furnished
(S Cont.)	3	The individual has, or had, ESRD but is currently covered by the disability provision. (See §3687 for required development.)
	4	The individual is age 65 or over and is covered by Medicare as an uninsured or old-age or survivor insured, and has ESRD.
	8	The individual has ESRD and is covered under the Part A premium payment provision.
	9	The individual is covered under the Part A premium payment provision.

NOTE 1: Five extra positions are added to show the reimbursement method and effective date for ESRD beneficiaries receiving home dialysis. When this applies, we follow the regular trailer code with 1 to show that the beneficiary elected Method I, or 2 for Method II. Following the method is the effective date (MMYY) of the election that applies to the service period shown in the query.

NOTE 2: Codes 2, 3, 4, and 8 apply for the reporting of ESRD cases as required by HCFA. Refer to §§3644ff. for procedures concerning the submission of ESRD bills.

All claims for services received by beneficiaries are entitled based upon disability, ESRD, or who are Part A Premium Payers subject to special workload reporting. For workload and financial reporting:

Codes 1 and 3 cover Disability
Code 2 covers ESRD
Codes 8 and 9 cover Part A Premium Payers

T — Termination of Current Period of Part A Entitlement.--This gives the month and year of termination for reasons other than death. It may be transmitted with any approval or qualified approval reply. A T trailer is always transmitted with disposition Code 44 which furnishes the reason for termination.

U — Date of Death.--This gives the month, day and year of death as recorded in the HI Master.

It may be transmitted with any approval or qualified approval reply. It is always transmitted with disposition codes 23, 43, and 63. The description for disposition code 23 includes a previously reported deceased beneficiary where the admission date is prior to the month of death. The description for disposition code 43 furnishes you necessary action in resolving date of death problems. A disposition code 63 is the corresponding status reply. If the actual day is not available, "00" appears in the day field (i.e., 010084).

Trailer Code

Y Other Program Involvement.--This indicates that some other insurance program may be the primary payer. It is possible to receive multiple Y trailers. Their number depends upon the number of Other Program annotations present on the beneficiary's record. In all cases, annotate your records and proceed in accordance with the following instructions. (See §3550, Exhibit 16 for trailer format.)

The Other Program Code indicates the other federal program or other type of insurance that may be the primary payer for claims submitted by/for this beneficiary. Possible codes are:

Code 1.This is furnished when the HI Master indicates that this beneficiary has WC coverage. Check the diagnosis on the claim. If it appears that the services may have been necessitated by an accident, or if it consists of an occupational disease, withhold payment until you determine that the services for which payment is claimed are not covered by WC. Fully develop the issue in accordance with §§3415ff. Contact the State Workers' Compensation Agency (§3599, Exhibit 10) of the beneficiary's State of residence to obtain information about this WC award. If his home State is not the award State, obtain the appropriate address by writing to:

Health Care Financing Administration
Office of Management and Budget, DMOS
P. O. Box 17078
Baltimore, MD 21203

Code 2.This is furnished when HI Master BL indicates that this beneficiary is on the Department of Labor's (DOL) beneficiary rolls. Enter the annotation "BLACK LUNG" on your reply to the notice of admission. Check the diagnosis on the claim. If it appears from the diagnosis or the services performed (see §3415.3 E and F) that all or part of the inpatient services on the claim were attributable to BL disease, deny the claim. (See §3722.4 MISC-15 for denial paragraph.)

NOTE: For the following codes, annotate your records and use them as alerts if you receive improperly completed claims. In addition, annotate your reply to the notice of admission indicating the type of potential other payer involvement. These codes are an indication that Medicare was determined not to be the primary payer on at least one previous claim. In addition, Code A also includes individuals whose SSA record shows the presence of a S2 LAF code.

Code A.Medicare was not primary because the beneficiary was a 'working aged' beneficiary or spouse covered by an EGHP based on a prior claim or the beneficiary's record shows the presence of an S2 LAF code. An S2 LAF code indicates the beneficiary is in suspended benefit payment status because of earned income and could be a potential "working aged." (See §3686 for development.)

Trailer Code	Data Furnished
	Code B. Medicare was not primary because this beneficiary was determined to be an ESRD beneficiary in the 12 month coordination period and was covered by an EGHP. (See §§3491ff.) Code C. Medicare has made a conditional payment on a claim until a final resolution (of the claim) is decided. One type of conditional payment is where there is/was a pending liability claim. (See §§3419ff.) Code D. Medicare was not primary because of automobile medical, no-fault, or other liability insurance involvement. (See §§3419ff. and 3489ff.) Code E. Medicare was not primary because of WC. (See §§3407ff.) Code F. Medicare was not primary because the beneficiary was entitled to coverage by the PHS or other Federal agency program. (See §3153.) Code G. Medicare was not primary because the beneficiary was a disabled beneficiary covered by a LGHP. (See SIM 3492.) Code H. Medicare was not primary because of BL coverage. (See §3414.2.) Code I. Medicare was not primary because the beneficiary was involved in the VA program. (See §3153.2.) The effective date contained in this trailer indicates: For codes 1 and 2 the effective (entitlement) date of the applicable program involvement. For codes A, B, C, D, E, F, G, H, and I the earliest date on record indicating actual (from prior claim) or potential (from SSA LAF code) Medicare coverage as secondary. See §3686 for development instructions upon receipt of any of these Y trailer codes.
Z	Hospice Involvement.—This trailer is given when the beneficiary's record indicates one or more periods of Hospice involvement. Only the applicable period of Hospice is included. Once a beneficiary elects Hospice care, all care for the terminal condition must be under the auspices of the Hospice. Contact the servicing intermediary identified in the trailer (see §3550, Exhibit 17) to determine if the claim is for services related to the Hospice care. If it is, deny payment. (See §§3100ff.) If the claim is not for services related to the Hospice care make payment if they are otherwise covered. See §3550, Exhibit 14 for the record format of the Z trailer.

3512.9 Explanation of the HMO Identification Code.--When a beneficiary has HMO involvement, explanatory information, including an identification code, is furnished in an R trailer appended to the reply to the admission or start of care notice. (See §3512.8.) The code is a five-position alpha numeric which identifies each HMO within a State. The first position is always an H. The second and third positions give the applicable State Code. The fourth and fifth positions give the serial number (01 through 99) assigned to the particular HMO within the State.

3513. HCFA REPLY TO HOSPICE QUERY

HCFA responds to each Hospice query received. If no response is received within 7 working days (not including holidays, Saturdays or Sundays) retransmit the query using the same information. The HCFA response indicates the results of your query after it has been processed to the beneficiary record.

3513.1 Types of Replies in Response to Hospice Queries.—HCFA responds to the Hospice query using one of the following replies:

Edit Reject - Type 4
If HCFA cannot process the query because it failed the initial EDP edits, a Type 4 reply is returned. The reply contains an indication of which data element was in error. (See §3550, Exhibit 13 for record format.)

Acknowledgement - Type 3
If the query passes the initial EDP edits, but HCFA is unable to process the query to a beneficiary record, a Type 3 reply is returned. (See §3550, Exhibit 13.) The reply contains one of the following disposition codes:

Disposition Code	Meaning
00	See §3512.7, disposition code 00.
09	See §3512.7, disposition code 09.

Definitive - Type 5
A definitive reply is returned by HCFA when the record is processed against a beneficiary record, or if no matching beneficiary record can be located. The reply contains an indication of the action taken by HCFA. In addition, a Z (Hospice) trailer is appended (except codes 38 and 52). It shows how the applicable Hospice period appears on the beneficiary record. (See §3550, Exhibit 13.) The reply contains one of the following codes:

Disposition Code	Meaning
10	A Hospice query has been received by HCFA and the applicable start, termination, change or void was accepted and posted to the beneficiary record. The attached Z (Hospice) trailer shows

Disposition Code	Meaning
	the applicable Hospice period after your query was applied. A Z trailer containing all blanks, returned on a response to a void query, indicates that the query voided the only period of Hospice on the beneficiary record.
11	A Hospice query has been received by HCFA and the applicable start, termination, change or void was not accepted because: o There is a Hospice period already in progress and your start date falls within the applicable 90 or 30 day period; o The start date submitted on a termination action does not match a start date on the beneficiary record; o You are attempting to void (cancel) a period of Hospice but one or both of the start and/or termination dates do not match a period of Hospice on the beneficiary record; o You are attempting to change the intermediary and/or Hospice number in an existing period of Hospice but the appropriate period has already been changed (only one change per period is allowed); o You are attempting to add a new period of Hospice but the beneficiary has already used the three allowable periods; or o You are attempting to delete a period of Hospice for which Hospice bills have been received. The attached Z (Hospice) trailer shows the applicable Hospice period as it appears on the beneficiary record.
38	See §3512.7, disposition code 38.
42	See §3512.7, disposition code 42.
43	See §3512.7, disposition code 43.
44	See §3512.7, disposition code 44.
48	See §3512.7, disposition code 48.
52	See §3512.7, disposition code 52.

3518. INTERMEDIARY ACTION ON HCFA REPLIES

Examine the HCFA reply, and on the basis of the disposition code, date of last discharge or last action, compute the remaining eligibility. Take into consideration any bills paid but not recorded by HCFA.

Determine the days available, the applicable coinsurance and deductible rates, and the amount of the deductible, if any, to be met as of the date of admission on the current bill. In order to do this, review the query reply and check your records for any admissions where HCFA has not posted a bill. (See §3512.7.) Use any unreported hospital stays that come to your attention.

If the bill submitted by the provider is incorrect according to your calculations, correct the bill and process accordingly. Apply the guarantee of payment provision, if the provider justifies payment under that rule. (See §3714.)

3520. VERIFICATION OF PRIOR INPATIENT STAY

A noncovered or unreported stay in Item 33 of the HCFA-1450 may affect the patient's eligibility and deductible and/or coinsurance liabilities. Inpatient benefits, except for lifetime reserve days, are related to a spell of illness. Once begun, a spell of illness cannot end until the individual has not been an inpatient of a hospital or SNF, for 60 consecutive days, starting with the date of last discharge.

An individual's benefit days are subject to reduction if he was an inpatient in a participating psychiatric hospital on the first day of entitlement and also received inpatient psychiatric services during the 150 days before entitlement in a psychiatric or a general hospital that was participating as of the first day of entitlement. (See §§3104 and 3510.3 for necessary development.)

3520.1 Prior Stay Institution Is a Participating Provider.—The HCFA reply shows the date of last discharge or last covered date reported on an interim bill. If this is consistent with the prior stay allegation on the current admission and other hospital transfer information, (see §3520.3), no further action is required. If it is not, consult your records and where necessary contact the prior stay provider or servicing intermediary to verify the entry and to obtain a claim if appropriate. Providers are to maintain the name and address of a prior stay facility indicated by the beneficiary. Where such contacts are necessary, resolve the issue of potential waiver in accordance with §3520.3.

3520.2 Prior Stay Institution is Not a Participating Provider.—When the HCFA reply shows a date of last discharge that is more than 60 days before the date of the current admission, the current admission usually begins a new spell of illness. Verify prior stay dates only if your records and/or a reply from HCFA indicates that the prior stay may not be valid. There is no need to contact a prior-stay nonparticipating provider where the HCFA reply shows that there are fewer than 60 days between the date of last discharge or the last date billed on a partial bill and the current admission, since the current stay continues the spell of illness.

If no date of last discharge or interim bill date is shown on the HCFA reply, no further development is necessary.

Where the stay was in a hospital outside of the United States, accept the patient's allegation of a prior stay without verification (in the absence of contrary evidence), and assume that a stay of 1 or more days prolonged the spell of illness. (See §3035.)

Where the institution listed in Item 33 is an emergency hospital, see §3035 for spell of illness implications.

From the dates of stay, determine:

- o Whether the stay in the nonparticipating portion prolonged the benefit period, or
- o Whether 60 days elapsed from the date of discharge to the present admission.

3520.3 Verifying 3-Day Prior Stay and the Transfer Requirement for SNF Admission.—The 3-day prior stay hospital admission and discharge dates are entered on the bill by the SNF in Item 33. The names and addresses of any SNFs and the name and address of any hospital in which intervening stays occurred (regardless of length) is maintained by the provider. (Institutional stays in the 60-day period prior to the 3-day hospital stay are shown last.

In counting days for a qualifying 3-day hospital stay, count the day of admission as a day, but not the day of discharge. In counting days for the 30-day transfer requirement, do not include the day of discharge from the prior hospital stay.

Rely on information in Items 15 and 33 of the HCFA-1450 in determining whether the 3-day hospital stay and 30-day transfer requirements are met. When an HMO has jurisdication over processing a bill, return the bill to the provider with instructions to send documentation with the bill sufficient for the HMO to determine if the 3-day hospital stay and 30-day transfer requirements are met.

The SNF completes Item 33 from information given on the hospital transfer form or shown in a written SNF record of a telephone coversation with the transferring hospital.

If the prior-stay hospital is not a participating hospital, psychiatric hospital, or a participating distinct part of a psychiatric hospital, it may satisfy the prior-stay requirements if it meets at least the definition of hospital described in §§3010A, E, and G.

If an intervening stay occurred between the 3-day hospital stay and the current SNF admission, the SNF attaches a detailed explanation to the billing form. You or the HMO, depending upon jurisdiction, determine whether such intervening stay extended the 30-day transfer period.

Part B Queries and Replies

3525. QUERYING FOR PART B SERVICES OF PROVIDERS.

Part B deductibles are recorded from queries. (See §3510J for HCFA's policy of scheduled down-time for Federal holidays relative to Part B query replies.)

Query your first Part B claim for an individual in a calendar year to determine if the individual is eligible and whether or not the Part B cash deductible has been met.

Routinely send a Part B query if the waiver of liability provision is applicable and the beneficiary is not at fault. (This includes cases where the provider is at fault and potential indemnification exists--see §3446.) These queries serve to update the deductible in HCFA's HI Master.

Send a Part B status query if the waiver of liability provisions are considered, but the beneficiary is found to be at fault. Status queries do not update the deductible, but their replies contain eligiblity information needed to send the proper denial notice.

When the time limitation expires before the provider files a claim for payment, the following rules control assessment of the Part B deductibles:

o If the provider was responsible, send a Part B expense query to update the deductible.

o If the beneficiary was responsible, the deductible and coinsurance are not assessed. Instead of a Part B expense query, submit a status query to determine Part B entitlement and the type of denial letter to send.

3525.1 Part B Deductible Has Been Met.--

If a query reply is for other than a status query and indicates that the deductible was met, and the current request does not involve Part B blood, process the claim without querying HCFA.

Exception 1: Subsequent Year.--The above applies only within one calendar year. When HCFA has received queries from other contractors it notifies you of certain events as indicated in §3511. Query HCFA for deductible status in the new calendar year in the same manner as the prior year; i.e., until a HCFA reply is received indicating that the current year's deductible has been met or that the Part B blood deductible has been met.

Exception 2: Deductible Information Not Available In File.--Query for each Part B claim processed.

Exception 3: Purchase of Durable Medical Equipment.--Submit a status Z query to HCFA before making a periodic payment for the purchase of DME, except when medical necessity is being reevaluated. (See §3113.7E.) This query is necessary to insure against overpayments when the updated record indicates benefits terminated due to death, nonpayment of premiums, or withdrawal.

3525.2 Deductible Has Not Been Met.—If your records do not show that the deductible has been met, submit a Part B expense query.

3525.3 First In - First Out.—Before payment can be made for covered expenses in the calendar year, the individual must meet the Part B cash deductible. Apply expenses toward the deductible in the same order that the bills are received, regardless of the dates expenses were incurred. (If bills are received simultaneously, apply the deductible on the basis of the earlier incurred dates. If two or more bills involving one beneficiary are received from different sources on the same day, with the same incurred date, prorate the deductible.)

Total benefits paid must be the same regardless of the order in which the bills are received and paid.

3525.4 Expenses for Radiology and Pathology Services.—Reimbursement for professional services of radiologists and pathologists is made by the carrier under Part B. These expenses do not count as incurred expenses toward the cash deductible on the bill you process; therefore, never include them in the Part B expense query. The reply to the Part A admission query furnishes the effective date of Part B coverage. (See §3512.6B.) Use a Part B status query when necessary.

3525.5 Querying Expenses for Part B Provider Services.—Where Part B inpatient and outpatient SNF services (see §3640.3) are furnished, transmit a Part B query to HCFA reporting billed charges.

3525.6 Reporting Allowable Monthly Charges for Purchase of DME.—Payments may be made for the purchase as well as the rental of DME. Where the equipment costs more than $50, or it is decided that a payment for equipment costing $50 or less will not be made in a lump sum, set up a diary for continuing payment. Until the deductible is met, send a separate Part B query for each monthly allowed charges based upon the rental value of the equipment. (See §3113.7B for the date expenses for DME are incurred.) After the deductible has been met, transmit Z status queries.

3525.7 Retention of Part B Deductible Data by HCFA.—HCFA retains deductible status in its HI Master for a maximum of 5 years and a minimum of 1 year.

3526. PART B QUERY PROCEDURES FOR THE BLOOD DEDUCTIBLE

There is a separate Part B blood deductible equal to the charge for the first three pints of blood furnished an individual in a calendar year. (See §3235.2.) When blood deductible data is shown on a query, it is recorded on the utilization record. The query need not show whether the blood was replaced or unreplaced since the blood deductible is on an incurred basis. Report blood in terms of complete pints, rounded upwards, i.e., if a beneficiary receives 1 1/2 pints of blood, report 2 pints.

3526.1 When to Query.—When a claim involves blood and you have information in file that:

o Both the cash deductible and blood deductible are met, no query is necessary.

o The cash deductible is met but the blood deductible is not met; your query should show in the sex/blood field pints of blood furnished up to a maximum of three.

o The cash deductible is not met and the blood deductible is met; your query should show as reasonable charges total Part B expenses including covered charges for blood. Expenses for which Medicare reimbursement is not due because of the blood deductible cannot be applied toward the annual cash deductible.

o Neither the cash deductible nor the blood deductible is met; your query should show as reasonable charges all covered expenses, basing the computation of noncovered expenses for blood on the deductible pints remaining as shown on the last query response shown. Show the pints of blood furnished, up to a maximum of three, in the sex/blood field.

If reasonable charges for blood included in the query prove incorrect based upon HCFA's reply, send a type A or I reply, as appropriate, to correct the record.

EXAMPLE: Four pints of blood were furnished at $10 per pint = $40, and $10 for blood administration. Your record for the beneficiary shows none of the cash deductible is met and one pint of the blood deductible is met. Send a Part B query showing reasonable charges of $30 ($20 for blood and $10 for administration) and three pints of blood furnished.

If the reply shows that two pints of the blood deductible remain to be met, no requery is necessary. If the reply shows that one pint remains to be met, submit a type I query showing $10. This increases the money amount in the cash deductible record to the correct amount of $40.

3527. DATA FURNISHED TO HCFA IN THE PART B QUERY

A. Intermediary Number.—Enter your number on each request so that HCFA knows where to send the reply. Errors in furnishing this information result in the request not being processed or in routing the reply to the wrong intermediary. If you have both an A and B intermediary number, use the A intermediary number when processing Part B queries for "provider" claims (outpatient claims, for example).

B. Intermediary Control Number.—This number is a processing or identification number you assign. It may contain up to 10 alphanumeric characters.

Assign a control number to each query to identify the query (except it is not necessary to assign one to a Z query).

Each new query for an individual must have a different control number, except when it is a followup. When you followup because HCFA has not responded, send an exact duplicate of the initial query using the same intermediary control number used in the initial query. When retransmitting a previously rejected query, however, you may use the same or a different control number. By following this procedure, you enable HCFA to prevent duplicate posting of the same bill. For a period of 75 days HCFA maintains sufficient query identification data on the beneficiary's record to enable detection of duplicate queries. The query identification data includes the control number and is maintained for accepted Part B queries only.

Since identical control numbers are HCFA's only method of detecting duplicate queries for outpatient services (which may represent duplicate bills or potential duplicate payments), exercise control to insure: Your responsible personnel are fully trained in the recognition and handling of duplicate query responses; bills are not routinely requeried beyond the 75-day HCFA control number retention period and that control numbers are not changed to negate HCFA's duplicate detection screens

If HCFA determines that the control number in the query matches the control number of a previous query, the expenses are not posted. HCFA transmits a reply containing disposition code 03, 04, 07, 08, 23, or 28, as applicable. This indicates the reply is a duplicate of a previous reply that was transmitted with a disposition code 01, 02, 05, 06, 21, or 26.

When sending an A-coded query (to adjust or cancel), use a different intermediary control number than the one used in the I-coded query that is being canceled or adjusted. When an A-coded query generates a reply with disposition code 03, 04, 07, 08, or 28, it indicates that the A query contained the same intermediary control number as a previously submitted I query and that the Medicare Bureau has not posted the cancellation/adjustment. Retransmit the A-coded query using a different intermediary control number.

When you transmit an I query and the Medicare Bureau rejects it with a disposition code 23, it indicates the I query contained the same intermediary control number as an earlier A query. The individual's record has not been updated and you should retransmit the I query using a different intermediary control number.

When you transmit a query which does not contain an intermediary control number, the Medicare Bureau transmits a type 4 "reject" reply. The reason for the rejection is indicated by the inclusion of the intermediary control number trailer record code "A," preceding the word "OMITTED." An asterisk is shown at the end of the field, the usual procedure to indicate that this is the field that was incorrect in the query.

C. Explanation of Query Code.--This tells the EDP system what type of action to take as a result of the query. The Part B query codes, A through D and G through Z, are listed below with an explanation of when each is used.

Establish controls to assure that initial queries are not inadvertently sent twice, since this could result in double processing and incorrect updating of the deductible and/or noninpatient psychiatric expense amounts. Each Part B query code, except Z, has a companion code to be used for sending a second request. Second requests may be made if no reply has been received after 7 days (not including Saturdays, Sundays, and legal Federal holidays).

If you follow these instructions, you will rarely, if ever, receive duplicate replies. However, if second requests are sent prematurely, it is quite possible that two replies will be received.

When you send a second request on a Part B query, establish a control to assure that only one reply is received for the item. If two replies are received and the disposition code of one of the replies does not indicate that the reply is a duplicate of a previous reply, cancel the followup query by sending a message using query code A. Otherwise the Medicare Bureau processes the data twice and incorrectly updates the deductible status for an individual.

Use Query Code:	To Followup on Prior Query Code:
B	A or B
D	C or D
H	G or H
J	I or J
Z	Z

NOTE: Query codes A, B, C, and D are adjustment query codes. None of these coded queries should be sent until a reply has been received indicating that the Medicare Bureau has recorded the query to which the adjustment is directed. Also, it is not necessary to cancel a query if the Medicare Bureau has rejected it--see disposition codes in § 3535.

Query Code	Explanation
A	Void or Credit Query. When a previously sent query is to be canceled, whether or not it is replaced, cancel it by retransmitting the prior query data using an A or B query code (and a new intermediary control number). When the canceled query is to be replaced, transmit the corrected query using an I or J query code. It is also permissible to use an A- or B-coded query to reduce the money amount. Retransmit the prior query showing the amount by which the previously reported expenses are to be reduced.

To increase the money amount, it is also permissible to use a new I- or J-coded query to transmit the difference between the amount in the previous query and the larger, correct amount.

Use query code B to retransmit a query coded A when no response has been received.

C Void or Credit Query - Termination or Prior Period of Entitlement Involved. Use this code to cancel a query sent with query code G or H. Retransmit the earlier query using a C (D) query code and a new intermediary number. It is also permissible to use a C- or D-coded query to reduce the money amount. Retransmit the earlier query showing the amount by which the previously reported expenses are to be reduced.

The intermediary should also use a C (or D) query code to cancel medical expenses that were posted to the HCFA record in error; i.e., where HCFA sent an approval reply to a query and later sends a notice of termination, nonentitlement, or special intermediary involvement, or that the beneficiary is in a lock-in status in a Health Maintenance Organization (HMO). When such medical expenses are removed from the HCFA record in reply to a C or D query, HCFA sends a disposition code 21 or 23 reply in which the entitlement field is blank. (See § 3535.) Use query code D to retransmit a query coded C when no response has been received.

G Routine Claim Query - Termination Involved. Use this code to retransmit expenses that were previously transmitted in an I or J query, for a period during which the beneficiary was entitled to Part B, but only after HCFA has furnished a reply to a previous I or J query showing any of the following disposition codes:

40, 44, 45, 48 (see § 3535 for explanation of codes).

The use of a G (or H) query is positive indication that the intermediary has reviewed and considered the HMO lock-in, termination, or prior period of entitlement.

Use a query code H to retransmit a query code G when no response has been received.

I Routine Part B Query. Code I indicates a claim has been received and furnishes amounts of incurred reasonable charges and blood furnished. Use these codes to request status when a claim is pending. HCFA updates deductible and psychiatric care totals on the basis of this type of query. Use a query code J to retransmit a query coded I when no response has been received.

Z Part B Entitlement Status Query. Use the Z query code to request status. It is used when the intermediary needs information from HCFA's records to process correspondence, to assist in resolving questionable items prior to submitting a routine claims inquiry, or to make periodic payments for the purchase of durable medical equipment (§ 3525.2, Exception 3). A code Z query must have the year for which status is requested in the "Date First Incurred" field. The month may be an actual month of expense. The subsequent money fields must be zero fill. HCFA does not update on the basis of this type of query; however, an "approval" reply (see disposition codes in § 3535) to a Z query will include deductible information.

Services of radiologists and pathologists to hospital inpatients are covered under Part B with no deductible or coinsurance. When the intermediary's file indicates the individual has Part B coverage and the intermediary has been placed on an automatic notification listing in accordance with § 3511, no Part B query is necessary before processing a claim involving these services. However, when these conditions are not met, a Z status query must be submitted. (See § 3525.5.)

A code Z query may be used to follow up on a prior code Z query.

NOTE: In processing replies to I, J, and Z queries, intermediaries are cautioned to verify that the dates of expense do not fall outside a period of coverage. To facilitate this verification an I trailer will be furnished in the query reply if HCFA records indicate that a beneficiary has had a prior period of coverage.

D. Health Insurance Claim Number.--See § 3504 for discussion of this item.

E. Name.--See § 3507.4 for discussion of this item.

F. Sex and Blood Deductible.--The sex code in the Part B query includes pints of blood furnished, if any, as well as sex. (See

§ 3526.) Take the sex from the claims form, e.g., the SSA-1483. Select the sex/blood code from this chart:

Pints of Blood Furnished:		0	1	2	3
SEX	Male	1	C	E	G
	Female	2	L	N	P

C. Incurred Expenses.—The amount of the "reasonable charge" for Part B services is reported on the Part B query. Expenses incurred in the last three months of a calendar year which apply toward the Part B cash deductible for that year also apply toward the Part B deductible for the following year. (See § 3525.1.) SSA maintains a record of this; therefore, when querying SSA, the intermediary reports the "First Incurred Dates" and "Reasonable Charges" during the first nine months, and those during the last three months separately.

3531. SSA RECORD MAINTENANCE AND REPLIES

SSA maintains an up-to-date record of each beneficiary's status using expenses reported in queries received from the intermediary to update the deductible amount on the SSA tape record. The record includes separate totals for outpatient psychiatric and other medical expenses. SSA also maintains the amount of any carryover deductible. Upon receipt of each new inquiry, SSA notifies the current inquirer of the amount of the deductible that still has not been satisfied. Where more than one inquiry for the same individual is processed on the same day, SSA sorts the queries for that person in sequence alphabetically by query codes and then by dates of incurred expenses.

SSA's reply gives the status prior to receipt of the current inquiry and enables the intermediary to determine whether he can make a payment EXCEPTION: Replies containing disposition code "21" furnish status after adjustments have been made based on the current inquiry. (See query codes A and C, § 3527C.)

SSA will not furnish a deductible status in reply to an intermediary when:

A. The reported incurred date precedes the month of the beneficiary's entitlement to Part B, or

B. His entitlement to Part B had terminated for a reason other than death.

C. The beneficiary is in an HMO lock-in status.

There is an exception to A, B, and C. SSA will reply when the intermediary uses a query code of G or H indicating that he is aware of the prior period of entitlement, termination, or the HMO lock-in, but is reporting expenses incurred prior to that. A code 41 or 44 reply will be received for a G query if the first date is not during a period of Part B entitlement. A code 40 reply will be received for a G query if the first date of expense falls within a lock-in period.

3532. INTERRUPTED PERIOD OF ENTITLEMENT UNDER PART B

There are individuals currently enrolled under supplementary medical insurance who have had an interrupted period of entitlement. For example, a beneficiary's coverage was terminated and he enrolled during a general enrollment period, or he was re-enrolled by a State under a State buy-in agreement.

SSA takes these actions concerning terminations:

1. Disposition Code 41.--SSA transmits a disposition code 41 reject reply in response to an A, B, I, or J query which contains a date of first expense prior to current entitlement date and SSA has no indication of a termination date nor a prior period of entitlement. (See § 3535 for the alternate meaning of code 41 when it is received in reply to a G or H query.)

2. Code 44 With F Trailer.--When an A, B, I, or J query is received for a beneficiary whose latest period of entitlement has terminated, SSA sents a reject reply with disposition code 44. The code 44 reply format is the same as the disposition code 41 format except F trailer code is added to furnish the date of termination. (See § 3535 for the alternate meaning of code 44 when it is received in reply to a G or H query.)

3. Code 48 With I Trailer.--When the intermediary's query contains a date of first expense that is prior to the current entitlement date and the SSA record indicates there was a prior period of entitlement , SSA sends a reject reply using disposition code 48. The code 48 reply format is the same as the code 41 format except an I trailer code is added. The field following this trailer code will show the entitlement date and termination date of the earlier period of coverage; e.g., I.0766 1266.

If the intermediary determines that some or all expenses fall within an entitlement period, he should send a query coded G, including only expenses incurred during a period that the individual was entitled. The intermediary is cautioned to compute payment on the basis only of expenses incurred during a period of titlement. Query code C (with a D followup) should be used to cancel or adjust expenses reported in a G or H-coded query.

3534. CROSS REFERRING HEALTH INSURANCE CLAIM NUMBERS

When a beneficiary's entitlement to Medicare benefits has been transferred from one health insurance claim number to another, SSA will cross-refer the old number to the new number. Where there has been utilization of benefits under each number, this data will be combined under the new claim number. Through this combination of data, SSA may find that an improper deductible reply was given for this beneficiary which has resulted in a potential overpayment/underpayment. If this is the case, SSA transmits this information by form letter SSA-L495 (§ 3550, exhibit 6) to either the intermediary who received the improper deductible reply or to the intermediary receiving the latest query reply indicating deductible to be satisfied. Take the appropriate steps to either refund the underpayment or collect the overpayment. (Any requests for assistance to SSA regarding form letter SSA-L495 should be accompanied by a copy of this letter.)

In developing the overpayment and underpayment information, HCFA adjusts the latest query reply to show the deductible to be met, not necessarily the query reply which gave the wrong deductible status. This is done to simplify adjustment actions. For example, if a query reply prepared in 1979 is found to contain an erroneous deductible status, HCFA may adjust the reply to a query submitted in 1984. This could save the time and effort required to obtain the original claim information from the Federal Archives and Records Center.

3535. DATA FURNISHED IN THE PART B REPLY.

There are four reply codes representing different types of Part B reply messages.

Type 3--is an acknowledgment. HCFA is either unable to locate the beneficiary's record on the basis of the HI claim number and/or name furnished in the query, or is processing an adjustment to the beneficiary's record which may affect the current utilization data. HCFA is investigating and will send a type 6 reply when the investigation is completed.

Type 4--is a reply indicating that a query has been rejected due to edit errors.

Type 6--is a routine reply to a Part B query

Type 7--is an automatic notification of a change in beneficiary status. This type of message has a "reply" code; however, it is generated automatically by a certain event; not in response to a query. (See § 3511.)

All Part B replies contain a reply code, an intermediary number, the HI claim number, and (except type 4), a disposition code.

A. Intermediary Number.-- This is a 5-digit number assigned by HCFA.

B. HI Claim Number.-- This is the beneficiary's claim number which may vary from 7 to 12 positions. The field is 12 position; any unused positions following the seventh position are blank.

C. Disposition Code.-- This is a 2-digit number that describes a condition on the HCFA's utilization records for the individual:

Disposition Code — CONDITION

00 HCFA acknowledges receipt of the query, but information is delayed. The name and/or HI claim number does match a record on the HI master file. HCFA will send a definitive reply within 75 days if the individual is identified, or a code 52 if not.

If you determine that the original query contained an incorrect HI claim number or surname, requery immediately using the corrected data and your control number of the original query.

If a definitive reply or disposition code 90 reply is not received within 30 days, requery using the same information submitted in the original. Do not refer 00 replies to the Social Security Office.

Approximately 55 percent of these cases are resolved by HCFA within 5 days.

NOTE: When you receive a query response containing disposition codes 01, 02, 03, 04, 05, 06, 07, or 08 and it contains an H trailer, you must take the action indicated under the H trailer (S 3535.1) before you make payment.

01 Approval.-- This is an unqualified reply containing data requested in the query.

02 Qualified Approval.-- The beneficiary's entitlement to Part B has terminated because of death. A code 02 reply is given any time a date of death appears on the HI master record, regardless of the date of expense. The date of death is indicated by a six-digit month-day-year format after a trailer record code "U." (See S 3535.1.) When the month, day and year of expense are not subsequent to the date of death in the "U" trailer, process the claim to completion with no verification of the date of death. Also, if the "U" trailer contains "OO" as the day of death, process the claim without verification of date of death as long as the month and year of expense are not subsequent to that in the "U" trailer.

When the date of death in the "U" trailer is prior to the last date of expense in the claim, take the following actions:

1. Verify that the patient is the same individual previously reported deceased and the accuracy of the service dates. For example: review the original claim form for consistency of identity data (name, sex); check the beneficiary's full name, address, and HICN (including suffix) against the CASF; compare the service dates with those contained in the query.

2. If this review reveals a discrepancy in your queried data, i.e., query submitted under an incorrect HICN or erroneous dates of expense, submit a void (A) query to remove the incorrect data and requery the charges with the correct date (HICN and/or dates of expense) using an I or J query code.

3. If the review reveals that the queried data agrees with the claim data, contact the physician/provider to verify the dates of expense. Where this contact reveals that the dates of expense on the claim form are incorrect, submit a void query to remove the incorrect data and requery the correct data.

4. Where contact with the physician/provider verifies the date of expense on the claim form, the intermediary should suspend the claim and take necessary action to have the date or fact of death verified or corrected on the HI record. To accomplish this, the case will be referred to the SSO via Form SSA-1980, Carrier or. Intermediary Request for SSA Assistance. (or a locally agreed upon form) (See § 3706)

   Include the following information:

   a. HI claim number (including suffix);
   b. Name and full address on the claims form;
   c. Part B (outpatient) disposition code (02);
   d. Date of death as shown on the query reply:
   e. Date of death, if any indicated on payment request;
   f. A statement that the case is being forwarded for date of death investigation and/or correction;
   g. Signature and title of person completing the request form;
   h. Intermediary's return address;
   i. Copies of any documentation pertaining to the case that is at your immediate disposal.

   The SSO investigates the date of death issue, and where necessary, initiates corrective action. The SSO notifes the intermediary of SSA action taken by completing and returning Part II of Form SSA-1980 or the reply portion of other locally agreed upon forms. (If the SSO reply is delayed, use regional guidelines for followups. However, if there is no reply after 90 days, refer the case to the Medicare RO

5. Upon receipt of the SSO's findings, initiate payment or denial action accordingly.

6. Keep the SSO reply on file until the bill processes. In the event the bill rejects with a code 5211 (see § 3828.1), use the SSO reply for immediate resolution.

7. When the disposition code 02 (for outpatient queries) is received in conjunction with a railroad claim (indicated by a prefixed claim number such as A123456, WA123456789, etc.), follow the above guidelines. This instruction also applies when the query response indicates a cross-referred railroad number. However, do not refer date of death discrepancies involving railroad beneficiaries to the SSO. Instead, send completed SSA-1980s for such cases to:

Railroad Retirement Board
Health Insurance Operations
844 Rush Street
Chicago, Illinois 60611

The RRB will investigate, initiate corrective action, and provide notification in the same manner as the SSO.

NOTE: Where the expenses reported are for rental of durable medical equipment, investigation of discrepant dates of death will not be required for the period of rental in which death occurs. For example, a beneficiary rents a hospital bed on July 12, 1978, and the rental period extends through August 9, 1978. If the beneficiary dies at any time prior to August 10, 1978, no investigation is required.

Disposition Code	Condition
03	Rejected.--Duplicate SSA reply of a previously approved reply sent with disposition code 01.

NOTE: Receipt of an 03 reply usually means that an 01 reply was previously received. The intermediary should be sure that the same claim is not paid twice.

In some instances the intermediary sends an I query, receives an 01 reply, then sends an A query, inadvertently using the same control number as in the I query. In response, SSA transmits an 03 disposition code. This code should alert the intermediary that he has not deleted the expenses or blood information as he intended.

Disposition Code	Condition
04	Rejected. Duplicate SSA reply of a previously approved reply sent with disposition code 02. (The Note above also applies to an 04 code reply situation.)
05	Unqualified Approval. This code corresponds to disposition code 01, except that the deductible to be met is adjusted to correct an erroneous carryover. Since this query was for less than the cash deductible, any subsequent claim for medical expenses incurred in the same year must be required. The intermediary must query SSA for deductible information until at least the cash deductible has been met for that year.
06	Qualified Approval. This corresponds to code 02 (beneficiary's entitlement has terminated because of death) except the deductible to be met is adjusted to correct an erroneous carryover. A reply with an 06 code indicating the deductible has been satisfied is not sufficient to process subsequent bills without an additional query. (See Note in code 05.)
07	Rejected. Duplicate SSA reply of a previously approved reply sent with disposition code 05.
08	Rejected. Duplicate SSA reply of a previously approved reply sent with disposition code 06.
09	Acknowledgment. This acknowledges receipt of the query. However, a definitive reply cannot be furnished at this time due to an adjustment, cross-referencing, or clerical correction action currently being taken by SSA. If a definitive reply is not received within 60 days, forward a letter, including the HI claim number and name of the beneficiary to: Social Security Administration Health Insurance Bill Processing Methods Branch, BDP 2-G3 Dogwood East Building Baltimore, Maryland 21235 If a final reply is not received from BDP within 45 additional days, the case should be referred to the Regional Officer Under the critical case procedure outlined in § 3537. The 75 day time frame for a definitive reply by SSA does not apply to disposition code 09.
21	Acknowledgment. Query code A or C (void/credit) or the companion follow-up code B or D has been received and posted. This reply furnishes status after adjustment has been made based on the current query.

NOTE: Upon receipt of a response to an A, B, C, or D query bearing disposition code 21 (or duplicate reply code 23), compare the deductible status shown in this response to the original query reply.

If the original query reply indicated deductible remaining, this should alert the intermediary to the fact that the medical expenses cancelled were used to satisfy part or all of the deductible and the cancellation of these expenses may have created an overpayment.

Where the deductible remaining in the reply to the cancel query is equal to or greater than that shown in the original query reply, there is no possibility of an overpayment, therefore no further review is required. For example:

(1) Intermediary #1 queries for $50, gets an 01 response and $50 deductible remaining. Later he cancels the entire $50 and gets a 21 response again with $50 remaining. No action required.

Also, if the amount shown as the deductible remaining in the reply to the cancel query is less than that shown in the original query reply but the figures can be reconciled, no further action is required. For example:

(2) Intermediary #1 queries for $60, gets an 01 response showing $50 deductible remaining. Later he cancels $50 and gets a 21 response with $40 deductible remaining. These figures are reconcilable by the intermediary since he knows he still has $10 posted to the beneficiary's account and the deductible remaining is $40. No further review is required; however, any overpayment based on the original query reply must be recovered.

If the deductible remaining shown in the reply to the cancel query is less than that shown in the original query reply and the figures cannot be reconciled, there is a definite possibility of an overpayment. The intermediary should document the available facts in the case and forward them for reconciliation to: Social Security Administration, Division of Systems, BHI, Part B Systems Branch, Baltimore, Maryland 21235. Examples:

(3) Intermediary #1 queries for $40, gets an 01 response and $50 deductible remaining. Intermediary #2 queries for $10, gets an 01 response and $10 deductible remaining. Later, intermediary #1 cancels $20, gets a 21 response with $20 deductible remaining. These figures are not reconcilable by Intermediary #1, therefore the case should be documented and forwarded to BHI.

(4) Intermediary #1 queries for $40, gets an 01 response and $50 deductible remaining. Intermediary #2 queries for $50, gets an 01 response with $10 deductible remaining. Intermediary #2 pays 80% of $40. Later intermediary #1 cancels the $40, gets a 21 response with $0 deductible remaining. This means there was a definite overpayment. The case should be documented by Intermediary #1.

Disposition Code — Condition

23 Rejected. Duplicate HCFA reply of a previous reply sent with disposition code 21. (See Note in code 21.)

NOTE: In some instances the intermediary sends an A query, receives a 21 reply, then sends an I query, inadvertently using the same control number as in the A query. In response, HCFA transmits a 23 dispsition code. This code should alert the intermediary that it has not updated the expenses or blood data as it intended.

26 Qualified Approval. Alien nonpayment provision may apply. No payment may be made under Part A or Part B until HCFA reports in writing that payment is not barred. (See § 3716 for explanation of this provision and development of these areas.)

28 Rejected. Duplicate HCFA reply of previously approved reply sent with a disposition code 26.

36 (This is an automatic notice code. See page 127.3)

38 Rejected. A query has been received which:

1. Contains the HICN and surname of a deceased beneficiary whose record has been placed on the inactive file, i.e., the beneficiary has been deceased more than 1 year without any query or payment record activity. The query, however, failed to match on all the personal characteristics, i.e., initial and sex code.

OR

2. Contained expenses subsequent to 12/31/75 and perfectly matched an inactive record of a deceased beneficiary with a date of death prior to January 1, 1976. (HCFA has purged all inactive beneficiary records containing date of death prior to January 1, 1976.)

Information furnished in this reply includes:

1. HICN
2. Surname (6 positions)
3. Initials
4. Date of Birth (Month and Year)
5. Date of Death (Month, Day and Year)
6. Sex Code (1=Male; 2=Female)
7. Query Control Number as shown in Query.

Review the data in the original claim form and, if it is determined that the claim was for a different beneficiary develop the appropriate claim data and resubmit the query. If it is determined that the original claim form was for the beneficiary identified in the query and the date of death is correct on the HI record, the data furnished in this reply will be used to submit a corrected query. A code 09 reply will be generated immediately and within 30 days a definitive reply will follow once the inactive record has been retrieved.

Disposition Code **Condition**

38 If it is determined that the original claim form was for the beneficiary identified in this code 38 reply and the date of death is incorrect on the HI record, the case will be referred to the SSO via Form HCFA-1980, Carrier or Intermediary Request for SSA Assistance, (or a locally agreed upon form).

Documentation should include the following information:

a. HI claim number (including suffix);
b. Name and full address on the claim form;
c. Part B disposition code 38;
d. Date of death as shown on the query reply;
e. Date of death, if any indication on claim form;
f. A statement that the case is being forwarded for date of death investigation and/or correction;
g. Signature and title of person completing the request form;
h. Contractors return address;
i. Copies of any documentation pertaining to the case that is at your immediate disposal.

The SSO investigates the date of death issue and when necessary, initiates corrective action. The SSO notifies you of any action taken by SSA by completing and returning part II of form HCFA-1980 or the reply portion of other locally agreed upon forms. (If the SSO reply is delayed, use regional guidelines for followups. If there is no reply after 90 days, refer the case to the HCFA RO.

Upon receipt of SSA's findings, process the claim accordingly. However, if the SSA's findings indicate that the HI claim number (including suffix) identified on the claim form belongs to the beneficiary identified on the claim form and the date of death originally returned in the code 38 reply was prior to January 1, 1976 then it is necessary to have HCFA reinstate the beneficiary record since it has been purged. To have a purged record reinstated, send the following documentation to Health Care Financing Administration, Records and Telecommunications Branch, Room 2-A-4, Meadows East Building, 6325 Security Boulevard, Baltimore, Maryland 21207:

1. Copy of completed investigation (form HCFA-1980);
2. Copy of the claim involved;
3. Statement advising HCFA to reinstate the purged record to the HI active file.

Disposition Code	Condition
39	(This is an automatic notice code. See page 127.2.)
40	Rejected. The HI master record indicates that the beneficiary is locked in to a Health Maintenance Organization (HMO) which is required to process all Part B claims, and the date of first expense was incurred before or during the period of HMO enrollment. A code 40 reply always has an R (HMO) trailer. Review the claim to determine if any of the services were outside the period of lock-in status. If all services were within the lock-in period, transfer the claim to the HMO identified in the R trailer. Where expenses were incurred outside the period of lock-in, requery using query code G. A code 40 reply can be received in response to any query except codes C and D. Where a code 40 response is received in reply to a G or H query, it means the date of expense fell within the lock-in period.
41	Rejected. HCFA transmits a code 41 when the month of first expense is prior to the entitlement month on record and there is no prior period of entitlement. Where the code 41 is in reply to a G or H query, this means that the month of incurred expense in the query is not in a period of entitlement. Review the claim and the previous related reply.
42	Rejected. HCFA records indicate the individual has never been entitled to Part B. However, contact the State to investigate eligibility under any State buy-in agreement if the intermediary and the State have an arrangement to do so and if it appears that it may be a buy-in case. The Social Security claim number should be furnished in case the State does not have the correct number on record. If the individual is not covered, the State will advise the intermediary so that the claim can be denied immediately. If the State's record indicates coverage under the agreement, it will inform the intermediary and will certify coverage to HCFA outside the normal accretion process. After HCFA has established Part B coverage in the eligibility records, HCFA will advise the intermediary by letter when to requery.

Disposition Code	Condition
43	Rejected. A query coded A (void), B (followup for A), C (credit), or D (followup for C) requested cancellation or reduction of more medical expenses or pints of blood than the amount posted to the beneficiary's record. The query cannot be processed and is rejected with disposition code 43. Determine whether the amount transmitted in the rejected query was correct. If the amount was not correct, submit a new query with the correct amount. Otherwise, send a code Z query to determine the amount posted on HCFA's record. If the HCFA reply indicates some remaining amount, compute the amount previously reported and make the necessary adjustment with a new query. However, if the status reply shows zeros (and, therefore, the posted amount is still unknown), send a memorandum outlining the desired adjustments to: Health Care Financing Administration Bureau of Support Services, OHPS Transaction Processing Branch P. O. Box 17078 Baltimore, Md 21203
44	Rejected. Beneficiary's latest period of entitlement to Part B has terminated for reasons other than death. This code indicates that the individual, according to HCFA records, has either failed to pay the SMI premium or has voluntarily withdrawn from the SMI program. A code 44 is given any time a date of termination exists, regardless of the date of expense. Since there will be delays in recording some timely premium payments, however, HCFA replies may not reflect final status. Therefore, do not disallow a claim for services rendered after the termination month shown in the

Disposition Code

Condition

reply until at least 30 days have elapsed after that month. If, in the meantime, a timely premium payment is recorded by HCFA a correction notice will be sent to the intermediary so immediate payment can be made on the claim.

A tentative or informal termination notice may be sent to the provider if it seems needed; e.g., where a provider has started services under a home health service plan and the intermediary is notified early in the month following termination that the services beyond the termination date may not be covered, informal notice to the provider would enable the provider to bill directly for expenses incurred after the termination or take other steps deemed necessary to protect his interests.

When the intermediary receives a code 44 reply, it is also possible that the individual has enrolled under a State buy-in agreement, but a code 44 reply is sent because of problems involved in identifying and matching State buy-in items. The intermediary should follow the procedures in the "Condition" for disposition code 42 above, if it has arranged with the State to do so.

Where the code 44 is in reply to a G or H query, it means that the month of incurred expense in the query is after the current month of termination on the HI record.

45 Rejected. This code indicates that, according to Medicare records, the individual has been terminated from SMI due to failure to meet the alien residency requirement, termination of DIB entitlement, or ESRD cessation. A code 45 response is given any time a date of termination exists for any or all of the above 3 reasons, regardless of the date of expense.

Disposition code 45 can be sent in reply to any query code except codes C and D. Where the code 45 is in reply to a G or H query it means that the month of incurred expense in the query is after the current month of termination on the HI record.

Do not follow the procedures for disposition code 44 as there cannot be SMI entitlement after the month of termination on the HI record. Enrollment under a State buy-in agreement is also precluded.

Disposition Code	Condition
47	Rejected. The surname agrees but the sex and first initial of the individual shown in the query do not agree with HCFA's records. HCFA will not attempt to reconcile the discrepancy. If either the sex or the first initial agrees, a code 47 will not be furnished. When a code 47 is furnished, the reply will contain a trailer code "H" showing the full name on the HCFA record. The intermediary should check the sex and the first initial queried against the claim or the CAST to determine whether the same or different individuals are involved. If the same individual is involved, requery using the initials shown on the HCFA record. If different individuals are involved, check the CAST/CASF, for another individual with the same surname using guidelines in § 3506. If this check does not resolve the issue, apply the instructions in § 3504.
48	Rejected. This code indicates that the date of first expense shown in the query is prior to the current entitlement date; however, the individual had a prior period of entitlement. The intermediary should review the claim to determine expenses incurred during a period of entitlement, then report those expenses in a query coded G. (see § 3535.)
49	Rejected. HCFA received a G or H-coded query, but there is no prior period of entitlement or termination which would require the use of a G or H query.
50	Rejected. The name, SSN, and personal characteristics furnished in the query match HCFA non-HI records, but the individual has not filed for HI entitlement. This is authorization to deny the claim for Medicare reimbursement. Referral of the claim to the social security office (SSO) is not required of the intermediary, but the denial is to contain the legend referring the individual to their local SSO if the individual disagrees with the denial.
51	Rejected. The name, SSN, and personal characteristics furnished in the query match HCFA's non-HI records. However, HCFA determined the individual is not eligible for HI benefits. This applies also to individuals receiving SSI benefits, but under the age of 65 and not eligible for HI benefits. Since most of the cases in this category are disallowed for failure to establish proof of age or residence requirements, the individual may become eligible at a later date.

Disposition Code Condition

52 Rejected. The claim number furnished in the query is not assigned to the surname furnished in the query.

This code indicates the surname and/or HI claim number given in the query is incorrect or, in some cases, that the HI master record is incorrect. Check the surname and number against the claim. If they agree, check the Carrier Alphabetic State File (CASF) microfiche (See §§ 3505ff) for another spelling of the surname or a difference in the claim number. If this check does not resolve the issue, apply the instruction in § 3504.

Requery when you obtain the correct name and HI claim number.

54 Rejected. The surname, SSN, and initial or sex furnished in the query match HCFA's non-HI records, but HCFA is unable to resolve the exception item within a specified 75 day time limit.

Resolve the rejection by initiating the following actions:

1. Seek the correct claim number on the Carrier Alphabetic State File (CASF) microfiche. (See §§ 3505ff.) An appreciable number of Code 54s involve individuals entitled under another claim number.
2. Verify that another claim for the same individual has not been cleared on receipt of corrected claim data.
3. Review the source document with the data input to the automatic claims processing system for errors.
4. Review the claims history file, if readily accessible.
5. If the claim number is obtained in any of the above processes, requery as appropriate.

If the claim cannot be resolved by any of the above actions, deny the claim. Referral of the claim to the SSO is not required but the denial must contain a legend referring the individual to the local SSO if the individual disagrees with the denial.

Disposition Code	Condition
55	SSI Recipient Not Eligible for Automatic Enrollment by HCFA in SMI Buy-In Coverage Rejected. The name, SSN, and personal characteristics furnished in the query match HCFA's non-HI records but the individual is shown to be entitled to SSI benefits only. Since this code is generated only when HCFA's records show the individual is age 65 or over, refer the claim to the appropriate SSO for resolution. The SSO will develop the claim and notify you as to entitlement status. (NOTE: If the individual is under age 65 and receiving SSI benefits only, HCFA would respond with a code 51.)
56	SSI Recipient Eligible for Automatic Enrollment by SSA in SMI Buy-In Coverage SSA is Developing a Claim for HI Benefits. The name, SSN, and personal characteristics furnished in the query match HCFA's non-HI records and the individual is shown to be eligible for SSI benefits. Diary the claim and requery HCFA in 60 days. HCFA will undertake the necessary development to secure a claim. The first code 56 is generated 10 to 15 days following the MBR search. Upon receipt of a second code 56 refer the claim to the SSO. Be sure to indicate on the form HCFA-1980 "Second Code 56 after 60 Day Diary."
90	Acknowledgement. The name, SSN, and personal characteristics furnished in the query matched a non-HI record. The individual has filed a claim, but the entitlement is not presently reflected in the master HI records. HCFA has initiated an extended development in an attempt to resolve the situation. If a 75 day time limit expires HCFA will generate a code 54. Requery using the same Intermediary Control Number as in the original query if and when you obtain corrected or additional data.

Part B Automatic Notices

NOTE: Disposition codes 36, 39, 70 through 72, 77, and 79 appear in a Part B outpatient automatic notice (type 7) reply. (See § 3511 for an explanation of the automatic notice.) For examples, see Addendum A, page A-18.1.)

Disposition Code	Condition
36	Notice of Other Program Involvement. Sent to all intermediaries of record when the beneficiary becomes entitled to WC, BL and/or VA benefits. It is also sent when HCFA receives an indication that a claim has been processed where Medicare was not the primary payer. The data parallels that contained in the Part B Y (Other Program Involvement) trailer contained in § 3535.1. Annotate your records and process all future claims in accordance with the procedures outlined in the Y trailer. (See § 3599, Exhibit for record specification.)
39	Notice of ESRD. Sent to all intermediaries that have received a valid response to a query. Insure proper financial workload reporting and submission to HCFA of all claims processed for this beneficiary.
70	Termination. Part B entitlement has terminated for a reason other than death. This includes terminations as a result of erroneous entitlement. Where the termination is due to erroneous entitlement, the "effective date" field contains xxxx. In those instances, make adjustments for claims paid under the prior approval. The code is sent to all intermediaries that have submitted queries and received approvals. Do not pay for expenses incurred after the last day of the month indicated. Do not deny other claims without querying. You may hold any pending claims for 30 days before denying them if your experience indicates a substantial number of cases where a reinstatement notice is received soon after a code 70 notice. This code is also used where entitlement is terminated because disability or renal dialysis treatment ended.
71	Reinstatement or Change in Effective Date of Entitlement. The individual's Part B entitlement has been reinstated after termination or the effective date of entitlement has been changed as a result of administrative review. Where the date of entitlement has been changed (in most instances the new date is later than the original,) determine if payments have been made for the period between the original and the new entitlement dates. Where required, initiate recoupment action.

Disposition Code	Condition
	If your records show a termination date and the date in this notice agrees with the original entitlement date, drop the termination. If there is no termination date in your records, the date contained in this notice replaces the original entitlement date. Disposition code 71 notices are sent to intermediaries which have received approval replies or disposition codes 44. Query any new claims and reprocess any which have been improperly denied.
72	Query Next Claim. Indicates that a beneficiary's deductible status for the indicated year has moved from a "met" to a "not met" status. o The individual's account has been credited; i.e., the cash or blood deductible has been adjusted from a "met" to a "not met" condition, or amounts have been adjusted that were previously applied to physical therapist expenses, or to the maximum for noninpatient psychiatric care. (See §3535.1, trailer D for maximums.); o HCFA has received a date of death or an adjustment in the date of death for this beneficiary and the HI Master indicates that the Part B deductible for the year of death had been satisfied; o HCFA has removed a date of death. When a date of death is removed the effective date field contains zeros; or, o HCFA has received notification that the beneficiary has elected a period of Hospice coverage and the Part B deductible for the year of Hospice had been satisfied. Query the next claim for the beneficiary. The correct deductible status, date of death or appropriate Hospice involvement data will be on the reply. Disposition code 72 notices are sent to all intermediaries which submitted queries and received approvals.
77	Cross-Referred HICN. This is given when a beneficiary's entitlement to Part B benefits has been transferred from one HICN to another. Annotate the beneficiary's files and use the new HICN on subsequent queries and claims.

Disposition Code	Condition
79	Enrollment in, or Disenrollment from, an HMO, or a Change in Option for an HMO. This is given to intermediaries when the beneficiary enrolls in, disenrolls from, or changes his option in an HMO. Annotate your records and process claims in accordance with the information in the notice. See §§ 3512.8 and 3512.9 for additional information. The data content of an R trailer (see § 3535.1) is given.
90	Acknowledgment. The name, SSN, and personal characteristics in the query match a non-HI record. The individual has filed a claim, but entitlement is not reflected in the HI Master. HCFA has initiated development to resolve the situation. If the 75 day time limit expires HCFA generates a code 54. Requery using the same control number as in the original if, and when, corrected or additional data is available.

D. Part B Entitlement Date.-- This is the month and year that the beneficiary became entitled to SMI payments. HCFA transmits two digits for the month and the last two digits of the year. When the month is one digit, it is preceded with an "O." Example: for September 1987, HCFA shows 0987.

E. Beneficiary's Part A Entitlement Date/Blood Deductible Remaining to be Satisfied.-- This field has six positions. The beneficiary's current Part A entitlement date has two positions each for the month and year. A period is in the fifth position and the blood deductible remaining to be satisfied (before the current query is posted) is in the sixth. If the beneficiary had Part A entitlement but it is now terminated, the word 'TERM' appears in place of the entitlement date. If the beneficiary had Part A entitlement erroneously at some time the legend 'XXXX' appears. If the beneficiary was never entitled to Part A, the field is blank. It is necessary to know if the beneficiary has Part A entitlement in order to know whether the beneficiary does or does not meet the 'Working Aged' definition of the law. (See § 3100ff.)

The following identify the blood deductible code:

CODE	EXPLANATION
0	Blood deductible satisfied (on code 41 - 44 and 47 - 52 replies, 0 does not mean the deductible has been satisfied).
1	Blood deductible to be satisfied is 1 pint.
2	Blood deductible to be satisfied is 2 pints.
3	Blood deductible to be satisfied is 3 pints.

EXAMPLE: Intermediaries using ARS:
6.50000.470389297A .01.0866.0801.3.5000.A.1234567891.

F. Part B Remaining Deductible.-- This is the amount of the deductible that has not been met prior to receipt of the present query. (See § 3531, Disposition Code 21 for exception.)

3535.1 Explanation of Part B Trailer Codes.—A trailer code is a one-position alphabetical code which identifies the content of data which immediately follows. In any Part B reply, one or more trailer records may be present. Part B trailer codes and a description of each follow.

Trailer Codes	Data Furnished
A	Intermediary Control Number.—This is a repeat of the control number that you included in your query.
B	Corrected Surname.—A corrected surname is shown only if the name of the beneficiary submitted in the query is not consistent with HCFA's records. If investigation indicates HCFA has an incorrect name, process the claim, and refer the information via a HCFA-1980 to the local SSO for correction. Supply pertinent documentation. Include the data contained in the B trailer as well as the correct data.
C	Corrected HICN.—The corrected number is included only if the one submitted is incorrect.
D	Reasonable Charges for Psychiatric Care Remaining.—These are the maximum reasonable charges for the year in which care was provided, less reasonable physician's charges for psychiatric care reported in earlier queries: $500 before 1988 $900 during 1988 $2200 after 1988
F	Part B Termination Month and Year.—HCFA transmits 2 digits for the last month covered and the last 2 digits for the year. Expenses incurred through the last day of the month shown are reimbursable.
G	Representative Payee.—When HCFA knows that someone is authorized to act on behalf of the beneficiary, the name and address appear.

Trailer Codes	Data Furnished
H	Name on Master HI Record.--In matching queries against the HI Master Record, HCFA compares the HI claim number, six positions of the surname, the first initial, and the sex code. If a query is found to match on the HI claim number, surname, and either the first initial or sex code, it is accepted, the eligibility for Part B is determined, the deductible status is updated, and a definitive reply is furnished. In addition, the query reply will include an H trailer (when either the first initial or sex code fails to agree) containing the surname, followed by one comma, then the first name, and, if applicable, the middle initial, preceded by a comma. Where the data in the H trailer does not follow this exact format, document this and submit it to the local SSO for correction. For example, if the H trailer should show the surname followed by two commas, then the first initial, this would indicate that the failure to match the query on first initial was due to the presence of the second comma. The documentation should include the data contained in the H trailer as well as the correct data. In reviewing the H trailer and the HCFA-1483, in some instances, it may be determined that the H trailer was caused by an erroneous sex code in HCFA's records. For example, the query was for Mary A Jones with sex code of 2 and the H trailer contained Jones, Mary, A. Then it would be obvious that HCFA's records did not show a sex code of 2. To correct this and also to prevent future H trailers, submit by letter, the HI claim number, the beneficiary's name, and the correct sex code to the local SSO. If the name does not take the full 25 positions, the field will be filled with blanks. This will enable the intermediary to determine whether the individual identified in the query is the same as the individual on the HCFA Master Record. If it is determined that the query was posted to the wrong record, the intermediary should take the appropriate steps to cancel the erroneous posting, determine the proper HI claim number, and requery accordingly.

Trailer Codes

Data Furnished

I Prior Period of Coverage.-- HCFA transmits this information with disposition code 48 to enable you to determine if expenses reported in a query fall within a prior period of entitlement.

K Cross-Referred HI Claim Numbers.-- HCFA transmits this information whenever a beneficiary's HI claim number is cross-referred to another HI claim number. Process the beneficiary's current claim(s) using the new number, cross-refer any beneficiary files, and on subsequent claims use the claim number given on the K trailer. When a query is transmitted using the number in the K trailer, the reply is not cross-referred to the prior number.

M State Buy-In.-- HCFA transmits this information whenever current involvement with State buy-in is indicated. This information is to alert you that referral of claims data to the title XIX State agent may be in order. The option on whether referral is to be made is up to the State agency. If it is desired, the State Medicaid agent and the intermediary servicing the State coordinate to determine the method of referral and data elements to be furnished.

The HCFA RO coordinates these activities and works with the intermediary in any aspects of implementation. At a later date, the trailer will contain the State code and the effective date of buy-in. (See § 1602 in Part I and § 3771 concerning disclosure of information for Federal grant-in-aid program purposes.)

O Beneficiary Date of Birth and Sex.— This trailer is furnished on all approval replies. The trailer contains the date of birth and sex of the beneficiary as contained in the HCFA beneficiary record. This trailer also contains a code which indicates if the date of birth reflects the current or prior century; for example, 1875 versus 1975. Assume that the date of birth contained in this trailer is correct. This data is necessary in order to know if the beneficiary meets/does not meet the working aged definition of the law. (See §§ 3100ff.) (See § 3550, Exhibit 15 for the format of the O trailer.)

R Health Maintenance Organization (HMO) Involvement.-- This data is transmitted any time a query is received for a beneficiary who is currently or had been enrolled in an HMO. The trailer gives data on the HMO Identification Code, Option Code, and Enrollment Period (explained below) for the current period of HMO enrollment and also furnishes it for the prior period.

(1) HMO Enrollment Code.-- This is a 1-position numeric code (1, 2, or 3) which indicates that the individual has had 1, 2, or more than two periods of enrollment in an HMO.

Trailer Codes — Data Furnished

R(Cont.)(2) HMO Identification Code.-- This is a 5-position code identifying a specific HMO:

Position	
1	H
2 and 3	State Code
4 and 5	HMO number within the State

(3) Option Code.-- This is a 1-position code which describes the beneficiary's relationship with the HMO:

For unrestricted use beneficiaries:

1 - Intermediary to process all (Part A and Part B) provider bills.
2 - HMO to process provider bills only for directly provided services and for services from providers with whom the HMO has effective arrangements. Intermediary to process all other bills.

For restricted use beneficiaries:

A - Intermediary to process all (Part A and Part B) provider bills.
B - HMO to process only bills for directly provided services.
C - HMO to process all bills except bills from approved dialysis facilities for dialysis and related services.

NOTE: Regardless of option, the intermediary will process all bills for dialysis and related services provided through an approved dialysis facility.

(4) Enrollment-Period.--This trailer gives the month and year of the first and last months of enrollment in an HMO.

S Reason for Entitlement.--This trailer indicates that the beneficiary is entitled because of disability (§ 3001.2), end stage renal disease (§ 3001.3), or because he has secured coverage on a voluntary basis and pays a Part A monthly premium (§ 3001.4). The codes furnished in the trailer are as follows:

Code	Definition
1	The individual is entitled because of disability.
2	The individual in entitled because of end stage renal disease.

Trailer Code		Data Furnished
S(Cont.)		
	3	The individual has, or had, ESRD, but is currently covered by the disability provision. (See §3687 for required development action.)
	4	The individual is age 65 or over and is covered by Medicare as an uninsured or old-age or survivor insured and has, or had, ESRD.
	8	The individual has, or had, ESRD and is covered under the Part A premium payment provision.
	9	The individual is covered under the Part A premium payment provision.

NOTE 1: Five extra positions are added to show the reimbursement method and effective date for ESRD beneficiaries receiving home dialysis. When this applies, we follow the regular trailer code with 1 to show that the beneficiary elected Method I, or 2 for Method II. Following the method is the effective date (MMYY) of the election that applies to the service period shown in the query.

NOTE 2:

Codes 2, 3, 4, and 8 apply for reporting ESRD cases as required by HCFA. See §§3644ff. for submitting ESRD bills.

U Date of Death.--This trailer gives the month, day, and year of death as recorded in the HI Master Record. The U trailer is always transmitted with disposition codes 02, 04, 06, 08. The description for these codes furnishes you with the necessary actions to resolve date of death problems. If the actual day is not available "00" appears in the day field (e.g., 010083).

Y Other Program Involvement.—Indicates that some other insurance program may be the primary payer. It is possible to receive multiple Y trailers. Their number depends upon the number of Other Program annotations present on the beneficiary's record. In all cases, annotate your records and proceed in accordance with the following instructions. (See §3599 Exhibit for trailer format.)

The Other Program Code indicates the other Federal program or other type of insurance that may be the primary payer. Possible codes are:

Trailer Code	Data Furnished

Code 1. Is furnished when the HCFA master indicates that this beneficiary has WC coverage. Check the diagnosis on the claim. If it appears that the services may have been necessitated by an accident, or an occupational disease, withhold payment until you determine that the services are not covered by WC. Fully develop the issue in accordance with SS3415ff. Contact the beneficiary's State Workers' Compensation Agency S3599 Exhibit 10 to obtain information about this WC award. If his home State is not the award State, get the appropriate address from:

Health Care Financing Administration
Office of Management and Budget, DMOS
P. O. Box 17078
Baltimore, MD 21203

Code 2. Is furnished when the HI Master Record indicates that this beneficiary is on the Department of Labor's (DOLs) Black Lung beneficiary rolls. Enter the annotation "BLACK LUNG" on your reply to the notice of admission. Check the diagnosis on the claim. If it appears from the diagnosis or the services performed (see S3415.3 E and F) that all or part of the inpatient services on the claim were attributable to BL disease, deny the claim. (See S3722.4 MISC-15 for denial paragraph.) In regard to outpatient services, if the primary diagnosis is not related to BL disease, reimburse the provider for the services if they are otherwise covered. (See S3415.3D.)

NOTE: For the following codes, annotate your records and use them as alerts in case you receive improperly completed claims. In addition, annotate your reply to the notice of admission indicating the type of potential other payer involvement. These codes are an indication that Medicare was determined not to be the primary payer on at least one prior claim. In addition, Code A includes individuals whose SSA record shows the presence of an S2 LAF code.

Code A. Medicare was not primary because the beneficiary was a "working aged" beneficiary or spouse covered by an EGHP plan based on a prior claim, or the beneficiary's record shows the presence of an S2 LAF code. An S2 LAF code indicates the beneficiary is in suspended benefit payment status because of earned income and could be a potential "working aged."

Code B. Medicare was not primary because the beneficiary is an ESRD beneficiary in his 12 month coordination period and was covered by an EGHP.

Trailer Code	Data Furnished

Y(Cont.)

Code C. Medicare has made a conditional payment on a claim until a final resolution (of the claim) is decided. One type of conditional payment is where there is/was a pending liability claim. (See §§3419ff.)

Code D. Medicare was not primary because of automobile medical, no-fault, or other liability insurance involvement. (See §§3419ff. and 3489ff.)

Code E. Medicare was not primary because of WC. (See §§3407ff.)

Code F. Medicare was not primary because the beneficiary was entitled to coverage by the PHS or other Federal agency program. (See §3153.)

Code G. Medicare was not primary because the beneficiary was a disabled beneficiary covered by a LGHP. (See §IM 3492.)

Code H. Medicare was not primary because of BL coverage. (See §3414.2.)

Code I. Medicare was not primary because the beneficiary was involved in the VA program. (See §3153.2.)

The effective date contained in this trailer indicates:

For codes 1, 2, and 3 the effective (entitlement) date of the applicable program involvement.

For codes A, B, C, D, E, F, G, H, and I the earliest date on record indicating actual (from prior claim) or potential (from SSA LAF code) Medicare coverage as secondary. See §3686 for development instructions upon receipt of any of these Y trailer codes.

Z Hospice Involvement.—This trailer is given when the beneficiary's record indicates one or more periods of Hospice involvement. Only the applicable period of Hospice is included in the trailer. Once a beneficiary elects Hospice care all care for the terminal condition must be under the auspices of the Hospice. Contact the servicing intermediary identified in the trailer (see §3550, Exhibit 17) to determine if the claim is for services related to the Hospice care. If it is, deny payment. (See §§3100ff.) If the claim is not for services related to the Hospice care, make payment if they are otherwise covered. See §§3550, Exhibit 14 for the record format of the Z trailer.

3536. REQUERY GUIDELINES FOR PART B QUERIES

Upon receipt of Part B reply disposition codes 00, 54, 90, you may requery (using the same Intermediary Control Number as in the original) if, and when, corrected or additional data is obtained. Corrected data may be obtained by checking the original claim form, checking the HICN against the Carrier Alphabetic State File (CASF) microfiche (see §§ 3505ff.) or by contact with the provider or beneficiary.

After any query (except one in disposition code 09 status) has been pending HCFA's investigation for 75 days, a reject disposition code 54 is returned. If reply code 90 preceded the reply code 54 reject, the case may have been referred to the appropriate program center, but was rejected by HCFA due to the 75 day limitation on retaining queries. (The 75 day limitation for a definitive reply by HCFA does not apply to disposition code 09.)

INTERMEDIARY REQUEST FOR PART B QUERY HISTORY

Address Response To:

3537. REQUESTING ASSISTANCE IN RESOLVING PROBLEM AREAS IN THE QUERY/QUERY/REPLY PROÇEDURES

In the normal course of claims processing activities, expect to encounter problems involving query/query reply procedures. The actions taken to resolve the problem depend upon the problem identified. See §§ 3538ff. for critical case procedures.

A. HCFA Central Office Assistance.—If the problem involves:

1. A complaint from a beneficiary alleging over-application of the Part B deductible. This requires the preparation of a Part B query history. Direct requests for query history should be directed to:

Health Care Financing Administration
Transaction Processing Branch, OHPS
P.O. Box 17078
Baltimore, MD 21203

The format for requesting a query history is shown on page 128.4 and may be reproduced locally. If the format cannot be adopted, all requests must contain the same basic information. The purpose of this format and the required information is to establish a standard format which furnishes the minimum information necessary for HCFA to process the requests. If a reply is not received within 45 days of mailing of the Request for Part B Query History form, forward another form clearly captioned "Second Request." Show any congressional interest by checking the "Other" block on the form letter followed by the Congressman's or Senator's name. Where the problem involves more than one query reply, report this and furnish the additional information. Round the amount of money reflected in the "Deductible To Be Met" column to the nearest dollar as this is the way it is recorded on HCFA's microfilm. If exact dollar and cent figures are required, extract the data from your files.

2. Failure on the part of HCFA to provide a definite query reply within 60 days of receipt of disposition code 90 reply, request assistance from central office. Direct these requests to:

Health Care Financing Administration
Correspondence Service Branch, BSS
P.O. Box 11979
Baltimore, MD 21207

best copy available

B. Social Security Office Assistance.—Direct the initial request for assistance to the Social Security office if the problem is caused by difficulties in determining the beneficiary's correct entitlement status. (See S3706 for details of assistance requests to Social Security offices.) Examples of situations which may require SSO assistance are:

1. Problems involving jurisdiction;

2. Evidence that a beneficiary has utilization under more than one health insurance claim number, but you are not aware of any cross-reference action taken by HCFA; or

3. The beneficiary's name, address, sex code, date of birth or date of death is incorrect on the HI master record.

In the event the Social Security office is unable to resolve the entitlement problem; (e.g., cross referencing of HI records), request assistance from central office via the RO.

C. Railroad Retirement Board Assistance.—If the problem concerns an entitlement issue involving a prefixed claim number (A123456, WA12456789, etc.), send requests for assistance via form HCFA-1980 to:

Railroad Retirement Board
Health Insurance Operations
844 Rush Street
Chicago, IL 60611

The RRB will investigate, initiate corrective action, and provide notification in the same manner as the SSO.

3537.1 HMO Related Master File Corrections.—Fully document and send to the HMO inquiries concerning problems with HMO data on the HI Master. The HMO will resolve the problem and advise you of the results.

Critical Cases

3538. CRITICAL CASE PROCEDURES—ESTABLISHING ENTITLEMENT UNDER PART A AND PART B

Use the "Critical Case" procedure to expedite processing of Part A and Part B claims delayed because of an error in the beneficiary's HI master record. The "critical case" procedure provides speedy correction of the master record and may be used where the following conditions are met.

- There is an error in the HI Master which prevents the receipt of an approval disposition code query reply. This may occur when one of the following conditions exists.

You have been unable to process a claim, even though the beneficiary apparently has entitlement because HCFA transmitted a Part A query reply with a disallowance disposition code of 42, or a reject code of 43, 44, 48, 50, 51, 52, 54, or 57; or a Part B query reply with a reject disposition code of 41, 42, 44, 47, 48, 50, 51, or 52; or

A Part A or Part B interim reply has been received with an "acknowledgement" disposition code of 00,90, or 09, but not a final reply.

- Two followups have been made to the SSO and the HI Master has not been corrected.

- At least 90 days have elapsed since correction procedures were initiated.

- A serious hardship to the beneficiary or a public relations problem has developed.

3538.1 Referral of Critical Cases to the RO.—When you identify a claim meeting the above criteria send a memorandum to the RO identifying the beneficiary by name and HICN. Specify the nature of the problem, state that the above criteria are met, and give the date of all actions in the case. If disposition code 09 is involved, indicate whether the problem concerns a hospital admission date or a Part B bill. Mark "Critical Case" on the envelope. Flag your file for special handling and expedite the claim as soon as the reply is received.

The RO provides any additional documentation needed and sends it to HCFA Central Office for processing. The RO notifies you when the claim is forwarded. Diary the case for 30 days—by that time the RO should have a response and so advise you. If you receive a positive query reply before hearing from the RO, notify the RO.

Requery where the reply to the Part A admission notice was a code 42, 44, 48, 50, 51, or 52 and you receive information that the record has been corrected. Requery where a code 41, 42, 44, 47, 48, 50, 51, 52, 54, or 57 was the problem for a Part B claim and you are informed that the record is correct.

Requery where you had received a disposition code 00, 09, or 90, and the RO receives a response from HCFA that the record is now correct. If a positive reply has not been received within 2 weeks, recontact the RO, giving the name and HICN of the beneficiary and the date the claim was originally referred.

3538.2 Social Security Office Responsibility.—SSOs also process critical cases. Where both the SSOs and you are involved, the SSO is responsible for processing the case.

TEMPORARY NOTICE OF MEDICARE ELIGIBILITY

District Office Address:

Date:

____
Patient's Health Insurance
Claim Number

Dear

Based on the information given to the Social Security Administration, you are (Mr. __________ was) eligible for hospital insurance beginning (mo.) (yr.) and for medical insurance beginning (mo.) (yr.). This notice will serve as evidence of your (his) eligibility for these benefits for 60 days from the date shown at the top of this notice unless you are notified otherwise during the 60-day period.

To obtain medical services (or reimbursement for medical services) before you receive a health insurance card, show this letter to your hospital or doctor but keep the letter with you. This temporary notice of eligibility is to be used only by the person to whom it is addressed. Misuse is unlawful and will make the offender liable to a penalty.

This letter should be destroyed as soon as you receive a health insurance card or other notice of eligibility.

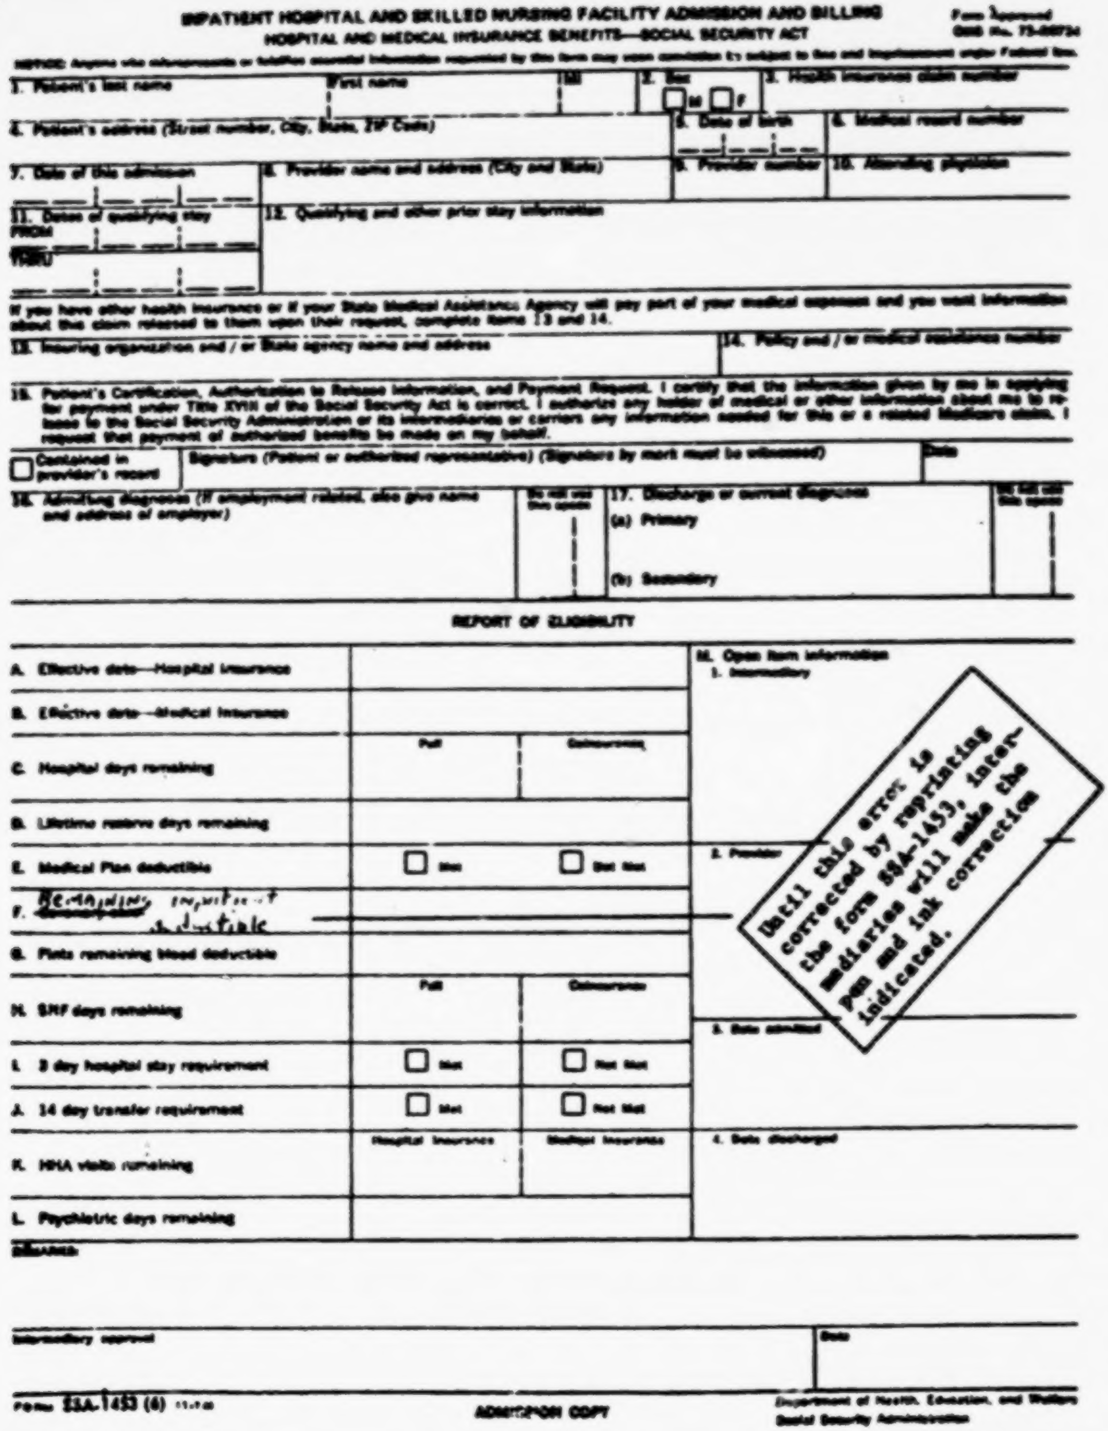
Sincerely yours,

Commissioner of Social Security

IMPORTANT

When services are provided on the basis of this notice, all bills or correspondence with an intermediary or the Social Security Administration should show the patient's health insurance claim number.

Exhibit 2



INPATIENT HOSPITAL AND SKILLED NURSING FACILITY ADMISSION AND BILLING

HOSPITAL AND MEDICAL INSURANCE BENEFITS—SOCIAL SECURITY ACT

Form Approved
OMB No. 72-R0734

NOTICE: Anyone who misrepresents or falsifies essential information requested by this form may upon conviction be subject to fine and imprisonment under Federal law.

1. Patient's last name | First name | MI
2. Sex ☐ M ☐ F
3. Health insurance claim number
4. Patient's address (Street number, City, State, ZIP Code)
5. Date of birth
6. Medical record number
7. Date of this admission
8. Provider name and address (City and State)
9. Provider number
10. Attending physician
11. Dates of qualifying stay FROM THRU
12. Qualifying and other prior stay information

If you have other health insurance or if your State Medical Assistance Agency will pay part of your medical expenses and you want information about this claim released to them upon their request, complete items 13 and 14.

13. Insuring organization and / or State agency name and address
14. Policy and / or medical assistance number

15. Patient's Certification, Authorization to Release Information, and Payment Request. I certify that the information given by me in applying for payment under Title XVIII of the Social Security Act is correct. I authorize any holder of medical or other information about me to release to the Social Security Administration or its intermediaries or carriers any information needed for this or a related Medicare claim. I request that payment of authorized benefits be made on my behalf.

☐ Contained in provider's record | Signature (Patient or authorized representative) (Signature by mark must be witnessed) | Date

16. Admitting diagnoses (If employment related, also give name and address of employer) | Do not use this space
17. Discharge or current diagnoses (a) Primary (b) Secondary | Do not use this space

TYPE 7 (HOSPICE) QUERY FORMAT
BCA FORMAT

FIELD DESCRIPTION	POSITION	REMARKS
1. Health Insurance Claim Number	1-12	Beneficiary HICN, left justified.
2. Field Separator	13	Constant '.'.
3. Name		
a. Surname	14-24	Beneficiary surname.
b. Separator	25	Constant ','.
c. Initials	26-27	First initial must be present, middle initial may be blank.
4. Field Separator	28	Constant'.'.
5. Query Code	29	Constant '7'.
6. Field Separator	30	Constant '.'.
7. Intermediary Number	31-33	Number of intermediary submitting the query.
8. Field Separator	34	Constant '.'.
9. Hospice Number	35-40	Provider number of the Hospice.
10. Field Separator	41	Constant '.'.
11. Start Date	42-46	YMMDD. The beginning date of a period of Hospice election or the beginning date of an intermediary/Hospice change within an existing period of Hospice election.
12. Field Separator	47	Constant '.'.
13. Date of Birth	48-53	YYMMDD. Beneficiary date of birth.
14. Field Separator	54	Constant'.'.
15. Termination Date	55-59	YMMDD. Termination date of an existing period of Hospice election. This field will be blank when no termination date is involved. NOTE: It is not necessary to terminate a period of election unless the beneficiary chooses to do so before the expiration of the appropriate 90 or 30 day period. Also, it is not necessary to terminate when the only action being conveyed is a change of intermediary/Hospice within an existing period of election.
16. Field Separator	60	Constant '.'.
17. Hospice Code	61	A one position code indicating the reason for this query. Allowable codes are: 1 - indicates this query is starting a new period of Hospice election.

Exhibit 12 (Cont.)

TYPE 7 (HOSPICE) QUERY FORMAT
BCA FORMAT

FIELD DESCRIPTION	POSITION	REMARKS
		2 - indicates this query is terminating an existing period of Hospice election. This code is used only for early termination of an existing period of Hospice when chosen by the beneficiary. See NOTE under termination above. The appropriate start date must be included in the query when this code is used. 3 - indicates a change of intermediary/Hospice during an existing period of Hospice election. No termination date is necessary. NOTE: The beneficiary is allowed to change to a different Hospice once during each period of election. It is the responsibility of the new servicing intermediary to record the change of Hospice. 4 - indicates this query is attempting to void (cancel) an existing period of Hospice election. An appropriate use would be where the intermediary erroneously sent a code 1 query for the wrong beneficiary. The start date originally used must be included in the query. Additionally, if the period were terminated, either early via a code 2 query or because the appropriate 90 or 30 day period had elapsed, then the query must also include the applicable termination date.
18. Record Mark	62	≠ (0-2-8 card punch code). Indicates end of record.

Health Maintenance Organizations, Admissions, and Query Procedures

3555. ADMISSION AND QUERY PROCEDURES FOR SERVICES TO HMO MEMBERS

3555.1 Inpatient Services to HMO Members.--

A. Admission Procedures--General.--The provider furnishing the inpatient services, (including one owned and operated by an HMO), sends you a bill for all admissions, including those for HMO members. Review the bills for completeness and query HCFA.

B. HCFA Action on Queries.--HCFA determines the status of the HMO member and the payment option that the particular HMO elected. HCFA sends you a utilization reply including the appropriate ID trailer. (See §3512.8 for description.)

C. Intermediary Actions on Query Replies.--

1. R Trailer Code "1".--The beneficiary is unrestricted in an HMO which elected to have you process all bills. Process the claim as usual (§§3600ff.) and send a notice of payment or nonpayment (photocopy of the bill or other medium) to the HMO. Send the bill data to HCFA in UNIBILL.

2. R Trailer Code "2".--The beneficiary is unrestricted in an HMO which elected to process only bills for directly provided services and for providers with whom it has effective arrangements. Check the directory (see §3558) to determine if services are directly provided or from a provider with whom the HMO has an effective arrangement.

a. Directly Provided or Effective Arrangements.--Return the bill and instruct the provider to bill the HMO.

b. All Other Services.--Process the bill as described in 1 above.

3. R Trailer Code "A".--The beneficiary is restricted to an HMO which elected to have you process all bills. Check the directory (see §3558) to determine if services are in-plan.

a. Services are In-Plan.--Process the claim as usual (§§3600ff.) and send a notice of payment or nonpayment (photocopy of the bill or other medium) to the HMO. Send the bill data to HCFA in UNIBILL.

b. Services Are Out-Of-Plan.--Determine if the beneficiary lives in the HMO's service area. (See §3558.) If the beneficiary does not, process the claim as in a. above.

If the beneficiary lives in the HMO's service area, determine if the services were emergency or were provided outside the HMO's service area but were urgently needed. Notify the provider to send emergency documentation within three days. (See Nonparticipating Domestic Hospital Supplement, D-§3605.1.)

If the services were either emergency or urgently needed, but provided outside the HMO's service area, process the claim. Send the UNIBILL to HCFA and a copy to the HMO.

If the services were not emergency or urgently needed but provided inside the HMO's service area, deny the claim. Send the nonpayment bill to HCFA in UNIBILL and the denial notice to the HMO, the beneficiary, and the provider. Forward a copy of the bill to the HMO.

NOTE: Claims which involve emergency services can be paid whether the services were received inside or outside the HMO's service area.

4. R Trailer Code "B".—The beneficiary is restricted to an HMO which elected to process bills only for directly provided services. Check the directory (see §3558) to determine if services are in-plan or directly provided.

a. Services Directly Provided.—The HMO has elected to process all bills. Return the bill to the provider and instruct the provider to bill the HMO.

b. Services are In-Plan.—Follow 3a above.

c. Services are Out-of-Plan.—Notify the provider to send emergency documentation (see Nonparticipating Domestic Hospital Supplement, D§3605.1) within 3 days unless the beneficiary does not live in the HMO's service area. Process the claim as described in 3b above.

5. R Trailer Code "C".—The beneficiary is restricted to an HMO which elected to process all bills for restricted members. Check the directory (see §3558) to determine if services are in-plan.

a. Services are In-Plan.—Return the bill and instruct the provider to bill the HMO.

b. Services are Out-of-Plan.—Notify the provider to send emergency documentation to the HMO within 3 days unless the beneficiary does not live in the HMOs service area. (See Nonparticipating Domestic Hospital Supplement, D§3605.1.) Instruct the provider to bill the HMO. The HMO follows the procedures in 3b. above.

3555.2 Outpatient and Part B Inpatient Services to HMO Members.—

A. Billing and Reporting Procedures.—The provider (including one owned and operated by an HMO), furnishing the outpatient services, prepares a bill.

1. If the provider knows that the bill will be paid and processed by you, it sends it to you indicating condition code 04 to show HMO status. Upon receipt of the bill, query HCFA, and pay or deny the bill.

2. If the provider knows that the bill will be paid and processed by the HMO, it sends the bill directly to it. Do not query unless blood deductible pints are involved. The query is accepted by HCFA even when option code C is shown with the R trailer. After the HMO makes its coverage determination on a claim involving blood charges, it sends a copy of the billing to you in a specially marked envelope annotated "HMO blood claim for query." Upon receipt of the query response from HCFA, attach it to the photocopy of the bill and return it to the HMO unless an option code of 1 or A (intermediary jurisdiction) is involved. If option code 1 or A, request the HMO to send the original bill to you for processing.

3. If the provider does not know whether you or the HMO has jurisdiction, it sends the bill to you. Check the directory (see §3558) to determine if the HMO or you have jurisdiction. If the directory does not list the HMO, send a status query to verify the HMO allegation on the bill and to determine jurisdiction. If the HMO has jurisdiction send the bill to the HMO; and notify the provider, otherwise, process the bill as in 1 above.

4. If you receive a bill without an indication of HMO enrollment and subsequently discover that the beneficiary is a member of an HMO which has jurisdiction of bill payment, delete the query and send the bill to the HMO. Notify the provider.

B. HCFA Action on Queries.—HCFA determines the status of the HMO member and the payment option that the particular HMO elected. The appropriate ID trailer is included (see §3512.8 for a description of the trailers.)

C. Definitions of HMO Trailers Received.—

1. R Trailer Code "1".—The beneficiary is unrestricted in an HMO which elected to have you process all bills. Process the claim and send an informational copy of the bill to the HMO.

2. R Trailer Code "2".—The beneficiary is unrestricted in an HMO which elected to process bills for directly provided services or effective arrangement providers.

a. Services are Directly Provided or Effective Arrangements.—The provider sends the bill to the HMO. The HMO processes the bill.

b. All Other Services.—Process the claim as described in §3640 and send an informational copy of the bill to the HMO.

3. R Trailer Code "A".—The beneficiary is restricted to an HMO which elected to have you process all bills. Check the directory (§3558) to determine if services are in-plan.

a. Services Are In-Plan.--Process the bill and send an informational copy of the HCFA-1450 to the HMO.

b. Services Are Out-Of-Plan.--Determine if the beneficiary lives in the HMO's service area (see §3558). If the beneficiary does not, process the claim and send an informational copy of the bill to the HMO. If the beneficiary lives in the HMO's service area, determine if the services were emergency or were urgently needed if provided outside the HMO's service area.

If the services were neither emergency nor urgently needed, nor urgently needed, but provided inside the HMO's service area, deny the claim, submit a delete query, and notify the beneficiary, the provider, and HMO.

4. R Trailer Code "B".--The beneficiary is restricted to an HMO which elected to process bills for only directly provided services.

a. Services Directly Provided.--The HMO elected to process all bills. The provider sends the bill to the HMO.

b. Services are In-Plan.--Process the bill and send an informational copy to the HMO.

c. Services Are Out-Of-Plan.--Determine if the beneficiary lives in the HMO's service area. (See §3558.) If the beneficiary does not, process the claim and send an informational copy of the bill to the HMO. If the beneficiary lives in the HMO's service area, determine if the services were emergency or were urgently needed if provided outside the HMO's service area.

If the services were either emergency, or urgently needed and provided outside the HMO's service area, process the claim and send an informational copy of the bill to the HMO.

If the services were neither emergency nor urgently needed, but provided inside the HMO's service area, deny the claim, submit a delete query, and notify the beneficiary, provider, and HMO.

5. R Trailer Code "C".--The beneficiary is restricted to an HMO which elected to process all bills for restricted members. The provider sends the bill to the HMO. The HMO processes the bill and submits to HCFA.

NOTE: Regardless of the option, process all bills for dialysis and related services provided through an approved dialysis facility.

For option 2, process all bills for outpatient psychiatric services or services by an independent physical therapist.

3555.3 Home Health Services to HMO Members.--

A. Part A Home Health Services.--For intermediary and HMO processed bills, follow the procedures in §3555.1. All HMO trailer codes applicable to inpatient bills also apply to home health under Part A. Process bills in accordance with §3650.

B. Part B Home Health Services.--

1. Start of Care Procedures.--(See §§3540ff.) If the provider knows that the bill will be paid and processed by you, it sends you the bill in an envelope containing only HMO bill(s). The envelope is marked to that effect. Process and query HCFA. (See §3545.) If the query reply shows that the HMO has jurisdiction for bill payment, send the bill to the HMO.

a. If the provider knows that the bill will be paid and processed by the HMO, it sends it to the HMO. The HMO may request you to status query. If after checking its enrollment records, the HMO determines that it does not have jurisdiction, it sends you the bill.

b. If the provider does not know whether you or the HMO has jurisdiction, it sends the bill to you. Check the directory (§3558) to determine if the HMO or you have jurisdiction. If the directory does not list the HMO, status query to verify the HMO's existence and determine jurisdiction. If the HMO has jurisdiction, send the bill to the HMO for processing; and notify the provider, otherwise, process the bill as in 1a above.

c. If you receive the bill without an indication of HMO enrollment and find that the beneficiary is a member of an HMO, which has jurisdiction of bill payment, send the bill to the HMO. Notify the provider.

2. Billing Procedures.--

a. If you pay the bill, process in accordance with §3650. Send the HMO an informational copy of all bills.

b. HMO paid bills are processed in accordance with §3650. The HMO keeps a record of Part B visits for its members. After processing, the HMO sends the bill to you for submission to HCFA.

3560. INTERMEDIARY SYSTEMS TESTING PROJECT (ISTP).

The Intermediary Systems Testing Project (ISTP) has been designed to identify errors in your claims processing system which require corrective action. It tests your ability to process and pay bills correctly while making correct entitlement, eligibility, medical review, and utilization determinations. Test materials are updated annually to reflect changes in deductible and coinsurance and to test new program initiatives. You are assigned test account numbers containing area code 697 and a unique two-digit group code.

You will be assigned an RO test coordinator who will have overall responsibility for proper administration of the ISTP. This individual insures that all testing is performed as scheduled and, during the testing, performs the following functions:

o Briefs your personnel on the purpose and general requirements of the test and discusses procedures for processing the test claims.

o Provides you with test materials.

o Serves as the source of data for claim investigation, i.e., provides data that would normally be required from providers, beneficiaries, the servicing SSO, another intermediary, or HCFA's central records. This data is provided in response to your specific requests.

o Evaluates and scores the output you generate.

o Analyzes, with you, the "Final Report of Test Results."

o Follows up to insure that required corrections are made timely.

Perform the test in a normal production environment. Use claims in the test package marked "PREPROCESSED" in the remarks area to set up test conditions. They contain no errors, based on information available at the time they are received. Process them prior to the rest of the test claims. Process the test using normal procedures. If additional data is required to resolve eligibility or entitlement questions, request this information from the test coordinator via telephone.

Send a copy of each corrected claim to the RO. Claim payments will be mailed to you since your address is used for the provider address. Void the checks and send a copy with the provider listings for the claims to the RO. Mail any correspondence to the beneficiary to the address on the bill in the normal manner. Where possible, intercept and void checks generated to test beneficiaries prior to their being mailed. Submit a copy of the voided check and related correspondence to the RO. The RO voids and returns any checks that you did not intercept.

Send the processed claims to HCFA along with regular bills on the paid claims tape. When they enter the HCFA System, a printout of the updated history will be prepared for inclusion in the evaluation of the test. Rejected claims will not be returned. They will appear on the Batch Clearance Tape with the error code blanked out to eliminate the possibility of a corrected claim being resubmitted. Suppress test data before going to any data files, e.g., MSP Data Exchange or PS&R Report. The error listings and bill history printouts for rejected test claims will be used by HCFA in the test evaluation. At the completion of the test, HCFA, using the checks, EOMBs, Medicare Benefit Notices, paid claim listings, and corrected claim copies prepared by you, and using the query/reply reports, bill history printouts, and error listings prepared by the Health Insurance System, prepares a "Final Report of Test Results." The report indicates error conditions requiring corrective action. It also indicates as errors any claims that were either not completed or not received by the established cutoff date. Copies of the report will be sent to you and to Central Office.

Based on the report, prepare and forward a response to the RO within 30 days. Indicate the necessary corrective actions you and the regional office deem necessary to insure the errors are corrected and your proposed completion dates. Report the completion dates of your corrective actions to the RO.

3561. CONSISTENCY EDIT TESTING

The consistency edit test material includes:

- Approximately 200 test claims.

- A consistency edit reject listing (Error Code Matrix) that shows the HCFA error code expected for each test claim and a brief narrative of the error condition. The error code expected on each claim is also shown in the "Remarks" block on the bill.

- Information needed to set up a file of test providers. These are the same as those used for ISTP testing. Use only the data that is applicable to your provider file. Additionally, use your two-digit State code with the test provider numbers shown.

Data Preparation

- Convert test claim data to machine readable form.

NOTE: If data entry device restrictions prevent entering invalid characters or other informational fields from test claims, document and notify the RO in your report of test results.

Test Conduct

- Perform the test without RO administration.

- Process the test file in the regular production system.

- Within a week of processing the test file through your consistency edit programs, provide written notification to the RO indicating when the test was run (start/completion dates), identification (HICN) of claims that rejected, your error code and reasons why they rejected, identification of claims that did not reject (Name, HICN). Investigate those which did not reject to determine and schedule any necessary corrective actions.

- Do not attempt to correct claims after editing runs are completed.

- Purge or invalidate all test claims.

- The RO follows up to assure that the indicated corrective actions are satisfactorily completed. Following completion of the corrective actions, retest the claims that failed to reject and notify the RO of the results.

3563. RETESTING.

Run ISTP annually. Also run it upon implementation of any major systems change.

Retest the consistency test whenever directed to do so by your RO.

Part A Replies from SSA

Exhibit 1--Part A--Notice of Admission Coding Sheet
Exhibit 2--Part B--Inquiry Coding Sheet

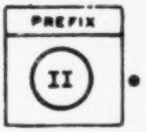
ADDENDUM A--ADVANCED RECORD SYSTEM

1. THE GSA ADVANCED RECORD SYSTEM.--The teletype system operated by the General Services Administration is called The Advanced Record System. Part A intermediaries who have been furnished Government-owned teletype equipment use this system to query the SSA records in Baltimore. Part A intermediaries using the Blue Cross Association teletype system should refer to "Telecommunications System Principles of Operation Tributary Station."

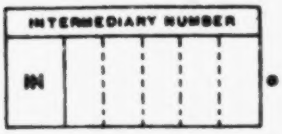
The ARS data transmission system uses a floating format for transmission of queries to SSA and a fixed format for transmitting replies to the intermediary. To facilitate floating format transmission, Part A intermediaries using the ARS are furnished Form SSA-1577a (Part A Notice of Admission Coding Sheet) and Form SSA-1577 (Part B Inquiry Coding Sheet).

The following sections deal with completing the forms SSA-1577 and SSA-1577a. For details of transmission and keying for queries to SSA, see the SSA "Telecommunication Operating Procedures Manual."

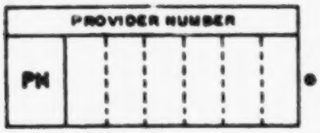
2. PART A QUERY--COMPLETING FORM SSA-1577a.--Following is a description of each item on the form SSA-1577a and how it is completed.



This code identifies the request as a data message initiated by an intermediary and transmitted to SSA via the ARS telecommunications system. This code serves as a case separator for the computer. It is the most important code on the request. If incorrectly keyed or omitted, the request itself will be lost.



The "IN" code must precede the intermediary number. It identifies the intermediary who will process the Part A claim for this admission. It is recorded as part of an "open item"-and in the event SSA or another intermediary needs information concerning an open item, it tells whom they must contact for this information. If this number is incorrect or not furnished, the notice of admission cannot be processed.



The "PN" code must precede the six-position number which identifies the provider who will submit a bill for payment. The notice cannot be processed without this number. It also facilitates investigation of open items by SSA or an intermediary. If the number is incorrect, payment of the bill may be delayed until the number is corrected on the "open item."

TYPE QUERY	
TQ	

The TQ code tells the SSA EDP system what action to take as a result of the query. TQ code 1 is used normally. This code indicates that a Notice of Admission or Start of Care has been received by the intermediary and is being reported to the SSA utilization record. A list of Part A query codes is shown in section 3507.3.

CLAIM NUMBER HOLDER		INITIALS
CH		

The name of the individual being admitted is entered immediately following the "CH" code. Up to 11 positions of the last name of the individual are entered. If the last name is longer than 11 positions, enter only the first 11 positions. Enter a comma immediately following the last letter of the name or in the 12th position if the name exceeds 11 positions. Immediately following the comma key one or two initials. The proper entry for "William B. Jones" would be: "CHJONES,WB." The proper entry for a name with one initial only would be: "CHJONES,W.", etc. Do not space within the last name field. Example: "Von Charles" would be keyed thus: "CHVONCHARLES,--.". Similarly, do not use hyphens or other punctuation within the last name field. Example: O'Rourke is keyed "OROURKE,--.". If known, space after surname and show: Jr., Sr., III, etc; do not use any punctuation.

CLAIM NUMBER	
CN	

The CN code indicates that the alpha-numeric information which follows is the claims number. This field is variable in length. For example, an entry for a person who has an HI card issued by the Railroad Retirement Board could look like this: "CNA991273." An entry for a person who has an HI card issued by SSA could look like this: "CN123456789F2." The field can contain up to 12 characters and may contain as few as 7 characters.

DATE OF BIRTH			
	MO.	DAY	YEAR
DB			

The DB code is shown followed by the date as a 6-digit number: 2 digits for month, 2 digits for day, and 2 digits for year. September 4, 1900 is shown 090400. The date must be transmitted to SSA in that numerical order. If the date of birth is unknown, make no entry. If only the year of birth is known, enter 00 for the month or day if either of these is not known. (Omitted in ECF admissions.)

Date of Admission			
	Mo.	Day	Year
DA			

Enter the date of admission or date of start of care as a six-position numeric immediately following the code DA. For home health start of care notices, show the date of start of care. The first month of the year is "01," the last month 12. The first two positions following "DA" indicate the month of admission. The next two positions indicate the day of admission. The third day of the month is shown as "03." The last two positions indicate the year of admission. The proper entry for an admission date of April 7, 1979, would be: "DA040779." If the date of admission is not correct, the bill cannot be processed. Beginning July 1, 1981 the home health visits (A/B) as given in the type 1 and 2 replies, is fixed at full value (i.e., 100).

3. PART A REPLIES FROM HCFA.--HCFA will transmit a reply message in response to each Part A notice of admission even though it is unable to process the notice. Replies will be furnished the day following the receipt of the admission notice by HCFA. These replies will be sent via teletype. They will be separated by 5 linefeeds on your hard copy. Decimal points will be used to separate the individual items of reply data.

The replies will be transmitted in fixed format; that is, certain positions in the reply will be assigned to certain types of data. An asterisk will appear in place of a decimal when a reply transmits an edited request to you for retransmission. The last field in a line will be terminated by a decimal point. It may be terminated by an asterisk if the field contained an edit error.

A reply may contain more than one line of information. If this is the case, a "trailer code" will identify the kinds of information in the second line.

4. Type 1 reply.—The example below is a typical reply to a hospital notice of admission. The list of data beneath it explains what each item of data means.

1.01212.021102011D.01.081581.60.30.190.100.100.20400.2.3.____.0766.

HI Claim Number (470389297 A)
Disposition Code (50)
Date of Admission (110883)

7. TRAILER FORMATS.-The second line of a reply to an admission query may contain one or more of the following trailers: (See S3512.8 for explanations of trailers).

TRAILER CODE B - Name Correction Information

Here is a typical second line of a Reply to a Hospital Admission query where name correction information is furnished:

0766. 85. B. MAHONEY. TA.

Part B Effective Date (0766)
Year Benefit Period Began (85)
Trailer Code (B)
Last Name on HCFA Record (MAHONEY)
Initials on HCFA Record (TA)
The surname field is 11 positions

TRAILER CODE C - HI Claim Number Correction Information

Here is a typical second line of a reply to a hospital admission query where HICN correction information is furnished.

0766.84.C.484100337D.

Part B Effective Date (0766)
Year Benefit Period Began (84)
Trailer Code (C)
HICN on HCFA's record (484100337D)

TRAILER CODE G

Here is a typical last line of a Reply to a Hospital Admission Notice where the beneficiary has used one or more of his 60 lifetime reserve days. The G trailer always begins a new line and is always the last line of the reply.

EXAMPLE:
0766.68.
G.55.

Part B Effective Date
Year Benefit Period Began
Trailer Code

Number of Reserve Days Remaining

TRAILER CODE K

Here is a typical second line of a reply to a hospital admission notice where a cross-referred HI claim number is furnished:

0766.68.K.484100344B.

TRAILER CODE L

Here is a typical second line of a duplicate reply to a hospital admission notice where the disposition code of the original reply is furnished:

0766.68.L.25

If there are other trailers, the L trailer will be the last trailer furnished.

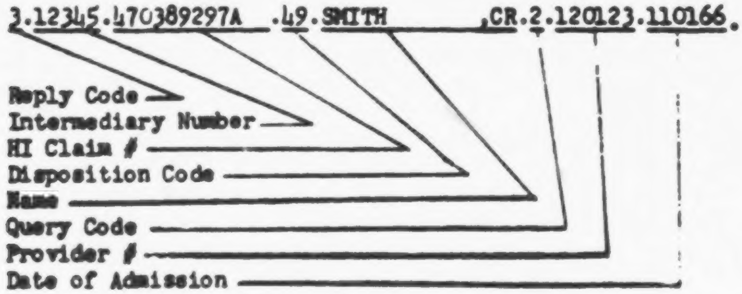
8. ACKNOWLEDGMENT REPLY.--Whenever SSA cannot process a case within the EDP system immediately, it will nevertheless acknowledge receipt of the Admission Notice. This acknowledgment looks like this:

3.01212.51320441A .00.GOODFELLOW ,M .1.21996.090366.

Reply Code
Intermediary #
HI Claim #
Disposition Code
Name
Query Code
Provider #
Date of Admission

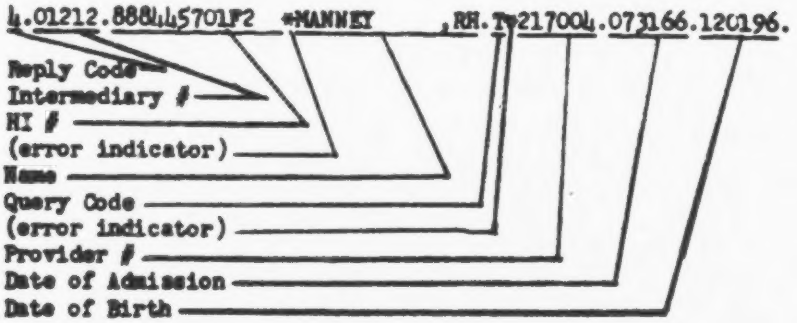
The reason for sending this reply is merely to acknowledge receipt of the notice so it will not be retransmitted. A type "1" or "2" reply will be furnished by HCFA as quickly as possible. Do not retransmit the original query once a reply is received. However, if a 1 or 2 reply is not received within 30 days, requery.

When HCFA processes a deletion item (query code 2), the intermediary receives an acknowledgment reply containing disposition code 00, 03, or 49. (For an explanation of the codes, see § 3512.7.)



3.12345.470389297A .49.SMITH ,CR.2.120123.110166.
Reply Code
Intermediary Number
HI Claim #
Disposition Code
Name
Query Code
Provider #
Date of Admission

9. EDIT REJECTION REPLY.--If it is impossible for HCFA to process a query, the query will be returned as received with your block codes replaced by decimals or an asterisk. The asterisk indicates an error in the data preceding the asterisk. This reply code is "4." Shown below is a typical rejection reply. Requery HCFA when this type of reply is received after correcting the errors indicated on the reply



4.01212.888445701F2 *MANNEY ,RH.T*217004.073166.120196.
Reply Code
Intermediary #

Name
Query Code
(error indicator)
Provider #
Date of Admission
Date of Birth

NOTE: The HI number is not possible. The query code furnished is not possible.

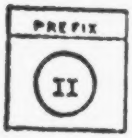
10. THE PART B QUERY.--HCFA maintains individual records of utilization and eligibility for each individual now entitled (or previously entitled) to Part B insurance. When the intermediary receives the first Part B claim in a calendar year, the HCFA record must be queried to see if the individual is eligible, has met his deductible, and to determine if any limitation on payment exists. The intermediary must continue to query HCFA each time a claim for payment is received until HCFA has furnished a "deductible met" reply. An intermediary with a fully automated claims processing system must maintain its files in such a way that it can determine that the deductible has been met previously in the year. Once the intermediary is informed that the deductible is met, subsequent claims may be paid without querying HCFA. HCFA will automatically notify the intermediary of any pertinent changes in an individual's status once it has sent a "deductible met" reply to the intermediary.

A Part B query is sent to HCFA when:

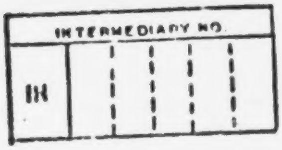
(a) A claim for payment is pending and HCFA has not previously notified the intermediary that the deductible is met for that year. (However, another query must be made later if the situation in item (b) applies.)

(b) A claim for payment is pending where expenses were incurred in the last 3 months of the year, unless the intermediary's records show that the deductible was met in the first 9 months of the year.

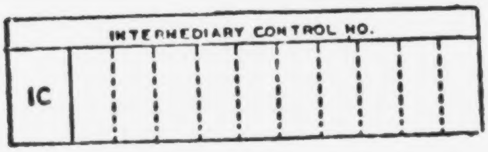
11. COMPLETING A PART B INQUIRY CODING SHEET (EXHIBIT 2).



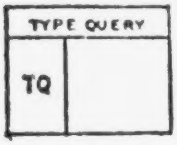
The II code tells the computer that this is the beginning of a new Part B inquiry. This two-position alphabetical code serves as a request separator. Proper keying of this code is extremely important. If it is not keyed properly at the beginning of each request, the request cannot be processed.



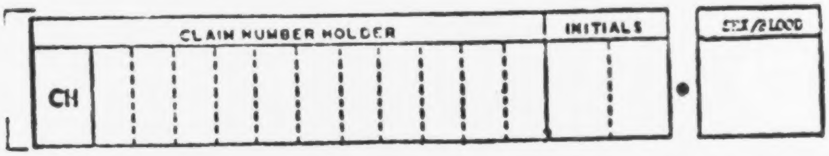
The IN code indicates that the five-position numeric information following is the intermediary identification number. This must be entered on each request so HCFA will know where to send the reply. Errors in keying this information will result in the request not being processed or in routing the reply to the wrong intermediary.



The IC code indicates that the alpha, numeric, or alpha-numeric data following is an intermediary control number. This number is used by HCFA and the intermediary to prevent processing the same query twice. It is displayed on the reply to facilitate processing by the intermediary. The control may be 1 - 10 positions in length.

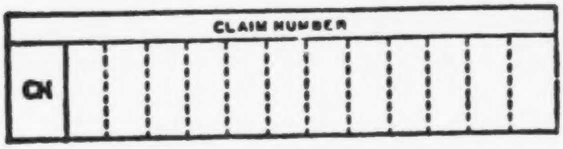


The TQ code tells the HCFA EDP system what type of action to take as a result of the query. TQ code "I" is normally used to report incurred expenses for Part B. This code indicates that the intermediary has a pending claim, is furnishing an amount of incurred expenses to the system, and wants to know the status of the individual's record.



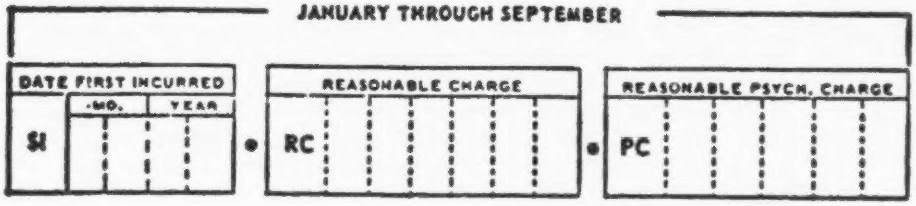
The CH code indicates that the alphabetic characters following represent the name information for the individual. This field is variable in length. Up to 11 letters of the last name may be furnished. If the last name is longer than 11 letters, do not enter more than 11 letters. Up to two initials may be entered. If the individual has only one initial, enter it followed by a decimal. A comma is keyed immediately following the last character of the last name and immediately preceding the initial or initials. The proper entry for William B. Jones would be: "CHJONES, WB." The proper entry for a name with one initial only would be: "CHJONES, W.". Do not space within the last name field. Example: "Von Charles" would be keyed: "CHVONCHARLES,--". Similarly, do not use hyphens or other punctuation within the last name field. EXAMPLE: O'Rourke is keyed "CHOROURKE,--". If known, space after surname and show: Jr., Sr., III, etc; do not use any punctuation.

Immediately after the decimal following the initial or initials, key a one-position numeric sex/blood code. Select the proper code from the chart given in § 3527.



CLAIM NUMBER
CN

The CN code indicates that the alpha-numeric information which follows is the claim number. This field is variable in length. For example, an entry for a person who has an HI card issued by the Railroad Retirement Board would look like this: "CNA991273." An entry for a person who has an HI card issued by HCFA could look like this: "CN123456789F2." The field can be up to 12 characters long and may contain as few as 7 characters. (See § 3504 for possible HI claim numbers.)



JANUARY THROUGH SEPTEMBER
DATE FIRST INCURRED
MO.
YEAR
SI
REASONABLE CHARGE
RC
REASONABLE PSYCH. CHARGE
PC

The three data blocks shown above are used to report claims data for a pending bill or to correct information previously submitted depending on the type of query being sent. Incurred expenses during the period January-September are reported using the three blocks above. Any information about the last three months of a calendar year are furnished using other codes. Each data block is completed as follows:

Date First Incurred (CD) (4 positions)
Enter the month and year during which services were first incurred in the first 9-month period of a calendar year. If the total includes services in two or more months, show the earliest month within the 9-month period. Enter 4 numeric characters immediately following the SI code to show month and year in that order.

Reasonable Charge (CC) (6 positions)
Enter the reasonable charge for regular medical services. The field is variable and may be 6 positions long. If charges exceed $9999.99, enter this amount. Example: Enter a charge of $96 as "RC9600," a charge of $9.68 as "RC968," and a charge of $100 as "RC10000." Minimum field length is 2 positions (01 cent).

Reasonable Psych. Charge (CP) - (5 positions)
Entries are the same as for the RC block except only outpatient psychiatric expenses are entered. Do not report amounts in excess of the limits shown in §3535.1, trailer code D.

Report psychiatric expenses incurred as an inpatient under the RC code. Report HHA services as regular medical expenses, not as psychiatric expenses even though they may be of that nature.

Split queries for psychiatric expense that exceed $999.99 in a single claim in order to meet the 5-position (dollars and cents) limit in the query record. When you split a query, assign a different control number to each.

OCTOBER THROUGH DECEMBER

Date First Incurred
Reasonable Charge
Reasonable Psych. Charge

Use the three data blocks to report claims data for a pending bill or to correct information previously submitted depending on the type of query being sent. Report incurred expenses during the period October-December using these blocks. Report information about the first 9 months under the other codes as instructed. Each data block is discussed below:

Date First Incurred (CD) (4 positions)

Enter the month and year in which services were first incurred immediately following a CD code. Enter 4 numeric characters.

Reasonable Charge (CC) - (6 positions)

Enter the reasonable charge for regular medical services. This field varies in length from 2 to 6 positions. If charges exceed $9999.99 enter this amount. Always enter 2 positions for "cents."
Example: Report $137.00 as: "CC13700."

Reasonable Psych. Charge (CP) - (6 positions after 1988)

Entries in this block are similar to the CC block. However, report only outpatient psychiatric expenses. Do not report amounts in excess of the limits shown in §3535.1, trailer code D. (The maximum field length will be increased to 6 positions in 1989.) Report psychiatric expenses incurred as an inpatient using the CC code. Part B HHA expenses are considered to be regular medical expenses.

10. PART B REPLIES.-- HCFA transmits a reply, transmitted typically within 24 hours of receipt of the query, even though it is unable to furnish detailed information. This reply is typically transmitted within 24 hours of receipt of the query. You will not receive a reply if the intermediary number you furnished is incorrect. Each reply is separated by 5 line-feeds on your teletype hard-copy.

Part B replies are a combination of "fixed" and "floating" formats. The first replies are in "fixed" format. That is, certain information is always shown in the same place. The remainder may be "floating". That is, information may not always appear in the same position. Whether or not a reply is in "fixed" or "floating" format is indicated by the reply and/or the disposition codes shown.

13. REPLY CODES.--A Part B reply will contain a 3, 4, 6, or 7 in the first position of the reply. This number is called a reply code. Reply code 3 identifies the reply as a message acknowledging receipt of a query but does not furnish deductible information. Reply code 4 identifies the reply as a message indicating that the query to which the reply pertains failed the initial SSA edit operation and could not be processed by SSA. Reply code 6 identifies a reply to a Part B query where SSA is furnishing information to the intermediary. Reply code 7 identifies an automatic notification of termination, reinstatement, adjustment, or cross referred HI claim number. The reply code and disposition code identify the format of the reply.

14. DISPOSITION CODE.--The disposition code is a 2-position numeric code appearing in positions 22 and 23 of a Part B reply which contains a type code 3, 6, or 7. Replies with a type code 4 do not contain a disposition code. The disposition code is a coded remark which either constitutes the reply or explains or amplifies upon other information contained in the reply. The disposition code and the reply code identify the format of the reply. (See § 3535 for explanation of the meaning of the various disposition codes.)

(See §3535.1 for trailer codes.)

16. FORMAT OF PART B REPLIES.-- The reply code in the first position of the Part B reply and the disposition code in positions 22-23 dictate the format of the reply. The first 21 positions of the reply are always the same format and show the reply code, the intermediary number, and the HI claim number.

The formats of the various replies are shown in the following sections.

17. REPLY CODE 3 WITH DISPOSITION CODE "00".-- All replies with reply code "3" in the first position of the reply are "fixed" format replies. An example of a code 3 message is shown below with each item of data identified:

```
3.01212.387129686B    .00.MEYER       ,AW.I.1.0766.034265.
A.1234567899.
```

Reply Code (3)
Intermediary Number (01212)
HI Claim Number (387129686B)
Disposition Code (00)
Surname (MEYER)
Initials (AW)
Query Code (I)
Sex (1)
Month Expenses Incurred (0766)
Reasonable Charge Medical (034265)
Reasonable Charge OPT/Psych (blanks)

Line #2

Trailer Code (A)
Intermediary Control Number (1234567899)

18. REPLY CODE 4 FORMAT.-- All replies with reply code "4" in the first position of the reply are "fixed" format replies. An example of a reply code 4 message is shown below with each item of data identified:

```
4.01212.396031217D .LANGE     ,RT.I.1.0866.        *10000.
A.1296066109.
```

Line #1

Reply Code (4)
Intermediary Number (01212)
HI Claim Number (396031217D)
Surname (LANGE)
Initials (RT)
Query Code (I)
Sex (1)
Month Expenses Incurred (0866)
Reasonable Charge Medical (Blank)
Reasonable Charge OPT/Psych (10000)

Line #2

Trailer Code (A)
Intermediary Control Number (1296066109)

Significance of the Asterisk (*).-- The asterisk in a reply code 4 message indicates that the data immediately preceding it failed the edit. In the example above note an asterisk appears in place of the decimal which would normally indicate the end of the reasonable charge medical field. The presence of an alphabetical character in this field in a query would cause a reply code 4 reply as illustrated.

19. TYPE 6 REPLIES.-- An example of a regular type 6 reply is shown below. This is followed by an explanation of this example plus an explanation of the special format for a code 38 type 6 reply.

6.01212.049077395A .01.0866.0866.0.6000.A.1234567891.

42-45	Effective Date:

Disposition Code 70 (Termination), represents the last month and year for which the beneficiary is entitled. If termination is caused by a determination of erroneous entitlement this field contains xxxx.

Disposition Code 71 (Reinstatement), represents the effective month and year that benefits were reinstated.

Disposition Code 72 (Adjustment), contains the calendar year, e.g., 1988, for which the cash or blood deductible has been adjusted from a "met" to a "not met" condition or the amounts previously applied to the maximum for psychiatric care have been adjusted below the applicable amount shown in §3535.1, trailer D.

When HCFA receives a date of death, or an adjustment to a date of death, this field contains the year of death. When HCFA removes a date of death, this field contains zeros. When HCFA receives notification of a period of Hospice care, this field contains the year of such Hospice care.

Disposition Code 77 (Cross-Referred HICN)

3600. GENERAL REQUIREMENTS

3600.1 Claims Processing Timeliness.--

A. General.--Establish a control record and timely processing of claims as described below.

1. Claims Processing Timeliness Requirements.--Pay or deny "clean" claims within the applicable number of days from the date of their receipt as follows:

Time Period for Claims Received	Applicable Number of Days
02-01-86 thru 09-30-87	30
10-01-87 thru 09-30-88	26
10-01-88 thru 09-30-89	25
10-01-89 and later	24

NOTE: For interest payments and PIP requirements the time period began April 1, 1987.

See subsection A.3. for the definition of a clean claim. All claims (e.g., paid claims, partial and complete denials, no payment claims), including PIP and EMCs are subject to the above requirements.

Start your count on the day after the receipt date except where you receive and deny the claim on the same day. (In such cases you have 1 day's processing time.) End your count on the scheduled payment date. For example, for claims received October 1, 1987 through September 30, 1988, if this span is 26 days or less, you met the requirement.

2. Payment Floor Standards.--Do not pay, issue, mail, or otherwise reimburse for any claim you receive within the waiting period indicated below. The length of the waiting period is determined by the date the claim is received. Start your count on the day after the day of receipt. For example, a claim received July 1, 1988 can be paid on or after July 12, 1988.

Claims Receipt Date	Waiting Period (Calendar Days)
07-01-88 thru 09-30-88	10
10-01-88 thru 09-30-89	14

Do not hold claims upon receipt. Process them immediately and, when necessary, delay payment to meet these requirements. Regardless of when the check is dated, show as the scheduled payment date the actual date the check is mailed.

Continue to apply existing rules governing PIP to all PIP claims (e.g., should cover a period beginning 3 weeks after discharge). The rules have not changed with the introduction of the payment floor standards as they apply only to payment for individual claims. You may, however, release notification of the disposition of claims to PIP hospitals at any point in time convienent with your operations as long as you meet the claims processing timeliness requirements.

best copy available

NOTE: No payment claims are not subject to the payment floor standards.

3. Definition of "Clean Claim".--A "clean" claim is one on which:

- You do not investigate or develop external to your operation on a prepayment basis; and

- You receive a definitive query response within 7 days of your original query. A definitive query response is one which provides all the eligibility data you need to process the claim.

Examples are claims which:

- Pass all edits and are processed electronically;

- Are investigated within your claims, medical review, or reimbursement office *without* the need to contact the provider, beneficiary, or SSA;

- Are subject to medical review but complete medical evidence is attached or forwarded simultaneously with EMC records in accordance with your instructions to the provider. If medical evidence must be requested, see first example under subsection 4 below; or

- Are developed on a postpayment basis.

A claim handled manually, solely because of the design of your particular system, is a clean claim.

4. Other Claims.--Claims which do not meet the definition of "clean" claims are considered "other" claims. These include those which require investigation or development external to your operation on a prepayment basis. In addition, if you do not receive a definitive query response within 7 days of your original query, the claim is considered an "other" claim regardless of whether you develop externally. Examples are claims on which you:

- Request additional information from the provider or other external source. This includes routine data omitted from the bill, medical information, or information to resolve discrepancies;

- Request information or assistance from another contractor, e.g., development data obtained through the carrier-intermediary data exchange;

- Develop MSP information;

- Request information necessary for a coverage determination;

- Perform sequential processing when the earlier claim is in development;

- Requery because an original query has not been answered within 7 days (See §§3501 and 3507.3); or

- Do not receive a definitive query response within 7 days of your original query date. Receipt of an acknowledgement within 7 days such as 00 or 09 does not constitute a definitive reply.

NOTE: For Common Working File dependent intermediaries, a claim is considered "other" if after the second time the claim is recycled you continue to receive a 50, 53, 54, 60 or 61 response.

Enter condition code 64 in positions 352-365 of the UNIBILL record to indicate that the claim is not a "clean" claim and therefore, not subject to the mandated claims processing timeliness standard.

5. Interest Payment on Clean Non-PIP Claims, Not Paid Timely.—Effective April 1, 1987, you must pay interest on clean non-PIP claims if payment is not made within the applicable number of calendar days after the date of receipt as described in subsection A.1. For example, a claim received on October 1, 1987 must have been paid before the end of business on October 27, 1987. Interest is not required on:

- Claims requiring external investigation or development;
- Claims on which no payment is due;
- Full denials; or
- Claims for which the provider is receiving PIP.

However, PIP on inpatient bills does not preclude interest payments on outpatient bills.

Pay interest on a per bill basis at the time of your payment. Interest is a Federal expense and is not assessed against you.

6. Continuation of PIP.—Continue PIP upon request to subsection (d) hospitals as defined in subsection B.1. (including units excluded from PPS) that received PIP on June 30, 1987, until you meet the requirement to pay 95 percent of all clean claims (for which PIP payment is not made) in the applicable number of days for 3 consecutive months. (See subsection A.1. for the applicable number of days.)

Regardless of your claims processing timeliness performance on clean, non-PIP bills, PIP continues, upon request, for:

o DSHs that have at least a 5.1 percent disproportionate share adjustment (as discussed below); or

o Rural hospitals with 100 or fewer beds.

The request to continue PIP by such hospitals is a one time opportunity and must have been made no later than July 1, 1987. It is limited to hospitals that:

o Received PIP on June 30, 1987; and

o Continued to meet requirements specified in regulations that were applicable on October 1, 1986. (Qualified DSHs and rural hospitals with 100 or fewer beds may receive PIP payments indefinitely provided that they continue to meet standards established by the Secretary that were applicable on October 1, 1986.)

Section 1815(e)(1)(B)(i) of the Act (as added by §9311(a)(1) of OBRA), requires the amount of a hospital's disproportionate share adjustment percentage for purposes of this PIP provision be based upon the data base used by HCFA to standardize the FY 1987 PPS rates. The disproportionate share adjustment was calculated by HCFA from the hospital's percentage of low income patients based on the FY 1985 SSI/Medicare data and the Medicaid percentage from the FY 1984 cost report data. HCFA furnished you a list of DSH payment percentages to use to determine whether a hospital meets the DSH requirement to retain PIP. Except as follows, use the listing to determine whether a hospital meets the 5.1 percent criterion. A hospital meets the criterion where it included adequate Medicaid days in its 1984 cost report but HCFA failed to properly include them in its data base when computing the 1984 Medicaid percentage. It also can meet the criterion where it had adequate Medicaid days in its 1984 cost reporting year even though it did not include them in its cost report.

In the latter situation, a hospital must submit to you previously unsubmitted Medicaid data applicable to the 1984 cost report year (cost reports beginning October 1, 1983 through September 30, 1984). Verify the accuracy of this subsequently submitted Medicaid data and take appropriate steps, including audit where necessary, to assure the data's validity.

A hospital's request and the data must be received by you no later than 3 years from the date of the Notice of Program Reimbursement for the 1984 cost report. Remove from PIP after June 30, 1987 any hospital not qualifying based on the HCFA listing, or improper exclusion from the data base. Any hospital removed from PIP that has notified you of its intention to submit additional Medicaid data, or which has submitted the data with its request, will remain off PIP pending your evaluation of the data.

Consult your RO for specific timeframes involved and subsequent actions required where you permit PIP for a hospital not on the listing.

For rural hospitals to continue PIP, they must be located in a rural area (as defined for PPS) and have 100 or fewer beds on July 1, 1987. A rural hospital is a hospital outside any Metropolitan Statistical Area (MSA). Use the guidelines for determining MSAs for PPS hospitals to determine whether a hospital is rural.

In determining the bed count, a bed means a general routine or intensive care type adult or pediatric bed maintained in a patient care area for inpatient lodging. Do not count beds assigned to newborns, to custodial or domiciliary care, to units excluded from PPS, to hospital based SNFs, to areas maintained and utilized for only a portion of a patient's stay, or primarily for special procedures (e.g., labor rooms, birthing rooms, postanesthesia and postoperative recovery rooms, outpatient areas or emergency rooms, or ancillary departments).

Where hospitals have significant cash flow problems as a result of removal from PIP, accelerated payments are payable in accordance with Provider Reimbursement Manual §2412.

If the provider has previously elected PIP and continues to qualify, continue PIP for:

- Inpatient services from hospitals other than subsection (d) hospitals;

- Hospitals which receive payment under a State hospital reimbursement system under §§1814(b)(3) or 1886(c) of the Act, if payment on a PIP basis is approved by HCFA as an integral part of such reimbursement system. (PIP is an integral part of the New Jersey system but is not of the Maryland system);

- SNF services; or

- Home health services.

In addition, upon request you can implement PIP effective July 1, 1987 or later for hospices meeting the requirements to qualify for PIP.

7. Receipt Date.—The receipt date is the date you receive the claim subject to the qualifications in subsection C on whether a claim is sufficiently complete to be considered received. Using this date permits use of UNIBILL to monitor your performance. Enter this date in positions 1955-1960 of the UNIBILL record.

8. Scheduled Payment Date.—The scheduled payment date is the date the check you issued is mailed, deposited by you in the provider's account, or transferred electronically. For PIP claims and no payment bills, the scheduled payment date is the date for payment bills in the same adjudication batch. For adjustments (action code 3 in position 2 of the record) the scheduled payment date is the date you forward the UNIBILL record to HCFA. Enter this date in positions 1967-1972 of the UNIBILL record. Determine the date based upon your scheduled remittance and mailing operations before you prepare the UNIBILL record.

B. Systems Requirements.—

1. Determine Whether You May Remove Hospitals From PIP Based on Your Processing Timeliness.—In determining whether your processing timeliness is adequate to remove hospitals from PIP, consider all clean, non-PIP bills. Select cases based upon:

Pay interest at the rate used for §3902(a) of title 31, U.S. Code (relating to interest penalties for failure to make prompt payments). The interest rate is determined by the rate applicable on your scheduled payment date.

This rate is determined by the Treasury Department on a 6 month basis. The rate is 9 3/4 percent from January 1, 1989 through June 30, 1989. The prior rate was 9 1/4 percent effective through December 30, 1988. Changes to the rate will be issued to you. Calculate the interest using the following formula:

- o Reimbursement amount x rate x days divided by 365 = interest payment.

The interest period begins on the day after payment is due and ends on the scheduled payment date.

EXAMPLE: Date received - January 1, 1989
Payment due - on January 26, 1989
Payment made - February 09, 1989
Interest begins - on January 27, 1989
Interest ends - February 09, 1989
Days for which interest due - 14 days
Amount of reimbursement = $100
Annual interest rate = 9.75%

The formula is applied as follows:

$100 x .0975 x 14 divided by 365 = $.373 or $.37 when rounded to the nearest penny.

Use the UNIBILL reimbursement amount (locations 1707-1715) as the amount of principal. This is the payment after all deductions for deductible, coinsurance, and MSP. Round to the nearest penny. Report as value code 70 in UNIBILL the amount of interest you pay.

4. Reinstatement of PIP.—If you fail to pay 95 percent of all "clean" claims (for which PIP payments are not made) in the applicable number of days (as described in subsection A.1.) for each of 3 consecutive months, implement PIP for subsection (d) hospitals that qualify for PIP and request it. (See subsection B3 for instructions for selecting claims for this calculation.)

- Initial bill;
- Scheduled payment date during the month;
- Reimbursement amount greater than zero; and
- Neither condition code 62 nor 64 applies.

If for April, May, and June you pay 95 percent of these bills in 30 days after the day of receipt, discontinue PIP for subsection (d) hospitals, beginning July 1, 1987 for bills with discharge dates of July 1, 1987 and later, for hospitals that do not meet the exceptions in subsection A5.

Subsection (d) hospitals are hospitals in the 50 States, D.C. and Puerto Rico other than:

- Psychiatric hospitals;
- Rehabilitation hospitals;
- Whose inpatients are predominantly under 18 years old; and
- Whose average inpatient length of stay exceeds 25 days.

Hospitals in Maryland and New Jersey are included, but PIP is continued to New Jersey hospitals.

Treat excluded units of subsection (d) hospitals in the same manner as the hospital.

If you did not pay 95 percent of your clean bills in 30 days for April, May, or June 1987, notify your hospitals sufficiently early in order to permit them to timely submit their request to continue PIP and to assure that their PIP payments continue uninterrupted.

Discontinue PIP beginning with the first month after you have met the claims processing timeliness standard described in subsection A.5. for 3 consecutive months.

2. Determine Which DSHs and Small Rural Hospitals Will Continue on PIP.—Determine which hospitals will meet the DSH and rural hospital requirements to retain PIP (see subsection A.5. for requirements). Notify these hospitals sufficiently early in order to permit them to timely submit their request for continuation and to assure that their PIP payments continue uninterrupted.

3. Determine and Pay Interest.—Beginning with claims received April 1, 1987 you must pay interest on clean, non-PIP claims for which you do not make payment within the applicable number of calendar days (as described in subsection A.1.) beginning on the day after the receipt date. Select claims for interest based upon:

- Received April 1, 1987 or later;
- Processing time exceeds applicable number of days in Subsection A1. (Julian scheduled payment date minus Julian receipt date equals more than applicable number of days in A1.)
- Neither condition code 62 nor 64 applies; and
- Reimbursement amount is greater than zero.

5. Report Interest Payment on Remittance Records.—When interest payments are applicable, i.e., days after April 1, 1987, indicate for the individual claims on your remittance record the amount of interest.

6. Payment Made to Beneficiary.—If payment is made directly to the beneficiary on a clean claim for which you did not make payment within the applicable number of days (as described in subsection A.1.) apply interest. Add the following messages on any EOMB that you prepare. "Your payment includes interest since we were unable to process your claim timely."

7. Prepared Bills for DME.—Where you prepare bills for payment for purchased DME because the $50 tolerance is exceeded (see §3600.3) establish any date consistent with your system processing requirements as the receipt date for the second and succeeding bills. Use the date as close to your payment as possible.

8. Claims Paid Upon Appeal.—Interest payments are not payable on clean claims initially processed to denial and on which payment is made subsequent to the initial decision as a result of an appeal request. This applies to appeals where more than the applicable number of days (as described in subsection A.1.) had elapsed before an initial denial, but the claim was later paid upon appeal. Even though, in this situation, your mechanism for processing may be an initial debit action, no interest is due. Where an appeal of a previously paid claim results in increased payment follow 9 below.

9. Handling Interest on Postpayment Denials and Other Adjustments.—If a paid claim is later denied in full, recover any interest paid as well as the incorrect payment. Do not pay interest on the related no payment bill. If the claim is partially denied, interest is payable on the reduced amount. Recalculate the interest due based upon the new reimbursement amount. Use the rate of interest and elapsed days applicable to the original claim. This can be accomplished by applying a ratio of the new reimbursement amount (from your debit action) to the reimbursement amount on the initial claim (from your credit action). Multiply the result by the interest amount paid on the initial claim. The result is the interest amount payable on your debit action. Report this amount in value code 70 of UNIBILL. Use the following formula:

$$\text{Interest} = \frac{\text{debit action reimbursement amount}}{\text{credit action reimbursement amount}} \times \text{original interest paid}$$

This formula applies to the following actions where interest was initially paid:

- o DRG changes (higher or lower payment);
- o Postpayment partial denials;
- o Postpayment increase in payments (regardless of source of action); and
- o RTIs.

Use of the formula is preferable to expanding your system to handle multiple scheduled payment dates and calculation procedures.

10. Preparation of IRS Form 1099 INT.--IRS requires that interest paid in the course of a "trade or business" be reported if it totals $600 or more for any person. Interest payments you make fall within the "trade or business" definition. Therefore, prepare and file with the IRS, Form 1099 INT when interest payments for a calendar year to a beneficiary or provider total at least $600. Use the beneficiary's individual Social Security Number (SSN) to report interest. Individual SSNs are identified by the suffix A or M, J, T, or TA. Other suffixes mean benefits are based upon a spouse's, parent's or child's (F1 thru 8) SSN. If the spouse's, parent's or child's SSN is involved, determine the individual's SSN to report interest. The active HICN plus the preceding SSN are cross-referenced on the BEST file. (See §3506.) If the SSN is not known, all zeros appear in the cross-referenced field. If the individual's SSN is not present, contact your parallel SSO for the information. The cross-reference is not shown on the CAST file.

C. Control and Counting.--Consider claims as received for processing time purposes from the date of their receipt. Improperly completed claims that you return are considered received from processing time purposes when received again, properly completed. See §3894 for counting of claims on the workload report.

1. Provider Billing Via Terminal or Equivalent.--If the provider bills via remote terminal with on-site (in the provider) editing or if you otherwise can communicate edit results to it electronically, establish a control record when the bill passes your consistency edits. Count it as received for UNIBILL date received, for administration of timely billing under PIP, and for your timely processing on the day you receive it properly completed. Normally, this is the same day the bill passes your edits, unless you delay entry into your system of a properly completed bill.

2. Manual Hardcopy Bills, Magnetic Tapes.--Establish a control record when you enter the initial claim into your system. Count the bill for administering timely billing for PIP, and timely bill processing by you, only if it passes your edits. The date received for UNIBILL and PIP is the date you received it properly completed even if entered into your system on a later date.

3. Bill Returned To Provider.--If you return the bill, retain a claim record to minimize data entry cost when returned. Assign a receipt date for UNIBILL and PIP monitoring only when it is properly completed and passes your edits.

Forward PRO prepayment review claims that you receive and identify in batch processing as needing PRO prepayment review either to the PRO directly or to the hospital to forward to the PRO. These are incomplete bills needing additional development. count them received when they are returned.

If you forward cases directly to the PRO, you may want to develop a list or memorandum for providers advising them that the claims were forwarded to the PRO for review. This eliminates subsequent provider status inquiries.

4. Bills Requiring Medical Information.—When you request medical information, retain the bill as a pending record until you either pay or deny it. Returning cases for review by the PRO is not a request for medical information. Claims that fail your initial edits because required medical reports or other required attachments are not included are not requests for medical evidence.

5. Deleting Control.—Retain your control record unless deleted as described in 1, 2, 3, or 4 above until final resolution. For inpatient records which affect utilization, this is when the claim passes your final edits immediately prior to sending to HCFA via UNIBILL. For other records (outpatient, HHA, SNF, etc.) it is when the claim passes your final edits immediately prior to sending to HCFA via UNIBILL or a denial letter is generated.

D. Adjustment Bills.—An adjustment bill is a correction to a claim previously processed. Establish a control record for it.

Count hospital, MSP or manual PRO adjustments as pending when received. PRO electronic adjustments are received and pending only when they pass your edits. (See §3674.6.)

Assign the date received in your mailroom as the receipt date for hospital and MSP adjustments. On PRO adjustments, assign the later of the date you receive the request (passed your edits) or the date the batch clearance record was received from HCFA for the claim to be adjusted.

Count adjustment bills as processed when no further action by you is required. The final action taken on the adjustment bill depends upon the situation. If an adjustment bill involves only money adjustments (no utilization changes) and will not be submitted to HCFA, count it as "processed" after review and adjustment in payment. If an adjustment bill involves utilization changes and the original bill was accepted by HCFA, consider it processed when submitted via UNIBILL.

3600.2 Time Limitations for Filing Provider Claims.—

A. Time Limitation for Medical Information Requests.—When you request medical information for initial claims review, send one request to the provider. Indicate in the request that the information must be received within 30 days of the date of the request and that if the information is not received within 30 days the claim will be denied for "failure to submit medical evidence." If the medical information is subsequently received, reopen the claim and pay or deny as appropriate. Generate appropriate notices to the beneficiary and provider. File and process these bills to update utilization using an "R" code to identify "refused payment."

B. Time Limitation for Provider Claims.—Provider cost claims must be filed on, or before, December 31 of the calendar year following the year in which the services were furnished. (See §§3307ff. for details of the rules and exceptions. See §3816E for the effect on adjustment bills.)

Deny bills not received timely. However, such bills should be filed and processed because of the spell-of-illness implications. In provider fault situations, record the days, visits, cash and blood deductibles.

When a bill is received from a provider paid on a cost basis where only part of the services were rendered within the prescribed time limitations, obtain a breakdown of charges before and after the time limit. This enables you to determine how much of the bill to deny. For example, you received a bill on February 3, 1987, for provider services furnished September 16, 1985 through October 30, 1985; because the time for filing expired December 31, 1986, treat services furnished before October 1 as noncovered. Accordingly, obtain a breakdown of the charges for the covered and noncovered periods to properly complete UNIBILL.

3600.3 Reviewing Bills for Services After Suspension, Termination, Expiration, or Cancellation of Provider Agreement, or After a SNF is Denied Payment for New Admissions.—See §3008.4 for provisions for payment following a termination, expiration, or cancellation of a provider agreement. Effective August 1986, a SNF may be denied payment for new admissions as an option to termination of its provider agreement for noncompliance with one or more conditions of participation. The SNF may only be reimbursed for covered services furnished on or after the effective date of denial of payments if such services were furnished to beneficiaries who were admitted to the SNF before the effective date payments were denied.

EXAMPLE: Effective date of denial of payment - 9-30-86
Beneficiary admitted before 9-30-86 - pay for covered Part A or B services
Beneficiary admitted on or after 9-30-86 - deny payment under Part A or B

NOTE: An inpatient who goes on leave from the SNF before or after the effective date of denial of payments for new admissions is not considered a new admission when returning from leave.

You are notified of SNF payment denials through the HCFA-2007. Install appropriate edits or other safeguards to prevent incorrect payments to the provider.

Obtain a list of Medicare inpatients when a SNF or hospital agreement is terminated, or after a SNF is denied payment for new admissions to assure that nonpayment spell of illness bills are filed. (See §3604, Item 24.)

Following termination, expiration, or cancellation of its agreement, a hospital or SNF is considered to be a "nonparticipating provider." An inpatient of such an institution who has Part B coverage, but for whom Part A benefits have been exhausted or otherwise not available, is entitled to reimbursement only for services that are covered in a nonparticipating institution. A patient admitted to the SNF on or after the effective date of denial of payment who has Part B coverage is entitled to reimbursement for services covered in a nonparticipating institution. Such services furnished on or after the effective date of termination, or in the case of expiration or cancellation of an SNF agreement, on or after the day following the close of such agreement, are billed on Form HCFA-1500, Health Insurance Claim Form and sent to the carrier.

A terminated hospital may be certified to provide emergency services. If it meets the criteria, it is assigned an emergency provider number (E suffix). This procedure is not automatic, and hospitals terminated for Life Safety Code violations may not be able to qualify. If a terminated hospital qualifies, billings are handled by the designated emergency intermediary.

In a no-payment situation, where the entire billing period represents charges for which no Part A payment can be made, it is not necessary to submit two bills. Submit only a final no-payment bill, with a discharge date, under the former provider number.

Services furnished during the "no-payment" period may subsequently be determined to be covered. Where such covered services were furnished before the date of change in provider number, the provider submits one corrected bill covering the entire period showing the former provider number. Where the services were furnished after the date of change in provider number or both before and after the date of change, the provider submits a corrected discharge bill.

3600.4 Change of Intermediary.—The RO sends the official notice to you of changes in your list of providers. (See Part 2, §2810.) The following special procedures apply:

A. Outgoing Intermediary is Still Connected with Medicare Program.—Non-PPS providers and excluded units submit interim bills to the outgoing intermediary for services and supplies furnished prior to the date of change. Bills for services and supplies furnished beginning with the effective date of change are submitted to the new intermediary. Each intermediary updates HCFA utilization records based upon the bill it processes.

When an intermediary change occurs, HCFA does not require a new admission query. The established admission remains on HCFA's records until a final bill is accepted.

PPS hospitals do not submit separate bills. The incoming intermediary is billed for the entire stay upon the beneficiary's discharge.

B. Outgoing Intermediary is Not Connected with Medicare.—Where the prior intermediary is no longer connected with the Medicare program, it may be necessary for the new intermediary to handle bills which it normally would not process. Where the outgoing intermediary is terminating participation, the RO makes the necessary arrangements to effect a smooth transition.

3600.5 Multiple Provider Numbers or Changes in Provider Number.—Where a multiple facility provider is assigned separate provider numbers for each facility or where it is assigned a different number, special billing procedures are necessary. The provider uses the new number for all bills, beginning with the date the new number takes effect.

It submits a bill with the old provider number for the period before the change and another with the new provider number for the period after the change. The date of discharge on the first bill and the date of admission on the second bill are the same, i.e. the effective date of the new provider number. All subsequent billings are submitted under the new provider number.

3600.6 Reduction in Reimbursement Due to P.L. 99-177, P.L. 100-119, and P.L. 100-203.—

A. General.—P.L. 99-177 requires reduction in all Medicare program payments when the total Federal budget deficit exceeds set limits. P.L. 100-203 sets the reduction at 2.324 percent for services rendered November 21, 1987 through December 31, 1987 for Part A home health, hospice, and SNF services. The 2.324 percent reduction continues for services rendered through March 31, 1988 for inpatient hospital services and all services reimbursed under Part B.

Reduce all Medicare program payments after applying any deductible, coinsurance, and any applicable MSP adjustments. Make the reduction for each claim or interim payment (including PIP).

B. Definitions.—

Date of Service: For PPS hospital services, the date of discharge is the date of service. Reduce payment if the discharge date is November 21, 1987 or later, but before April 1, 1988.

For non-PPS inpatient services (excluded hospital units, non-PPS hospitals, SNFs and inpatient Part B services) apply the reduction if the through date on the bill is on or after November 21, 1987 through March 31, 1988. Do not search for earlier bills to apply the reduction.

For all other services (including outpatient hospital, SNF, HHA, CORF, hospice, renal dialysis facility, RHC), apply the reduction to all bills received with through dates on or after November 21, 1987 through March 31, 1988. The provider is responsible for billing earlier services separately to avoid the reduction. Do not incur expense to develop split bills where the bill may contain some earlier services, except for services the facility must bill on a monthly basis (ESRD, HHAs, and repetitive therapies). You may accept adjustment bills or adjust the bills only for these types of services. Do not accept adjustment bills to correct earlier bills spanning November 21, 1987 for other types of services.

Affected Providers: All Medicare providers, both PPS and non-PPS, including those in areas with special reimbursement rules (Maryland, New Jersey, and the Finger Lakes region of New York) are affected.

Reduction Amount: The reduction amount for Medicare program payment is 2.324 beginning November 21, 1987. Although the reduction provided in the law is limited to 2 percent for FY 1988, 2.324 percent must be withheld for discharges and services on or after November 21, 1987 through December 31, 1987 for Part A home health, hospice, and SNF services and November 21, 1987 through March 31, 1988 for inpatient hospital services and all services reimbursed under Part B (hospital outpatient department, Part B home health, clinical diagnostic laboratory fee schedule, ESRD, CORF, etc.). Apply the ESRD network reduction before sequestration. Calculate interest payment on claims either before or after the 2.324 percent reduction, whichever is more efficient for your system.

For FYs after 1988, you will be informed via a Program Memorandum of the specific percentage by which to reduce bills. Inform your providers of the reduction amount. Hold any bills with a discharge date on or after October 1 until you receive the reduction amount.

C. Changes Required in Bill Payment Procedures.—Your program for calculating payment must change the sum remaining after deductible, coinsurance, and MSP to reduce the payment by the appropriate percentage. Do this in all calculation modules, rounding to the nearest cent. Base calculations upon a percentage reduction of payment, not on interim rates or DRG amount.

Adjust final PPS (DRG) payments and interim payments (cost based interim payments), PIP payments, and PPS pass-through payments.

Adjust payment amount not payment rates. Apply the reduction to the amount that would have been paid before P.L. 99-177, i.e., after reduction for deductible, coinsurance, and MSP. This provides a slightly higher payment to the provider than applying the percentage reduction before deductible, coinsurance, and MSP.

When payment is for laboratory services, make the percentage reduction after you decide whether the charge or fee schedule is lower.

Make your changes in the most feasible manner to permit further changes if necessary. Effective each October 1, it may be necessary to change the reduction amount, based upon the discharge date or date of services.

D. Reporting.—Report the payment amount, after making the percentage reduction, to your PS&R and in UNIBILL. This applies to both reimbursement amount (UNIBILL inpatient and outpatient positions 1707-1715) and inpatient pass-thru per diem (positions 1846-1851).

3602. BILLING FORMS AND FORMATS

3602.1 Electronic Media Claims (EMC).—Develop automated system capabilities to receive EMC data from providers or their billing services in lieu of hardcopy data. You must have the ability to receive EMC via telecommunications unless you can demonstrate to your RO that is not cost effective. You may also develop the capability to receive EMC submitted via other electronic media where it is cost effective.

Review the provider's capability to submit EMC if fewer than 95 percent of its bills pass your automated consistency edits. Use edit specifications in §3606.

A. Assessment of Provider EMC Capacity.—To maximize provider participation, peridically reassess using hardcopy EMC capacity of providers. To the extent that it would be cost-effective, encourage provider EMC. Urge providers and billing services to convert to EMC.

B. Ro EMC Approval of Intermediary System.--The procedures you plan to use to support EMC are subject to RO approval. Upon request, your RO will advise you of the informatin it requires.

3602.2 Requirements for Submission of EMC Data.--Receive and process claims reported by providers electronically if the claims adhere to the file and record formats and utilize the data set in §3602.3.

A. Requirements.--

1. Control.--Account for all EMC received. Minimally, identify and report to the provider the claims received in each group/batch of claims it submitted. Include the number of EMC received in the workload report. (See §3894.) Once EMC submissions have passed the consistency edits, your system must have the capability to suspend and control claims in which errors are found and reassociate corrective data with the suspended claims. Additionally, to determine providers', accuracy levels maintain data on the number in which errors are found.

2. Retention.--Retain the bill records submitted exactly as submitted. The media of rention is left to your discretion, so long as individual claims are readily accessible. (For example, bills submitted on magnetic tape may be retained on microfilm or microfiche, rather than on the original reel of magnetic tape.) Retain data for the same period that hardcopy claims are stored prior to microfilming, destruction, or Federal storage. Store any paper forms, including error correction documents, that are subsidiary to the EMC data to insure their retrieval, if necessary.

3. Claims Review.--Exercise the same vigilance and utilize the same criteria in performing medical necessity and coverage reviews as for hardcopy claims. The method of performing this review, whether automated, clerical, or a combination, is left to your discretion (unless specified otherwise in this manual) so long as it complies with the requirements. An example of an acceptable approach is utilization of an approved automated means of performing review on both hardcopy and EMC, e.g., automated screens.

4. Return of Beneficiary Data.--Beneficiary eligibility and utilization data can be returned to a provider or to its billing service.

5. Assignment of Benefits.--If a complementary claim is involved, the provider must indicate on the specific claim record whether payment of complementary benefits has been assigned to it by the beneficiary.

6. Technical Assistance.--If it is cost effective, provide technical assistance to providers that wish to bill electronically.

B. Provider Requirements.--

1. Provider Representative Certification.—The initial group of claims submitted to you must be accompanied by a covering letter, signed by the provider's representative. (For hospitals and SNFs the appropriate representative is the administrator.) The letter must include the following statements: "In submitting machine readable claims, I understand that I am certifying that the required patient signatures, or, where applicable, appropriate signatures on behalf of the patient, and required physician certifications and recertifications (PRO certifications where applicable) are on file and that anyone who misrepresents or falsifies essential Medicare claims information, may, upon conviction, be subject to fine and imprisonment under Federal law." The statement should be resubmitted annually, or upon a change in provider representative if that occurs first.

2. Claims Submission.—Claims may be submitted individually or in periodic groups/batches at intervals mutually established between you and the provider. Where limitations on frequency of billing are applicable (e.g., monthly billing for ESRD, HHA, or the therapies) providers must comply with established rules.

3. Control.—Provider systems must have the capability to resubmit lost or garbled claims data or unreadable tapes, cassettes, floppy disks, or whatever other medium is used, and be able to reassociate data found to be in error with the original claim for correction and resubmission.

4. Retention.—Providers must retain all applicable source data in accordance with existing requirements and make it available for periodic verification.

3602.3 File Specifications, Records Specifications, and Data Element Definitions for EMC Bills.--In addition to accommodating the requirements for Medicare claims, specifications are designed to meet the needs of other private and government programs.

Provision has been made for users to expand the file and record format to accommodate needs of a specific locality or type of coverage. If an entire physical segment is desired within a subset, record types n5 through n9, where no represents 1 through 9, are available. Within the nationally defined physical segments, where space permits, a portion is set aside for local use. The File and Record Formats are described in Addendum A. The data elements are listed alphabetically and defined in Addendum B. Coding structures for data represented by codes are defined in Addendum C. Addendm D contains the home health plan of treatment data definitions and codes. Addendum E contains MCED edits. Addendum F contains OCE edits.

3602.4 National EMC Formats.—The maintenance of the file and record formats is the responsibility of a committee chaired by HCFA's Director of the Division of Provider Procedures known as the Provider Electronic Billing Technical Advisory Groups—PEBTAG. Other groups represented are the American Hospital Association, the Health Insurance Association of America, the Blue Cross Association, the Medicaid Systems Technical Advisory Group, and CHAMPUS. The PEBTAG meets on a regular basis at a time and place designated by the chairman.

3602.5 Paper Bills.—HCFA Form 1450 was developed by representatives of the hospital and health insurance industries to be used when EMC billing is not feasible. Instructions for review of the form are contained in §3604.

3603. FREQUENCY OF BILLING

Inform providers about the frequency with which you can accept billing records and the frequency with which they may bill on individual cases.

In your requirements, consider your billing systems operations and bill review procedures, the provider's systems operations and Medicare program and administrative requirements. The following requirements apply.

Inpatient services in SNFs and non-PPS hospitals (i.e., excluded units or hospitals) may be billed upon discharge or after 30 days (and if necessary, as often as every 30 days thereafter). You may permit more frequent billing if the cost is not excessive (e.g., if the provider bills electronically). Each bill must include all applicable diagnoses and procedures. However, it must not include charges billed on an earlier bill. The from date must be the day after the thru date on the earlier bill. Interim billing is not necessary for providers that receive PIP payments. Therefore, do not permit interim billing for them.

Repetitive Part B services to a single individual must be billed monthly (or at the conclusion of treatment). This avoids processing costs in holding such bills for monthly review and reduces bill processing costs for relatively small claims. Services are:

Service	Revenue Code
- DME Rental	290-299
- Therapeutic Radiology	330-339
- Therapeutic Nuclear Medicine	342
- Respiratory Therapy	410-419
- Physical Therapy	420-429
- Occupational Therapy	430-439
- Speech Pathology	440-449
- Home Health Visits	570-599
- Kidney Dialysis Treatments	820-859
- Cardiac Rehabilitation Services	482, 943
- Psychological Services	(910-919 in a psychiatric facility)

Other one time Part B services may be billed upon completion of the service. Bills for outpatient surgery must contain all services provided on the day of surgery on a single bill. (Outpatient services furnished on a day other than the day of surgery must not be included on the outpatient surgical bill.)

See §3628 for clinical diagnostic lab services paid under the fee schedule when included with outpatient bills for other services.

Where there is an inpatient stay, or outpatient surgery, during a period of repetitive outpatient services, one outpatient bill is required for services prior to the day of surgery or admission and another for those following discharge (or the day of outpatient surgery). This is in addition to the bill for the inpatient stay or outpatient surgery.

Periodically review bills from providers known to be furnishing repetitive services to determine if they are billing more frequently than proper. Techniques you may use are:

- o Sample review of bills to determine if most are for a monthly period (by using from and thru dates or number of services). This may be done manually or electronically. You may rely on informal communications from your medical review staff.

- o Modification of your duplicate screens to detect bills that meet duplicate criteria except for billing period, but which fall in the same 30 day period.

Where providers bill improperly, attempt an educational contact. If this fails, return bills with an explanation and request proper billing.

Be alert to situations where the treatment plan is completed or discontinued because the beneficiary dies or moves.

HCFA-1450

3604. REVIEW OF FORM HCFA-1450 FOR INPATIENT AND OUTPATIENT BILLS

This form, also known as the UB-82, serves the needs of many payers. Some data elements may not be needed by a particular payer. All items on the HCFA-1450 are described, but detailed information is given only for items required for Medicare claims. Items listed as "Not Required" need not be reviewed although providers may complete them when billing multiple payers. All intermediary processed Medicare claims are billed on the HCFA-1450 or related electronic data records.

If the provider omits required data, obtain it from the provider or other sources and maintain it on your history record. It is not necessary to search paper files to annotate missing data unless you do not have an electronic history record. You need not obtain data not needed to process the bill.

Data elements in the HCFA uniform electronic billing specifications are consistent with the HCFA-1450 data set to the extent that one processing system can handle both. Definitions are identical. In some situations the electronic record contains more characters than the corresponding item on the form because of contraints on the form size not applicable to the electronic record. Also, for a few data elements not used by Medicare, conversion may be needed from an alpha code to a numeric, but these do not affect Medicare processing. The revenue coding system for both the HCFA-1450 and the electronic specifications are identical.

Admitting Diagnosis
For inpatient hospital claims subject to PRO review (see §3770.1), the admitting diagnosis is required. Admitting diagnosis is the condition identified by the physician at the time of the patient's admission requiring hospitalization. This definition is not the same as that for SNF admissions. Providers report admitting diagnoses in a 5 position ICD-9-CM code in block E.

Item 1. (Untitled) - Provider Name, Address, and Telephone Number
Required. The minimum entry is the provider's name, city, State, and ZIP code. The post office box number or street name and number may be included. The State may be abbreviated using standard post office abbreviations. Five or nine digit ZIP codes are acceptable. Use the information to reconcile provider number discrepancies.

Item 2. (Untitled)
Not Required. This is one of the four fields which have not been assigned for national use. Use of the field, if any, is assigned by the SUBC and is uniform within a State.

Item 3. Patient Control Number
Not Required. Some providers use an identifying number to facilitate retrieval of case records and posting payment. Where you have made arrangements to use this number in your communications to the provider, the provider shows it here.

Item 4. Type of Bill

Required. This three-digit numeric code gives three specific pieces of information. The first digit identifies the type of facility. The second classifies the type of care. The third indicates the sequence of this bill in this particular episode of care. It is referred to as "frequency" code.

Code Structure (only codes used to bill Medicare are shown).

1st Digit - Type of Facility

1 - Hospital
2 - Skilled Nursing
3 - Home Health
4 - Christian Science (Hospital)
5 - Christian Science (Extended Care)
7 - Clinic (Requires special information in second digit, below)
8 - Special Facility or hospital ASC surgery (Requires special information in second digit, below)

2nd Digit - Classification (Except Clinics and Special Facilities)

1 - Inpatient (Part A)
2 - Inpatient (Part B) (Includes HHA visits under a Part B plan of treatment.)
3 - Outpatient (Includes HHA visits under a Part A plan of treatment and use of HHA DME under a Part A plan of treatment.)
4 - Other (Part B) (Includes HHA medical and other health services not under a plan of treatment and hospital and SNF diagnostic clinical laboratory services to "nonpatients."
8 - Swing bed (used to indicate billing for SNF level of care in a hospital with an approved swing bed agreement).

2nd Digit - Classification (Clinics Only)

1 - Rural Health
2 - Free Standing Renal Dialysis Center
4 - Comprehensive Outpatient Rehabilitation Facility (CORF) or Other Rehabilitation Facility.

2nd Digit - Classification (Special Facilities Only)

1 - Hospice (Nonhospital Based)
2 - Hospice (Hospital Based)
3 - Hospital Outpatient (ASC Procedure)

3rd Digit - Frequency	Definition
A - Admission Notice	This code is used when the hospice is submitting the HCFA-1450 as an admission notice.
0 - Nonpayment/zero claims	This code is used when the provider does not anticipate payment from the payer for the bill, but is informing the payer about a period of nonreimbursable confinement or

termination of care. The "Through" date of this bill (Item 22) is the discharge date for this confinement. Medicare requires "nonpayment" bills only to extend the spell-of-illness in inpatient cases. Other nonpayment bills are unneeded and may be returned to the provider.

1 - Admit Through Discharge Claim	This code is used for a bill encompassing an entire inpatient confinement or course of outpatient treatment for which the provider expects reimbursement from the payer or which will update deductible for inpatient or Part B claims when Medicare is secondary to an EGHP.
2 - Interim - First Claim	This code is used for the first of an expected series of bills for which utilization is chargeable or which will update inpatient deductible for the same confinement or course of treatment.
3 - Interim - Continuing Claim	This code is used when a bill for which utilization is chargeable for the same confinement or couse of treatment had already been submitted and further bills are expected to be submitted later.
4 - Interim - Last Claim	This code is used for a bill for which utilization is chargeable and which is the last of a series for this confinement or course of treatment. The "Through" date of this bill (item 22) is the discharge date for this confinement or course of treatment.
5 - Late Charge Only	This code is used only for outpatient claims. Late charge bills are not accepted for Medicare inpatient claims.
6 - Adjustment of Prior Claim	This code is used by the provider to show an increase and/or decrease in charges. The provider may use this code only with your permission. If you grant such permission, you must create a code 7 and code for UNIBILL.
7 - Replacement of Prior Claim	This code is used by the provider when it wants to correct (other than late charges) a previously submitted bill. This is the code applied to the corrected or "new" bill.
8 - Void/Cancel of a Prior Claim	This code indicates this bill is an exact duplicate of an incorrect bill previously submitted. A code "7" (Replacement of Prior Claim) is also submitted by the provider showing corrected information.

P	- PRO Adjustment Claim	Use this code to identify a debit adjustment initiated as a result of PRO review.
I	- MISC Adjustment Claim (Other Than PRO or Provider)	Use this code to identify a debit adjustment initiated by HCFA or you.

Item 5. Blue Cross/Blue Shield Provider Number

Not Required.

Item 6. Federal Tax Number

Not Required.

Item 7. Medicare Provider Number

Required. This is the six-digit number assigned by Medicare.

Item 8. Medicaid Provider Number

Not required.

Item 9. (Untitled)

See item 2, above.

Item 10. Patient's Name

Required. The patient's name is shown with the surname first, first name, and middle initial, if any.

Item 11. Patient's Address

Required. This item shows the patient's full mailing address including street number and name, post office box number or RFD, city, State and ZIP code. A valid ZIP code is required for PRO purposes on inpatient bills.

Item 12. Patient's Birthdate

Required. The month, day, and year of birth is shown numerically as MM-DD-YY. If the date of birth was not obtained after reasonable efforts by the provider, the field will be blank. For hospitals reimbursed under PPS the date of birth in the query response is used for assigning a DRG.

Item 13. Patient Sex

Required. A "M" for male or a "F" for female must be present. This item is used in conjunction with items 78-86 (diagnoses and surgical procedures) to identify inconsistencies.

Item 14. Patient's Marital Status

Not Required.

Item 15. Admission Date

Required. The month, day, and year of admission for inpatient care is shown numerically as MM-DD-YY. When using the HCFA-1450 as a hospice admission notice, the facility shows the date the beneficiary elected hospice care.

Item 16. Admission Hour
Not Required.

Item 17. Type of Admission
Required on inpatient bills only. This is the code indicating priority of this admission.

Code Structure:

1	Emergency	The patient required immediate medical intervention as a result of severe, life threatening or potentially disabling conditions. Generally, the patient was admitted through the emergency room.
2	Urgent	The patient required immediate attention for the care and treatment of a physical or mental disorder. Generally, the patient was admitted to the first available, suitable accommodation.
3	Elective	The patient's condition permitted adequate time to schedule the availability of a suitable accommodation.
4	Newborn	A baby born within this facility. Use of this code necessitates the use of special Source of Admission codes - see Item 18.
9	Information Not Available	The hospital cannot classify the type of admission. This code is used only on rare occasions.

Item 18. Source of Admission
Required on inpatient bills only. This is the code indicating the source of this admission.

NOTE: Newborn coding structure must be used when the Type of Admission Code in Item 17 is code 4.

Code Structure:

1	Physician Referral	The patient was admitted upon the recommendation of a personal physician.
2	Clinic Referral	The patient was admitted upon the recommendation of this facility's clinic physician.
3	HMO Referral	The patient was admitted upon the recommendation of a HMO physician.

4	Transfer from a Hospital	The patient was admitted as a transfer from an acute care facility where he or she was an inpatient.
5	Transfer from a SNF	The patient was admitted as a transfer from a SNF where he or she was an inpatient.
6	Transfer from Another Health Care Facility	The patient was admitted as a transfer from a health care facility other than an acute care facility or a SNF.
7	Emergency Room	The patient was admitted upon the recommendation of this facility's emergency room physician.
8	Court/Law Enforcement	The patient was admitted upon the direction of a court of law, or upon the request of a law enforcement agency's representative.
9	Information Not Available	The means by which the patient was admitted is not known.

Code Structure (for Newborn):

1	Normal Delivery	A baby delivered without complications.
2	Premature Delivery	A baby delivered with time and/or weight factors qualifying it for premature status.
3	Sick Baby	A baby delivered with medical complications, other than those relating to premature status.
4	Extramural Birth	A baby born in a nonsterile environment.

Item 19. Accident Hour
Not Required.

Item 20. Discharge Hour
Not Required.

Item 21. Patient Status
Required. (For all Part A inpatient, SNF and hospice services.) This code indicates the patient's status as of the "Through" date of the billing period (item 22).

Code	Structure
01	Discharged to home or self care (routine discharge)
02	Discharged/tranferred to another short-term general hospital
03	Discharged/transferred to SNF

Code	Structure
04	Discharged/transferred to an ICF
05	Discharged/transferred to another type of institution (including distinct parts)
06	Discharged/transferred to home under care of organized home health service organization
07	Left against medical advice
20	Expired (or did not recover- Christian Science Patient)
30	Still patient
40	Expired at home (Hospice claims only)
41	Expired in a medical facility, such as a hospital, SNF, ICF or freestanding hospice (Hospice claims only)
42	Expired - place unknown (Hospice claims only)

Item 22. Statement Covers Period (From-Through)
Required. The beginning and ending dates of the period included on this bill are shown in numeric fields (MM-DD-YY). Days before the patient's entitlement are not shown. Use the "From" date to determine timely filing. (See §§3307ff.)

Item 23. Covered Days
Required. The total number of covered days during the billing period applicable to the cost report including lifetime reserve days elected for which Medicare payment is requested, is entered. This should be the total of accommodation units reported in Item 52. Covered days exclude any days classified as noncovered as defined in Item 24, leave of absence days, and the day of discharge or death.

If you made an adverse coverage decision, enter the number of covered days through the last date for which program payment can be made. If waiver of liability provisions apply, see §3441.

The provider does not deduct any days for payment made under WC, automobile medical, no-fault, liability insurance, an EGHP for an ESRD beneficiary, employed beneficiaries and spouses age 65 or over or an LGHP for disabled beneficiaries. Enter the number of days shown in this Item in the cost report covered days field 24 (positions 145-147) of the UNIBILL RECORD. However, when the other insurer has paid in full (see §§3679B, 3680B, 3681B, 3682B and 3685), enter zero days in the UNIBILL RECORD. Calculate utilization based upon the amount Medicare will pay and enter the utilization days chargeable to the beneficiary in the covered days field 22 (positions 138-140) of the UNIBILL RECORD. (See §§3679B and C, 3680B and C, 3681B and C, 3682 B and C, and 3685.)

For discussion of how to determine whether part of a day is covered, see §§3620ff.

If the provider reported an incorrect number of days, report the correct number when submitting the UNIBILL RECORD.

Item 24. Noncovered Days
Required. The total number of noncovered days during the billing period within the "From" and "Through" date that are not claimable as Medicare Patient Days on the cost report.

Item 25. Coinsurance Days
Required. The number of covered inpatient hospital days occurrring after the 60th day and before the 91st day or the number of covered inpatient SNF days occurring after the 20th day and before the 101st day of the benefit period are shown for this billing period. Verify this entry with the admission query response and use the data from the admission query response if different.

See §3106.2 for special considerations in election of lifetime reserve days. The provider enters the number of lifetime reserve days applicable. You may need to change this entry based on data developed by your claims processing system.

Item 27. (Untitled)
See Item 2, above.

Items 28, 29, 30, 31, and 32. Occurrence Codes and Dates
Required. Code(s) and associated date(s) defining specific event(s) relating to this billing period are shown. Event codes are two numeric digits and dates are shown as six numeric digits (MM-DD-YY). When occurrence codes 01-04 and 24 are entered, they must be accompanied by the entry of the appropriate value code in Items 46-49, if there is another payer involved.

Occurrence and occurrence span codes are mutually exclusive. Occurrence codes have values from 01 through 69 and occurrence span codes have values from 70 through 99.

When Item 33 is utilized, for an occurrence span, Items 31 and 32 may be used to contain the "From" and "Through" dates of another occurrence span code. In this case, the code in Item 31 is the occurrence span code and the occurrence span "From" date is in the date field. Item 32 contains the same occurrence span code as the code in Item 31 and the occurrence span "Through" date is the date field.

Code Structure (only codes used to bill Medicare are shown)

Code	Title	Definition
01	Auto accident	Code indicating the date of an auto accident. This code is used to report an auto accident that inovolves liability insurance. (See §§3419ff.)
02	Auto Accident/No Fault Insurance Involved	Code indicating the date of an accident where State has applicable no-fault liability laws (i.e., legal basis for settlement without admission or proof of guilt). This code us used to report the date of an auto accident that involves auto medical/no-fault insurance. (See §§3489ff.)
03	Accident/Tort Liability	Code indicating the date of an accident resulting from a third party's action that may

Code	Title	Definition
		involve a civil court process in an attempt to require payment by the third party, other than no-fault liability.
04	Accident/Employment Related	Code indicating the date of accident relating to the patient's employment. (See §§3407-3416.)
05	Other Accident	Code indicates the date of an accident not described by the above codes. This code is used to report that the provider has developed for other casualty related payers and has determined there are none (additional development not needed).
11	Onset of Symptoms/Illness	Code indicates the date the patient first became aware of symptoms/illness.
18	Date of Retirement Patient/Beneficiary	Code indicates the date of retirement for the patient/beneficiary.
19	Date of Retirement Spouse	Code indicates the date of retirement for the patient's spouse.
20	Guarantee of Payment Began	(Part A claims only.) Code indicates date on which the provider began claiming payment under the guarantee of payment provision. (See §3714.)
21	UR Notice Received	(Part A SNF claims only.) Code indicates date of receipt by the SNF of the URC finding that an admission or further stay was not medically necessary. (See §3421.1.)
22	Date Active Care Ended	(SNF claims only.) Code indicates date on which a covered level of care ended in a SNF. Code is not required if code "21" is used.
23	Benefits Exhausted	(Part A claims only/not reported by providers.) Code indicates the last day benefits can be paid based on your query response from HCFA. Enter this date only when benefits have been exhausted before the date of discharge or death and during the period described in Item 22.

Code	Title	Definition
24	Date Insurance Denied	Code indicates the date of receipt of a denial of coverage by a higher priority payer.
26	Date SNF Bed Available	Code indicates the date on which a SNF bed became available to a hospital inpatient who required only SNF level of care. (See §§3327C and 3421ff.)
27	Date HHA Plan Established or Last Reviewed	Code indicates the date a plan of treatment was established or last reviewed for home health care as required by §§3326 and 3328.
28	Date CORF Plan Established or Last Reviewed	Code indicates the date a plan of treatment was established or last reviewed for CORF care as required by §3350.
29	Date OPT Plan Established or Last Reviewed	Code indicates the date a plan was established or last reviewed for OPT as required by §3350.
30	Date Speech Pathology Plan Established or Last Reviewed	Code indicates the date a plan was established or last reviewed for outpatient speech pathology as required by §3350.
31	Date Beneficiary Notified of Intent to Bill (Accommodations)	Code indicates the date of the notice provided to the patient by the hospital stating that he no longer requires a covered level of inpatient care.
32	Date Beneficiary Notified of Intent to Bill (procedures or treatment)	Code indicates the date of the notice provided to the patient by the hospital stating that requested care (dignostic procedures or treatments) is not considered reasonable or necessary by Medicare.
33	First Month of the 12 Month Coordination Period for ESRD Beneficiaries Covered by EGHP	Code indicates the first day of the first month of the 12 month period, defined in §3490.2D, during which Medicare benefits are secondary to benefits payable under an EGHP. Required only for ESRD beneficiaries.
34	Date of Election of Extended Care Services	Code indicates the date the guest elected to receive extended care services (used by Christian Science Sanatoria only).

Code	Title	Definition
35	Date Treatment Started	Code indicates the date treatment began for any of the therapies.
36	Date of Inpatient Hospital Discharge for Transplant Procedure	Code indicates the date of discharge for the inpatient hospital stay in which the patient received a transplant procedure when the hospital is billing for immunosuppressive drugs.
42	Date of Discharge	(Hospice claims only.) Code indicates date on which the beneficiary terminated his election to receive Hospice benefits from the facility rendering the bill. (See §3648, Items 28-32, code 42.) The frequency digit (3rd digit, Item 4, Type of Bill) should be 1 or 4.
47-49	Payer Codes	Codes reserved for internal use only by third party payers. HCFA will assign as needed for your use. Providers will not report them.

Item 33. Occurrence Span Code and Dates Required. Code and associated beginning and ending date(s) defining a specific event relating to this billing period are shown. Event codes are two numeric digits and dates are shown numerically as MM-DD-YY.

Code Structure (Only codes used for Medicare bills are shown)

Code	Title	Definition
70	Qualifying Stay Dates	(Part A claims for SNF level of care only.) Code indicates the dates shown are for a hospital stay of at least 3 days which qualifies the patient for payment of the SNF level of care services billed on this claim.

Code	Title	Definition
71	Hospital Prior Stay Dates	(Part A claims only.) Code indicates the from/through dates given by the patient of any hospital stay that ended within 60 days of this hospital or SNF admission.
72	First/Last Visit	Code indicates the actual dates of the first and last visits occurring in this billing period where these dates are different from those in Item 22, Statement Covers Period.
74	Noncovered Level of Care	Code indicates the From/Through dates of a period at a noncovered level of care in an otherwise covered stay excluding any period reported with occurrence span code 76 or 77.
75	SNF Level of Care	Code indicates the From/Through dates of a period of SNF level of care during an inpatient hospital stay. The code also means that a PRO, reviewing the stay, has approved the patient's remaining in the hospital because of the nonavailability of a SNF bed. For hospitals under PPS, this code is needed only in length of stay outlier cases, (code "60" in Items 35-39). This code is applicable to swing bed cases.
76	Patient Liability	Code indicates the From/Through dates of a period of noncovered care for which the hospital is permitted to charge the beneficiary. Code should be used only where you or the PRO have approved such charges in advance and the patient has been notified in writing 3 days prior to the "From" date of this period. (See occurrence codes 31 and/or 32.)
77	Provider Liability	Code indicates the From/Through dates of a period of noncovered care for which the provider is liable.
78	SNF Prior Stay Dates	(Part A claims only.) Code indicates the From/Through dates given by the patient of any SNF or nursing home stay that ended within 60 days of this hospital or SNF admission. An inpatient stay in a facility or part of a facility that is certified solely as an ICF, or licensed by the State solely at, or below, an ICF level of care, does not continue a spell of illness and

		therefore, is not shown in Item 33. (See §3880.2 for the importance and use of such information for PRO medical review for hospital admissions. Also, see §3035.B.2 for a listing of specific provisions by State.)
79	Payer Code	Code reserved for internal use only by third party payers. HCFA will assign as needed for your use. Providers will not report it.

Item 34. (Untitled except on Patient Copy of the bill) Responsible Party Name and Address (For Hospice claims only, the name, address, and provider number of a transferring Hospice is shown by the new Hospice on its HCFA-1450 admission notice. See §3648, Item 34.) For claims which involve payers of higher priority than Medicare as defined in Item 65, the address of the other payer may be shown or in Item 94 (Remarks).

Items 35, 36, 37, 38, and 39. Condition Codes
Required. Code(s) identifying conditions related to this bill which may affect processing.

Code structure (only codes affecting Medicare payment/processing are shown).

02	Condition is Employment Related	Code indicates patient alleges that the medical condition in this episode of care is due to environment/events resulting from employment. (See §§3415.2ff. for WC and §§3415.3ff. for BL.)
04	Patient is HMO Enrollee	Code indicates patient is a member of a HMO.
07	Treatment of Nonterminal Condition for Hospice Patient	Code indicates the patient has elected hospice care but the provider is not treating the terminal condition and is therefore requesting regular Medicare reimbursement.
08	Beneficiary Would Not Provide Information Concerning Other Insurance Coverage	Code indicates the beneficiary would not provide information concerning other insurance coverage. Develop to determine the proper payer. (See §3686 for development guidelines.)
09	Neither Patient Nor Spouse is Employed	Code indicates that in response to development questions, the patient and spouse have denied any employment.
10	Patient and/or Spouse is Employed but no EGHP Coverage Exists	Code indicates that in response to development questions, the patient and spouse have indicated that they are employed but hold no group coverage from an EGHP.

Code	Title	Definition
11	Disabled Beneficiary But no LGHP	Code indicates that in response to development questions, the disabled beneficiary and/or family member has no group coverage from a LGHP.
12-16	Payer Codes	Codes reserved for internal use only by third party payers. HCFA will assign as needed for your use. Providers will not report them.
17	Patient is Over 100 Years Old	Code indicates that the patient was over 100 years old at the date of admission.
20	Beneficiary Requested Billing	Code indicates the provider realizes the services on this bill are at a noncovered level of care or otherwise excluded from coverage, but the beneficiary has requested a formal determination of coverage.
21	Billing for Denial Notice	Code indicates the SNF or HHA realizes services are at a noncovered level of care or excluded, but requests a denial notice from Medicare in order to bill Medicaid or other insurances.
36	General Care Patient in a Special Unit	(Not used by hospitals under PPS.) Code indicates the hospital temporarily placed the patient in a special care unit because no general care beds were available.
37	Ward Accommodation at Patient's Request	(Not used by hospitals under PPS.) Code indicates that the patient was assigned to ward accommodations at his own request. This code must be supported by a written request in the provider's files as described in §3101.F. Also, see §3101.1F.1.
38	Semi-Private Room Not Available	(Not used by hospitals under PPS.) Code indicates that the patient's assignment to a ward or private room was because there were no semi-private rooms available at admission.
39	Private Room Medically Necessary	(Not used by hospitals under PPS.) Code indicates patient's assignment to a private room was for medical reasons.
40	Same Day Transfer	Code indicates patient was transferred from one participating provider to another before midnight on the day of admission.

Code	Title	Definition
55	SNF Bed Not Available	Code indicates the patient's SNF admission was delayed more than 30 days after hospital discharge because a SNF bed was not available.
56	Medical Appropriateness	Code indicates the patient's SNF admission was delayed more than 30 days after hospital discharge because his condition made it inappropriate to begin active care within that period.
57	SNF Readmission	Code indicates the patient previously received Medicare covered SNF care within 30 days of the current SNF admission.
60	Day Outlier	(Not reported by providers.) Pricer indicates this bill is a length-of-stay outlier. Indicate the outlier portion in code 17.
61	Cost Outlier	(Not reported by providers.) Pricer indicates this bill is a cost outlier. Indicate the outlier portion paid in code 17.
62	PIP Bill	(Not reported by providers.) Code indicates bill was paid under PIP. You must record this from your system.
63	PRO Denial Received Before Batch Clearance Report	(Not reported by providers.) Code indicates that the "date received" on a PRO adjustment bill is the date the HCSSACL file was received indicating acceptance of the original bill by HCFA. Use the HCSSACL receipt date if the PRO's notification is earlier than the acceptance report of the original bill.
64	Other Than Clean Claim	(Not reported by providers.) Code indicates claim is not a "clean" claim. You must record this from your system.
65	Non-PPS Bill	(Not reported by providers.) Code indicates bill is not a PPS bill. You must record this from your system for non-PPS hospital bills.
66	Provider Does Not Wish Cost Outlier Payment	A hospital being paid under PPS is not requesting additional payment for this stay as a cost outlier.
71	Full Care in Unit	Code indicates the billing is for a patient who received staff-assisted dialysis services in a hospital or renal dialysis facility.

72	Self-Care In Unit	Code indicates the billing is for a patient who managed his own dialysis services without staff assistance in a hospital or renal dialysis facility.
73	Self-Care Training	Code indicates the billing is for special dialysis services where a patient and his helper (if necessary) were learning to perform dialysis.
74	Home	Code indicates the billing is for a patient who received dialysis services at home but code 75 below did not apply.
75	Home 100 Percent Reimbursement	Code indicates the billing is for a patient who received dialysis services at home using a dialysis machine that was purchase under the 100-percent program.
76	Back-up Infacility Dialysis	Code indicates the billing is for a home dialysis patient who received back-up dialysis in a facility.
77	Provider Accepts or is Obligated/Required Due to a Contractual Arrangement or Law to Accept Payment by a Primary Payer as Payment in Full	Code indicates the provider has accepted or is obligated/required due to a contractual arrangement or law to accept payment as payment in full. Therefore, no Medicare payment is due.
79	CORF Services Provided Off Site	Code indicates that physical therapy, occupational therapy, or speech pathology services were provided off site.

NOTE: If the revenue charge codes indicate a ward accommodation was assigned and neither code 37 or 38 apply, and the provider is not reimbursed under PPS, the provider's reimbursement is at the ward rate. Otherwise, pay semi-private costs.

Item 40. Pints of Blood Furnished
Required. The total number of pints of whole blood or units of packed red cells furnished, whether or not replaced, is shown. Blood is reported only in terms of complete pints rounded upwards, e.g., 1 1/4 pints is shown as 2 pints. This entry serves as a basis for counting pints towards the blood deductible.

Item 41. Pints of Blood Replaced
Required. The total number of pints of blood which were donated on the patient's behalf is shown. Where one pint is donated, one pint is considered replaced. If arrangements have been made for replacement, pints are shown as replaced. (See §3235.4A.) Where the provider charges only for the blood procesing and administration, i.e., it does not charge a "replacement deposit fee" for unreplaced pints, the blood is considered replaced for purposes of this item. In such cases, all blood charges are shown under the 39X revenue code series (blood administration) or under the 30X revenue code series (laboratory).

Item 42. Pints of Blood Not Replaced

Required. The difference between the number of pints of blood furnished and the number of pints replaced is shown.

Item 43. Blood Deductible Pints

Required. The number of unreplaced deductible pints of blood supplied is shown. If all deductible pints furnished have been replaced, no entry is made.

Item 44. Special Program Indicator

Required. A code indicates that the services on this bill are covered under special program provisions.

Code Structure (Only a code pertaining to Medicare is described)

06	PPV/Medicare 100 percent Payment	Code indicates this bill is for administration of pneumococcal vaccine reimbursed at 100 percent.
09	Second Opinion/Surgery	Code indicates services requested to support second opinion on surgery. Part B deductible and coinsurance do not apply.

Item 45. (Untitled)

See item 2, above.

Items 46, 47, 48, and 49. Value Codes and Amounts

Required. Code(s) and related dollar amount(s) identify data of a monetary nature that are necessary for the processing of this claim. The codes are two numeric digits, and each value allows up to eight numeric digits (000000.00). Negative amounts are never shown. If more than one value code is shown for a billing period, codes are shown in ascending numeric sequence. There are two lines of data, line "a" and line "b." Items 46a through 49a are used before items 46b through 49b (i.e., the first line is used up before the second line is used).

Code	Title	Definition
05	Professional Component Included in Charges and Also Billed Separately to Carrier	Code indicates the charges shown are included in billing charges (column 53) but a separate billing for them will also be made to the carrier. For outpatient claims, these charges are excluded in determining the deductible and coinsurance due from the patient to avoid duplication when the bill for physician's services is processed by the carrier. These charges are also deducted when computing interim reimbursement.

06	Medicare Part A Blood Deductible	Code indicates the amount shown is the product of the number of unreplaced deductible pints of blood supplied times the charge per pint. If the charge per pint varies, the amount shown is the sum of the charges for each unreplaced pint furnished. If all deductible pints have been replaced, this code is not used. When the provider gives a discount for unreplaced deductible blood, charges after the discount is applied are shown.
07	Medicare Part A Cash Deductibles	Code indicates the amount shown is the Part A cash deductible where Part A blood deductible is also shown in value code 06. In all other cases, the entry in item 60 reflects the Part A cash deductible, and no entry is needed in this item.
08	Medicare Lifetime Reserve Amount for First Calendar Year in Billing Period	Code indicates the amount shown is the product of the number of lifetime reserve days used in the first calendar year of the billing period times the applicable lifetime reserve coinsurance rate. (See §§3206 and 3211.) These are days used in the year of admission.

Code	Title	Definition
09	Medicare Coinsurance Amount for First Calendar Year in Billing Period	Code indicates the amount shown is the product of the number of coinsurance days used in the first calendar year of the billing period times the applicable coinsurance rate. These are days used in the year of admission. (See §§3206 and 3211.) This code is not used on Part B bills.
10	Medicare Lifetime Reserve Amount for Second Calendar Year in Billing Period	Code indicates the amount shown is the product of the number of lifetime reserve days used in the second calendar year of the billing period times the applicable lifetime reserve rate. The code is used only for stays spanning two calendar years when lifetime reserve days were used in the year of discharge.
11	Medicare Coinsurance Amount for Second Calendar Year in Billing Period	On Part A bills, this code indicates the amount shown is the product of the number of coinsurance days used in the second calendar year of the billing period times the applicable coinsurance rate. This code is used only for stays spannning two calendar years when coinsurance days were used in the year of discharge. This code is not used on Part B bills.
12	Working Aged Beneficiary/Spouse With EGHP	Code indicates the amount shown is portion of a higher priority EGHP payment made on behalf of an aged beneficiary that the provider is applying to covered Medicare charges on this bill. If six zeros (0000.00) are entered in the amount field, the provider is claiming a conditional payment because the EGHP has denied coverage. (See §3491.)
13	ESRD Beneficiary in the 12 Month Coordination Period With an EGHP	Code indicates the amount shown is that portion of a higher priority EGHP payment made on behalf of an ESRD beneficiary that the provider is applying to covered Medicare charges on this bill. If six zeros (0000.00) are entered in the amount field, the provider is claiming a conditional payment because the EGHP has denied coverage or there has been a substantial delay in its payment. (See §3490.)

Code	Title	Definition
14	Automobile, No-Fault or Any Liability Insurance	Code indicates the amount shown is that portion of a higher priority automobile, no-fault or liability insurance payment made on behalf of a Medicare beneficiary that the provider is applying to covered Medicare charges on this bill. If six zeros (0000.00) are entered in the amount field, the provider is claiming a conditional payment because the other insurer has denied coverage or there has been a substantial delay in its payment. (See §§3419-3489.)
15	WC	Code indicates the amount shown is that portion of a higher priority WC payment made on behalf of a Medicare beneficiary that the provider is applying to covered Medicare charges on this bill. If six zeros (0000.00) are enterd in the amount field the provider is claiming a conditional payment because there has been a substantial delay in the other payer's payment. (See §§3407-3416.4.)
16	PHS, Other Federal Agency	Code indicates the amount shown is that porition of a higher priority PHS or other Federal Agency's payment made on behalf of a Medicare beneficiary that the provider is applying to covered Medicare charges on this bill. (See §§3153ff.)
17	Outlier Amount	(Not reported by providers.) Report the amount of outlier payment made (either cost or day) in UNIBILL with this code.
18	Disproportionate Share Amount	(Not reported by providers.) Report the disproportionate share amount applicable to the bill in UNIBILL with this code. Use the amount provided by the disproportionate share field in the Pricer report.
19	Indirect Medical Education Amount	(Not reported by providers.) Report the indirect medical education amount applicable to the bill in UNIBILL with this code. Use the amount provided by the indirect medical education field in the Pricer report.
20	Payer Code	Codes reserved for internal use only by third party payers. HCFA will assign as needed for your use. Providers will not report them.

Code	Title	Definition
31	Patient Liability Amount	Code indicates the amount shown is that which was approved by you or the PRO to charge the beneficiary for noncovered accommodations, diagnostic procedures or treatments.
41	BL	Code indicates the amount shown is that portion of a higher priority BL payment made on behalf of a Medicare beneficiary that the provider is applying to Medicare charges on this bill. If six zeros (0000.00) are entered in the amount field the provider is claiming a conditional payment because there has been a substantial delay in its payment. (See §§3415ff.)
42	VA	Code indicates the amount shown is that portion of a higher priority LGHP payment made on behalf of a disabled beneficiary that the provider is applying to Medicare charges on this bill. (§§3153.1A.)
43	Disabled Beneficiary Under Age 65 With LGHP	Code indicates the amount shown is that portion of a higher priority LGHP payment made on behalf of a disabled beneficiary that the provider is applying to Medicare charges on this bill.
70	Interest Amount	(For internal use by third party payers only.) Report the amount of interest applied to this claim.
71	Funding of ESRD Networks	(For internal use by third party payers only.) Report the amount the Medicare payment was reduced to help fund the ESRD networks.
72-79	Payer Codes	Codes reserved for internal use only by third party payers. HCFA will assign as needed. Providers will not report them.

Item 50. Revenue Description
Required. A narrative description or standard abbreviation for each revenue code in column 51 is shown on the adjacent line in column 50. The information assists clerical bill review. Descriptions or abbreviations correspond to the revenue codes shown in Addendum C. "Other" code categories descriptions are locally defined and individually described on each bill.

Also, in the space to the right of the dotted line on hospital diagnostic clinical laboratory bills for outpatients or nonpatients (bill type 13X and 14X) the hospital enters the HCPCS code describing the procedure.

290s - rental/purchase of DME
304 - rental and dialysis/laboratory
330s - radiology therapeutic
367 - kidney transplant
420s - therapies
520s - type of clinic visit (RHC or other)
550s-590s - home health services
800s-850s - ESRD services

Zero level billing is encouraged for all other services; however, based upon your knowledge of a particular provider's facilities or billing practices, you may require detailed breakouts of other revenue code series. This is acceptable to the extent that it is used for bill review purposes.

See §3626.4 concerning the level of coding for outpatient surgical procedures.

Item 52. Units of Service
Required. The entries in this column quantify services by revenue category, e.g., number of days in a particular type of accommodation, pints of blood. Providers have been instructed to provide the number of covered days, visits, treatments, tests, etc. applicable for the following:

Accommodations - 120s-150s, 200s, 210s (days)
Blood - 380s (pints)
Emergency room visits - 450 (visits)
Clinic visits - 510s and 520s (visits)
Dialyses treatments - 800s (sessions or days)
Outpatient therapy visits - 410, 420, 430, 440, 480, 910, and 943 (visits)
Outpatient clinical diagnostic laboratory tests - 30s-31s (tests)
Radiology and other diagnostic services - for CPT-4 codes

Up to three numeric digits may be entered. Charges for noncovered services are shown as noncovered.

Item 53. Total Charges
Required. The total charges for the billing period are summed by revenue code (column 51) or in the case of diagnostic laboratory tests for outpatient or nonpatients by HCPCS procedure code and entered on the adjacent line in column 53. The last revenue code entered in column 51 is "001" which represents the grand total of all charges billed. Column 53 totals on the adjacent line. Each line allows up to eight numeric digits (000000.00).

HCFA policy is for providers to bill Medicare on the same basis that they bill other payers to provide consistency of bill data with the cost report, so that bill data may be used to substantiate the cost report.

Medicare and non-Medicare charges for the same department must be reported consistently on the cost report. This means that the professional component is included on, or excluded from, the cost report consistently for Medicare and non-Medicare charges.

Where billing for professional component is not consistent for all payers, for example where some payers require net billing and others require gross, the provider must adjust either net charges up to gross, or gross charges down to net for cost report preparation. In such cases adjust accordingly your provider statistical and reimbursement records that you derive from the bill.

Laboratory tests (revenue codes 300-319) are billed net for outpatient or nonpatient bills because payment is based on the lower of charges for the hospital component or the fee schedule. Determine, in consultation with the provider, whether it must bill net or gross for each revenue center other than lab. Where "gross" billing is used, adjust interim payment rates to exclude payment for hospital-based physician services.

The physician component must be billed to the carrier to obtain payment.

Items 54, 55, and 56. Unlabeled Charge Columns
Required. The SUBC decides whether to show "total covered charges" or "total noncovered charges" in one of these columns. Showing "total noncovered charges" requires fewer entries by the provider.

Each line allows up to eight numeric digits (000000.00).

Item 57A, B, C. Payer Identification
Required. If Medicare is the primary payer, "Medicare" is entered on line A. If Medicare is entered on line 57A, the provider has developed for other insurance and has determined that Medicare is the primary payer. All additional entries across line A (Items 58-64) supply information needed by the payer named in Item 57A. If Medicare is the secondary or tertiary payer, the provider will identify the primary payer on line A and enter Medicare information on line B or C, as appropriate. See §§3407-3415, §§3419, 3489, 3490, and 3491 to determine when Medicare is not the primary payer.

Item 58A, B, C. Assignment of Benefits Certification Indicator
Not Required.

NOTE: The back of the HCFA-1450 contains a certification that all necessary release statements are on file.

Item 59A, B, C. Assignment of Benefits Certification Indicator
Not Required.

Item 60 A, B, C. Deductible
Required. On inpatient hospital and SNF bills, the provider enters the sum of the Part A cash and/or blood deductibles, if any, applicable to the billing period. It also enters value codes 06 or 07 in Items 46-49, as appropriate. Although the provider reports the deductible in this item, you must report it by value code upon submittal of the UNIBILL record for inpatient claims.

Amounts collected from the patient by the provider toward Part B deductible are reported on the fourth line of Item 63.

Code	Title	Definition
31	Patient Liability Amount	Code indicates the amount shown is that which was approved by you or the PRO to charge the beneficiary for noncovered accommodations, diagnostic procedures or treatments.
41	BL	Code indicates the amount shown is that portion of a higher priority BL payment made on behalf of a Medicare beneficiary that the provider is applying to Medicare charges on this bill. If six zeros (0000.00) are entered in the amount field, the provider is claiming a conditional payment because there has been a substantial delay in its payment. (See §§3415ff.)
42	VA	Code indicates the amount shown is that portion of a higher priority VA payment made on behalf of a Medicare beneficiary that the provider is applying to Medicare charges on this bill. (See §3153.1A.)
43	Disabled Beneficiary Under Age 65 With LGHP	Code indicates the amount shown is that portion of a higher priority LGHP payment made on behalf of a disabled beneficiary that the provider is applying to Medicare charges on this bill.
50	Physical Therapy Visit	Code indicates the number of physical therapy visits from onset (at the billing provider) through this billing period.

NOTE: This is not a money but a number of visits value. Entries for the number of visits are right justified from the dollars/cents delimeter as shown.

				1	3		

Accept zero or blanks in cents position. Convert blanks to zero for UNIBILL.

70	Interest Amount	(For internal use by third party payers.) Report the amount of interest applied to this claim.
71	Funding of ESRD Networks	(For internal use by third party payers only.) Report the amount the Medicare payment was reduced to help fund the ESRD networks.

Code	Title	Definition
72-79	Payer Codes	Codes reserved for internal use by third party payers. HCFA will assign as needed. Providers do not report them.

Item 50. Revenue Description
Required. A narrative description or standard abbreviation for each revenue code in column 51 is shown on the adjacent line in column 50. The information assists clerical bill review. Descriptions or abbreviations correspond to the revenue codes shown in Addendum C. "Other" code categories descriptions are locally defined and individually described on each bill.

When coding HCPCS, i.e., outpatient surgery bills, clinical diagnostic laboratory bills for outpatients or nonpatients, the hospital enters in the space to the right of the dotted line the HCPCS code describing the procedure. See §3628 for diagnostic clinical laboratory services and §3626.4 for other outpatient services and surgery.

On inpatient hospital or SNF bills, the accommodation rate may be shown in the space to the right of the dotted line.

HHAs identify the specific piece of DME or nonroutine supplies for which they are billing in this area on the line adjacent to the related revenue code. This description may be narrative or HCPCS coding if coding is acceptable to you. (Also, see Item 94, Remarks.)

Providers reporting a separate date for each date of service for outpatient claims enter the dates in this item. They have the option of using either approved format. (See §3604.1.)

Item 51. Revenue Code
Required. For each cost center for which a separate charge is billed (type of accommodation or ancillary), a revenue code is assigned (see Addendum C for complete list of revenue codes and definitions). The appropriate three-digit numeric revenue code is entered on the adjacent line in column 51 to explain each charge in column 53. This data takes the place of fixed line item descriptions on the billing form.

Additionally, there is no fixed "Total" line in the charge area. Instead, revenue code "001" is always entered last in column 51. Thus, the adjacent charge entry in column 53 is the sum of charges billed. This is also the same line on which charges, if any, in columns 54-56 are summed.

To assist in bill review, revenue codes are listed in ascending numeric sequence to the extent possible. To limit the number of line items on each bill, revenue codes are summed at the "zero" level to the extent possible.

Providers have been instructed to provide detail level coding for the following revenue code series:

If the entry contains only the Part A cash deductible, there is no value code "06" entry. (See discussion under Items 46-49.) Each line allows up to eight numeric digits (000000.00).

Item 61A, B, C. Coinsurance
Required. For inpatient or SNF claims, the hospital enters the sum of the regular and lifetime reserve coinsurance amounts, if any. It also enters value codes 08-11, in Items 46-49 as appropriate.

Amounts collected from the patient by the provider toward Part B coinsurance or coinsurance on Part A DME are reported on the fourth line of Item 63.

Each line allows up to eight numeric digits (000000.00).

Item 62A, B, C. Estimated Responsibility
Not Required.

Item 63A, B, C. Prior Payments
For all services other than inpatient hospital and SNF the sum of any amount(s) collected by the provider from the patient toward deductibles (cash and blood) and/or coinsurance are entered on the unnumbered (fourth/last) line of this column.

Part A home health DME cost sharing amounts collected from the patient are reported in this item. In apportioning payments between cash and blood deductibles, the first 3 pints of blood are treated as noncovered by Medicare. Thus, for example, if total inpatient hospital charges were $350 including $50 for a deductible pint of blood, $300 would be apportioned to the Part A deductible and $50 to blood deductible. Blood is treated the same way in both Part A and Part B.

Items 64A, B, C. Estimated Amount Due
Not Required.

Due From Patient (Unnumbered line below 57-64C)
See Items 63A, B, C, above.

Items 65A, B, C. Insured's Name
Required. On the same lettered line (A, B, or C) that corresponds to the line on which Medicare payer information is shown in Items 57-63, the provider enters the patient's name as shown on his HI card or other Medicare notice. All additional entries across line A (Items 66-75) pertain to the person named in Item 65A. The instructions which follow explain when those items are completed.

If there are payers of higher priority than Medicare and the provider is requesting payment because another payer paid some of the charges and Medicare is secondarily liable for the remainder, another payer denied the claim, or the provider is requesting a conditional payment as described in §§3679K, 3680K, 3681K, or 3682K, it enters the name of the individual in whose name the insurance is carried. If that person is the patient, the provider enters "Patient." Payers of higher priority than Medicare include:

- o EGHPs for employed beneficiaries and their spouses. (See §3491.);

- EGHPs for beneficiaries entitled to benefits solely on the basis of ESRD during a period up to 12 months. (See §3490);
- LGHPs for disabled beneficiaries;
- Automobile medical, no-fault, or liability insurer. (See §§3419 and 3490); or
- WC, including BL. (See §§3407-3416.)

Item 66A, B, C. Insured's Sex
